Residual oil can be desulfurized but supplies are limited and for the most part are dependent on Venezuelan sources. The usefulness of this alternative in affecting any regional fuel mix is obviously limited by ocean transport.

Fuel switching—for example, from coal to oil—is a third alternative for reducing environmental impacts. Feasibility is restricted by both the availability of lower environmental impact fuels as well as the capability of a facility to utilize a different fuel. The greatest potential for environmental improvements is in switching to natural gas.

Industry plans call for the importation of liquified natural gas—LNG—by tanker. Obtaining large quantities of LNG from foreign sources will be dependent on the number of tankers available as well as the availability of terminal storage facilities. An added factor is the yet unresolved reliability question.

The fourth alternative is to remove sulfur oxides from flue gases after combustion. Many processes are under development and in varying states of laboratory bench scale, pilot plant, or advanced scale demonstration. With each day more information is gathered and we are brought closer to determining the economics of all these processes.

The Air Quality Act of 1967 provided for a major program for the development of air pollution control research. While effort has not met the congressionally estimated needs, some processes have fallen short of expectation; others are approaching commercial status. But the effort, as a whole, has been inadequate, and both Government and industry are to blame.

Last year this program was analyzed by a National Academy of Engineering-National Reserach Council Ad Hoc Panel on the Control of Sulfur Dioxide from Stationary Combustion Sources. As was expected, their report concluded that "contrary to widely held belief, commercially proven technology for control for sulfur oxides from combustion processes does not exist," and a 5-year research plan was recommended.

The 1967 projection of Federal expenditures for a 5-year research and development plan relating to the control of sulfur oxide emissions from stationary sources called for $394 million, including $215 for the period from 1968 through 1970. In this 3-year period the estimated actual expenditure was only $82 million, or $123 billion behind schedule.

Yet, the estimated expenditure for fiscal 1971 is $26 million compared to an estimated research and development need of $94 million.

As anticipated one of the recommendations of the First Annual Report of the Council on Environmental Quality was:

Federal research and development on sulfur oxides and nitrogen oxide control technology should be accelerated. Sulfur oxides control technology for large coal-and-oil-fired power plants should be demonstrated in actual operation so that the technology can be applied throughout the industry.

The Council's report also recommends:

A more balanced research and development program is necessary to hasten the development of more efficient energy processes. Although control technology for sulfur oxides will provide appreciable improvement for several decades, a longrun answer to this type of air pollution lies in better energy conversion processes which will emit less pollutants per unit of energy produced. Gasified coal, fluidized bed combustion, breeder reactors, and nuclear fusion all hold promise. Although research for new nuclear power sources has already received significant support, greater attention must be given to these other processes. Even now, the Nation needs to use its fuel resources more effectively through development of a national energy policy. Such a policy would guide the use of natural gas, low-sulfur coal and oil, and other energy resources to assure their availability and minimize air pollution.

I hope this recommendation receives better support from the administration than has the development of sulfur oxides control technology.

The last year has seen progress, however. As of last week four sulfur oxide control demonstrations have been initiated and three additional projects are under negotiation.

Mr. President, I ask unanimous consent that selected reports and correspondence supporting these observations be included in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ABATEMENT OF SULFUR OXIDE EMISSIONS FROM STATIONARY COMBUSTION SOURCES

(Prepared by Ad Hoc Panel on Control of Sulfur Dioxide from Stationary Combustion Sources, Committee on Air Quality Management, Committee on Pollution Abatement and Control, Division of Engineering, National Research Council)

I. SUMMARY AND CONCLUSIONS

Controlling and improving the quality of our environmental resources is a growing concern of the nation. National and regional goals and standards for air quality management are being defined. Capital investments of billions of dollars will be required to install processes to meet these standards. Keeping these costs within bounds, while still attaining an acceptable level of control within the shortest practical period of time, will call for the best efforts and most careful planning at all levels from individuals, civic groups, and companies through local, regional, state, and Federal agencies.

The emission of SO_2* from combustion of sulfur-bearing coal and oil, primarily for the generation of electrical energy, is second only to the emission of pollutants from internal combustion engines in quantity of pollutants discharged to the national air environment.

During the next 20 years, the national requirement for electrical energy is expected to more than triple. The supply of natural gas, a low-sulfur fuel, is expected to decrease in about 10 years, and petroleum products may reach their maximum availability in about 30 years. To supply the needed electricity, the use of coal is expected to triple by the year 2000, when it is expected that the use of nuclear energy will about equal the use of coal, after which the requirement for coal will start a downward trend.

The substitution of low-sulfur fuels, the only presently available method for reducing SO_2 emissions, is restricted by the limited availability of natural gas, low-sulfur oil, and low-sulfur coal. More rapid expansion of the application of nuclear energy is constrained by engineering and economic problems, in addition to siting problems, that are of growing concern to all planning of major electricity generating installations. By the late 1980's, new fossil-fueled plants may employ magnetohydrodynamic (MHD) generators followed by conventional steam boilers, or by an advanced gas-turbine/steam-power cycle. The combined energy conversion efficiency of such plants is expected to be in the range of 50 percent to 60 percent compared with about 40 percent for modern conventional plants, which would result in a corresponding decrease in SO_2 emissions. However, the high operating temperature of MHD units may result in increased NO_x emissions.

In addition to improving the energy conversion efficiency, the fast breeder nuclear reactor produces a net gain of fissionable material and thereby reduces the net cost of fuel. The Atomic Energy Commission is planning a 500 MW fast breeder demonstration plant for 1976 and expects the first commercial units to start up about 1985 in the United States.

Therefore, *the reduction of SO_2 emissions from stationary combusion sources, in the next 5 to 20 years, will depend very largely on the development, demonstration, and application of a combination of technologies designed to prevent the sulfur in coal and petroleum products from reaching the atmosphere through the combustion processes.*

The technology for removal of sulfur from oil is being developed by a number of oil companies, and the panel does not believe that NAPCA should contribute significantly to these developments.

Although broader application and refinement of existing technology could increase the quantity of low-sulfur coal available, there are no cleaning or washing processes presently in sight that have the potential for substantially reducing sulfur content below levels presently being achieved. This emphasizes the need for new concepts in engineering and chemical approaches to the desulfurization of coal.

In addition to joint support by groups of utilities, a number of industrial organizations have committed significant funds to research, development, and demonstration of sulfur emission control processes and equipment. An increase in these activities, together with increased support by the Federal Government, is needed.

The panel reviewed the status of United States and foreign sulfur oxide abatement and control processes and firmly concluded that, *contrary to widely held belief, commercially proven technology for control of sulfur oxides from combusion processes does not exist.*

---

* The symbol SO_2 is used in this report to designate the sulfur oxides in stack gases (SO_2 plus 1 percent to 2 percent SO_3).

Efforts to force the broad-scale installation of unproven processes would be unwise; the operating risks are too great to justify such action, and there is a real danger that such efforts would, in the end, delay effective SO_2 emission control. *A high level of government support is needed for several years to encourage research, engineering development, and demonstration of a variety of the more promising processes, as may be suited to specific local and regional conditions, to bring these processes to full-scale operating efficiency at the earliest practical date. This can be done most expeditiously if Federal support, in addition to industry commitments, is provided at the appropriate time and in the needed amounts.*

Federal support for the development of the following control approaches is suggested:

1. "Throw-away" processes for removal of SO_2 from stack gases, such as limestone injection, which produce a presently nonmarketable product.

2. New combustion concepts, such as fluidized bed combustion (FBC), which fixes the sulfur as a sulfate during combustion and prevents its release as SO_2 to the stack.

3. Chemical recovery processes, which produce salable SO_2, sulfuric acid, elemental sulfur, or fertilizers.

4. Coal gasification processes, which produce sulfur-free fuels.

5. New concepts in engineering and chemical approaches to the desulfurization of coal.

The limestone injection processes, with adequate particulate control, should be commercially demonstrated within the next 1 to 3 years and, if successful, can be installed in many existing plants.

Several sulfur-recovery processes appear to be ready for scale-up to commercial demonstration size (100,000 kw or larger boilers). Full-scale demonstration of the industrial reliability of these processes is 3 to 10 years away. Some of them can be installed in a portion of existing plants or engineered into future plants.

New combustion technology may be available for industrial application in 5 to 10 years. Efficient coal gasification processes, which are 5 to 10 years away, have the potential for producing pipeline-quality, low-sulfur gas for supplementing existing supplies of natural gas or for producing a product of less than pipeline-quality, but adequate for power generation. Such fuels seem likely to become increasingly competitive for use in power production as the cost for controlling all pollutants (SO_2, NO_X, and fine particulates) increases the costs for conventional systems.

These time estimates are realistic only if there is dedication and a positive commitment on the part of government agencies, utilities, fuel suppliers, and equipment manufacturers to support the orderly development and timely application of the more promising processes.

In recommending a 5-year plan for future work, the panel places special emphasis on the following:

1. Complete development of the limestone process should be given high priority because it is applicable to many existing boilers and is closer than others to demonstrated industrial application.

2. For new power plants and some existing plants, it is expected that sulfur-recovery processes will be necesary to keep costs for future control within reasonable limits.

3. NAPCA should continue to support the development and demonstration of new concepts in combustion technology, sulfur-recovery, and coal-desulfurization processes.

4. Research should be supported on ways to combine the abatement of nitrogen oxide and particulates with sulfur oxide control.

5. Elemental sulfur is a more desirable by-product than sulfuric acid or sulfur dioxide. The conversion of sulfur dioxide to sulfur is not a well established process, and it is important that the technology and costs of this conversion be thoroughly studied.

6. NAPCA should employ a *process engineering and construction firm* to project costs on a *common basis* for all the promising processes at various stages in their development to aid in making scale-up decisions.

STAFF MEMORANDUM, MAY 22, 1970

From: Walter Planet and Richard Grundy.

Subject: Summary of NAE/NRC comments on SO_2 removal process developments.

The NAE/NRC report "Abatement of Sulfur Oxide Emissions from Stationary Combustion Sources" states ". . . contrary to widely held belief, commercially proven technology for control of sulfur oxides from combustion processes does not exist." The processes along with their status as given in the report are summarized here.

SULFUR RECOVERY FROM STACK GASES

Process	Status	Comments
(a) Monsanto Cat-Ox	Piloted on 15-MW plant; possible commercial demo by 1973.	Requires boiler modification.
(b) Wellman-Lord	Piloted in 1969	Commercial unit being installed on sulfuric acid plant.
(c) Esso-B & W	Bench-scale unit in operation; 25-MW pilot being planned.	Requires boiler modification; commercial process by 1973 is objective.
(d) Magnesium oxide	Pilot studies being conducted	
(e) Formate scrubbing	Bench scale studies conducted	
(f) Ammonia scrubbing	Bench scale studies conducted years ago.	
(g) Westvaco Char	Pilot studies being conducted	
(h) Molten Carbonate	Bench scale studies conducted	Mainly new plants with modified boilers.
(i) Sodium bicarbonate adsorption.	Pilot studies conducted	
(j) Modified claus	Bench scale studies conducted	Requires hydrogen for sulfur removal process.
(k) Catalytic chamber	do	
(l) Ionics/S&W	Pilot-level studies conducted	
(m) Alkalized alumina	Engineering and cost analysis	Further work unjustified.
LIMESTONE PROCESSES		
(a) Wet scrubbing (combustion engineering).	Units on 2 existing plants (125MW); 3d unit planned for 430 MW plant.	Problems in scrubber optimization and waste removal.
(b) Dry removal	1 unit being installed on 175-MW plant.	Possible worsening of flyash problem.
COMBUSTION PROCESSES		
(a) Fluidized bed	Piloted in U.S.; English studies indicate 20-30MW pilot can be completed by 1972.	Applicable only to new plants.
(b) B, S and B process	Feasibility studies being conducted; pilot plant design begun.	New concept in boiler design.

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
May 19, 1970.

Hon. JENNINGS RANDOLPH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR RANDOLPH: I am pleased to reply to your April 9 letter in which you requested our estimates of the costs of developing and demonstrating several sulfur oxide control processes. Please understand that the costs shown for private industry are our best estimates based on limited actual data, since this information is proprietary to the organizations involved.

Your letter specifically mentions Scientific Research Instruments Corporation. To our knowledge, SRI has not developed a sulfur oxides control process. Rather, they are working under a contract with National Air Pollution Control Administration (Contract No. CPA-70-50) to provide fundamental data on sulfur behavior during thermal treatment of coal. These data are being used to analyze various coal gasification or partial gasification processes for efficiency, economics, allowable circulation rates, etc.

Bituminous Coal Research, together with Chemico, has been working on an aqueous alkali carbonate process in the laboratory. This process is only in its earliest stages of development. We would estimate that about $200,000 has been spent so far by Bituminous Coal Research and Chemico. If this concept proves to be technically sound, we would estimate that a total of $15 to $20 million would have to be spent to bring it to the stage of having been demonstrated. A proposal for funding small pilot-scale development at a cost of $2.2 million to National Air Pollution Control Administration has been submitted by Chemico.

Chemico has, in addition to this aqueous alkali carbonate process, been developing a process based on the use of magnesium oxide slurry scrubbing of flue gas. Chemico and Basic Chemicals, Inc., have spent between one-half and one million dollars on this process so far. A proposal for a large scale pilot plant has been submitted to the National Air Pollution Control Administration, to be jointly funded by Boston Edison. This pilot plant if funded would cost approximately $5 million and would be cost shared, 40 percent by the National Air Pollution Control Administration and 60 percent by Boston Edison. If this pilot plant suffices for demonstration, total development costs will be $6 to $8 million. If a larger demonstration plant is required, an additional $7 to $9 million will be required.

Combustion Engineering has been developing a process based on limestone injection followed by wet scrubbing. Funds for this work to date have been supplied by Combustion Engineering, Union Electric Company of St. Louis and Kansas City Power and Light (Kansas City, Missouri). A total of $3 to $5 million has been spent so far. Further development is required and the National Air Pollution Control Administration has an extensive program to evaluate major process engineering problems, solid and liquid waste disposal problems, and optimization of the process. The total that will be required by all parties is estimated at about $19 million.

Monsanto Enviro-Chem Systems, Inc., has developed the Cat-ox process mainly with its own funds and some contribution from Pennsylvania Electric Company. This proc-

ess has been operated on a sizable pilot plant. Total development costs to date have been about $7 million. Monsanto has submitted a proposal for a demonstration plant costing an additional $6.6 million which would bring the total development cost to $13.6 million. The demonstration would be jointly funded by National Air Pollution Control Administration and Illinois Power on a 50–50 basis.

Stone and Webster and Ionics have spent about $750,000 so far on a process for which a $4.2 million proposal has been submitted to the National Air Pollution Control Administration. This proposal, presently being negotiated, calls for a jointly funded (National Air Pollution Control Administration and a consortium of utilities represented by Tampa Electric Power on a 50–50 basis) program to build and operate a large pilot plant. It is estimated that a total of about $3 million would be required to bring this process to the point of having been demonstrated.

Westvaco is developing a process based on char sorption of sulfur oxides. This process is less advanced than others and therefore would require considerably more work to thoroughly assess its viability and economics. Westvaco has spent about $750,000 so far of its own funds and has submitted a proposal to the National Air Pollution Control Administration calling for a small pilot plant at a cost of about $1 million to the National Air Pollution Control Administration. This is presently being negotiated. Total development cost for this program would be about $14 million.

Wellman-Lord has spent a total of about $6 million of its own funds and funds supplied by several utilities, including Potomac Electric Power Company and Baltimore Gas and Electricity. The current status of this program is not clear. The sizable pilot plant at the Crane Station of Baltimore Gas and Electricity has been shut down because of technical problems.

It is anticipated that the demonstration costs for processes that reach that state of development will be in part borne by the ultimate users of the process, e.g., utilities and smelters, through cost-shared programs. For product producing processes, it may generally be said that processes that produce sulfur (the most desirable by-product of sulfur oxides pollution control processes) cost somewhat more to develop than do processes that produce sulfuric acid.

Low-sulfur fuels can provide relief in areas of severe pollution where industrial users are unable to use control methods such as flue gas cleaning. Coal cleaning-studies have shown the significant potential of this control method. National Air Pollution Control Administration has funded support studies totalling $2.5 million to date, including a successfully completed conceptual design study for a demonstration coal-cleaning plant. Detailed design, construction, and operation of the plant, along with supporting studies, will cost an estimated additional $13 million. The National Air Pollution Control Administration is attempting to gain coal industry participation in this activity.

A coal-cleaning plant would provide a cleaned fuel stream and a sulfur-rich stream that could be utilized in a special combustor equipped with a sulfur recovery system. The National Air Pollution Control Administration now has under way a feasibility study of such a combustor. Demonstrating the combustor and recovery system will cost at least $10 million.

I trust this gives you a satisfactory picture of the total effort involved in developing an adequate array of usable processes for sulfur oxides control. Further information on any of these processes is, of course, available, and can be provided at your request.

Sincerely yours,

JOHN T. MIDDLETON,
Commissioner.

NATIONAL COAL ASSOCIATION,
Washington, D.C., August 21, 1970.

Mr. RICHARD D. GRUNDY,
Professional Staff Member, Senate Committee on Public Works, New Senate Office Building, Washington, D.C.

DEAR MR. GRUNDY: The following is in response to your request for data on SO_2 units recently contracted or anticipated. The units listed below have been contracted within the last two weeks.

CHEMICO—BOSTON EDISON

This project involves a 150 MW unit at B–E's Mystic Station. The total cost is $5 million and it is shared equally by Boston Edison and the National Air Pollution Control Administration. The fuel used is No. 6 oil containing 2.25% sulfur and the expected SO_2 removal efficiency is 90% which will bring them well within the State of Massachusetts regs of 1% sulfur or equivalent.

MONSANATO—ILLINOIS POWER CO.

This project involves a 100 MW unit at the Wood River Station. The total cost will be approximately $6.8 million with the utility picking up $3.3 million and NAPCA the rest. Again, 90% SO_2 removal is expected.

TVA

The latest project announced August 12, 1970 is for full-scale SO_2 removal equipment on a 500 MW generating unit at the Widow Creek Steam Plant in northeast Alabama. The unit is expected to cost more than $10 million. It is to incorporate a wet limestone scrubber to achieve the SO_2 control.

In addition, NAPCA in concert with Black Sivals & Bryson announced on July 9, a novel project to combine techniques used in steel making with fuel utilization. The present contracts, in cooperation with NAPCA ($890,000) are directed at constructing a *pilot plant.*

I am familiar with three additional utility projects quite near public announcement. I have requested clearance from each to announce their plans. I have not received this as yet but hope to within the next few days. These, too, are full-scale demonstrations; two on a 100 MW unit, and a third proposed for a 800 MW unit. Several other utilities are in preliminary stages—cost evaluation, engineering studies, etc. The foregoing frankly causes me to feel confident of the future for SO_2 control devices.

Sincerely,

JOSEPH W. MULLAN,
Director of Environmental Affairs.

Mr. RANDOLPH. Mr. President, despite these efforts by government, the pollution control industry, and, only recently, the electric power industry, progress is insufficient to meet the needs. It will be the mid-1970's before any sulfur oxide control devices can be considered tested and commercially available.

One process, the Monsanto limestone injection process, may be commercially available before the mid-1970's; but even then, full application of this process can only mitigate, not eliminate the problem of sulfur oxide emissions from coal combustion.

Those electric utility executives who are attempting to provide air pollution control are faced with a dilemma. A very descriptive picture of this situation was recently presented to me by Mr. Jack Busby, president of Pennsylvania Power & Light Co.

I ask unanimous consent that this letter appear in the RECORD at this point as well as a letter from Mr. J. Eck of Monsanto to Mr. Busby.

There being no objection, letters were ordered to be printed in the RECORD, as follows:

PENNSYLVANIA POWER & LIGHT CO.,
Allentown, Pa., July 9, 1970.

Hon. JENNINGS RANDOLPH,
Committee on Public Works,
Washington, D.C.

DEAR SENATOR RANDOLPH: I have just seen a copy of a letter sent to you on March 13 by Joseph G. Stites, Jr., of Monsanto Enviro-Chem Systems, Inc. It appears to be an earnest appeal by a man who believes he has something to sell. However, I do feel that we should examine some of Mr. Stites' assertions and implications.

From his letter, the conclusion could be drawn that Monsanto's Cat-Ox unit is an "off-the-shelf" item, ready for installation on an 800,000-kilowatt generating unit. The closest Monsanto ever came to demonstrating such an item has been a prototype unit which operated at Metropolitan Edison Company's 250,000-kilowatt generating unit at its Portland, Pa., plant. And at that relatively small-sized plant, the Cat-Ox unit processed only 6% of the flue gas. But perhaps this observation is meaningless since Mr. Stites says they are willing to guarantee the unit's performance.

This guarantee would imply a high degree of faith in their equipment—faith enough, perhaps, to use their own equipment if Monsanto were having SO_2 emission problems at any of its operations. Maybe even if the age of a Monsanto plant precluded a Cat-Ox system, added credibility would justify its installation.

Therefore, I should like to call your attention to an article in the June 28, 1969, issue of Business Week,—keeping in mind that Mr. Stites said that the Cat-Ox system has been available since October, 1968. The article is headed "Fight swirls over pollution. Stiff new air standards imposed by St. Louis have put manufacturers in a quandry, the issue in the courts." About halfway through the article a pertinent paragraph appears. It states:

"One of the local concerns that could be left out in the cold next winter is Monsanto Co., one of the country's leading chemical companies. Monsanto has three plants in the St. Louis area that use high-sulfur coal to heat steam boilers. Company officials say that efforts to find a source of low-sulfur coal have been fruitless, and that barring a last-minute change of luck they may have to seek a variance from the new law."

Toward the end of the article under a subheadline "Controls," another pertinent paragraph appears. It states:

"One system called Cat-Ox, is under development by Monsanto and now being tested in a power plant owned by Metropolitan Edison Co. in Portland, Pa. The system catalytically oxidizes sulfur dioxide in flue gases and recovers it as marketable sulfuric acid. Monsanto says that Cat-Ox has progressed to a point where the company *may"* (italics ours) "try it in some of its St. Louis operations."

Mr. Stites also states that the higher the sulfur content of the fuel, the lower the operating costs because sale of the by-product produced—sulfuric acid—helps to offset some of the operating expenses. We question the proximity of markets for the volume of sulfuric acid which would be produced from full-scale Cat-Ox operations at large new generating stations—we have four new units of about 800,000 kilowatts each, scheduled for service in 1971, 1973, 1974 and 1975. Transportation charges quickly turn sulfuric acid from asset to liability within a relatively short distance from point of origin.

This is a cost we shall have to face someday. We already accept the costs of fly ash disposal. We believe this is also the prospect

for large volumes of sulfuric acid from our power plants—*disposal*, not marketing.

Further along in his letter, Mr. Stites states that utilities are reluctant to do anything until they are forced to. Speaking for PP&L, that just isn't so.

Before there were regulations or laws for environmental control, PP&L was installing flue gas cleaning equipment and making environmental studies. Several of our stations which are now retired had dust collectors and Sunbury units 1 and 2 designed in the late '40s had installed with them the best commercially available collectors designed for 96% efficiency. This rating was excellent for that time.

Our newest unit has 99.5% efficient precipitators as will another large plant we have under construction. Furthermore, we are upgrading dust collection efficiency at two of our older plants—one with a Venturi scrubber and the other with a completely new installation. The latter plant's upgrading is at a cost of $2.2 million and will be in operation for about only three years before we convert it to burn oil.

In addition to particulate control, PP&L has adopted what it considers to be the only workable approach that is available at this time to handle SO_2 emission—this is to increase the height of our stacks for better dispersion of stack gases. At our Brunner Island plant we spent $490,000 for increased stack height. At our Montour plant (now under construction) we estimate an expenditure of $700,000 for two units. At Montour we have designed so as to have room for sulfur removal equipment when it becomes available for large units.

At Brunner Island we have spent $26,000 for an air monitoring station to measure SO_2 ground levels. Air monitoring stations are being installed at Montour plant at an estimated cost of $70,000. In addition to this we have installed ready piles of low-sulfur coal to be used under extreme inversion conditions.

Looking ahead, our recently announced addition of two 800,000-kilowatt generating units at the Martins Creek site will involve total expenditures of about $800,000 or more for added stack height. When the units are in operation we will also be paying about $11.5 million per year in premiums for the *low-sulfur* oil they will burn.

By the end of 1970, we estimate that our research expenditures through EEI and other groups on sulfur abatement will have cost some $400,000. This includes vegetation studies and, for example, a study with other Keystone and Conemaugh owners on a pyrite removal scheme using the coal mines and their rejection systems.

In all, our construction budget for the 1970–74 period is $847 million. About $40 million or 5% of this is slated for pollution control and aesthetics.

Why then don't we install Cat-Ox or other SO_2 collection equipment? We have studied the pilot installations and the reports and we just don't believe that they can be installed as reliable vital components of an 800,000-kilowatt plant. There is also, quite frankly, the very significant matter of the estimated $24 million which a Cat-Ox system would add to a unit's cost. But the matter of costs aside, in this period when every kilowatt of capacity counts, we cannot—and our customers cannot—tolerate equipment or operations which would jeopardize the availability of our generating stations.

In 1974 and 1975 we will bring 800,000-kilowatt oil-fired generating units on the line. When in operation they and existing coal-fired units which will be converted will consume about 23 million barrels of low-sulfur oil which at today's prices, cost about a 50-cent premium per barrel. As I mentioned before, this premium for low-sulfur content totals about $11.5 million per year—a sum which would support a sizeable investment in SO_2 collection equipment. So we are not out to duck the costs nor our responsibility to maintain the quality of the environment.

Do our words mean we have closed our minds to SO_2 collection equipment? Not at all. We have made design provisions for future installation of SO_2 removal equipment at our 1,580,000-kilowatt Montour plant now under construction and at our soon-to-start 1,600,000-kilowatt expansion of our Martins Creek plant. And we sincerely look forward to the day when a satisfactory SO_2 removal system is available. Regrettably, we firmly believe that it has not yet arrived.

Our position regarding the state of technology for SO_2 removal equipment is well substantiated by an agency of the Federal government. In order to settle the question of whether or not such equipment existed, the Federal Department of Health, Education and Welfare, through the National Air Pollution Control Administration, on June 20, 1969, asked the National Academy of Engineering to make a comprehensive review of present industry and government research and development programs directed toward control of sulfur oxides from power plants. The project was undertaken by an ad hoc panel selected by the National Academy of Engineering and the National Academy of Sciences. The report of this panel has recently been made and concludes—

"The panel reviewed the status of United States and foreign sulfur oxide abatement and control processes and firmly concluded that, contrary to widely held belief, commercially proven technology for control of sulfur oxides from combustion processes does not exist.

"Efforts to force the broad-scale installation of unproven processes would be unwise; the operating risks are too great to justify such action, and there is a real danger that such efforts would, in the end, delay effective SO_2 emission control. A high level of government support is needed for several years to encourage research, engineering development, and demonstration of a variety of the more promising processes, as may be suited to specific local and regional conditions, to bring these processes to full-scale operating efficiency at the earliest practical date. This can be done most expeditiously if Federal support, in addition to industry commitments, is provided at the appropriate time and in the needed amounts."

The panel cautioned the government against leading the public to expect improvements in the environment faster than they can be realized. The requirements for electrical energy, expected to more than triple in the next 20 years, and the increasing amounts of coal needed to supply this electricity will contribute to a significant rise in total sulfur emissions. The best that can be hoped for through the year 2000 is to hold total sulfur oxide emissions from all utilities somewhere near the present level. Unless immediate action is taken, however, the emission level will be more than four times as great by the year 2000.

Very truly yours,

JACK K. BUSBY.

JULY 24, 1970.

Mr. JACK K. BUSBY,
President, Pennsylvania Power & Light Co., Allentown, Pa.

DEAR MR. BUSBY: Thank you for your letter of July 9 to Mr. Thomas. Your company is to be congratulated on its aggressive approach to environmental control.

Before Monsanto and Metropolitan Edison built the prototype Cat-Ox plant at Portland, Pennsylvania, we gave careful consideration to the sizing of the plant. We needed to develop meaningful data in which we had confidence—and from which we could scale to even the largest power stations. The Cat-Ox plant is a merging of equipment common to the power industry and to sulfuric acid manufacture. We received assurances from power plant equipment suppliers relative to their ability to scale to full size operations and are confident of our ability to build the sulfuric acid equipment. Monsanto has designed over 50% of the sulfuric acid plants in the world.

The prototype plant was sized by the air heater. It was the smallest commercially available air heater from which Air Preheater Company (Combustion Engineering) said they could scale with confidence to the largest power plant. It was large enough that leakage did not become an overpowering variable and, therefore, meaningful data could be obtained.

We received similar assurances from other vendors—for the precipitator, fans, heat exchangers, etc.

The Cat-Ox prototype was located at Portland rather than at one of our own plants because we believed that it was very important to design and operate a system in conjunction with a utility type operation rather than with an industrial boiler operation. We needed to develop a system capable of handling the variable boiler loads—and we did it.

In nearly three years of operation at Met-Ed, we have achieved a high degree of confidence in the Cat-Ox system and our ability to scale it to large units. For very large power stations, we would recommend the use of modular construction—using a multiplicity of Cat-Ox trains rather than treating all of the flue gas in a single train. A basic design premise is that the Cat-Ox system will not adversely affect the ability of the power station to generate electricity.

With respect to installation of the Cat-Ox system on one of our own plants, our biggest problem area is here in St. Louis at the oldest Monsanto plant. The boilers at this plant are old and small and we have elected to solve the problem by burning low sulfur (premium priced) fuel.

Sulfuric acid is the backbone of the chemical industry. It is used in large amounts today and will be for a long time to come. Over 35 million tons of sulfuric acid was consumed in the United States last year. Until a large number of sulfur recovery systems are installed on power stations, there will be no problem in the marketing of acid. To be sure, the value of the acid is a function of the location of the producing plant with respect to the market. Monsanto is prepared to use its best efforts to market the acid for utilities in the most economically attractive way.

Last week Illinois Power Company announced that it would be installing a Cat-Ox system on one of their 100 Mw units at their Wood River plant. We believe this is a significant step forward.

If you have any questions regarding the operability or reliability of the Cat-Ox system, may we suggest that you contact Mr. Fred Cox, President, Metropolitan Edison Company, in Reading.

Again, thank you for your interest and if we can be of further assistance, please contact me.

Sincerely,

J. R. ECK,
Vice President.

Mr. RANDOLPH. Mr. President, obviously the abatement and control of air pollution sufficiently to protect the public health will require more drastic measures. In order to minimize the resultant economic impact, however, these measures must be coordinated with a national fuels and energy policy.

I present for consideration one alternative which deserves special attention. This proposal is for a major substitution of our cleanest fuel, gas, for coal; not natural gas, but synthetic gas in electric

power generation commencing in 1980. The example chosen assumes the creation of a major coal gasification industry in this country which will be able to commence significant production of pipeline quality synthetic gas at the end of this decade, a difficult but not unrealistic task considering current technology and economics.

I review in the Atlantic seaboard region, alone, the benefits to be derived from such a national fuels policy.

Let us first look at currently anticipated developments within the region as described in this table, which I ask to be included in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV.—ATLANTIC SEABOARD PROJECTED ANNUAL SULFUR OXIDE EMISSIONS FROM ALL SOURCES, 1970–2000

[Millions of tons per year]

Year	Uncontrolled	Case I	Case II	Gas substitutions (utilities only)
1970	5.6	5.5	5.5	5.6
1975	5.2	5.0	4.7	5.2
1980	5.1	4.7	4.0	5.1
1990	5.8	5.1	3.7	4.9
2000	6.8	5.9	4.1	5.0

References. Personal correspondence to Senator Jennings Randolph, chairman, Committee on Public Works, U.S. Senate from Dr. John T. Middleton, Administrator, National Air Pollution Control Administration; on July 8, 1970, transmitting requested entitled, "Projections of Sulfur Oxides and Particulate Emissions from a Portion of Northeast Atlantic Seaboard," (May 1, 1970).

Mr. RANDOLPH. Mr. President, most likely, as a result of air pollution regulations, control processes under industry development would be applied as they become proven—case I—and sulfur oxides emissions would remain relatively constant at current levels through the year 2000. Under an accelerated research and development program supported by Government and industry—case II—the best that could be achieved would be a 20-percent reduction in the next 20 years.

For the purposes of this example, let us assume that the only control measure taken is to substitute gas for coal for power generation. Under our proposed fuel policy this substitution would begin in 1980 and the objective would be to return to 1965 levels of sulfur oxide emissions from power generation by 1990. Recognizing that these figures are only approximate, the startling fact is that total sulfur oxide would be reduced to levels comparable to those achieved with the application of fuel substitution, fuel cleaning, and flue gas treatment.

Additional sulfur oxide reductions could be achieved if other fuels users, for example, smelters and refineries, also adopted some revision of this modified fuels policy. The outstanding point is that, without such significant modification in our national fuels policy, pollution control is an illusion.

The task involved in creating such an industry is large, if the required quantities of synthetic gases from lignite and bituminous coal are to be supplied. Construction cost will run into the billions of dollars, but the projected cost for add-on sulfur oxide control equipment runs as high as $24 billion over the next 30 years for powerplants alone.

The environmental impacts of supplying energy can also be reduced by improving combustion efficiencies. Several years ago, electrical energy production reached a plateau in approximately 40 percent efficiency for converting fuel energy to electric energy. One sure road to environmental protection and low-cost power supplies and efficient utilization of our energy resources is to move on to a new plateau where more kilowatt-hours are obtained from a ton of coal or a pound of uranium. Each step taken toward increased efficiency in the production, transmission, and even consumption of energy reduces the future requirements for powerplants and transmission lines.

In the July 16 speech in the Senate, I mentioned magnetohydrodynamics—MHD—as one possibility for improved combustion efficiencies; however, a very large number of engineering problems remain before MHD becomes a practical reality.

MHD has a potential plant efficiency of approximately 50 percent; sulfur oxides and particle emissions would be reduced by about 20 percent, and thermal pollution by nearly 40 percent.

One disadvantage of MHD is the possible increase of nitrogen oxide emissions, perhaps by as much as 10 times that found in a conventional plant. It may well be that controlling these higher nitrogen oxide emissions as well as other contaminants is more costly than controlling the emissions from conventional electric power generation methods. This remains to be proven.

I do not mean to discount the potential of MHD, but rather to suggest alternative methods for central station power generation must be pursued, also, in parallel. Our current energy crisis, I believe, is in large part caused by an overreliance on nuclear energy development.

Another advanced-cycle power system with a potential for more immediate application is that under development by the United Aircraft Research Laboratories. An outgrowth of that company's research efforts on aircraft turbine engines utilization is an advanced industrial gas turbine in combination with a conventional steam electric turbine. A projected 54-percent efficiency is possible using on-the-shelf equipment, including coal gasification equipment by 1980.

Benefits include a reduction in the depletion rate of our fuel resources, reduced atmospheric emissions of sulfur oxides and particulates, and reduced thermal pollution.

Simultaneous development is needed on combined steam-gas turbine cycles, coal-fired gas turbines, thermionic and thermoelectric devices, and fuel cells, to name a few alternatives. All offer promise for increased efficiency, and lower pollution emissions. Acceptance will undoubtedly be delayed, however, because of the utility industries reluctance to depart from standard fuel combustion techniques and apply new design concepts.

Long-term solutions to fuel and environmental problems will require the parallel development of new, nonpollution fuels, and flue gas cleaning methods. A national fuels and energy policy could serve to guide the efficient use of our resources and provide the priorities necessary for a balanced research and development program. Each alternative must be considered in terms of potential environmental impact, economics, commercial availability, and fuel reserves.

These are some of the advantages to be derived from a national fuels and energy policy, the objective of the National Commission on Fuels and Energy proposed in S. 4092.

Initial hearings on this legislation are scheduled for September 10 and 11, 1970, before the Subcommittee on Minerals, Materials, and Fuels of the Committee on Interior and Insular Affairs, which are chaired by Senator FRANK MOSS and Senator HENRY JACKSON, respectively.

I am concerned, however, with the apparent proliferation of Federal efforts in this time of crisis. Recent reports indicate energy studies are being undertaken by the Office of Science and Technology, the National Science Foundation, the Atomic Energy Commission, the Department of Commerce, the Federal Power Commission, and two studies by the Department of the Interior, to name a few. There is an apparent need for overall coordination if piecemeal examinations and competitive forces are to be minimized. Government agencies must be directed to lay aside jurisdictional disputes and short-term self-interests and recognize the long-term national interests involved.

I have written the President expressing my concern, suggesting that the President provide the needed additional direction and coordination.

I ask unanimous consent that this letter appear in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
Washington, D.C., August 24, 1970.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Be assured that I endorse your August 6 directive to the Domestic Council to study the national energy situation and recommend actions which may be taken to alleviate the short-term acute shortage of clean fuels. Indeed, one of the most pressing problems for many, if not most, electric utilities is the ability to secure adequate supplies of fuels, particularly coal, for the next five years.

Over the past 18 months fuel stocks have reportedly slipped from sufficient coal for at least 90 days operation to quantities sufficient for only about 40 days operation. Several causes have contributed to this serious problem and were reported in the April 18 issue of *Business Week* magazine. These causes include a willingness of the Japanese to pay high coal prices, a shortage of railway hopper cars, a plague of wildcat strikes, and the impact of the Coal Mine Health and Safety Act. A major cause, however, is this Nation's lack of a national fuel and energy policy.

With the development of nuclear power a shift was anticipated from fossil to nuclear fuels and there has been a reluctance in many cases to supply alternative sources of oil or coal. This shift which also would re-

quire the opening of new mines has been slower than originally envisioned, and a situation of crisis proportions has developed. The fossil fuel shortage is the most acute phase of our short-term energy crisis, dwarfing the problem of short-term needs for adequate generation and transmission facilities to meet demands for the next five years.

This situation need not have occurred and cannot be allowed to repeat itself. For many years the future of electric power generation has focused on nuclear power development, in particular the fast breeder-reactor. Yet, development of the fast breeder-reactor has slowed down and may not be commercially available until the 1990's when we will probably begin to run out of economical sources of uranium. Alternatives compatible with environmental quality goals must be developed in the interim period. Reliable sources of crude oil, natural gas, coal, and synthetic fuels must be developed as well as more efficient means of utilizing these fuels. Attention must be directed beyond the short-term crisis before us to the long-term requirements of this Nation and indeed the world.

A national fuels and energy policy is needed to establish a program for insuring the most efficient utilization of all energy resources, without sacrificing or degrading environmental qualities. In examining the dimensions of the energy crisis confronting us, attention must be directed to include an evaluation of anticipated energy demands and available fuel resources. Additionally, this examination must evaluate methods to expand our resource base through such technical developments as coal gasification, fuel cells, and M.H.D. (magnetohydrodynamics). These alternatives must be developed in parallel and coordinated to avoid recurring crises.

A national fuels and energy policy would serve to guide the efficient use of our resources as well as provide priorities for a more balanced research and development program to hasten the development of more efficient energy processes. These are the objectives of the proposed National Commission on Fuels and Energy provided for in S. 4092, which I introduced on July 16, 1970, with 55 co-sponsors. The remarks I made on this subject, including an analysis of the bill, and a copy of the measure are included in this letter.

Insuring a coordinated, integral fuels and energy policy is of deep concern to me, and I am equally concerned over an apparent proliferation of Federal efforts in this time of crisis. The few experts capable of advising the government are being competed for without an adequate definition of national priorities.

Recent reports indicate energy studies are being undertaken by the Office of Science and Technology, the National Science Foundation, the Atomic Energy Commission, the Department of Commerce, the Federal Power Commission, and two studies by the Department of the Interior, to name a few. There is an apparent need for overall coordination to avoid piecemeal examinations and eliminate competitive forces.

Positive steps new can lead to solutions to both our short-term and long-term energy problems and assure the best use of our domestic fuel reserves. The efforts of the Domestic Council represent a first step. The next step is the formation of a national fuels and energy policy, a policy which should have been established a decade ago. Cooperation, not competition, is needed now if the energy needs of the 1970's are to be met and long-term policies formulated. Government agencies must be directed to lay aside jurisdictional disputes and short-term self-interests in favor of long-term national interests.

I respectfully suggest that additional Presidential direction and coordination is needed at this time if our short-term fuels and energy crisis is to be overcome and future energy crises averted.

With esteem and best wishes, I am,

Truly,

JENNINGS RANDOLPH,
Chairman.

Mr. RANDOLPH. Mr. President, positive steps now can lead to both short-term and long-term solutions to this Nation's energy problems. The efforts of the Domestic Council represent a first step. The next step is formation of a "national fuels and energy policy," a policy which should have been established a decade ago.

LEGISLATION TO REQUIRE THE OPEN DATING OF PACKAGED FOOD—XIII

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FARBSTEIN. Mr. Speaker, on previous occasions, I have discussed three ways of achieving open dating of foods: First, through legislation; second, through action by the Federal Trade Commission under section 5 of the Federal Trade Act; and third, through voluntary action by supermarkets and food manufacturers.

I have attempted to utilize each of these routes. Last November, I introduced H.R. 14816, legislation to require open dating of canned and packaged foods. In June, I filed a petition asking the FTC to require open dating; and subsequently, I launched Campaign A&P, which had as its objective voluntary action by the Nation's 10 largest supermarket chains to achieve open dating.

There is also a fourth route through which the objective of open dating can be achieved, through State or local requirement. New York, for example, except for a brief period has required the dating of milk for more than 30 years. The State of New Jersey has a similar requirement.

The main disadvantage in consumer action at the State or local level is that lobbyists for the food trade associations opposed to open dating are strongest at these levels of government. They were thus able to force Illinois to drop its law requiring the open dating of milk and to get the New York State Legislature to ban open dating for a time.

A unique example of State action on open dating is Virginia, where the nine member Board of Agriculture and Commerce has set up a special committee to study open dating. The action came as a result of recent testimony by the Virginia Citizens Consumer Council.

The board has been deluged with food industry lobbyists opposing open dating; but despite this, its investigations have found dating to be a key to unlocking a number of dangerous practices followed by some aspects of the food industry.

The investigation of open dating, for example, exposed the fact that much of the sour milk being sold in the State was the result of attempts by some dairies to cut down on the number of deliveries to local stores by giving price discounts to retailers who purchased greater quantities of milk less frequently.

The special committee is expected to report its findings to the full Board on September 29. How willing the board is to act on open dating will serve as an indication of whether the State or local government can be looked to for effective action to protect the consumer, or whether such action can only come from stepped up pressure at the Federal level.

I insert at this point in the RECORD material describing the actions by the Virginia board:

NEWS RELEASE OF VIRGINIA DEPARTMENT OF AGRICULTURE AND COMMERCE

A committee of the Virginia Board of Agriculture and Commerce appointed to study the possibility of code dating perishable food items met in Richmond, August 24.

The committee was appointed by President John C. Lester, Jr., following the board's July meeting because of considerable public interest in the open dating of grade A milk. The committee was asked to broaden its scope and look into the need or desire for dating all perishable foods.

For the past month the committee, which includes three board members, Mrs. John A. Baker of Arlington, Millard B. Rice, Jr. of Phenix, and is chaired by Edward C. Norman of Purcellville, has been gathering information from state and federal organizations, industry, educational institutions and consumer organizations. At the meeting Monday, this material was discussed and evaluated.

Mr. Norman stated the overall objective of the committee was to assure quality foods for the consuming public and to make recommendations to the board for future action.

At the present time federal legislation is under consideration in Washington and the committee is following the progress of this legislation to see how it would apply in Virginia and the need for any possible additional legislation on the state level. The committee also instructed the department staff to survey quality control methods in relation to quality of products in retail stores.

The committee is to meet again on September 28, and will have a preliminary report available for the Board meeting on September 29.

[From the Richmond Times-Dispatch, July 10, 1970]

CONSUMERS SHOULD KNOW MAELSTROM IN MILK BOTTLE MAY DEVELOP

(By Estelle Jackson)

A maelstrom in a milk bottle may be developing in Virginia.

The state's cows may be contented, but some Virginia housewives aren't. They want open dating on milk and milk products sold in supermarkets and other stores. This would mean that pasteurization or pick up dates would be printed in terms that the consumer could understand. And they have a strong ally in Mrs. John A. Baker of Arlington—a member of the Virginia State Board of Agriculture and Commerce, the agency that would have the power to order such open dating.

Mrs. Sacha Miller of Springfield, representing the Virginia Citizens Consumer Council, testified last week before the Virginia Board of Agriculture and Commerce, saying that perishable products are already marked with

the date that they were packaged or the date they should be removed from the shelves. However, she added, the dates are marked in a code that currently benefits only the retailer. It would be in the interest of the milk industry, the retailer and the consumer if these codes were replaced with open dates, she said.

Instead of labeling milk with figures such as 709, 907, 0524 or 45520 to indicate that it should be removed from the shelves by July 9, milk should be just labeled with the date, JUL 9, said Mrs. Miller.

The Virginia Citizens Consumer Council presented petitions asking for open dating signed by 300 Virginians during a brief mailing campaign. Mrs. Miller said signature are still being collected.

The board passed new regulations for production, processing and sale of Grade A milk that did not mention open dating, but proponents did win a point.

John C. Lester Jr. of Forest, president of the board, appointed a three-member committee to study and report on open dating. Edward C. Norman of Perceville is chairman of the committee, and members are Millard B. Rice Jr. of Phenix, and Mrs. Baker.

This open dating "could possibly include other perishable food items," according to Raymond D. Vaughan, who is executive assistant to the commisisoner of agriculture and commerce.

Wilbur M. Gaunt Jr., executive vice president of the Virginia Dairy Products Association, is categorical about what that problem is.

"We are unalterably opposed to open dating," he said. "Some distributors and processors do have open dating, and they have all kinds of trouble. Dating has nothing to do with the freshness of the product—it's how it's handled that matters," he said.

Temperature problems that can originate in a retail store—such as storage for an hour or so in a back room, or stacking in a cooler above the refrigeration line—would not be solved by open dating, he said. "Open dating has no public health significance."

The committee investigating open coding will be given aid and advice by industry and by members of the department of agriculture and commerce.

M. W. Jefferson, head of dairy inspection for the department, said, "We regulatory people hate to see the coding question come back because of the extreme waste it creates. Open dating in our opinion would be an extra cost."

Jefferson also prophesies that the consumer would purchase only the milk with the latest date, forcing dairies to make daily deliveries, and collect day-old milk that was "perfectly wholesome."

The returned milk would then either be dumped, creating sanitary problems, or "down-graded"—re-pasteurized at a higher temperature than before and used in such milk products as ice cream, cheese or butter, he said. (State law prohibits the re-pasteurization and re-sale of milk as such.)

To extra costs resulting from these procedures would be added the costs of the unused and discarded milk cartons, Jefferson said.

Jefferson can enumerate off-the-cuff the names of about a dozen localities, including Richmond, that have rescinded milk-dating regulations in the last 15 years.

He served as representative of his department on a National Labeling Committee that, after six years work, drafted a model labeling law for milk and milk products.

"Twenty-eight states have adopted it, and one thing it says is that (open) dating should be prohibited," said Jefferson.

Mrs. Baker is wholeheartedly in favor of open dating of milk (and of all perishables, for that matter) and attributes the seeming silence of other board members on the subject to a lack of exposure to problems of milk-buying. "I ask them, have you ever bought a half-gallon of milk for your wife?" she says.

"What we have now in Virginia is real confusion," she said. "A coded number is put on to show the advance or expiration date, which can be six to 10 days after pasteurization. Some milk is on sale two weeks after pasteurization. If you read the codes, you still don't know what they mean. (Mrs. Baker does concede that proper refrigeration will keep bacteria count down, but she questions what happens to milk's vitamin content after a time.

Mrs. Baker wants open dating, but she wants a regulation that can be enforced.

"If you have a strict law, and not enough people to enforce it, that could be a disaster," she said. Therefore, she leans toward a regulation that would require posting the pasteurization date on the carton "and let the customers make up their own minds.

An alternative, stricter law—such as is now in force in Baltimore—might require printing on the carton the "pull" or expiration date, roughly four days after pasteurization.

Mrs. Baker has an answer for the argument that sour milk can always be returned for credit. She says, "I don't thing that's the answer. We should be able to take for granted that food is fresh. And it's not the easiest thing for people—especially mothers with little children—to go back. It takes time and money."

VIRGINIA CITIZENS CONSUMER COUNCIL, INC.,
Alexandria, Va., August 24, 1970.

ELLIS LEVIN,
℅ CONGRESSMAN FARBSTEIN,
House of Representatives,
Washington, D.C.

DEAR ELLIS: Enclosed is a copy of the statement prepared by the Virginia Citizens Consumer Council and delivered by our founding, past president, Mrs. Sacha Miller, before the Virginia Board of Agriculture and Commerce earlier this summer. This statement shows the concern of Virginia's only statewide consumer citizens organization over open dating and presents a case showing that it is in the interests of the retailers and producers as well as of the consumers for open dating to be instituted with regard to milk and milk products.

We are very much aware of the outstanding efforts that the Congressman has been making to call attention to the need for open dating in supermarkets and other stores and we support him in these efforts. If you feel our statement would be of interest to others, we would be delighted if you would add it to the series of articles you have been inserting in the Congressional Record to show that consumer groups throughout the country are behind the Congressman in his campaign for open dating.

Unfortunately, the Virginia Board of Agriculture and Commerce declined to institute open dating of milk and milk products in July, and this is one reason why we look to the federal government. Hopefully, it can act where state governments have been unwilling to act in the consumers' interests. The Virginia Board of Agriculture and Commerce, however, has, as a result of its hearing in July, set up a committee to look into packaging and selling of perishables, particularly open dating, and we remain hopeful that the Board will at a later date issue regulations favoring open dating.

Sincerely,

Mrs. LAURA HOROWITZ,
Board Member.

OPEN DATING OF MILK AND MILK PRODUCTS

(Remarks of Sacha K. Miller, past president and board member, before the Virginia Board of Agriculture and Commerce, July 2, 1970)

First, I would like to introduce myself to this board. My name is Mrs. Sacha K. Miller. You might say that I am a small business woman in that I am in charge of production and fiscal responsibility at a small dwelling in Fairfax County, Virginia. I am first, and foremost, a homemaker with a husband and three and one half children. In my spare time I am a Board member of the Consumer Federation of America, headquartered in Washington, D.C., and a Board member of the National Consumer League, also headquartered in Washington, D.C.

I am here today as a Board member and past president of the Virginia Citizens Consumer Council in order to voice our support for the open dating of milk and milk products.

When weighing the pros and cons of this issue, it is imperative that we consider all aspects of open dating. You must consider the side of the milk industry and retailer as well as that of the consumer. I would like to suggest that while considering all of these—you keep in mind that usually the interests of industry, retailer and consumer go hand in hand. These mutual interests, when brought to fruitation, result in fair play within the market place. In this instance, fair play is open dating of all milk and milk products. Open dating will result in marketplace equality—equal knowledge for all—manufacturer, retailer and consumer.

At the present time, most perishable food is coded. A code which signifies either the date the item was packaged or the date after which the item should not be sold. These codes serve to advise store personnel when items should be removed from the shelf. With the codes now in use, far be it for the consumer to try and decipher their meaning. As it stands now, any coding utilized by industry and retailers is of great benefit to the retailer as it helps him in controlling his inventories. He's more aware of his ordering and has a gauge to go by so that he won't over-order. All well and good.

Now, let's look at our consumer. She (and no offense to you gentlemen here today, but *she* is usually the one we find at the dairy counter, meat counters, etc.)—she too is running a small, but equally important business. In her own right she is a manufacturer, retailer and consumer rolled into one. Let me illustrate. She must purchase, or consume, from the retailer. Then she is her own "trucker" in the sense that she delivers her goods to her "plant" at 000 Somewhere Drive, USA, and begins her process of manufacturing. Her end products result in, hopefully, delicious, nutritional, balanced meals and their accompaniments: cakes, casseroles, pies, chocolate milks, entrees, salads, etc. After this labor is spent—she "sells" her products to her family. So you see—the little consumer is actually the largest industry in this country. The consumer is just as concerned over what I'll call efficient production quotas as your largest industries.

At this time, all coding is a voluntary gesture by the manufacturer on behalf of the retailer. Since coding is already being done, it really isn't an insurmountable problem to undertake, and engage in, "open dating."

For instance, I buy milk. My carton is stamped with a 709, or a 907, or a 5254, or a 45520. And usually one, two, or three of these numbers are so blurred they are indecipherable to me. But, I know that ultimately, this code says this carton of milk is considered good until July 9. After which it should be disposed of in the name of good health and salmonella. I consider myself a fairly intelligent, informed consumer. What about those consumers who don't know, or understand, these codes? How much better, for all of us, to be able to refer to a clear, legible date—such as JUL 9.

If this form of dating, what I am calling open dating, were utilized, our consumer could also benefit. As I've tried to demonstrate, our little consumer is in fact, a little industry unto itself, with thousands of dollars at stake; and she too, must maintain an

economical inventory and must be able to determine shelf-life and health standards for those consumers for whom she is responsible. Spoilage and shelf life are just as important, for efficient management, to her as they are to the managers of A & P, Safeway, and Grand Union.

I am not here today to make accusations or pass judgment—but, the way this voluntry dating or coding is used now, it tends to deliberately conceal information which the consumer needs vitally in order to make intelligent decisions.

It has been said that if consumers are given the benefit of "open-dating," they will buy only the latest items and leave the earlier dated ones to spoil. I say—not true! we are right back to inventory efficiency.

Stores can overcome this by closer inventory controls which would result in goods being moved more quickly after being put on the shelf and by not mixing goods of significantly different ages on the shelves. When goods are not sold promptly, they can and should be reduced in price to allow the consumer to decide whether they are willing to purchase slightly older but still relatively fresh goods at lower cost. This is done with bread and canned goods now.

We ask that the codes be replaced NOW with clear, readable dates. We ask that you require the date for removing perishable milk products from the shelf be clearly marked on the package.

Many times we have come to Richmond on behalf of consumers, asking for regulation and truth. We come once again, to the capitol of the South, asking for no more, nor any less, than Truth-in-Dating. . . . I thank you.

[Release from Virginia Citizens Consumer Council, Inc.]

VCCC ASKS FOR OPEN DATING ON MILK AND MILK PRODUCTS

RICHMOND.—In testimony presented today (July 2) to the Virginia Board of Agriculture and Commerce, the Virginia Citizens Consumer Council (VCCC) asked for open dating on milk and milk products sold in supermarkets and other stores in Virginia.

Perishable products are already marked with the date they were packaged or the date they should be removed from the shelves, said Mrs. Sacha Miller, speaking on behalf of the Council and to the state's consumers. However, she added, the dates are marked in a code that currently benefits only the retailer. It would be in the interest of the milk industry, the retailer, and the consumer if these codes were replaced with open dates, she said.

Instead of labeling milk with letters like 709, 907, 05254, or 45520 to indicate that it should be removed from the shelves by July 9, milk should just be labeled with the date, JUL 9, the Consumer Council testimony maintained.

"We ask that codes be replaced now with clear, readable dates. We ask that you require the dates for removing perishable milk products from the shelves to be clearly marked on the package," Mrs. Miller said.

To back up the VCCC's request for open dating in Virginia, Mrs. Miller presented the Board of Agriculture and Commerce with a number of petitions signed by citizens throughout the state asking for open dating. She said that because the Council had only a short time before the hearing to circulate the petitions, signatures are still being collected and will be forwarded to the Board as they arrive.

In her testimony, Mrs. Miller developed the idea that the housewife, like the store owner, is running a business operation in running her home. "Spoilage and shelf life are just as important to her as they are to the managers of A & P, Safeway, and Grand Union," Mrs. Miller said.

Relatively speaking, the housewife has just as much money at stake as the shopkeeper does, Mrs. Miller continued. Her plant is her home. She must purchase supplies from the stores, with which she manufactures finished "products" (e.g. chocolate milk, cakes, casseroles, etc.) which she must "sell" to a group of consumers, her family. The little consumer is, in fact, the largest industry in the nation, said Mrs. Miller.

Mrs. Miller, a founder and past president of the VCCC, introduced herself as "a mother and homemaker with 3½ children." She is currently a board member of the VCCC, the Consumer Federation of America, and the National Consumers League.

[From the Washington Post, July 4, 1970]

"SHELF LIFE" DATE ASKED FOR MILK

A Virginia consumer group has asked the state's Board of Agriculture and Commerce to require that packages of milk and milk products sold in food stores bear the date the item can be expected to spoil.

Most milk processors use codes on the packages to tell store managers either when the item should be pulled from the shelf or when the product was packaged.

Mrs. Sacha Miller, a board member of the Virginia Citizens Consumer Council, testifying before the state board Thursday said "spoilage and shelf life are just as important to her (the consumer) as they are to the managers" of stores.

Food store officials have said they only sell milk that they know will last at least a week in home refrigerators before spoiling.

They also contend that if they placed the actual spoilage dates on products, shoppers would buy only the freshest items. This, the store officials say, would result in wasted products and higher operating costs that would be passed on to consumers.

PRESIDENT'S DECISION TO FLY THE AMERICAN FLAG CONTINUOUSLY AT THE WHITE HOUSE

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, August 31, 1970

Mr. THURMOND. Mr. President, it has come to my attention that President Richard M. Nixon has given orders for around-the-clock flying of the American flag at the White House.

This decision is made possible because the American flag may be flown at night if it is properly lighted. Steps have been taken for special lighting effects at the White House, and it is my understanding the effect of the flag flying over the President's house at night is most inspiring.

I commend the President for taking this step. Further, Mr. Walter R. Martin, president general of the National Society of the Sons of the American Revolution, has also praised the President for this action.

Mr. President, I ask unanimous consent that the letter from General Martin to the President dated August 27, 1970, be published in the Extensions of Remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE NATIONAL SOCIETY OF THE SONS OF THE AMERICAN REVOLUTION,

Washington, D.C., August 27, 1970.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Your recent decision to fly the American Flag over the White House twenty-four hours a day is strongly endorsed by the Sons of the American Revolution. Particularly now, when some of our people seem to have forgotten that thousands of Americans have died so that our flag might fly over a free country, your action is proper, appropriate and justified.

As the thirty-seventh President of the United States, your job is probably more difficult than that of any of your predecessors. Our Country is striving to prove that government of the people, for the people, and by the people will not perish. People of diverse political philosophy, aided by misguided but, perhaps, conscientious students and well-meaning adults, are successfully promoting anarchy.

Our flag is a rallying point around which all Americans can join; all races, creeds, and colors. The Sons of the American Revolution was founded in 1889 by descendants of those brave men who wrested independence from tyranny. We are dedicated to the principles for which they fought, especially the preservation of human freedom. The Flag is the visible symbol of America, and it is only right that it be flown twenty-four hours a day to remind all of us that we are free, and must rededicate ourselves to remain so.

Sincerely yours,

WALTER R. MARTIN,
President General.

DESEGREGATION, NORTH AND SOUTH

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. DICKINSON. Mr. Speaker, I was very interested to notice in the news accounts of today, and also yesterday, that President Nixon and a group of his top Washington advisers were to fly to New Orleans today to talk with people from seven Southern States about how fast and how far school desegregation will be carried out in the South this fall.

This is commendable, and I hope the President comes up with some workable solution.

But it would seem to me, Mr. Speaker, and it would seem to most of the people in my area of the country and indeed to most people of the United States, that if this administration is in fact interested in carrying out the law equally there must be evenhanded justice.

Mr. Speaker, it would seem to me that if this administration is genuinely interested in justice and carrying out the laws, it would be just as concerned with segregation in the North as in the South.

As a matter of fact, Mr. Speaker, as of today, there is more genuine segregation in the North and in Chicago itself than there is in the whole State of Alabama.

If this administration is truly interested in carrying out the law of the land and in treating everyone fairly, then I would say it is time to bring lawsuits

elsewhere than in Alabama, Georgia, and Mississippi. There are 90 school suits consolidated in one suit in the middle district of Alabama. There has not been one suit filed in Illinois that I know anything about or in any other State that has in fact more segregation than we have.

Mr. Speaker, I am again calling on the Department of Justice today to start enforcing the law fairly throughout the land.

Mr. Speaker, according to June, 1970, statistics prepared by HEW in its "Survey of 93 of the 100 Largest Elementary and Secondary School Districts," there are over 87 percent of Chicago's Negro students going to schools in essentially all-black schools. An all-black school is defined by HEW as having an enrollment of between 90 and 100 percent Negro students. Only 3.4 percent of Chicago's blacks are attending integrated school systems. An integrated school, according to the Health, Education, and Welfare definition, is one where blacks are enrolled with 50 percent or more of the student population consisting of white students.

The survey continues pointing to the double-standard policies that are ignored in the North and abhorred in the South. How can the schools outside the South continue to receive preferential treatment when their school systems are much more segregated, when there is much less effort by them to obey the law? The answer is simple. They are allowed to keep their segregated neighborhood school systems while busing and closing of schools is rampant throughout the Southern States.

We in the South are not asking for special handling and special treatment. We are merely asking that laws which we deem unworkable, especially in regard to busing, be applied equally throughout the United States. We are sick and tired of being the scapegoat. If the laws being applied in the South are just and equal, we demand that they also be applied justly and equally to all sections of the country.

Schools in the South are complying, but HEW's own statistics—which appear below—show clearly that this is not the case outside of the South.

If they mean what they say and the law applies in every State, enforce it in every State—not just in the South.

Mr. Speaker, I include a tabulation of the HEW survey:

TAKEN FROM HEW'S "1969-70 SURVEY OF THE LARGEST 100 SCHOOLS"

[In percent]

City	Blacks attending integrated schools	Blacks attending all black schools
New York, N.Y.	17.6	54.3
Chicago, Ill.	3.4	87.1
Milwaukee, Wis.	11.4	71.3
Gary, Ind.	2.9	86.6
Detroit, Mich.	6.4	69.2
Newark, N.J.	2.4	85.3
Philadelphia, Pa.	8.2	69.6
Washington, D.C.	1.1	94.9
Los Angeles, Calif.	4.8	84.5
Houston, Tex.	5.5	87.0
St. Louis, Mo.	6.9	84.9
Miami, Fla.	16.1	70.8
Baltimore, Md.	8.4	77.7
Cleveland, Ohio	4.0	88.0

THE SEVENTIES: A TIME FOR GIANT STEPS

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. CULVER. Mr. Speaker, much talk is heard these days about "the sixties" and the great changes which occurred in the United States during this period. One of the fields in which the foundations of major innovations were laid, but to which little public attention has been given, is that of education.

In the past 10 years psychologists, sociologists, linguists, and educators as well as leaders in almost every profession, have devoted a great deal of effort toward learning how the growing process of young minds can best be fostered. Experiments have been made; new forms have been tried; the potentialities of the computer have been exploited; and a great deal has been learned.

This progress has not been confined to the urban school systems and the problems of the "culturally disadvantaged." Programs are underway to better stimulate the maximum development of each individual's unique capabilities, regardless of his social background. The rigidities of a system based solely upon IQ ratings are becoming apparent, and they are being changed. The growth process of one's creative abilities is becoming better understood, as are the methods of conveying an appreciation for the beauty of art and music.

Although many of these developments may not yet have appeared in most of our school systems across the country, new techniques are becoming more widely utilized, producing new possibilities about which every parent should be aware.

The character of these changes, which will become more prevalent during the seventies, is concisely described in an article printed recently in the Education Digest under the authorship of Joe L. Frost and G. Thomas Rowland. I insert this article in the RECORD at this time for the benefit of my colleagues and all concerned citizens:

THE SEVENTIES: A TIME FOR GIANT STEPS

(By Joe L. Frost and G. Thomas Rowland)

The course of educational events during the sixties was unique in history. The poor were discovered; the obsolescence of the slum schools was exposed; early childhood education was rediscovered; technology invaded the schools; federal support spurred innovation; the hippies and student militant groups forced public attention to focus on our stumbling schools; teachers, too, decided to join the act and demanded the right to participate in the politics that permeate schools.

In general, life was exciting for educators of the sixties, though most of them took only baby steps toward the future. Few were able to break away from ingrained notions about norms and grades, workbooks and basals, and free themselves to be daring and courageous in educational programing. Federal funds were responsible for practically all the innovations of the sixties. There is no reason to believe that these innovations—Head Start, research and development centers, regional laboratories, libraries, Title I instructional programs, to mention a few—would have been supplied by any other source, nor is there reason to fear that federal sources will be less important during the seventies.

Assuming sympathetic politicians, the seventies will be a decade of unprecedented progress in education. The few adventurous educators of the sixties will attract a sizeable following during the seventies. Cooperation and teamwork among teachers, specialists, administrators, and consultative sources will permanently erase the isolationism of individual teachers. Although very young children will continue to receive the close attention of one familiar adult, this adult will be a member of an instructional team composed of highly specialized people, semiprofessionals, and a clerical worker.

After hundreds of years of honored service, our education system is being accused of social obsolescence. Its critics feel that time and too many encounters have made once-keen professionals tough, and that they fail to respond. If such is true, time may be running out for education as it was known and practiced in the first half of this century.

In the late sixties, the great urban schools were the embodiment of all the ills of education. The urban school structure was attacked at its very core. One proposal was that the enormous structure be divided into smaller structures which would be more manageable and more in touch with the communities they serve. This concept of decentralization, and the battles it engendered, may well be recognized in the future as a key element in the evolution of education. At stake was the need for a school to work with the children of a community rather than to attempt to force them into some fantasized norm.

Tragically not everyone believes that the teacher of the sixties really cared about the cries for change which came from ghetto parents whose own educational experiences had chained them to poverty. If teachers who punch timeclocks and commute continue to exist in the seventies, then the school will have continued to exist as an irrelevance to education instead of a necessity, and society will turn to some other alternative.

The teacher of the seventies will necessarily come to terms with the essential humanity of students. Sensitivity development will certainly become a vital part of the education of teachers. For the teacher to be sensitive does not mean a compromise with science. Indeed, the sensitivity of science may well hold the key to the needed changes in educative processes. Massive research related to learning and memory is coming from biochemistry and neurophysiology, and the frontiers it opens for education almost stagger the imagination. Perhaps we will find out in the seventies what all this new knowledge will mean for the educator, just as we will surely come to terms with the possibility that the nature of the individual, as reflected in the chromosomatic mosaic, largely influences the learning processes. This may mean that contentual objectives will have to be radically rethought and revised so that the teacher can approach the student on a genuinely individual basis.

One of the most remarkable possibilities for the future is concerned with the science of child development. Educators have come to understand at last that the reasoning of the child is not inferior but qualitatively different. And they have been forced to come to terms with the idea that if the brain is the functional organ of intelligent behavior, and if that organ can, as research has demonstrated, be made more effective by experience, then there is an important possibility that education can overcome the debilitating effects of deprivation in early childhood.

As the allied sciences of psychology and education build toward an interdisciplinary

science of human behavior, the notion of "*an* intelligence" should fade away. The IQ will be abandoned as false and unworthy, though reevaluation of measures of intelligent behavior will not cease, since they do have value in helping the teacher plan for the needs of children.

The contentual objectives of the seventies will be expressed in a to-the-point fashion, reflecting the skill of educators who apply objective criterions in their search for curricular relevancies. As the teacher plans from ordinal (as opposed to normative) bases, and as the conceptual structures of the respective fields of inquiry are clarified, it will become possible to avoid traditional hit-or-miss teaching.

The linguist stepped heavily into the educational scene of the sixties, adding considerable fuel to old controversies about the teaching of speaking, spelling, reading, and writing. As linguists pool their talents with psychologists, educators, sociologists, and anthropologists to discover structure in language and apply it in dynamic societal contexts, the implications for greater flexibility of teacher attack will become obvious and exciting.

The teacher and the child will discover new avenues for vitalizing communication—nonverbal clues, multiple media, the fine arts. The supporting personnel-administrator team will pool skills to build diagnostic programs in every content area.

In the social studies curriculum, topics once considered taboo or overly difficult—sex, racial relations, violence, politics, economic systems, pollution, war—will be among fields of inquiry. Key concepts and generalizations will replace the "quiz show" content of the past. As humanistic, social, and intellectual objectives become relevant to our times, the effects will be observed in the miniature society of the classroom.

Despite verbal homage, the spirit of inquiry is still absent from most science and mathematics instruction. Even in many of the newer programs, more attention is given to *what* and *how* content is to be taught than to how learning is to take place. In the near future, the collective possibilities of science and mathematics programs for dramatizing related studies will become clear.

Esthetic education in the schools is a relatively untapped field. Art and music are rarely taught in ways that develop love and understanding for the art form. We suggest that the skills prerequisite to sensory intensification are identifiable; that a hierarchial structuring of performance criterions leading to increased awareness in individuals is possible; and that the forthcoming decade will witness the fruition of these goals.

If giant steps are taken, schools of the seventies will reject normative teaching in practice as they have already done in theory. The child will no longer receive letter grades; grade levels will be abolished. These will be replaced by a continuous diagnostic program appropriate to the individual child. The teacher will devote his time to teaching relevant processes of scientific inquiry, and the computer will provide for the repetitive type of learning through individually tailored programs, as well as for record-keeping, reporting to parents, and diagnostic evaluation.

International television via satellites will revolutionize communication of societal roles. The complexities of cultural interdependencies will crease new problems unimaginably complex, and the concept of the school as an institution set apart from society at large will grow increasingly obsolescent.

The school may assist parents in developing appropriate out-of-school activities, but arduous homework will be rejected. Schools will utilize musums, parks, libraries, theaters, industrial complexes, farms, and other sites as classrooms for providing experiences geared to the unique interests of students.

Early childhood education will be universal. Regional laboratories and other federally sponsored organizations will develop imaginative programs and assist schools in development activities. Teacher aides (paraprofessionals) will assist the teaching team and even assume some instructional roles. There will be times for small group instruction, individual explorations, and large auditorium-type activities using media in imaginative ways.

Teachers will have time for inservice education during school hours. Working closely with teacher-education institutions and using the resources of research centers and regional laboratories, the principal will find that his primary task is ensuring the ongoing education of his staff. His partnership with teacher-education institutions will be cultivated to the extent that college students will have semiprofessional roles in the public schools. University personnel will assume instructional duties for both college students and public school teachers in this cooperative relationship.

The "training program" for teacher education will be swept out like cobwebs from colleges and schools of education. Teachers are not trained, and this will become clear when we realize that those who think creatively should be more valued than those who conform.

If giant steps are taken, the educator will be a scientist-professional, qualified to analyze the data of behavior and then to couple this behavioral analysis with a keen understanding of human development in order to plan precise, effective intervention with the objective of change toward a predetermined goal.

UNIVERSITY CENTERS FOR RATIONAL ALTERNATIVES

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 1, 1970

Mr. SCOTT. Mr. President, on June 8, my good friend the able and distinguished majority leader very kindly placed in the RECORD the partial text of my commencement address delivered at Gettysburg College in my Commonwealth. My remarks were an appeal to reason and an urging that all of us seek to assert our strongly held views with a deep and honorable respect for the differing opinions of others.

Reason and mutual tolerance are indispensable to the survival of academic institutions. One organization that seeks to uphold these principles is University Centers for Rational Alternatives. This organization, whose national headquarters is located at 110 West 40th Street, New York, N.Y., was established early last year to encourage faculty members on college and university campuses across the Nation to organize local chapters in defense of academic freedom and integrity.

One of the founders and chairman of this distinguished group of scholars and teachers is Prof. Sidney Hook, of New York University, author of the recently published book, "Academic Freedom and Academic Anarchy." On July 23, Professor Hook testified on behalf of University Centers for Rational Alternatives before the President's Commission on Campus Unrest, whose Chairman is the distinguished former Governor of my Commonwealth, the Honorable William W. Scranton. I ask unanimous consent that Professor Hook's statement be printed in the RECORD. I also ask unanimous consent that a list of the officers and directors of University Centers for Rational Alternatives be printed at the conclusion of Professor Hook's statement.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TESTIMONY OF PROF. SIDNEY HOOK OF NEW YORK UNIVERSITY, PRESIDENT OF UNIVERSITY CENTERS FOR RATIONAL ALTERNATIVES, BEFORE THE PRESIDENTIAL COMMISSION INQUIRING INTO THE CAUSES OF CAMPUS UNREST

University Centers for Rational Alternatives is a grass-roots organization of scholars and teachers of different educational and political viewpoints. It is united by its dedication to three basic propositions. The first is that the entire academic community should freely and continuously participate in resolving all issues of educational policy. The second is that there is no place for violence or the threat of violence in this process of evaluation and decision. The third is that the academic community must gird itself against all threats to the academic freedom of scholars and teachers, from without and within.

American colleges and universities today face the gravest crisis in their history. Some university presidents to the contrary notwithstanding, it is *not* a crisis caused by lack of money. It is a crisis caused by the lack of a coherent educational philosophy and by a betrayal of the primary commitment of the university to the quest for truth and integrity in inquiry, in learning, and teaching. All the money in the world cannot remedy the failures of nerve and intelligence that follow from the loss of central purpose. Nor is the crisis one of student unrest—if unrest is related to the pursuit of an education, to interest in ideas and beliefs. Intellectual unrest is not a problem but a virtue, and no university can have too much of it if the university is engaged in genuine educational tasks. The problem and threat is *not* academic unrest but academic *disruption* and *violence*, which flow from substituting the political goals of action for the academic goals of learning.

Some academic administrators are currently seeking to muddy the waters by pretending that the public is getting fed up with controversy, and that the chief threat to academic freedom today comes from without and not from within. This is noisome hogwash—intended to draw attention away from what is actually happening on our campuses. The public's objection, of course, is not to controversy, for intellectual controversy is the life of mind. The public's objection is to *how* controversy is carried on—to the use of bombs, arson, vandalism, physical assault, and other expressions of violent and destructive impulses and desires.

Most of the problems that plague the American university today and threaten its future as a genuine educational institution can be traced to one fundamental, poisoned premise. This is the view that unless "the major social and foreign policy problems of our society" are solved satisfactorily, campus disruption and violence will continue. Leading university administrators have endorsed this proposition. One of them has even proclaimed that academic violence in part "derives from the distance separating the American dream from the American reality." This view and the actions that flow from it lead first to the political polarization of the campus, then to the political alienation of the campus from the general community and, if unchecked, will result in "academic genocide," the destruction of academic freedom.

What is wrong with this view? Many things. First, there will always be a disparity between the American dream and reality, especially when, as we raise our sights higher, we redefine the meaning and content of that dream. Second, in an open society of uncoerced opinion, there will always be social and foreign policy problems. In either case, if we accept the above view, we are confronted with a prospect of unending academic violence.

Third, this view perverts the university's function, which, in part, is to *study* social and political problems and to analyze alternative purported solutions to them. This view transforms an agenda of study into an agenda of action, and therewith converts the university into a political organization, agitating for the adoption of partisan political measures. It jeopardizes the university' tax-exempt status and invites political reprisals from a public that does not share its political commitments.

Fourth, and most important, it violates the fundamental principles of political democracy, by threatening resort to force and violence unless the community adopts the solutions to social and foreign-policy problems advocated not by the majority of the electorate, but rather by en elite minority.

To *whose* satisfaction must the "major social and foreign policy problems of our society" be solved before we have surcease of campus violence and turmoil? Even if there were complete unanimity among students and faculty on how such problems are to be solved—which is far from being the case—what right would they have to demand that the solutions they advocate be adopted by the community? Such decisions are for the representative legislative bodies of a democracy to make! The political process is open to students and faculty on the same footing as to all other qualified citizens. For a fanatical minority of students and faculty to use, or to threaten, or merely to condone violence when they have failed to persuade or convince the electorate, shows profound contempt for democratic due process.

Suppose the trade unionists or the farmers of the nation, who are also minorities but much more numerous than students, were to threaten violence unless "the major social and foreign policy problems of our society" were met to *their* satisfaction? Everybody would recognize such threats a subversive of the democratic process, and as harbingers of fascist rule, no matter what the deceptive rhetoric in which such threats were clothed.

Actually the university community is *not* homogeneous. The most militant student factions are small minorities. And they make no bones about their hostility to democracy, their scorn for rational process. Their heroes are the leaders of the most ruthless dictatorships—Lenin, Mao-tse-tung, Castro, Ho Chi Minh, Che Guevara. They openly declare that "major social and foreign problems of our society" can never be solved to their satisfaction and that their goal is the destruction of our society.

How then account for their influence, for their ability to create a major crisis in American higher education? There are many reasons. Among them are the great publicity buildup that extremist student groups and their irresponsible leaders have received in the mass media. (Liberal students who do not threaten to blow up computers are not news, no matter how intelligent their programs of educational reform.)

More important is administrative cowardice, and in consequence of this cowardice, administrative connivance. The scenario runs something like this. Different extremist groups vie with each other in making all sorts of demands on the university administration, coupled with a threat to tear the university apart. In hopes of winning them over, or of purchasing peace, the administration, often with the support of the faculty, yields to at least some of the demands, at the same time granting amnesty for defiance of rules governing student conduct. The mood of "peace at any price," together with actual fear of physical harassment, becomes dominant. The extremists escalate their demands until administrations and faculties, to avoid a new confrontation, yield on issues that politicalize the campus. Thus the university is "saved" by transforming, indeed reversing, its *raison d'etre*. A handful of extremists gain considerable prestige, while those who disagree with them appear ineffectual. Violence and the threat of violence seem to pay. Or, if the administration resists but violence gets out of hand, and measures of meeting it also get out of hand (as at Kent State), a sense of collective guilt weakens the will to resistance of almost all administrators; faculty bodies are weakened in the same way; and again the end result of cowardice and the illusion that violence can be made to pay.

An obvious consequence of the politicalization of the university is erosion of the academic freedom—of the right to teach and the right to learn—of both faculty and students. Once a university as a corporate body takes a political stand, teachers who disagree with that stand are harassed. When classes are suspended for purposes of political demonstration, or when universities are closed down by student "strikes," the teacher's freedom to teach has been abridged, or the right of nonstriking students freely to attend their classes has been destroyed. Even before recent events led some prestigious universities to mobilize their educational resources to influence Congress to take particular political actions, or led many of their students and some of their teachers to strike in behalf of causes that had nothing to do with educational issues (as in the case of the Yale strike on behalf of the Black Panthers), or led administrators to encourage the closing down of their institutions in the fall (as at Princeton) to permit electioneering for so-called "peace candidates"—even before these events, intimidation of faculty members and students by student extremists had become widespread.

It is no exaggeration to say that on many American campuses today academic freedom has been severely crippled. Certain extremist groups have interfered with the rights of students and faculty to hear views that disagree with or challenge their own. The consequence of the so-called Free Speech Movement at Berkeley is that in many areas free speech has disappeared at that campus. And not only at Berkeley! At scores of universities the extremist speakers representing revolutionary or antigovernment points of view are made welcome, but the meetings of other groups either critical of the extremists or offering forums to contrary positions are not tolerated. Their meetings are disrupted. Their speakers are shouted down, sometimes assaulted. While spokesmen for movements hostile to the government have unlimited freedom to incite to violent action in opposing government policies, spokesmen *for* these policies are often barred from campuses or can appear only under heavy police escort. By and large, in the affected institution, faculty and administration either remain silent or issue ineffectual news releases mildly deprecating the worst excesses. Even when official guests of the university have been insulted or scandalously mistreated, the administrations and faculty bodies seem loath to invoke or enforce disciplinary action.

On some campuses, fanatical student extremists have disrupted with relative impunity classes of professors of whom they have disapproved. Both students and faculty members have been threatened with bodily harm. On other campuses, similar elements have refused to permit student bodies to choose freely among curricular options relating to subjects connected with national defense, or have refused to abide by the majority student decision, once it was expressed. Scientists whose projects these fanatics have declared to be not in the public interest have been denounced, and attacks have been made against their laboratories. Most shameful of all, student fanatics have received the support of faculty allies who have encouraged and extenuated attacks on the academic freedom of their professional colleagues.

In view of the foregoing arguments and the mountains of evidence that can be cited, it is clearly demonstrable that universities that permit themselves to be politicalized are betraying their mission to serve as "citadels of reason, sanity, and civility in a deeply troubled world." Although opportunistic administrators with flexible backbone have opened the doors of their institutions to academic vandals, in the last analysis it has been the faculties who have been chiefly responsible for the decline in academic freedom. For they have lacked moral courage to uphold the professional standards of their calling as teachers and seekers of truth.

It remains to be asked: What is to be done? What measures must be adopted to insure a receding of the flood of violence and confrontation that has engulfed so many of our colleges and universities? How can we bring peace to the campus—a peace now shattered all too often by those who have cried loudest for peace in the world? There is no panacea with which this can be quickly done. We cannot abolish history or retrieve all the errors of the past, both of omission and commission. But I wish to submit an educational strategy that has recommended itself, as a possible first, tentative step, to the officers and members of University Centers for Rational Alternatives. This strategy, based on study of scores of educational disorders, is designed to work towards preventing outbreaks of violence on campuses so far as possible, and possibly to limit or contain it whenever it occurs, by methods acceptable to the overwhelming majority of the university community. The particular proposals that the strategy involves stem from a union of experience and common sense. They are not to be blindly followed anywhere or everywhere. On the contrary, they need to be intelligently adapted to specific emergencies.

A. The first thing to do is to convoke a representative assembly of the constituent parts of the university community—faculty, students, and administrators. Its chief business should be to draft the principles that are to serve as guidelines affecting the expression of dissent on any matter of interest to the academy, whether great or small. The drafting of such principles should be followed by the drafting of specific rules of implementation that spell out clearly—among other things—the kinds of conduct and behavior that shall constitute prima facie violations of the limits of legitimate dissent. At the beginning of each academic year, the principles and rules established in this way should be examined, and either reaffirmed or modified in the light of experience. Pains should be taken to make this reappraisal an intellectualy meaningful experience, not a mechanical ritual of academic piety. Academic due process should be linked up with rational process and—mutatis mutandis—with due process generally, so that conclusions will not only be fair but will be seen to be fair.

B. The rules implementing the principles should make provision for the establishment of a representative faculty-student discipline committee. The procedures for conducting hearings and the rules of behavior for defendants, complainants, and witnesses should be explicitly endorsed by the academic community or its representatives. The rules should clearly set forth the sanctions to be invoked against members of the academic community, whether students, teachers, or administrators, who disrupt the judicial proceedings of the discipline committee.

C. Violations of rules should be promptly punished by the appropriate agreed upon sanctions.

D. In the event of forcible disruption of the academic process, faculty and student marshals, equipped with cameras, should be empowered by the academic community to maintain order, report participants, and remain in liaison with the responsible officers of the university.

E. When a situation acquires a gravity beyond the power of faculty and student marshals to cope with it, the administrative authorities, after consultation with the executive or other appropriate committee of the academic community, should apply to the courts for injunctive relief, without suspending their own sanctions.

F. If the court injunction is disregarded, its enforcement should be left to the civil authorities.

G. If and when matters reach an extreme pass and hazards to life and limb—caused by arson, assault, vandalism, or whatever—can be contained only by use of police power, faculty and student marshals should accompany law enforcement officers, so that their mission may more probably be accomplished without force where resistance is not offered, and with minimum force where it is.

H. Where the scale of violence—for example, through intervention by large outside, nonstudent forces, as can happen in urban centers—takes on a magnitude that makes the previous steps inadequate or creates an atmosphere in which teaching and learning are impossible, the university may have to shut down for a limited period, and the preservation of life and academic property entrusted to the civil authorities. In such a case, before reopening, university sanctions against those found guilty of violence or inciting to violence, whether students or members of the faculty, should be strictly enforced. Amnesty for crimes of "academic genocide" can only invite their repetition.

The above strategy is designed to forestall costly and senseless violence, preserve or restore peace on the campus, and obviate the inescapable punitive legislation that continued violence will precipitate. It has the added advantage that, in case of failure, whether during the designing or the implementation stages, it will become obvious who the offenders are. I wish to conclude, however, with the reminder that in the long run the most serious threat to the integrity of teaching and learning comes not from the criminal violence of extremists but from measures of appeasement and captulation, adopted in the vain hope of curbing their frenzy. The wounds that will prove the most dangerous to the survival of academic freedom—without which the university is undeserving of its name—are the wounds that the academy inflicts on itself, in the course of bewildered and hysterical efforts to ward off further attacks by its enemies, chiefly its enemies within its own walls.

The history of American higher education is a history of change. Violence has never played an appreciable role in that history. It need not play a role today if it is recognized that the university is not responsible for the existence of war, poverty, and similar evils; that the solution of these and allied problems lies in the hands of the democratic citizenry and not of a privileged élite; and that the primary function of higher education is the quest for knowledge, wisdom, and vision—not the conquest of political power. The universities can by indirection help in the solution of "major social and foreign policy problems" by providing the knowledge, wisdom, and vision required for intelligent action—but only if it retains its relative autonomy and objectivity, and freedom from partisan political bias.

UCRA OFFICERS AND DIRECTORS[1]

Sidney Hook (New York University), President.

Paul Seabury (University of California, Berkeley), Vice President.

M. M. Todorevich (Bronx Community College-City University of New York), Executive Secretary.

Edward Chalfant (Hofstra University), Chairman, Publications Board.

James E. Roever (Speech Association), Chairman, Finance Board.

Howard L. Adelson (City College of New York).

FLETCHER THOMPSON REPORTS TO YOU

HON. FLETCHER THOMPSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. THOMPSON of Georgia. Mr. Speaker, I insert my most recent newsletter in the RECORD in order that it may be made available to all the Members who receive the CONGRESSIONAL RECORD and are not on my mailing list.

The newsletter follows:

FLETCHER THOMPSON REPORTS TO YOU

DEAR FRIEND: *Truth in housing.*—Should you have a right to know at the time that property near your home is being rezoned whether a low-rent, taxpayer-subsidized housing complex will be built or not? *Or, should the Atlanta Housing Authority be allowed to put low-rent housing on property originally zoned for regular apartments, thus denying the homeowners a chance for a hearing on the change of use?* The Atlanta Housing Authority is now trying to force low-rent housing similar to Carver Homes and Perry Homes into well-established neighborhoods without letting the homeowners in the neighborhoods know of their plans until it is too late. Why?

Fraud at Red Oak.—The deception practiced on local residents and your Congressman first came to light with the notification for funding of $4.5 million low-rent housing project at Red Oak. Notification of HUD's approval of the project was the first word your Congressman or the homeowners received that the project was even being considered at that site. *The Atlanta Housing Authority had not notified me nor the homeowners that it had submitted such a proposal on land which had been zoned for regular apartments.* Only after the announcement of the approval of the project did the true facts come to light which I say reveals blatant deception practiced on the homeowners in Red Oak.

Luxury apartments? Information supplied me about the Red Oak project and details now coming to light on other proposed projects show unmistakably that *land which was zoned on the premise of regular or "luxury apartments"* is being converted to low-*income housing without letting the neighbors know the truth before such is done.* If the Atlanta Housing Authority is able to force low-rent projects into Red Oak and on Kimberly Road at Niskey Lake without a hearing, then *a moral wrong is committed against the home-owners by denying them the right to be heard. It is wrong to represent at the time of the zoning hearing that regular apartments will be built and then, after the fact, change the use to taxpayer-subsidized units similar to Carver and Perry Homes* just because the developer can make more money and the Atlanta Housing Authority can force low-rent projects into suburban areas.

Personal appeal.—After getting the facts from nearby property owners on how they had been deceived, I personally met with HUD Secretary George Romney and *appealed to him to stop federal funding of the project because of the deception practiced on property owners.* Secretary Romney assured me he had no intention of allowing federally-financed housing projects to be placed on land where everything was not "above board." He ordered the projects to be stopped while a full review is made of the case.

Editorial reaction.—It was almost predictable that because of my efforts to keep this project from being rammed down the throats of property owners using their own tax money, that the editorial writers at Atlanta newspapers would take me to task. *Without the slightest investigation into the fraud practiced on property* owners, I was cartooned, denounced as a political "boob" and characterized as an opponent of public housing. *But this is what we have come to expect* from the once-respectable local press.

Sticks and stones.—Though the Atlanta newspapers in the cruelest fashion have lowered themselves to name-calling, I will not be deterred in representing the best interest of all citizens, white, black, poor, middle class or rich. *While the editorial writers were trying to think of new names to call me, I was busy asking HUD in Washington to approve $4,000,000 to upgrade some 9,000 units already existing in Atlanta. We got this and a few days later were also able to announce our approval, and the funding of, a 252-unit high rise, low-rent complex for the elderly.* Though the editorial writers ignored this almost $10 million for needed housing which I supported, I will continue to support that which is just and oppose that which is wrong.

Just the beginning.—In checking into the Red Oak and Kimberly Road projects, I learned that *this is just the beginning of a determined effort by social planners in Atlanta to force taxpayer-subsidized low-income public units into all the suburban areas, North and South.* Figures in the press have stated that Atlanta now has about 12,500 low income units built during the last 20 or more years and that 16,500 more are planned in the next 24 months. Plans are now being made by the Atlanta Housing Authority to distribute low-income housing projects into all neighborhoods throughout the city in an effort to eliminate "economic stratification."

Revealing conversation.—Several months ago at a reception, a holdover from the last Administration told me bluntly: *"Congressman, you might as well tell your constituents who are moving to the suburbs that they're wasting their time* because we plan to use their own tax money to build low-income units in the suburbs and send the intercity residents to them whether they like it or not." At the time I laughed and dismissed this as idle talk . . . *but it looks like this is exactly what is being tried.*

"Open communities".—As your Congressman, *I have placed myself on record with HUD as being unalterably opposed to any*

effort to force public housing into suburban home developments over the opposition of property owners. This insidious effort, I have learned, is being attempted under a program called "Open Communities" whose aim is to *forcibly eliminate "economic stratification" in all parts of the nation through the use of federally-financed housing projects utilizing both federal regulations and the federal courts.* In Chicago, for example, a court order was obtained to force 75% of all public housing to be built outside the inner city. To me, this is the ultimate in dictatorship. People naturally congregate in certain areas according to income, interests, ethnic backgrounds and other factors and to attempt to force people of diverse backgrounds together by law or regulation *is outright totalitarianism which I shall unrelentingly oppose.*

Continuing the fight.—Though I've asked HUD not to fund the Red Oak and Kimberly Road projects and have stopped them temporarily, the battle is far from won. *My investigation discloses an amendment has been proposed to the housing bill now being considered in the two Congressional subcommittees to authorize the Open Communities" program by law and also give HUD authority to completely overturn local zoning laws* through federal court suits to carry out the grand social scheme of mixing all classes through federal force. *I will fight this amendment wherever and whenever it is brought up.* You invested your hard-earned money, perhaps your life savings in your homes and dutifully paid your federal taxes while doing so. You deserve and shall get *my strongest efforts to protect your investment* from the loss of property value which undoubtedly would result if the above plan is allowed to go into effect. I shall not stand still for your property values being destroyed with your own tax money!

It is a high honor for me to serve you in Congress.

Yours very truly,

FLETCHER THOMPSON,
Member of Congress.

THE PLIGHT OF JEWS IN THE SOVIET UNION

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 1, 1970

Mr. SCHWEIKER. Mr. President, the plight of the 3 million Jews living in the Soviet Union deserves widespread and repeated notice.

Prohibited from the free exercise of their religious and cultural traditions, Jews in the Soviet Union are clearly made second-class citizens within their country.

Officially approved anti-Semitic propaganda is flourishing in the Soviet Union, yet Soviet Jews are also kept from emigrating to Israel. Today a Soviet Jew runs the risk of imprisonment if he merely makes application for an exit visa. Nevertheless, many Jews are coming forward and doing just that.

In the face of such adversity, the Jews of the Soviet Union are thus showing some remarkable courage. They want to continue living as Jews, not merely assimilate into the overall Soviet population. They deserve to have their case told throughout the world, and they deserve our active support. We must continue to call on the Soviet Government to permit emigration to Israel for all those Jews who desire to leave, and to improve the religious and cultural climate within the Soviet Union for those Jews who will remain.

Mr. President, I had the privilege recently of receiving a firsthand report on the status of Soviet Jews from a knowledgeable observer who visited the U.S.S.R. earlier this summer. He is Dr. Owen S. Rachleff, director of European Affairs for the Anti-Defamation League of B'nai B'rith

Mr. Rachleff, at my request, put some of his eyewitness, firsthand impressions of Jewish life in the Soviet Union into a written report. I feel that his report will be of considerable value to all my colleagues who are concerned, as I am, with the condition of Jews in the Soviet Union. I ask unanimous consent that Dr. Owen S. Rachleff's report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

VISIT TO THE U.S.S.R.—JUNE 1970

(Report to Senator RICHARD S. SCHWEIKER from Owen S. Rachleff, national director of European affairs, Anti-Defamation League of B'nai B'rith)

Knowing of your great concern for the Jewish population of the Soviet Union, and its present difficulties, I am very pleased to make the following report to you as a result of my recent visit to Moscow, Kiev, and Leningrad.

I. GENERAL OBSERVATIONS CONCERNING THE SOVIET JEWISH COMMUNITY

No doubt the Jewish people in the Soviet Union are having a very bad time of it. This is true even in comparison to other Soviet citizens who are not exactly enjoying total freedom and democracy. What makes the Jewish condition so unbearable is that relief, in the form of steady emigration to Israel, is not forthcoming. And so the Jew is forced to live as a pariah, a "foreigner", but at the same time he is denied the chance to "go back where he came from"—namely to Israel.

There has always been some question as to whether Soviet anti-Semitism is endemic or based upon political necessities, such as current Soviet involvement in the Middle East. In my own view, it is an endemic problem on the part of the Soviet establishment. This naturally bodes ill for the future of the Jewish community. For example:

The Jewish religion, though tolerated, is given no opportunity for growth or natural development. There are still no religious objects manufactured and no updated prayerbooks available. Though the chief synagogue in Moscow has been recently refurbished—probably as a result of tourist pressure—and the chief synagogue of Leningrad similarly scheduled for renovation, nevertheless, these houses of worship are merely shells of a moribund religion.

Police and other agencies concerned with "dissidents" still keep an eye on activities in the synagogue. This naturally inhibits the flourishing of any religious and cultural development. The Hebrew language, which is integral to the future of religious study and devotion, is not taught. Accordingly I was approached by an elderly gentleman in the Moscow synagogue who asked—in a whisper—if he could get from me a Hebrew dictionary or a Hebrew calendar.

The cultural and historical life of Jews in the Soviet Union has been pinched off, and except for the energies and devotion of brave young people, there is very little happening to assure a future for the Jewish ethnic tradition in the USSR. The government itself ignores the existence of a Jewish entity. In the Museum of Ethnology in Leningrad, which purportedly displays "all the cultures and nationalities of the USSR", there is, predictably, no mention of the Jewish People or even of the Birobidzhan culture—which for so many years was considered the "Jewish National region." Similarly, in a folk-dance festival I saw in Kiev, which again purported to represent all the cultures of the USSR—including the gypsies—there was no reference whatsoever to Jews or their ethnic songs and dances.

Regarding jobs and social rank, the Jewish people are forcibly kept in a second-class position. A pretty Jewish girl, whom I met in Moscow, found it more realistic to become a high-grade prostitute than to study for years and lose out on a good job because of a quota system or some other discriminatory practice. A young woman who had studied for years to teach grammar and linguistics was obliged to take a job as a gym teacher, while someone far less qualified filled the grammar-teaching post. She cautiously admitted that this happened because of her Jewish background. It is also true that in many engineering laboratories the Jews conceive the blueprints, renderings, and other specialized work but someone else (a non-Jew) signs his name as supervisor.

Concerning emigration to Israel, there is a great sense of futility among Jews about applying for visas to Israel. All around them they see the weary, long-term efforts of their co-religionists in trying to get out; as I view it, a pessimistic attitude about emigration has developed even among the young. In some cases there are those who are loathe to leave their families behind; others frankly do not wish to expose themselves to the troubles of the Middle East, and there are even one or two who have an oddly patriotic love for Mother Russia which blinds them to the conditions at home. In Kiev, however, a young man named Vladimir F—was very anxious to emigrate and said that his big problem was now securing enough money to "convince" the emigration bureaucracy.

The Soviet Union remains rife with *anti-Semitic materials,* both for Soviet consumption and for the tourist trade. Of course, the government makes no secret of its anti-Zion, anti-Israel posture, though it will continue to proclaim that it is not anti-Semitic in the ethnic sense. But references to "international Zionist conspiracies" and to the aggressive principles allegedly inherent in the Jewish faith cannot be written off as purely political propaganda. Indeed, such remarks smack of the fraudulent "Protocols of the Elders of Zion" campaign of the czars. Swipes at Israel and at coordinate "American imperialist aggression" are evident almost daily in the tourist-oriented *Moscow News* and the *New Times,* which are available in all hotels and at the airports.

II. SPECIFIC ITEMS OF INTEREST

The Saturn Restaurant: Young Jews, as reported, do indeed seek out tourists to make their message heard. I found this to be particularly true in Moscow, where I had occasion to visit the Saturn Restaurant, which seems to be a prominent gathering place for "swingers". The restaurant boasts of a rock band (early-Beatles vintage). Here one can speak relatively freely, often in English, with young people, both Jews and non-Jews, who have raised questions in their own minds about the System.

Kol Israel: Among the most important links with the West are the daily broadcasts of radio station Kol Israel (Tel Aviv). Despite Soviet attempts at jamming, these broadcasts are beamed in every day at 7 P.M. Because of Kol Israel broadcasts, Soviet Jews can learn the facts about the Middle East war and also hear of the petitions that have been received in Israel by those who wish to emigrate. Hebrew language programs are also transmitted, as well as news of the world. I found that a great many young people—Jews and non-Jews—were devoted to

Kol Israel and looked forward to tuning it in.

Babi Yar: The small cenotaph at the Babi Yar ravine, near Kiev, is a fairly popular tourist attraction, and as a result is relatively well-cared-for and nicely landscaped. To this date the Soviet government still ignores the tragic loss of Jewish life which occurred at this site during the Nazi occupation. The cenotaph only refers to the massacre of *Soviet* citizens at the hands of the Fascists. Now, rumors have it that a new monument will be erected which will commemorate the 150,000 slaughtered Jews. Presumably, this is in deference to the pressure of tourists. The Babi Yar monument, as far as I can report, is under surveillance. Most tourists will find that they are followed there and that the license numbers of their cabs are gratuitously noted.

Nearby Babi Yar is the only synagogue of Kiev, which has no rabbi and which is badly run-down and dilapidated. Because few tourists visit this small building, there will probably be no renovations as in Moscow or Leningrad.

In Kiev one may witness some striking contrasts in terms of religious life. Greek Orthodox priests, in their robes and mitres, are frequently seen at the Hotel Ukrainia—where they evidently live. During my stay at the hotel, a contingent came and went quite frequently and was driven in a large chauffeured limousine. No rabbi enjoys such favors. The point here is that the Soviet government, for all its official "atheism," still favors Christian clerics over Jews. One is inclined to believe this is the result of an anti-Semitic attitude.

It is interesting to note, in this connection, that a Russian Orthodox clergyman visiting France in late July denounced charges of anti-Semitism in the Soviet Union and indicated that Jews have the same opportunities, including jobs, as other nationality groups. He is Archpriest Pavel Sokolovski, who was sent from the USSR as an official observer to the Fifth Assembly of the Lutheran World Federation.

In Kiev, as well, young people want their message heard. While in that city, I learned that the Jewish martyr *Boris Kochubiyevsky,* who was sentenced for "slandering the State" to three years in prison in May 1969, had been removed this spring from his local cell in Kiev and taken to a nearby labor camp. Here he will begin his three-year sentence. Thus, in effect, Kochubiyevsky will be serving four years: the one year from May 1969 to the time of his removal to the labor camp, and the three years hereafter.

Leningrad has many interesting features concerning the Jewish problem. Here, young people will speak rather more freely because of a so-called "Western" (i.e. liberal) influence in that city. I was in Leningrad just two or three days prior to the alleged hijacking incident which resulted in a police roundup of many Jews. The only inkling I had of this was from two young men who questioned my opinions that things were "apparently better" in Leningrad. No, they said, it can be very serious here if we don't watch out. I left in the hands of one of these men a small photograph showing the April 26th "Exodus" demonstrations at the UN Plaza in New York, sponsored by the American Jewish Conference for Soviet Jewry. This was an eye-opener to them: they have heard of American activities on their behalf, but this picture was truly worth a thousand words.

III. THE IMPACT OF TOURISTS

There is no doubt that any slight improvements which may occur within the Soviet Union regarding the Jews are the result of outside pressure and the impact of tourists. It is doubtful that the Moscow and Leningrad synagogues would be scheduled for repainting and renovation if it weren't for the fact that tourists made complaints about their shabby conditions. The Soviet travel bureau, Intourist, is very sensitive to the reactions of their clients, and like any "bourgeois" agency in the West, wishes to do profitable business. However, it should be said that even for tourists, there are good times and bad times in the USSR. Therefore, a certain amount of caution is always advisable. Baggage is sometimes searched and there is a sense of "being followed" in some instances.

SUMMARY

It is hard to summarize a complicated and serious situation like the status of Soviet Jewry. Perhaps the best expression of conditions was given to me by a young Jewish student in Moscow named Mikhail. "We are given less than the others," he said, "and the others don't have very much. We want to do the best work we can, but we get second-rate jobs. They tell us we're not really one of them, but they won't let us go where we belong."

STATEMENT OF CONGRESSMAN CHARLES A. VANIK ON PEACE IN THE MIDDLE EAST

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. VANIK. Mr. Speaker, in connection with our strong desire for a lasting and just peace in the Middle East, I should like to reiterate my deep disappointment in the manner with which the administration has addressed itself to the violations by the Egyptians of the standstill cease-fire. Israel stands alone in her own defense. She cannot afford chicannery and must be abe to trust the words of those who advocate that she stand still and submit to a cease-fire. There is little chance for errors in judgment; one error in a situation of this magnitude could easily spell demise of the nation.

It is high time that the administration challenge the Egyptians' abuse of the terms of the cease-fire. The facts should be made clear. Egypt must live up to the cease-fire agreement or be blamed for its failure because of its own dereliction. The missiles must be dismantled if the cease-fire is to be maintained and Israel's integrity is to be inviolate. To do less under these grave circumstances is to face the prospect of irreparable damage to the stable Government of Israel which depended so heavily upon the work of this administration.

The extent to which the defense posture of Israel has been damaged is currently uncalculable.

Our Government has a deep responsibility to the people of Israel since the cease-fire and the subsequent enforcement of its terms are completely within our control, morally and legally. To refuse to acknowledge these violations places this administration in the tenuous position of protecting the the wrongdoer and penalizing Israel militarily and from the standpoint of future sensitive negotiations if they come about.

It seems to me only fair that the administration keep faith with the government and people of Israel and verify publicly the violations of the cease-fire and ask that the missiles be removed so that negotiations can proceed. Otherwise Israel's rights will have been compromised and negotiations will have little meaning. What is sought is lasting and meaningful peace, not further war. Now is the time that such a course may again be developed.

I wish to insert a very fine statement by Dr. William Wexler on this important subject and commend it to the attention of every Member of this House. The statement is as follows:

STATEMENT BY DR. WILLIAM A. WEXLER, CHAIRMAN OF THE CONFERENCE OF PRESIDENTS OF MAJOR AMERICAN JEWISH ORGANIZATIONS

The hopes for peace that had been raised by the achievement of a standstill cease-fire along the Suez Canal have been severely impaired by the action of the Soviet and Egyptian forces in installing missile sites and batteries within prohibited zones along the west bank of the canal.

This defiance of the basic condition of the cease-fire agreement demonstrates the cynicism with which the Soviet and Egyptian governments have responded to the American peace initiative. By violating the fundamental principle of the cease-fire—that there shall be no change in the military position of the opposing forces—the Soviet-Egyptian axis has critically undermined the very basis for the negotiations under the auspices of Ambassador Gunnar Jarring called for by the American plan. There can hardly be productive negotiations toward a Middle East settlement if one side to the conflict deliberately and flagrantly violates the terms under which the negotiations are to begin.

In his statements to the American people and his assurances to the government of Israel, President Nixon has made clear that he will not permit the Soviet government to strengthen its bridgehead into the Middle East. The cause of world peace, the defense of American vital interests and the security of Israel's people all demand that prompt and vigorous steps be taken to remove the missile sites and other equipment brought into the Suez Canal area since the beginning of the cease-fire; that the United States expand economic and other aid to Israel essential to the maintenance of a balance of power in the Middle East; and that our government make clear to all concerned that there can be no progress toward a just and lasting peace in the Middle East unless all parties to the conflict scrupulously respect the terms of the American initiative.

SENATOR PROUTY'S ENDEAVORS FOR MEANINGFUL SKILL TRAINING PROGRAMS

HON. JAMES B. PEARSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 1, 1970

Mr. PEARSON. Mr. President, during the 1960's the most imaginative ideas for job training efforts came from my good friend from Vermont, Mr. PROUTY. A look at his record indicates he was far ahead of others in his concepts. A look at his record indicates that it was his efforts that insured that job-training programs served all America—rural and urban.

His ideas keep coming. He continues to be imaginative and innovative. This decade needs his leadership in manpower training. A look at his record will prove this so. I ask unanimous consent that a

summary of his record on skill training be printed in the Extensions of Remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SENATOR PROUTY'S ENDEAVORS FOR MEANINGFUL SKILL TRAINING PROGRAMS

During his twelve years in the Senate, Winston Prouty has relentlessly attacked our nation's manpower dilemma; unemployment and underemployment paradoxically coexisting with job vacancies.

Senator Prouty has fought for manpower programs that teach skills that are needed, that train persons for jobs that are available. "To do otherwise, to train persons in unneeded skills or for jobs that do not exist, only adds to the disillusionment of the unemployed or underemployed," Senator Prouty has said time and again.

More important than what Senator Prouty has said is what he has done. He has been in a key position to act. He served as ranking Republican on the Manpower, Employment and Poverty Subcommittee and he is the ranking Republican on the Education Subcommittee. During most of the Sixties he was the ranking Republican on both subcommittees and he continually pressed for greater educational and job training opportunities.

During the Sixties there was a vast expansion of federal expenditures for manpower programs. In 1965, the total federal expenditure for manpower was $403 million and 278,000 people enrolled for the first time in such programs. In 1969 the federal expenditure totalled $2.2 billion and there were 1,761,000 new enrollees.

While the statistics are impressive, Senator Prouty has been most concerned that job training programs are responsive to all regions and all training needs. He has fought hard to insure this is the case. The major momentum for job training began in 1962. At the time the country was slowly recovering from a recession. Senator Prouty responded with a bill called the Public Works Employment Act of 1962. Its purpose was to reduce unemployment through acceleration of public works programs. But it offered much more. The bill sought to permanently relieve unemployment through manpower training on projects which could later be used in the private sector of the economy.

Senator Prouty made it clear that "make war" was not enough for those who had the potential for regular employment. His position has not changed. His bill also provided for a substantial state role in the program. Senator Prouty's bill never became law, but it served to stimulate the landmark Manpower Development and Training Act of 1962. The Act was the beginning of the big push for job training in the 1960's.

THE MANPOWER DEVELOPMENT AND TRAINING ACT OF 1962

Senator Prouty was one of the principal sponsors and primary supporters of the Manpower Development and Training Act of 1962.

The bill was a bipartisan product of the Labor and Public Welfare Committee, but Senator Prouty often reminded his Democratic colleagues that their party had adopted a Republican concept—job training by and for the private sector.

The two essential components of MDTA are: (1) Institutional training of skills in classrooms, shops and laboratories; and (2) On-the-job training of skills in the factory, shop or office.

In the institutional training programs, the federal government provides 90% of the cost of instruction and allowances for trainees. The state contributes 10%. In 1969, 461 Vermonters enrolled in over thirty institutional training programs throughout the state. The federal government provided $508,282 to support these programs.

During the time that these Vermonters were receiving classroom training, 109 Vermonters enrolled in ten on-the-job training programs. These trainees were learning skills as they worked under supervision. Under MDTA, the federal government contracted with private employers and contributed $141,602 to support OJT programs in Vermont.

The OJT portion of MDTA was later to be used by the Labor Department as a model to establish the Concentrated Employment Program (CEP) where necessary supportive services are supplied together with job training. The Job Opportunities in the Business Sector Program (JOBS) run through the National Alliance for Businessmen, was to adopt on-the-job training and the concept of hire first, then train.

Perhaps it was a Republican idea, but that's not what is important to Senator Prouty. The idea was put into action in 1962 and Senator Prouty and others have been able to build on its successes and correct its failings. He was also able to expand and redirect vocational education programs to provide early opportunities for skill training.

THE VOCATIONAL EDUCATION AMENDMENTS OF 1963

The Vocational Education Amendments of 1963 revitalized vocational education across the nation. They provided greatly increased federal support for vocational education programs. Senator Prouty helped draft the amendments and made certain that allocations to the states were based on ability to pay, as well as population. Without this provision, Vermont and other rural states would have been short-changed.

Senator Prouty also made sure that construction funds could be used for divisions of schools teaching vocational education, rather than only for schools devoted solely to this purpose. Again, the rural states were protected by Senator Prouty. He also won his battle to include semi-skilled occupations in programs previously restricted to skilled occupations.

THE ECONOMIC OPPORTUNITY ACT OF 1964

Senator Prouty approached the "war on poverty" with a determination to make it successful. In 1964 a leading New York newspaper dubbed Senator Prouty "one of the few who seem to care if the program actually does what it purports to do." He cared enough to fight for anti-poverty manpower programs that offered hope that the trainees would be able to find jobs at the end of their training. He was critical of "make work" projects for those with the potential for meaningful self-supporting jobs. He still is.

His concern about structural unemployment resulted in specific proposals. In a special minority report filed by Senator Prouty and Senator Len Jordan of Idaho, several recommendations were made:

(1) Tax credits for education expenses be enacted. In 1967 and 1969 the Senate approved such a proposal, but it is still not law.

(2) The Manpower Development and training Act (MDTA) be expanded to allow private vocational education schools or technical institutes to run MDTA programs. After six years, Senator Prouty is close to achieving this aim.

(3) A program designed to supplement the regular unemployment insurance program at any time in the future when unemployment nationally increases beyond the level for which the regular program would be responsible. This was a reiteration of a proposal first contained in a bill he introduced in 1961. This proposal was adopted into law in 1966.

(4) Counseling under the Vocational Education Act of 1963 for seventh and eighth graders be lowered to the fifth and sixth grades.

(5) A national clearinghouse for matching skills and jobs be set up. The job bank concept was finally adopted in 1970.

(6) The establishment of unemployed workers' revolving funds to give the jobless temporary assistance in paying installment debts be a proper subject for labor-management negotiations.

(7) The establishment of a system of mortgage unemployment insurance for the purpose of preventing foreclosure resulting from lengthy unemployment.

(8) That employers be given a tax credit for training expenses similar to the 7% tax credit for capital investment. This tax credit approach and the other recommendations were far ahead of their acceptance by Congress. Some have still not been implemented. But Senator Prouty looks ahead and keeps ahead.

MANPOWER DEVELOPMENT AND TRAINING ACT AMENDMENTS OF 1965

In 1965, MDTA was still in an experimental stage, but Senator Prouty noted several defects.

For one, under the 1962 Act, a trainee's weekly allowance was cut off when the trainee reached 22. Senator Prouty's amendment eliminated this cut-off.

Another inequity was that private training schools could participate in the program only when they could provide training cheaper than a public institution. Senator Prouty's amendment changed this so that a private institution would only have to provide the services at the same costs to participate.

Senator Prouty also foresaw problems in the new provision for 10% matching funds to be provided by the states. His amendment put this off a year to fiscal year 1967 to provide time for states to plan.

Beyond those problems he corrected, Senator Prouty foresaw inefficiencies, duplication and the prospects of programs training persons for jobs that did not exist.

In the Committee on Labor and Public Welfare, the Democrats had succeeded in writing a bill to extend the MDTA program five years to June 30, 1970. Senator Prouty argued that this experimental program needed close Congressional oversight and that it would be best to have the Act extended three years to insure an early review of MDTA. His amendment to extend MDTA three years to June 30, 1968 was defeated.

In conference with the House, the bill was reduced to four years and MDTA was extended to June 30, 1969. Senator Prouty though was proven correct. In 1968, the Congress overhauled MDTA just as he said they should.

THE HUMAN INVESTMENT ACT

In 1965, Senator Prouty first put his tax credit for job training proposal into legislation. His first version of the measure, called "The Human Investment Act" was introduced in February. Six months later after intensive study, a second version of the measure was introduced in the Senate by Senator Prouty and in the House by Representative Thomas Curtis (R.-Mo.). From its introduction, this approach began to gather strong Republican support, which continued to build.

UNEMPLOYMENT COMPENSATION FOR HIGH LEVEL UNEMPLOYMENT—ENACTED 1966

Senator Prouty's proposal for expanded unemployment compensation was enacted into law in 1966. He didn't boast, but he did point out that in 1961 he had introduced a bill similar to the one passed in 1966.

HUMAN INVESTMENT ACT REVISED—1967

Senator Prouty continued his efforts to broaden the scope of manpower programs by stimulating private industry training pro-

grams through a tax credit for training expenses. In February 1967, twenty-eight Senators joined him as cosponsors of a revised Human Investment Act. On the same day, a companion measure was introduced in the House with 129 cosponsors. The 1967 version of the bill incorporated the results of two years of intensive study to improve the 1965 measure.

The 1967 bill upped the percentage of tax credit allowable from 7% to 10% and a more precise description of the type of training expenses for which a credit would be allowable.

In the fall of 1967, the Economic Opportunity Act Amendments of 1967 were reported by the Labor and Public Welfare Committee to the Senate. Title II of the amendments, "The Emergency Employment Act of 1967" would have authorized a $2.8 billion two-year program to create public service jobs for the hard-core unemployed.

The Johnson Administration opposed the program authored by Senator Joseph Clark, a Pennsylvania Democrat. It was evident the Administration could ally those opposed to "make work" programs with staunch Administration supporters to defeat the $2.8 billion proposal. To prevent a total defeat, Senator Prouty and Senator Hugh Scott of Pennsylvania offered a substitute proposal. The Prouty-Scott plan called for a $925 million program with 57½% of the funds to be used for human investment training programs run by private industry and for on-the-job training and other vocational and institutional training programs under the Manpower Development and Training Act.

Senator Clark supported the compromise, but even this proposal was defeated 47 to 42 in what the New York Times called a "defeat for the poor".

Commenting on the Senate's refusal to accept either proposal, the Bennington Banner noted in an editorial: "In a sense the most distressing thing about the Senate's refusal to buy this program (or to buy even a scaled down version of it) was that the Johnson Administration joined the torpedo squad."

NEW APPROACHES IN 1968

Senator Prouty was discouraged in the fall of 1967. Not only were manpower efforts set back by the Senate's refusal to accept an emergency program, but it became apparent that the Johnson Administration only wanted programs it could tightly control from Washington and this was hurting small rural states like Vermont. Senator Prouty documented this evidence and he proceeded to move. As he had predicted in 1965 when he sought to limit extension of MDTA to three years, the Congress found it necessary to overhaul MDTA in 1968.

1968 was an election year and Senator Prouty was aware that the Democratic-controlled Congress was not likely to pass a Republican tax credit for job training measure in an election year. Therefore, he and Senator Scott introduced the Job Opportunities Act of 1968 which called for a three-year $3.11 billion program of federal support for private industry job training through grants rather than a tax credit. The bill though was similar in other regards to the Human Investment Acts of 1965 and 1967.

Senator Prouty was encouraged when the Republican Party adopted his tax credit for job training proposal at the Republican National Convention in Miami Beach, Florida.

He returned to Washington, intent on revising the Manpower Development and Training Act to make it more responsive to rural areas. He succeeded.

The Labor Department, he discovered, was refusing to accept applications for on-the-job training programs in rural states and applications formally filed were being ignored. The Department was re-allocating funds from Vermont and other rural states to urban centers in large industrial states. Senator Prouty hit this bias against rural America head on. In 1968 he had amendments enacted into law, which did the following:

(1) Required the Department of Labor to accept and consider all applications for on-the-job training programs.

(2) Prevented the re-allocation of one state's funds to another state until the ninth month of the fiscal year and required the Department of Labor give the state 15 days written notice prior to such transfer.

(3) Gave each state a minimum allotment of $750,000 regardless of the population formula for allocating MDTA funds. This resulted in an immediate increase of over $200,000 available for Vermont training programs.

(4) Provided that a state could itself approve programs using 20% of the funds without seeking federal approval.

(5) For the remaining 80% of the funds, provided that state approval becomes final if not reversed by the federal government within thirty days.

(6) Provided comparability of training allowances so that youths would receive the same rates as older trainees.

Senator Prouty fought hard for these six amendments. He succeeded in eliminating inequities against rural states and young trainees. The amendments established a whole new pattern for manpower training with more discretion and power at the state and local level. He brought control closer to the training actually being done. However important his victories, he still felt more could be done to streamline manpower programs. He made this clear as he urged adoption of the Manpower Development and Training Act Amendments of 1968.

The bill included another Prouty amendment which became law and has had a far-ranging impact on the nation and Vermont. His amendment required the Secretaries of Labor and Commerce to conduct a joint study of seasonality of employment in the building and construction industry. He noted that "20% of our nation's unemployment occurs in the construction industry, and approximately one-third of this figure represents seasonal unemployment." He envisioned the study "establishing affirmative programs for regularizing construction employment through such means as comprehensive advance planning and the development of improved technology in the construction field."

Initial reports required by Senator Prouty's amendment have proved productive. As a result of Senator Prouty's interest, Vermont Technical Service and the University of Vermont obtained two contracts with the Department of Labor to help with the study. VTS has made a major contribution to the study.

The Job Opportunities in the Business Sector (JOBS) Program run by the National Alliance for Businessmen and funded through the Department of Labor, was launched in 1968. Senator Prouty noted from the start that the NAB was ignoring rural America in implementing the JOBS program.

1968 was an important year for skill training. Not only was MDTA revised, but vocational education programs were completely overhauled with new provisions for the disadvantaged and handicapped. Senator Prouty also pressed for more innovation in vocational education through special emphasis programs. The Vocational Education Amendments enacted in 1968 provided a new direction, but Senator Prouty warned that unless more funds were available, we could not proceed along the direction charted.

A NEW HUMAN INVESTMENT ACT—1969—JOBS COMES TO VERMONT

On June 14, 1969, Senator Prouty addressed the National Alliance for Businessmen. He praised their successes but warned "The NAB must not dissolve into a mutual admiration society because of past successes." He had another warning about limiting the JOBS program to major cities.

"We do not begrudge the assistance JOBS is giving to our metropolitan areas. We do, however, have reservations about approving government action which results in funneling money from training programs which operate in our states into other programs such as JOBS which do not."

The National Alliance for Businessmen got the message, and began working with Senator Prouty to expand the JOBS program.

In December 1969, JOBS was extended to Vermont and several other small states. Senator Prouty's warning and urgings had worked.

In his speech to the NAB, Senator Prouty also outlined his revised version of the Human Investment Act. As updated in 1969, the measure provides a two-tier tax credit for private employer's training. The first tier is a 20% tax credit for expenses incurred in training the hard-core unemployed. The second tier is a 10% tax credit for up-grade trainiing to boost employees up the "skill ladder." Senator Prouty's latest version of the Human Investment Act embodies the recommendation of the National Advisory Commission on Civil Disorders (the Kerner Commission) and is cosponsored by thirty Senators. Senator Prouty believes that his latest proposal will work because it offers employers a bureaucracy-free approach to manpower training. He sees his proposal as adding another alternative, not as replacing existing manpower programs. He wants all sectors of our economy to be able to respond with flexibility to our nation's problems of unemployment and underemployment.

He also wants closer ties between vocational education administered by the Department of Health, Education and Welfare and manpower programs administered by the Department of Labor.

NEW DIRECTIONS IN 1970

On May 27, 1970, Senator Prouty introduced the Manpower Development and Training Act of 1970. His bill was based on the lessons of the 1960's and imaginatively sought to redirect manpower programs for the 1970's.

His bill proposed a National Manpower Advisory Committee to oversee, advise and review all aspects of manpower needs and responses.

Senator Prouty's measure sought an increased state and local role in manpower programs. It provided strong incentives for cooperation between education programs and manpower programs. It provided for direct funding of private schools and technical institutes to run manpower programs. It called for an increased minimum allotment of manpower funds for small states. It also provided for bonus payments to trainees equal to two weeks of training allowances to assist the trainee between completion of the program and his entry into a job.

The bill provided for a labor market information system using the most up-to-date telecommunications and data processing systems.

Most importantly, Senator Prouty's bill stressed flexibility at all levels so that programs can respond to changing needs.

On August 20, 1970, the Labor and Public Welfare Committee reported the "Employment and Training Opportunities Act of 1970" to the Senate.

The measure is filled with proposals made by Senator Prouty over the years and contained in his bill.

The bill authorizes the expenditure of $12 billion over three years for manpower training. It extends and improves the programs set up by the Economic Opportunity Act and MDTA.

Along lines suggested by Senator Prouty,

a new decentralized network of governors and mayors is set up with state and local responsibility for planning and execution of the manpower programs.

Through Senator Prouty's effort, the annual state minimum for manpower programs in the private sector is doubled from $750,000 to $1.5 million. The $1.5 million is also the annual floor for the new public service employment program authorized.

Thus under the bill, Vermont is assured $3 million annually in manpower funds.

Prouty also won out in his battle to allow private schools and technical institutes to directly participate in the programs.

He also had included in the bill a set-aside of 5% of all funds to be used as an incentive to bring local manpower programs into closer cooperation with vocational education programs. This will provide a much broader range of opportunities within communities.

The bill also contains the national computerized job bank, which Senator Prouty first advocated in 1964.

Throughout this landmark measure are provisions stemming from Senator Prouty's experience and knowledge in the manpower field.

He authored the provisions which provide special considerations to jobless heads of households with dependents and special consideration in job referral to those who need it most—the unemployed, underemployed or the unskilled.

Senator Prouty has always been skeptical of "make work" projects and he modified the public service employment section of the bill to emphasize training in skills that will lead to long-term employment. He insisted that "dead end" jobs be avoided wherever possible.

Whatever his reservations about some aspects of this measure, Senator Prouty feels he has made much progress in reshaping the programs he drafted in the 1960's. He has never felt wedded to old ways. He has never hesitated, out of pride of authorship, to change one of the programs he authored. His constant study has brought an increasing cohesion and flexibility to our manpower efforts.

DAY CARE

Day care facilities and programs are an integral part of manpower training programs and Senator Prouty has been one of the prime movers in day care programs.

He has continually insisted that pre-school programs be comprehensive and not piecemeal. He believes that food and medical programs should be provided and that more than custodial care of children is needed.

This year Senator Prouty introduced the most comprehensive day care bill to date. Called the "Head Start Child Development Act of 1970", the bill proposes to consolidate and improve existing day care programs. It would upgrade custodial day care programs to education programs. To do this, Senator Prouty's bill proposes statewide coordination and adoption of minimum standards, stressing the need to provide comprehensive services to young children.

Senator Prouty's day care bill has been widely acclaimed. Work on the measure is proceeding.

VOCATIONAL REHABILITATION

Nineteen hundred and seventy marks the 50th Anniversary of the federal-state vocational rehabilitation program. People familiar with the program to assist the handicapped with meaningful training realize Senator Prouty's contribution to expanding the program.

This year Senator Prouty was honored for his efforts. In commending Senator Prouty, John Twiname, Administrator of the Social and Rehabilitation Service, write: "On behalf of America's 2,500,000 rehabilitated citizens, we thank you for your support."

Senator Prouty knows that 5,000,000 handicapped Americans need the assistance of rehabilitation programs. He will continue to fight for them.

VERMONT SKILL TRAINING

Statistics have little appeal to Senator Prouty, but people do. He wants to be sure that the programs he designs help the unemployed, underemployed or unskilled. He oversees the Vermont applications for job training programs and does what he can to insure that Vermonters receive skill training.

The Barre-Montpelier Times Argus noted Senator Prouty's contribution in an editorial on February 15, 1969: "Certainly Senator Prouty's labors in this cause have had direct results of important value in Vermont and throughout the country."

The editorial referred to the on-the-job training program for stonecutters run by the Barre Granite Association. For a while it appeared the program would not be approved by the Department of Labor, but Senator Prouty worked hard and turned the Department around.

He also was able to get the Vermont Department of Employment Security designated as prime sponsor of on-the-job training programs. This designation brought control of the program from Boston to Vermont and thus closer to the training.

A LOOK AT THE FUTURE

Senator Prouty's proposals and warnings have proven correct. Finally this year manpower programs appear to be moving toward the flexibility and coordination he long sought. The state and local role has at long last been spelled out. The need for the day care programs Senator Prouty has advocated is now well recognized. This is reinforced by new and higher minimum state manpower allocations to bolster the job training efforts of small states.

The significance of rural manpower training has been underscored by clear Congressional action prompted by Senator Prouty. Six years after he first proposed the concept, job banks will be a reality.

After years of his prodding, private schools and technical institutes will have a full role in manpower programs.

Senator Prouty has accomplished much and he challenges the Congress to do more. His tax credit for training proposal still awaits action. His review and scrutiny will continue.

His thoughtful approach will lead the nation in finding new solutions to our nation's manpower dilemma—unemployment and underemployment paradoxically coexisting with job vacancies.

FUTURE EMPLOYMENT PROJECTIONS

HON. ALLARD K. LOWENSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. LOWENSTEIN. Mr. Speaker, even the Thirty Years' War came to an end and so, it seems safe to assume, will the war in Vietnam.

When it does, 800,000 military men and 170,000 civilian Defense Department employees will rejoin the civilian economy. Of the 1.5 million civilians employed in defense-related jobs generated by the war, 900,000 will be looking for new jobs. At the same time, projected troop reductions will further flood the pool of jobseekers.

These estimates come from Presidential reports in 1968 and 1969. The Pentagon only last month estimated that 367,000 workers in defense industries have lost their jobs in the last 11 months, and that another 592,000 will be given notice in the next 13 months owing to defense cutbacks. But as yet there is no evidence that the Nixon administration is acting on this knowledge.

There is a certain perverse consistency in the fact that the administration has neither a plan to end the war nor a plan to make the transition from a wartime to a peacetime economy. What the country has shown it wants is a consistency of another kind: a definite plan to end the war and a definite plan for insuring that workers who have been employed in war production are able to move into other jobs in a stable peacetime economy. There is no time for further shilly-shallying, for the future of this country depends on the urgency and commitment with which we deal with the critical problem of unemployment.

We have ample evidence of the damaging effects of the war on our economy. The recent gyrations of the stock market have further unsettled an economy so out of whack that consumer prices are rising at an annual rate of 6 percent, while industrial production is down 3 percent. Unemployment is now over 5 percent, as the ranks of the jobless have swelled from 2.8 million in December to over 4 million now.

In my community, Nassau and Suffolk Counties lost 2,400 manufacturing jobs in 1 month—from April to May—of this year. Between March 1967 and last May, 11,400 jobs folded up, almost all of them in aerospace and defense industries. Unemployment on Long Island has already risen to 5.9 percent and continues upward. The danger signals are up, and the administration ignores them at its peril and, more important, the peril of millions of Americans.

Urgent domestic needs go begging to satisfy the demands of the bottomless war chest. We have flushed $113 billion in direct war costs and another $82.5 billion in indirect costs down the Vietnam drain, money that could have been used to clean our air and water, and renovate our dilapidated cities, attack crime and drug abuse, and generally make America a better place to live.

Despite the myth of increasing affluence, the real average income of production workers, adjusted for war-induced inflation, has declined by 2 percent in the last 5 years. The average American worker with three children had a weekly take-home pay of $78.53 in 1965; today in constant dollars, it is down to $77.28.

The war and astronomical military spending remain the primary cause of the inflation, whatever the President says in his periodic vetoes of relatively modest appropriations for urgent domestic needs like hospitals, schools, libraries, and housing. In fiscal 1967, for example, military spending skyrocketed $13 billion over the 1966 figure. It rose $10 billion more in fiscal 1968.

The most lasting damage to the economy from the Nation's longest war may prove the distortion it has caused in the

allocation of our resources. As military spending rose from $50 billion before the Vietnam buildup to $91 billion last year, we have had more guns and less butter. As the war comes to an end we are going to have to make the transition back to more butter—and more schools, more livable cities, less pollution, et cetera—and fewer guns. The people who have been making the guns are going to be out of jobs unless the Government takes charge of converting the economy from a wartime to a peacetime operation.

If the Nixon administration persists in ignoring this fact we are going to be in for more of the hard times that people have come to associate with Republican economic policies.

You don't need a crystal ball to foresee that cutbacks in defense expenditures will put a lot of people holding jobs with defense contractors and subcontractors out of work. There is little an individual can do when he has been working, for example, as an engineer or a shopworker in the highly specialized gyroscopic division of Sperry Rand and is suddenly handed his walking papers because the demand has slackened for ships and planes and the gyroscopes that keep them on course. This is precisely what happened to 90 engineers and 385 shopworkers at Sperry Rand's Lake Success plant on July 10. Over 900 jobs have been lost at Sperry Rand during the last 2 years.

A man does not deserve to be in public office—whether he is a Congressman, a Senator, or the President—if he stands by while the people he represents are thrown out of work without trying to do something about it.

Over a year and a half ago, before a single soldier had been withdrawn from Vietnam, many of us in the House and Senate introduced a bill designed to protect men and women working in defense-related industries from economic forces beyond their control.

Our proposal would establish a National Economic Conversion Commission to coordinate existing Federal programs to assist veterans, defense workers, and industries that have come to depend on defense contracts. The Commission would offer direct planning assistance to defense contractors to ease the transition from wartime to peacetime production. It would also assist local and State governments in developing regional and statewide plans for conversion of defense-related industries to peacetime enterprises.

I plan to supplement this bill by introducing in legislative form a plan proposed by the late Walter Reuther that would require defense contractors to set aside a portion of their profits from defense production in a "conversion reserve fund." This government trust fund would be drawn on by the contractor to execute a conversion plan he would be required to file and to finance specified benefits for workers thrown out of work by plant closings.

This procedure would require contractors profiting at the public expense to do what prudent private businessmen do as a matter of course: establish a kitty for reequiping and retraining to produce a new product when the market for an old one dries up.

With the urban, environmental, and various other domestic crises that afflict us, no one doubts that there is an abundance of production alternatives for defense plants. Experts tell us that the housing shortage could be alleviated by airframe manufacturers, that our snarled transportation system could be eased by applying the expertise and technical skills of the aerospace industry to the problem of producing mass-transit systems. The list goes on—electronics firms producing medical equipment, computer firms devising new equipment to automate police departments, and a thousand and one other nondefense jobs that urgently need doing.

These kinds of measures, or something like them, are vitally needed; but to date the administration has neither supported them nor come forth with alternate proposals of its own.

Some would be fooled by the success of demobilization after World War II, when in the 9 months following the armistice, 8 million servicemen and 4 million defense worker rejoined the civilian economy. And even though the postwar decline in defense spending was an incredible one-third of the gross national product, unemployment during the transition period never rose above 4 percent.

But the problem then was primarily one of reconversion, of turning weapons plants back into the auto plants they had once been. The economic shifting of gears was also greased by pent-up consumer demands and postponed domestic needs accumulated during the war, neither of which exists today.

When we introduced the legislation a year and a half ago, there was merely the prospect of thousands of people thrown out of work because of defense layoffs. Now we are confronted with the reality.

Areas like Long Island suffer doubly, for not only are they faced with the dislocation of so many residents out of jobs, but they stand to see much of their labor force move elsewhere.

On Long Island we are fortunate to have a highly skilled work force, but many of these people will be the first to lose their jobs as defense spending is curtailed because many of them are employed at places like Grumman Aircraft, Sperry Rand, and Republic Aircraft. Once laid off, they will look for greener pastures in other parts of the country, and we on Long Island will lose the people who have been so instrumental in the region's rapid growth in recent years.

No longer can we enjoy the luxury of waiting for some invisible force to bring an end to the tragedy of unemployment now besetting the country.

We are going to have to have plans and programs. Above all, we need to be motivated by a concern for the working men and women who are going to be out of work if we simply hope for the best and try to muddle through.

COMPULSORY BUSING OF SCHOOL CHILDREN TO ACHIEVE RACIAL BALANCE IN SCHOOLS—DETROIT SAID A FIRM "NO"

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 1, 1970

Mr. BYRD of Virginia. Mr. President, recent events in Detroit show conclusively that opposition to compulsory busing of schoolchildren to achieve racial balance is not confined to the South.

In a recall election held August 4, the voters of Detroit removed from office four school board members who had pushed through a plan to institute forced busing. Opposition to the plan was expressed by both whites and Negroes in Detroit.

To force the recall election, the opponents of busing had to gather signatures on petitions. More than 520,000 signatures of Detroit citizens were collected on these petitions.

Now the four members who sponsored the busing plan will be removed from office, and the Governor of Michigan will replace them with temporary appointees until a school board election is held on November 3.

The will of the people of Detroit has been made unmistakably clear. It is obvious that like their fellow citizens in the South, the residents of Detroit firmly oppose compulsory busing to achieve racial balance.

The Richmond News Leader, in its August 12 edition, published an excellent editorial on the Detroit election. I ask unanimous consent that this editorial be included in the Extensions of Remarks.

The chief editorial writer of the Richmond News Leader is Ross Mackenzie.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DETROIT SAID A FIRM "NO!"

Apparently, Southerners are not the only Americans who object vigorously to compulsory integration. In Detroit, four school board members lost their jobs last week because as gung-ho integrationists, they pushed a plan through the seven-member board that would have instituted forced busing for the purpose of integration.

The school board was not being pressed by the courts, the Department of Justice, or the Department of Health, Education, and Welfare. Detroit, being in the North, naturally has remained free from the coercion now being applied to cities in Southern States. The four-man majority of the school board just decided—out of the blue—that attendance zones for a dozen high schools should be redrawn to foster higher levels of integration. Under this plan, 3,000 white students would have been bused for great distances to attend predominantly Negro schools.

The plan displeased many Detroit residents, including many Negroes who wanted to retain a higher degree of control over their neighborhood schools. An organization called Citizens for Better Education was formed, and its members set themselves the difficult task of acquiring enough signatures on petitions to demand a recall election of

the four integrationists. They succeeded in getting 520,000 signatures on their petitions—more than 120,000 for each of the four men they wanted recalled.

A number of legal challenges were made to the recall election, but it finally was held last week. In the election, sixty per cent of the voters approved recall of the four school board members, and recall carried a majority of votes in every section of the city—Negro and white. When the election returns are certified, within a few days, the four recalled members formally will be removed from the board. The Governor of Michigan will replace them through temporary appointments, pending a school board election on November 3.

The people of Detroit obviously have strong feelings about their schools, and they place the value of education above that of contrived integration. Many parents in the South feel the same way, but, because they are Southerners, they have no means of expressing their wishes, and school boards in Southern cities must knuckle under to intimidation and court orders.

Detroit's school superintendent views the recall of the four school board members as a "rejection of the national policy of integration." No doubt if a national referendum were held to determine the voters' wishes, the vote against compulsory integration and forced busing would have the same results as the recall election in Detroit, and all the votes wouldn't come from white Americans, or from the South, either.

YOUTH SAVES TOTS AS BUILDING BURNS

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. DADDARIO. Mr. Speaker, I would like to call to the attention of my colleagues the heroism of Anthony Ellis, a 16-year-old boy from Hartford who risked his own safety to rescue two young children from a burning building.

It is actions such as this one by Mr. Ellis which should serve as a constant reassurance of the good qualities and motives which are found in the overwhelming majority of our young people. An article from the August 28, 1970, edition of the Hartford Courant detailing Mr. Ellis' heroism follows:

YOUTH SAVES TOTS AS BUILDING BURNS

(By Ken Cruickshank)

A Hartford Public High School junior, climbing up a wall to a burning second-story apartment in Bellevue Square, Thursday night is credited with the rescue of two young chidlren.

Police Sgt. Dean Weech said 16-year-old Anthony Ellis of 36 Bellevue Square rescued Dwight Snipes, 3½, and Gregory Snipes, 2, while police were futilely trying to break down the front door of the blazing apartment.

Weech said smoke from the fire was noticed by some children at 8 p.m. playing near the apartment and that he ran up an inside stairway and tried to gain entrance through the apartment door.

Anthony Ellis also saw the smoke and, taking a running leap at the side of the brick building, clawed his way up to the second story window.

Anthony said that he kicked the screen in while clinging to the window ledge and crawled in through the open window. Making his way through the smoke-filled apartment he found the two children in the kitchen and carried them back to the window.

Anthony said he lowered the children by the arms to Nadine Nelson, 15, of 67A Bellevue Square, who was waiting under the window. He then jumped out the window himself.

Minutes later Sgt. Weech managed to break down the front door and enter the apartment.

"My flashlight was useless," said Weech, "All I could see was smoke." A couch and the front wall of the apartment were ablaze, Weech said, and he had just time for a quick check of the rooms before being overcome by the smoke.

The mother of the two children arrived moments later and found her children safe outside the building. Then the fire department arrived and extinguished the fire. Much of the apartment was scorched or smoke damaged and it was rendered uninhabitable.

Anthony's heroism was brought to the attention of The Courant by Sgt. Weech who said "considering the time it took to break down the door, I could have been too late. Thank heavens he was there."

He said it was possible that the fire had been started by the children playing with matches.

LEGISLATION TO REQUIRE THE OPEN DATING OF PACKAGED FOOD—XIV

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FARBSTEIN. Mr. Speaker, since I first introduced H.R. 14816, legislation to require the open dating of packaged and canned foods, there has been a great deal of media focus on food coding, there have been numerous surveys of food coding practices in cities across the country which have uncovered a great deal of nonfresh food being sold consumers, and there have been attempts by some supermarkets and food manufacturers to provide the consumer with information on the meaning of codes.

None of this would have happened if the American consumer had been indifferent to food freshness or to the specific proposal I put forth to require all packaged and canned foods to be open dated. That the consumer is anything but indifferent on either score is dramatically demonstrated by the thousands of letters I have received from all across the country on my legislation. This mail has described numerous examples of food coding abuses with respect to foods ranging from milk to canned chicken.

A lady in Baton Rouge, La., wrote concerning 8-year-old baby food she had recently purchased. The items she described had a shelf life of 18 months.

A women in Jeannette, Pa., wrote concerning her purchase of five jars of rancid mayonnaise that turned out to be 2 years old. Mayonnaise has a 6-month shelf life.

A resident of Sonoma, Calif. described milk that she purchased which turned her coffee a "dull gray" and frozen short ribs which had worms.

A citizen of the Nation's Capital wrote concerning her own survey of milk which found cartons left on the shelves, 2, 3, and even 4 days beyond the pull date.

And a housewife from Trenton, Mich. described mouldy packaged grapes, mouldy meat, and stale candy bars she had just purchased from her local store. These items were in addition to many others which spoiled very quickly after she got them home.

My mail has also described numerous related experiences of consumers.

A lady from Higland, Mich., described her frequent dilemma of returning home after a shopping trip to face the choice of going right back to the store to return stale food or throwing it away. She noted that on the occasions when she opted to return the food, the grocery personnel were not always very gracious about accepting the items back.

A housewife from Flushing, N.Y., wrote concerning a similar experience with meat—only they would not take it back at all.

And a lady from Garden Grove, Calif., noted that in talking with supermarket personnel, frequently she found even they did not know what the codes on the items they were selling meant, and they thus did not know if they were selling stale food.

But a great deal of my mail has come from people who simply wished to express their support for Government action to require open dating.

There was the petition from 150 women in suburban Detroit.

There was a second petition from a group of consumers in St. Louis.

There was the letter from a housewife and home economist from Cincinnati.

And there was the letter of a lady from Lake Junaluska, N.C.

I found my greatest volume of mail was from Las Angeles, Detroit, Florida, North Carolina, and Massachusetts.

The text of some of these letters follow:

CONSUMER FEDERATION OF AMERICA,
Washington, D.C., April 29, 1970.

Hon. LEONARD FARBSTEIN,
U.S. House of Representatives, Rayburn House Office Building, Washington, D.C.

DEAR MR. FARBSTEIN: Enclosed is the copy of a letter sent to Senator Hart by a consumer in Louisiana. Since you are interested in coding, I'm sure you'll find this letter of interest.

Can you help us unravel the code and the truth?

Sincerely,

(Mrs.) ERMA ANGEVINE,
Executive Director.

APRIL 13, 1970.

Hon. PHILIP HART,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HART: I have just discovered that my normal average supply of strained baby food contains four jars of Heinz baby food whose labels do not bear the zip code of the manufacturer: (1) macaroni, tomatoes, beef & bacon; (2) veal and veal broth; (3) lamb and lamb broth; and (4) liver and liver broth. I enclose one as a sample.

Those four jars represent 8.5% of the total amount of Heinz baby food (47 jars) that I happen to have on hand today. I purchased the entire supply last week from Gibson's Discount Center, 6945 Florida Blvd., Baton Rouge, La. 70806.

My concern is two-fold: (1) Is the Heinz Company failing to comply with the Truth-in-Packaging Law? (2) Is Gibson's selling baby food so old that its stocks there were canned and labeled before Truth-in-Packag-

ing went into effect? The codes on the lids tell me nothing about the age of the contents. These codes are, respectively, PO200-VND, PO470YJN, PO305XIJ, and P3029VHI.

Both as a mother and as co-editor of the *Louisiana Consumer*, I am most interested in getting the truth on this matter.

Sincerely,

DORALES F. RICHARDSON.

(NOTE.—The sample was manufactured in January, 1962.)

MAY 1, 1970.

Representative LEONARD FARBSTEIN.

DEAR SIR: Would like to have some action on this Hellmann's mayonnaise.

This is our fifth five-quart jar that is bad. We don't know what rotten food our government let these manufacturers sell us. No wonder everyone is sick, everything is rotten in USA.

Thank you.

Mrs. MARY KELLEY.

RD 2, JEANNETTE, PA.

NOTE.—The sample was manufactured in January, 1968.

JULY 27, 1970.

Hon. LEONARD FARBSTEIN,
House of Representatives,
Washington, D.C.

DEAR MR. FARBSTEIN: I read "Dates on Food" in today's Washington Post and thought that I'd send you the enclosed label as evidence to prove your point that food is left on shelves. This soup was bought about two weeks ago at the A&P, Greenbelt Road, near College Park (Hollywood area). I was about to send for the offer when I discovered the time had expired.

Sincerely yours,

NOREEN HASSLER.

COLLEGE PARK, MD.

NOTE.—The offer expired on December 31, 1969.

Rep. Leonard Farbstein, (D-N.Y.), has introduced a bill to force food manufacturers to print all food dates plainly on each package or can. Your letter has been passed on to him. Anyone who wants to support Rep. Farbstein's food-date decoding efforts should write to him c/o Rayburn Building, Washington, D.C.

Mr. and Mrs. Robert Moore, Mr. and Mrs. Frank Cerne, G. Trolaushas, C. Olivirio, M. Yanah, Mrs. E. Bechinger, Mrs. Stanley, Mrs. R. Miller, Jean McMullen, Mrs. U. Becka, Mrs. U. Bocks, Mrs. C. Anderson.

March 3, 1970.

DEAR SIR: Here is a list of the people that would like your food bill to pass. There are probably more people that would like to see it passed but they don't know about it.

Sincerely,

MRS. D. BENNETTS.

TRENTON, MICH.
March 6, 1970.

Representative LEONARD FARBSTEIN,
Washington, D.C.

DEAR SIR: I am very much in favor of your bill to force manufactures to print all fund dates plainly on each package.

This week, I had to return 3 packages of stale food: (purchased this week)

1. mouldy grapes (package)
2. mouldy packaged meat (Wilson's shoulder butt)
3. stale candy bars (Nestles, tasted horrible)

These purchases were bad when I got them but condition did not show through the package.

Since my family is small (2) there is a lot of items we do not use as fast as people with a large family. So there is also a lot of things such as bread, milk, cottage cheese, sandwich meat, etc. that are on the verge of spoiling a day or 2 after purchase if they have been on the grocery shelf a couple of days before I buy them.

People who have large families or eat a lot of bread, etc., purchase these items more often, so they do not have the product long. But people with small families have to keep the bread and milk longer. So we have to buy fresh food in order to keep it fresh at home longer.

The "codes" on food do not help the purchaser such as I. And I have worried many times if the sandwich meat in my husband's lunch is fresh or not. I have no way to knowing how old it is when I buy it.

Thank you,

Mrs. HARRY LAYNEW.

MILWAUKEE, WIS.,
July 27, 1970.

DEAR CONGRESSMAN FARBSTEIN: You hit the nail on the head when you said grocers and manufacturers are opposed to identification on packaged foods the consumer can read and understand. I just witnessed why they don't want us to know to. We had a electric power failure here last week end due to storm electricity was off 2½ hrs. on Sunday eve. Monday evening after work 4 p.m. I went into the National Tea Co. Store at Teutonia & Capitol Dr. the stock boys were emptying the one long freezer. I felt the packages they were room temperature. I asked the stock boy what he was going to do with the food and if they had a freezer break down. He said yes they had it repaired but were going to clean it out to and were going to take the food upstairs and refreeze it till they had the freezer cleaned. Whether they put it back out for sale I don't know. I reported it to the Health Dept. tho. This freezer contained all types TV Dinners Pizzas, Pastry, Cream Pies, Cheese Cake. How many stores with the power failure did the same thing with no one reporting it? I do know there are suppose to be quite a few cases of flu I wonder if its flu. Also how many times does this occur and the consumer pays the price without knowing. Hope this letter has been some help in your effort to get Consumer Legislation passed.

Mrs. EDITH ROUTE.

CINCINNATI, OHIO, *April 9, 1970.*

DEAR MR. FARBSTEIN: I have just read of your bill that would require stamps on food stating the deadline for removing products from the store shelf. As a housewife as well as a professional home economist, I feel it very important to let the housewives know in plain english how old the food is.

Consumer education seems to be the "in" thing right now and your bill is just one more step towards helping the everyday housewife become a better consumer.

I certainly hope that the big food retailers lobbys don't find a way to defeat your bill!

Good luck.

Sincerely,

JOAN BECKER.

MAY 20, 1970.

DEAR REPRESENTATIVE FARBSTEIN: I wholeheartedly support your idea of an "open dating bill." I am so disgusted with the stale bread, sour cottage cheese and bad meat that is being pawned off on the public.

Recently my mother purchased 3 pounds of chuck chopped from Hills Supermarket. We opened one package, it didn't smell, but when we cooked it, it was unedible. My mother threw it out, the same thing happened with the other 2 pounds of meat.

Unfortunately my mother did not bring it back to the supermarket, we have brought things back before that were stale in other stores, with no satisfaction. I think that with the high price of food today the public is entitled to fresh food.

Thank you sincerely,

JANE NEWMEYUR.

FLUSHING, N.Y.

GARDEN GROVE, CALIF.,
March 12, 1970.

Representative LEONARD FARBSTEIN,
Rayburn Building,
Washington, D.C.

DEAR REPRESENTATIVE FARBSTEIN: In today's Los Angeles Times I read that you have introduced a bill to force food manufacturers to put food dates on packages and cans.

Please try to get this legislation passed because it is such an annoying thing to try to figure out store codes. In some instances I have found out that the employees themselves cannot translate their codes. This happened in the case of some salad dressing. It would be nice to know you're getting fresh bread too instead of having to squeeze and feel it.

Thank you for working for us housewives. It is difficult enough to shop today with the inflationary prices; but to have to be a detective (with the children hanging out of the carts) is ridiculous.

Good luck to you!

Sincerely yours,

(Mrs.) KENNETH LANDERS.

MARCH 4, 1970.

DEAR MR. FARBSTEIN: I wish to support a bill to print all food dates plainly on frozen foods and canned.

I live in the 5th largest city Detroit, Mich., and shop at Supermarkets buying the best brands. Here are a list of the items I have had to throw out.

Del monte peaches, Milk, Krafts cheese, eggs, sliced sausage, frozen fish, Green Giant corn, cup cakes, ice cream.

HIGHLAND, MICH.,
March 3, 1970.

Representative LEONARD FARBSTEIN.

HONORABLE SIR: Please do carry on your work of help for the purchasers to know the perishable food he buys is at least (current) in its shelf storage.

Many times I have had to choose between a return trip to the store (often 8 miles) or tossing out a smelly package of cottage cheese.

Cheese and yogurt are my worst problems, although I have even at times bought butter that seemed to have absorbed other odors.

The attitude of the manager is not always gracious, either, when one brings back a deteriorated food product. They act hurt or annoyed or even doubtful that such a thing could happen at their establishment.

I make very sure to retain all sales slips until I have checked my purchases for quality, amount, and accuracy of figures (at home of course).

Thank you, thank you, I pray that your bill passes very quickly.

MRS. GLADYS CONNOLLY.

HIGHLAND, MICH.

WARREN, MICH.,
March 9, 1970.

Rep. LEONARD FARBSTEIN,
Rayburn Building,
Washington, D.C.

DEAR SIR: We recently read in the Detroit Free Press of the bill you have introduced which would force food manufacturers to print all food dates plainly on each package or can.

We are very much in favor of this idea. I had cut the reference to your bill out of the paper and kept it, with the thought that I might possibly write to you. The final incentive was provided yesterday by an egg, which, when cracked into a bowl by our ten-year-old, almost made him sick; it was that rotten.

In the past year we have purchased several cartons of eggs which turned out to have a rotten one in them, a pound of butter which was rancid, a carton of whipping cream which was sour, and even a sealed can of sweetened milk which had spoiled.

We feel there is a very definite need for your bill, and support it wholeheartedly.

Sincerely,

Mr. and Mrs. GORDON E. KOBS.

ST. LOUIS, MO.,
June 10, 1970.

Rep. LEONARD FARBSTEIN: We strongly support the bill you have introduced to force food manufacturers to print all food dates plainly on each package or can.

Mr. & Mrs. Chas. L. Wells, Max J. Seltzer, J. F. Hubbard, Dennis M. Sullivan, Joyce Pickering, R. Wildibor, Doris Hornbold, Elmer D. Englehardt, Mrs. O. F. Fluhr, John Constanti, Alfred L. Borgman, Donald W. Gronemeyer, D. W. Hines, James Alvers, John W. Schaefer, W. F. Arndt, Stanley C. Hudson.

WASHINGTON, D.C.
August 4, 1970.

Hon. LEONARD FARBSTEIN,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. FARBSTEIN: A belated letter to express my full support and encouragement to you in your attempts to pass legislation requiring the clear dating of perishable, semi-perishable and canned food products.

The weekly battle of trying to determine whether or not a product, a carton of milk, a package of meat or a loaf of bread is fresh and safe to buy is both frustrating and exhausting. The cost of having guessed wrong is even harder to bear.

Having figured out the dairy product coding used in my local store, it is disgusting to note that they do, in fact, keep products on the shelf marked for removal two, three and even four days previous. The whole method used in dating products by its complexity suggests a lack of honesty and an intent to deceive on the part of the manufacturer and marketer, another frustrating and resentment-provoking situation.

My fullest support for your bill and my daily support in telling others of the problem, your proposed legislation, and asking their support also.

Sincerely,

Miss L. J. GARDNER.

MARCH 27, 1960.

Representative FARBSTEIN,
c/o Rayburn Bldg.,
Washington, D.C.

DEAR SIR: I would like to add my complaint along with so many others concerning our bakery goods. It is very difficult to get a fresh (morning loaf) of bread these days even at a bakery. Everything is baked ahead and frozen.

Just this week I went to a local bakery in Torrance (I was visiting there) and asked for a fresh cream puff—all they had she said was a frozen one.

Another instance is the "Day Old Stores"—day old, my eye—that bread is a week old, if its a day. That's fine as long as it hasn't molded—etc., but they price it as day old bread! It's the misrepresentation I resent. We all like bargains—our struggling class, I mean—but when is a bargain, a real bargain?

And when I need a fresh loaf of bread—I'm willing to pay for just that—especially the brown breads—since I punch on every loaf—I didn't used to tho—

So I'm with you, anything that can be done to better the situation—I'm for that. As is I buy very little bakery goods—and I also know there are 10 times the people who are so busy they could care less if the bread is stale or fresh. They aren't around when their children fix their own sandwiches, etc.

Sincerely,

MRS. VIRGINIA GATTI.

PALMS, CALIF.

NOVEMBER 18, 1969.

Representative FARBSTEIN,
House of Representatives,
Washington, D.C.

DEAR REP. FARBSTEIN: Congratulations on your bill requiring dating of perishable foods. This is much needed.

May I suggest that cake mixes and other products now coded with a date also be included as "perishable" even though they do not appear in the dairy case.

My best wishes to you.

Sincerely,

D. FURBUSH.

TUCSON, ARIZ.,
Nov. 1969.

DEAR SIR: It is with great applause that I salute you!!

I have been living in Arizona for 25 years after coming here from Boston, Mass.

For many years I have believed a bill such as yours should be passed either locally or Nationwide.

Manytimes I carried groceries home on the bus and found a dairy product I purchased to be spoiled. It isn't pleasant to buy a spoiled product at any time. A person hates to return items to the store. After many hours to "tote" a bad product home and find it so, is even more irritating.

The milkman knows and the grocers know but does the purchaser know? (That is the date code.)

Also the fact that used mattresses are sold in many states is unbelievable to me. In a state like Arizona to allow this practice to go on for all these years in beyond me.

I love Arizona and enjoy living here.

Thank you for reading my letter and may your bill pass. Amen Amen.

I must add to my letter that canned products on shelves and sold as specials very often are found to be black inside the can and signs that the product is very old.

The year a product is canned is never known to the consumer it could be 5 or 10 years old. Then your special or bargin becomes a waste of money. It doesn't always happen with specials either. It can happen with regular stock.

MRS. E. WHEELER,

PRESCOTT, ARIZ.,
November 20, 1969.

Hon. LEONARD FARBSTEIN,
House of Representatives,
Washington, D.C.

DEAR SIR: It has been brought to my attention that you have introduced a bill rquiring packagers of perishable foods to put on the label the date after which they cannot be safely used. I think this is splendid and I wish you success in bringing this about.

In the past months I have had unpleasant experiences with packaged meats. I have returned such purchases and the merchant has replaced them willingly, however, the replacements were also spoiled. The merchant stated that the packages were coded by the packager but he had no way of interpreting the code and did not know how long the products had been in his case.

This speaks for itself and again, I wish you success with your bill.

Very truly yours,

ANNE E. MILLER.

BATTLE CREEK, MICH.,
March 2, 1970.

DEAR MR. FARBSTEIN: Here is another person who is in favor of the system you propose for dating food for freshness.

Some time ago I bought meat from a grocery freezer. It was unfit for human food. I doubt if it was even safe for dogs.

The store was selling all merchandise as they were giving up a lease.

So I was out the cash and could not even get an exchange for something else. I'm a retired widow and pensions are my income.

Thanks for trying to help people.

Sincerely,

MRS. PETER TERRY.

WESTLAND, MICH.,
March 8, 1970.

DEAR REPRESENTATIVE FARBSTEIN: Congratulations for introducing a bill "forcing food manufacturers to print all food dates plainly on each package or can." The homemakers have a busy day each and everyday; whereas, planning dates on merchandise will save us time each time we go shopping and guarantee freshness.

Even though I buy groceries a week at a time, I still have dairy, meat, and produce spoil on me which is no fault of mine. I've placed fresh meats in freezer immediately after purchasing them. Three or four days later I will take them out to thaw and discover when it was too late that the meat is spoiled. At times a hasty substitute will spoil the rest of evening. It is all because we do not know just how old certain items are.

Time is a very important factor in organizing a day. I waste so much time trying crack formulas for dates on perishable items that it ruins my schedule for the rest of the day. I do not like to dally at supermarkets.

Money is very important in running a household efficiently. Do you know how much it cost to run a car per mile? My husband informed last year it cost over "eleven cents a mile to run a car." I have three miles to drive to the nearest market. If I have to return a spoiled item it cost me sixty-six cents round trip. So if my item cost less than that, I do not return it. Why waste anymore money and time than I already have.

Since I and many of my friends want the best in a supermarket, we must deal at two or three places a week to get what we want.

Manufacturers know we need the items they produce. I feel like they are not being fair to me or the middleman, the supermarket manager. How can they in turn expect us to be fair to the next man if the consumer is always taken to the cleaners?

Thank you for reading my letter.

Mrs. THOMAS A. HIZ.

DETROIT, MICH.,
March 3, 1970.

DEAR SIR: Your bill to force food manufacturers to print all food dates is excellent. You are to be commended for such a bold step to help the consumer.

As a busy schoolteacher, I shop once a week for our family of four. I get so discouraged at times trying to reach the bottom package of sausage or cheese thus hoping to get fresher food products to last through the week.

Thank you for your thoughtful efforts to aid the shoppers.

Sincerely,

MARY PARZYCH.

WILLOUGHBY, OHIO,
March 20, 1970.

Representative LEONARD FARBSTEIN.

DEAR SIR: I am with you 100% on this bill to force food manufacturers to print all food dates plainly on packages and cans, instead of a string of numbers which I can't decode.

I just threw out a can of Kroger's pineapple which was spoiled, don't know whether I had it too long or Kroger, the top & bottom of can bulged. But Krogers do mark their breads, rolls, etc. plainly with the date. Thank you & much success with your bill.

Mrs. GEO. CABLE.

LOS ANGELES, CALIF.
March 20, 1970

Congressman FARBSTEIN.

DEAR SIR: We back you 100% on the food-date effort.

Knudsen Products and cottage cheese in this area relies on this trick and I have thrown out cottage cheese that lasts only 3 days—under refrigeration. Get a really fresh one and it's good for a week. (Thank you so much.)

Mrs. R. WOOD.

SAN PEDRO, CALIF.,
March 12 1970.

DEAR SIR: I have just read Peter Weaver's column in today's Los Angeles Times in which he mentions your bill to force food manufacturers to print all food dates plainly on each package or can.

In the past, I have tried to get information on how to read the codes on various items, but without success . . . even from otherwise very helpful store personnel. I never have any trouble when I bring food back that was stale when I bought it, but it is a lot of trouble. Recently I even purchased a box of stale cereal.

Anyway, I do hope your bill passes; and I am sure a lot of other people beside me feel the same way . Good luck!

Mrs. ROSEMARIE WEICHEL.

DEAR MR. FARBSTEIN: I was very pleased to hear that you have drafted a bill requiring production date labels clearly stated on canned and packaged foodstuffs.

Besides helping the housewife and food store properly rotate their supplies, it would help the household budget also. Shoppers can save quite a bit of money by buying "day old" merchandise, but, frequently, the goods are just a small distance from being actually spoiled and useless, because the stores themselves don't even know how old the products are.

If we knew actual production dates, we could more accurately judge the wisdom of "day old" purchases.

Thank you for taking time to consider the needs of the average consumer. In these days of rapidly increasing prices we all like to know that we're getting the best value for our dollars.

Sincerely,

Mrs. ROCHELLE FRIEDMAN.

SKOKIE, ILL.,
March 15, 1970.

DEAR REPRESENTATIVE FARBSTEIN: May I take this opportunity to commend you on your efforts to help the poor, abused, consumer by introducing legislation which would compel food manufacturers to print dates of processing on all packages and cans or containers, and particularly on milk, cream and other dairy products.

Have recently had 3 experiences with cartons of half and half cream, where it became soured within 24 hours of purchase.

We need more representatives like yourself, who are interested in helping their constituents rather than the special interests, with their well heeled lobbies.

Sincerely yours,

MORRIS ROSENTHAL.

Question—Baking companies identify the day bread is baked for a store by attaching colored, twist clips at the end of the loaf. What is the color code used? I wrote several large baking companies but so far no replies.

Answer—Every bakery uses its own code. One popular code is: Monday-white, Tuesday-blue, Wednesday-pink, Thursday-gray, Friday-yellow, Saturday-green. Others switch these colors around. Safeway says it is doing away with stale bread codes and will have bread delivery dates plainly marked on each loaf. Other supermarket chains may be forced to follow suit.

Rep. Leonard Farbstein (D-N.Y.) has introduced a bill to force food manufacturers to print all food dates plainly on each package or can. Your letter has been passed on to him. Anyone who wants to support Rep. Farbstein's food-date decoding efforts should write to him care of Rayburn Building, Washington, D.C.

CLINTON, MO.,
February 7, 1970.

Hon. LEONARD FARBSTEIN,
Washington, D.C.

DEAR REPRESENTATIVE: I read in the newspaper where you have introduced a bill to force food manufacturers to print all food dates plainly on each package or can or on loaves of bread.

I have bought bread that I know must have been at least a week old. Several years ago several markets had the day of the week printed in large letters on the end of the loaf. But now they leave it on the shelf until sold as fresh bread. They use the twist clip color for the day it arrived, and it is changed from time to time to fool the public.

Hope you may be able to do something about this.

Yours truly,

L. M. KLUTTZ.

HOUSTON, TEX.,
March 22, 1970.

Hon. LEONARD FARBSTEIN,
Rayburn Office Building,
Washington, D.C.

DEAR REPRESENTATIVE FARBSTEIN: I am one of many housewives who appreciate your efforts to force food manufacturers to print all food dates plainly on each package, can or carton. Purchasing sour milk and stale bread all too frequently has prompted me to take this means of letting you know that your efforts to correct the situation are enthusiastically supported.

Yours truly,

BEATRICE S. ROSE.

NEW LEBANON,
February 10, 1970.

DEAR REPRESENTATIVE FARBSTEIN: I am very much in favor of your bill to force food manufacturers to print all hand dates plainly on each package or can. So many times after shopping carefully you end up with something stale or not fit to feed your family. I live in a small town and know the grocer very well. He is always willing to take things back but you feel like a nut bringing something back and I'm sure the grocer feels little awkward, too. I don't think anyone should be put in a position like that. I think food date decoding would help the grocer as well as the customer.

Thank you.

Mrs. WM. RIKE.

KANSAS CITY, MO.,
February 9, 1970.

Representative LEONARD FARBSTEIN,
Rayburn Building,
Washington, D.C.

DEAR SIR: I am very much in favor of forcing food manufacturers to print all food dates plainly on each package or can.

I am tired of getting boxes of cookies, cartons of cottage cheese etc. home and finding they are stale. I don't have time to make two trips to the store to return them and it is a nuisance. The money I pay for the article should guarantee it to be at least today or yesterday but sometimes it is a week old.

Thank you.

Mrs. JOHN R. FOLEY.

WORCESTER, MASS.,
February 6, 1970.

Representative FARBSTEIN.

DEAR SIR: I am writing in support of your bill to have food manufacturers *print all* food dates on each package or can. Too many times I have bought dairy products and on arriving home found them not fit to eat.

Namely cottage cheese, I can shop only one day a week as I don't have transportation so I use a cab which is expensive. When I told the manager about bad dairy products he said I must bring them in. A week later? They would surely say then, it was my own fault for not using it soon enough or storing it properly, so why bother?

Your wonderful bill for food dates, printed so that the public can understand them is greatly appreciated by a great many shoppers I am sure.

Mrs. LILLIAN A. DERRY.

Rep. Leonard Farbstein (D-N.Y.) has introduced a bill to force food manufacturers to print all food dates plainly on each package or can. Your letter has been passed on to him. Anyone who wants to support Rep. Farbstein's food-date decoding efforts should write to him c/o Rayburn Building, Washington, D.C.

KENMORE, N.Y.
February 4, 1970.

Representative LEONARD FARBSTEIN,

DEAR REPRESENTATIVE: I am for your Bill—"100%"—Saw it in Buffalo Morning Courier. I wrote Washington, D.C. Dept. of Agriculture almost a year or so ago about a pkg of stale coffee cake and rolls, which I had purchased not once, but on several times, have I gotten *stale baked goods*. But to date nothing has been done about it.

I do not buy their baked goods any more, I will not mention their name as they are a very large outlet in the state of New York, having general offices in New York City.

I am a Republican, but I do not play party politics. I say if the shoe fits wear it. If you can get this bill passed I am all for it, Republican or Democrat, Washington would be a far better place today if the men down there would handle vital issues with the peoples interest at heart instead of My Party first and the people second.

Thanking you and good luck on the Food Date Bill. I hope and I am confident you will and can get a passage on it as a protection to us consumers in the future. I am rather fed up on getting stuck with stale baked goods and trips back to the store for return of same, which is very inconvenient to me.

Sincerely yours,

MISS ELSIE D. SWEET.

HIALEAH, FLA.,
February 11, 1970.

Congressman LEONARD FARBSTEIN,
Rayburn Building,
Washington, D.C.

DEAR SIR: I wish to say I am in favor of your food-date decoding efforts.

As a housewife I have often tried in vain to understand manufacturers, in code, dates on groceries. I am beginning to tire of bringing home spoiled products.

Please do all you can, and urge your colleagues to see that proper and easy to understand dating is on all products, such as 2–11–70.

I was happy to hear someone is finally doing something about this annoying problem.

Sincerely,

MRS. ELAINE BRIAIS.

DEAR SIR: I am in full support of your bill concerning food date decoding!

I am really aggravated when I get milk home, find out its beginning to sour, when I have paid for fresh! When I can't figure out the codes myself—I have asked clerks and been deliberately misinformed. The same is true of bakery products.

MRS. S. C. MANDEL.

MT. HOLLY, N.C.,
February 7, 1970.

Hon. LEONARD FARBSTEIN,
Rayburn Building,
Washington, D.C.

DEAR SIR: Thank you for your concern about "dates" on food packages and cans. We homemakers need to know this information to make wise purchases for our families.

I sincerely hope the bill passes and goes into effect soon.

I have had my share of unhappy experiences with dairy products, meats, breads and even frozen products not being fresh—the frozen packages apparently had been partly thawed and refrozen. I have also bought things like nuts and corn meal with worms or bugs in them.

It surely would help if we could know for sure that the products would still be good when we get home with them from the store.

Thank you.

MRS. C. LOWE.

LA GRANGE, ILL.,
February 24, 1970.

Hon. LEONARD FARBSTEIN,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE FARBSTEIN: I have noted with interest an item to the effect you propose to have perishable foods dated.

That is an excellent idea and I wish you success in your effort. The news article did not mention milk and I sincerely hope that you will include that product in your bill.

For many years we had a law in the State of Illinois which required the milk distributors to show a date on the milk carton which was the latest date on which such milk could be sold at retail. We in our home never experienced milk going sour with the cartons properly marked.

However a few years ago the milk distributors lobby in Springfield succeeded in knocking that law out of the Illinois Statutes.

Since then we have had to throw out a considerable amount of milk which has gone sour and I assume that many others have had the same experience.

I trust that you will include milk in the dating program.

Good luck and best wishes.

Yours truly,

A. A. REDDERSON.

N. KANSAS CITY, MO.,
March 9, 1970.

Representative LEONARD FARBSTEIN,
Washington, D.C.

DEAR REPRESENTATIVE FARBSTEIN: I definitely support you in your efforts to have "dates" imprinted on packages of food, etc. So often cakes or puddings when they are old simply do not bake well or taste good.

Just recently I bought a package of Yorkshire pudding at $1.00 for 4 helpings and it was a complete flop! I wrote the company and they suggested I check my oven. Well, I had used this product before with the same oven (new) and they were successful—so I say it must have been old and had lost its rising power.

Thanks for your interest in our (the homemakers) behalf.

Good luck in your endeavors.

Sincerely,

MRS. W. J. HOLTKE.

P.S.—I have asked my family and others to contact you.

UNADILLA, N.Y.,
February 4, 1970.

Representative LEONARD FARBSTEIN.

DEAR SIR: I am very glad to see someone is interested in forcing food manufacturer's to print all food dates plainly on each pkg. or can. I for one am tired of worrying if my milk is fresh and also returning cream cheese pkg. because of mold.

I would like to see these codes clearly stamped on each pkg or can and in the very near future.

Thank you.

MRS. ALFRED COMPTON.

KENMORE, N.Y.,
February 4, 1970.

DEAR SIR: As a mother of two small children, I am just beginning to realize the importance of knowing the freshness of the food I purchase. Where before my husband and I were unconcerned with the vitamin and mineral contents of food, I now see the necessity for getting the freshest food items to insure optimum vitamin and mineral content.

I am in full support of your food-date decoding efforts. I am a frequent shopper in the Tops Supermarkets a division of Niagara Frontier Services in Buffalo, New York. Perhaps you could recommend ways of alerting this food chain of the necessity of proper and uniform code-dating of their merchandise. Thank you for your efforts.

Sincerely,

MRS. FRANCIS BELLIOTTI.

WINSTON-SALEM, N.C.,
May 12, 1970.

DEAR MR. FARBSTEIN: Three cheers for you and the other congressmen who sponsored the bill to require dating of packaged foods.

Please include cream, milk and sandwich meats. It is maddening to have dairy products spoiled the day after they are brought from the store. Just as maddening is a return trip to the market to return them.

The packagers of sandwich meats are the worst offenders. One is forced to stick with the most common varieties, those that move the fastest.

The poor consumer, I feel, is being taken for a ride . . . and then has to take another ride to return to the market. Not to mention the fact that the consumer is "poor" because of ever increasing prices.

Good luck in getting your bill enacted.

Sincerely,

BETTY MORRISON.

P.S.—Single taxpayers deserve more consideration than they got in the last tax bill.

MICHIGAN CONSUMERS COUNCIL,
LANSING, MICH.,
May 8, 1970.

Mrs. JOHN SANTRUCEK,
Bannister, Mich.

DEAR MRS. SANTRUCEK: Thank you for your recent letter suggesting that processors should be required to include dates on the labels of perishable foods.

You will be interested in knowing that a proposal along the lines you suggested is presently pending before the Federal Congress. The proposal is H.R. 14816, introduced by Congressman Farbstein of New York.

We appreciate your bringing your views to our attention and we will send a copy of your letter to Congressman Farbstein, as we know he will also be interested in your comments.

Sincerely yours,

DIANNE MCKAIG,
Executive Director.

BANNISTER, MICH.,
May 6, 1970.

DIANE MCKAIG,
Mich. Consumer Council,
Lansing, Mich.

I'm writing to you about what I think concerns a lot of people not only in Mich. but the whole U.S.

When we put meat, veg. & fruit into our freezers we put labels and dates on packages so as to use the oldest ones first, and are told—Beef 6 to 9 months, Pork 4 to 6 months, chickens 6 mo. etc.

Now I have bought frozen fish at the store (never could find any date on box when it was frozen) my guess is that a lot of the meat is quite old, (I know that the fish sure doesn't taste good) I think it would be a good idea to put labels on all packages, who wants stale food.

Thank you.

Sincerely,

MRS. JOHN SANTRUCEK.

P.S.—If I'm wrong please let me know.

BETHEL ISLAND, CALIF.,
May 20, 1970.

Representative FARBSTEIN,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. FARBSTEIN: I have just learned that you have introduced legislation that would compel open dating on consumer items in grocery stores. I applaud your action and have written to my congressman to ask that he support this measure. As a housewife I must say it is very frustrating and madden-

ing to pay for stale goods only because one cannot read the cryptic codes that are used on such goods.

Another measure of which I would be in favor would be requiring temperature-sensitive tape to be affixed to frozen goods so that consumers could tell if an item had been thawed and then refrozen.

Sincerely,

Mrs. JAN ULRICH.

DICKINSON, TEX.,
May 10, 1970.

Representative LEONARD FARBSTEIN,
19the District of New York

DEAR MR. FARBSTEIN: I *heartily* approve of the legislation you have introduced which would compel open dating of pacakaged foods

As a bachelor, I buy a lot of ready-to-eat food and find that much of it is unfit to eat after I get it home.

Please keep up the good work! I am also writing my state representative asking him to support your bill.

Very truly yours,

KEITH MCKINLEY.

INDEPENDENCE, MO.,
May 12, 1970.

Hon. LEONARD FARBSTEIN,
House of Representatives,
Rayburn Building,
Washington, D.C.

DEAR MR. FARBSTEIN: Earlier this year, an article in *The Kansas City Star* discussed the food-date bill, and indicated that we should write to you if we wish to support your food-date decoding efforts.

We wholeheartedly support your efforts and hope that some action has been taken on the bill. In particular, we would like to emphasize the importance of dating frozen fish products as well as the importance of keeping such products constantly frozen from the time they are packaged by the distributor until they are purchased by the consumer. We have been able to determine from the deteriorated condition of the package and contents that lobster for example has on occasion been frozen thawed and refrozen. Yet instructions on the package advise not to refreeze once the package has been thawed. Consuming fish products under these conditions undoubtedly would be dangerous. We hope that special attention will be given these products through the passage of your bill.

Thank you very much for your consideration.

Sincerely,

Miss BETTY L. HISEY,
Mr. and Mrs. F. C. HISEY.

LAKE JUNALUSKA, N.C.,
April 21, 1970.

Hon. LEONARD FARBSTEIN,
U.S. SENATE
Washington, D.C.

SIR: I don't know whether this letter will ever reach you or not as I never know the correct address of the Senators. However, I would like to congratulate you for introducing a bill stating that each food package should carry the latest date. We have needed such a bill for a long while. It is simply ridiculous for food processors to be allowed to put coded dates on the packages that the consumer cannot understand for it is the consumer that really needs to know how fresh the food is that he's buying. It doesn't help the processor very much to know the date for he sells us just anything anyway. They don't care how old the food is that we're getting just so the money goes into their pockets.

Sir, you would be shocked if you knew the food situation here. We live in a summer resort town the year round. In winter the store managers seem to think they can just sell the customers inferior meat or just anything at all and in summer, because of the tourist trade prices go so high that the average person finds it difficult to just barely get by on the salary he makes.

I honestly think that the food companies think they can just dump their very worst and oldest food here because this is a mountain area.

I have in mind a sausage firm, "Jenkins," that must evidently make a small batch of new sausage and work in the old sausage that isn't fit for human consumption. I say this because time and again we've bought it, hoping to get a fresh package, then had to return it to store because it smelled almost rotten. A conglomeration of coded dates were on the outside of packages, so we'd never know what we were buying. I imagine some frozen foods we buy, such as chickens and turkeys, have been frozen as long as ten years. We went to a restaurant once that was considered the best in town and were served turkey. The steam escaping from it smelled so terrible that it made us sick and we had to leave immediately to keep from upchucking. The same thing happened one Christmas when I started to cook a turkey (frozen).

I do not think the food pk. should carry the latest date on which the food could be bought with confidence, I think it should carry the exact date the food was prepared for market.

I have never known a time such as now. The consumer is getting a bad break, and all the Ralph Naders in the world cannot change the situation. The Govt. must step in and change things. The deodorant companies, companies that sell cleaning products, all sorts of companies, in addition to the food processors, are just going wild and selling things they know are harmful but our Govt. does absolutely nothing about it. There was a great stir up recently over monosodium glutamate being harmful but V8 juices still have this harmful ingredient in them, as do a lot of other products.

The Government permits towns and cities to sell fluoridated water to the people just because parents are too lazy to see that their children brush their teeth and we elderly people have to suffer the consequences. I know that fluoridated water is bad for elderly and maybe for others. It just doesn't mix with the antibiotics and many other medicines we have to take. Now I know the opponents of fluoridation are labeled crack pots. This is a scheme to help those who vote it in. If they can make the opposition look bad, of course they will.

It is time someone in Congress began looking more closely at the consumer's needs and his rights. The labels on "Janitor in a Drum" a texize product advises one to wear gloves when using this product. Reports have been circulated that washday products are harmful. We want the truth, sir. Our lives and our health are at stake. I wish there'd be a protest march and protest speeches made against the foods that are killing us by the thousands. The nurse lays the sheet over many a hospital patient that died of food poisoning. Of course this is wasn't made known, the doctors label it a virus.

Sunday we bought our dinner from a restaurant. A few minutes after eating it we had pains in the stomach and dysentery. We think perhaps the preparations used to wash the dishes and clean grills etc. may have caused our trouble. In this area some of the restaurants, even the better ones, use young boys to wash the dishes and I never knew of a boy who liked to wash dishes and they never get them clean.

Very truly yours,

ROSE CLODFELTER.

P.S.—I hope you'll excuse this clumsily written letter. I am incurably ill with Parkinson's Disease and complications and sometimes I cannot put my thoughts coherently into words.

DES MOINES, WASH.
April 14, 1970.

Congressman LEONARD K. FARBSTEIN,
Democrat, House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FARBSTEIN: Recently our local newspaper published a UPI release reporting the work you and Mr. Bruce Terris are doing on dating the termination deadline on foods on grocery shelves. This has been done for some time on frozen biscuits but the consumer had better look at the date as stores do not remove these supplies from the shelves and it is not unusual to bring cans home only to discover that the time allowed has run out. Also if one keeps such supplies beyond the termination period, one can be very chagrined to discover that the biscuits did not raise. If I over-buy, as I do occasionally, I find it necessary to just throw them away. This, of course, is my fault.

Also, being a two-member family, I find that now and then, I use something from my supply shelves, that should have been disposed of and if there had been a termination date, I would have done so. I wrote to General Mills about this some time ago and received a nice letter from them.

If you can establish some sort of dating system with the help of your organization, it will be most helpful.

Sincerely,

Mrs. G. J. SCHICK.

ROCKVILLE, MD.,
April 17, 1970.

Representative LEONARD FARBSTEIN,
House of Representatives,
Washington, D.C.

SIR: Re dating foods for consumer knowledge. I and many friends and neighbors hope this will be done—and soon. It is irritating to have milk turn in 1 day—sugar, cereal, flour, bread crumbs, etc. to have little black or white insects waiting to greet you when you open a bag or box. I've had raisins which were not good—and meat must be very carefully selected. We deal in stores in our area and recognize these things do happen sometimes—but this would not be so if all things were dated. It *is* just a matter of stocking properly to meet the demand—and very irritating to ask a clerk how to read the date on a carton of milk or bag of flour and be told 'That's for us to know—and you to find out.' I'd like to find out.

Mrs. F. FLORSCHUTZ.

JACKSONVILLE, FLA.,
April 10, 1970.

Representative LEONARD K. FARBSTEIN,
House of Representatives,
Washington, D.C.

DEAR SIR: Today I read in the newspaper that you are proposing a bill to require stamps on food products stating deadlines for removing such products from grocery store shelves. I feel that consumers definitely should be aware of deadlines on perishable items and that such deadlines should be printed in plain view and certainly not in codes.

After my daughter was born (10 months ago), my husband purchased a case of the formula she was on. Being our first child, we were not even aware that there was a deadline for use of formula, thinking it, like evaporated milk, would be good for quite some time. Thus, it did not occur to us that it would be dated. Some time later, after using approximately half of the case, I noticed the formula was leaving a scum around the bottles that I would prepare the night before. Frantically, I checked the cans to make sure that they were not supposed to be refrigerated, thinking that I perhaps didn't see some fine, small print. Then I noticed the date on the top of the can, imprinted in the lid which was hardly noticeable. As it turned out, this formula was on the shelf of the grocery store over one month

beyond the expiration date! After that experience, and even after the child was no longer on formula, I periodically checked the supermarkets out of curiosity to see if they were still stocking "old" formula. Many of them were. Even though the date was stamped on the formula, it was done in such a manner that unless you examined it closely, it could not be seen. I feel that such a date should be put on the product in a contrasting color, or the like, so that it is immediately seen without having to look for the "fine print."

Your efforts in seeking passage of the above bill are greatly appreciated not only by me, but also by housewives and consumers all across the country. Thank you.

Respectfully yours,

Mrs. PATRICIA A. LAUGHLIN.

[From the Los Angeles Times]

POISONING LEADS TO BEEF JERKY RECALL

Statewide recall of B & S Food Products Co.'s beef jerky because of reported food poisoning incidents was disclosed Wednesday by the State Bureau of Meat Inspection and the County Health Department.

"Three separate incidents of food poisoning involving seven people in Los Angeles County and six people in Ventura County have been attributed to the ingestion of B & S Foods' brand of beef jerky," said County Health Officer Gerald A. Heidbreder.

"Any private citizen in possession of it or any beef jerky which cannot be identified, should dispose of this food item as garbage . . . Persons who think they are ill because of eating it should consult their physician."

Dr. Heidbreder said laboratory tests indicate that the product is contaminated with salmonella bacteria.

Edward Barrett, B & S Foods' president, believes 90% of the spiced, dehydrated beef has been withdrawn by jobbers since Friday in Ventura and Los Angeles counties.

"This bacteria was brought into our new plant at 107 S. Myers St.," he said, "and it was not due to negligence."

WASHINGTON, D.C.,
April 22, 1970.

Hon. LEONARD FARBSTEIN,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. FARBSTEIN: I was delighted to learn that you are introducing legislation seeking open dating of packaged foods in the grocery stores.

In the past few years I have noticed that more and more foods are stale or spoiled when purchased and I have conducted a one-woman campaign to combat this practice by returning all such items to the store for credit.

In order to avoid buying shelf-stale or out-dated items I often ask the store clerks to tell me the expiration date, only to be told that the manufacturer uses a "secret code" which the clerks cannot decipher. When I inform them I will return the goods if it is not fresh, they usually advise me which package to buy.

I have bought cream that sours in two days, frozen strawberries that are sour when opened, and soup so old it must almost be removed from the can with a chisel—and these from super markets in the best residential sections. Until your legislation is passed, I will continue to return such items to the stores. More power to you!

Sincerely yours,

FRANCES W. KERR.

DEAR REPRESENTATIVE FARBSTEIN: After reading your piece in Daily News, I was wondering if you might look into spoiled meat in A. & P. markets in Farmingdale. They are all wrapped in cellophane and I picked out chicken cutlets the paper wrapping was exceptionally wet, I made nothing of it, but clerk waiting on me said pick other chicken, this is old laying, I had had bad tasting meats before and never had an honest saleslady stop my purchase. Please look into A. & P. meat dept. in Farmingdale, L.I. and Massapequa Park. I would like to sign my name but I would not want honest clerk's identity known. I would be so grateful Rep. Farbstein for I am a Senior Citizen living in my Son's Home and live on a small pension and cannot afford the high price they charge for bad meat. This girl is still in A. & P. store, and thank you so much for looking out for the people's benefit.

Sincerely,

SOUTHBRIDGE, MASS.,
April 16, 1970.

Representative LEONARD FARBSTEIN,
Washington, D.C.

DEAR SIR: I read an item in this morning's Worcester Telegram, quoting you as fighting for a bill to date food packages so one can tell how old it is. This is something I have been fighting for a long while and it is long over-due.

I wrote three large bread companies, but didn't even get the courtesy of a reply. At today's prices for food one should get what you pay for and not a stale item. Keep up the fight and good luck.

Yours truly,

WILLIAM A. BAKER.

MOORESVILLE, N.C.

DEAR MR. FARBSTEIN: What a relief, now we have someone getting to bottom of a waste of money by housekeepers, homemakers or anyone buying food.

So often I have bought prepared food that I knew was ready to spoil as soon as it was open, not only certain foods need a date on them, at the present I have on hand a can of cocoa that is musty, it has to be five or more years old, spices sometimes are a cake of webs. Most older homemakers can tell old cakes by the freshness of paper if old paper is brittle and yellowing. Bread is very easy to detect age by softness.

I am a farm wife and do a lots of canning, freezing plus hand raising my vegetables myself. To see the rough way grocery boys handle vegetables make me almost bite my tongue, such a long list I could give you on the way things are ruined in Gro Stores.

I use to manage a school lunch room before becoming disabled. There is always enough left over to feed the hungry kids, but it happens there is a rule everything has to be poured out. This I took care of by letting older children eat last and eating all they wanted rather than throw it out. The woman who took over after me did not want the bother and dumped it all out.

People don't seem to care what happens to others like I do. Maybe that's why I am disable to work at public work, (do plenty at home as I can) seems people are tearing up everything and don't care how a job is done just so they get by. People during the depression years at least tried to put a little art in their work. All this trash was not beside the roads. We even get bottles, cans, broken glass in bales of hay we prepare for our cattle.

While on the subject of dates on food, make it a law that all the fine print on goods of any kind be larger. Its always so small that I put lots of things under a large light bulb with reading glasses to see and then lots isn't plain. Now there is lots of people who would not be able to even see there was small writing on labels. When I see it it makes me feel like the company hoped we could not read it, there is always plenty of room to write or print it larger. All this fine print is costing money and lives.

Having arthritis, diabetes, and some heart trouble, I have tried lot of medicine since the same doctor does not treat all three ailments. Several times I have been given the same drug in other shapes and color. Once each doctor gave me (3) the same drug in different shapes and I took it a couple days, then after I was sure something was wrong with medicine, I took all bottles to the druggist and found out what I had suspected was true. The three were dolonil, donnazyme and donnatol, all had same of the same drug in them plus other drugs. Ever since, I don't pay for drugs until the name of drug is put on the label. Doing this a person can either carry their medicine with them to the other doctor or write the name down on a card to carry with them to doctor, if you want a dry mouth and to be listless just try these three together a couple days. No need to pinch yourself to see if you are alive, you wont feel that either.

Wish a doctor could treat all of me without having to wear a person out getting around to all of them and each charges enough for full exam, when all one get is another bill and stay on some pills.

There is lots of time for me to think Government things over since this arthritis doesn't let me get about like other people. We see a lots that would help but who would listen to any of our suggestions since we or I am from the South and not a big shot.

If you would like my suggestions on crime, hippies, drug addicts, rioting, unemployment, gangs, government waste, housing for people on welfare and how to help ease these problems, I will write it up, if you want it.

Too hard to write with arthritis unless it's useful—could be taped.

Mrs. KNOX.

P.S.—It's we plain people who are holding this country together.

LAW OFFICES OF
GOTTLIEB & SCHWARTZ,
Chicago, Ill., April 13, 1970.

House of Representatives,
Washington, D.C.

DEAR MR. FARBSTEIN: I just read about your bill to require explicit dating of food products in supermarkets, and I wanted to join the people supporting it. I think that consumers ought to receive a great deal more information about the products they buy and the prices they pay than they now do.

Thank you for taking on this cause.

ROGER LEVIN.

LYNN, MASS.,
April 10, 1970.

DEAR CONGRESSMAN FARBSTEIN: I read yesterday in the Lynn Item of your bill which would require stamps on food, stating the deadline for removing products from the shelf before consumers buy stale food.

I give support to you and this bill because there have been plenty of times that I have bought something in a supermarket which was no longer useable and the cost of food the way it is now consumers should be assured that the product they are buying won't end up in the trash bucket because it was no good.

Thank you for your time. Good Luck with your bill.

Mrs. EMILE LANDRY, Jr.

BROOKLYN, N.Y.,
April 9, 1970.

Congressman LEONARD A. FARBSTEIN,
New York City, N.Y.

DEAR MR. FARBSTEIN: Throughout your years in public life, I have followed your career personally and proudly.

This morning I heard on radio news of the bill you are introducing, that manufacturers of food should *DATE* their food packages—therefore enabling them and all stores to properly rotate food in freezers and shelves for the safety and health benefit of thousands of people.

For this I salute you and so will the public. If you would like signatures of millions of housewives, I would think that *all orga-*

nizations would help in getting signatures to help in getting your bill passed, if you could get one copy of this bill printed up for signatures sent to all organizations and they can make up duplicates and get the signatures of many people for this bill.

I happen to belong to Phyian Ladies and B'nai B'rith and there are many more organizations as you know. The public I am sure will be 100% behind you.

I'm sure you do not remember me, but inasmuch as you are in the public eye so many years, I haven't forgotten you. Somehow thru my mother (Mollie Miller) and her mother (Hannah Isaacs) we might have been related distantly with your folks.

This bill you are introducing got to me so deeply I just had to write to you.

Wishing you and many people success in your endeavors.

Very sincerely yours,

GERTRUDE "MILLER" ROSENZWEIG.

P.S.—I will be leaving on a European trip by next week, so decided to sit down at once to write this, and again to salute you.

UNITED PLANNING ORGANIZATION
OF THE NATIONAL CAPITAL AREA,
April 3, 1970.

Congressman LEONARD FARBSTEIN,
U.S. Capitol,
Washington, D.C.

DEAR SIR: It was good to read in the Consumer Federation of America's "Consumer News Roundup", that you had introduced a bill, HR 14816 requiring the dating of perishable and semi perishable foods.

The Consumer Action component of the United Planning Organization conducts consumer education classes for residents of low-income areas of Washington. Often these consumers relate experiences of getting home from the food market only to learn that they have just purchased an item which is not fresh. The consumers tell us that they do not return these foods to the market for many reasons, some of which are:

(a) Transportation is usually poor in their areas, and most can not afford private transportation.

(b) They do not have money for extra bus or taxi fares to and from the markets.

(c) It is inconvenient and time consuming to make extra trips to the store.

The participants are asking that we include in their classes information on how to read codes of freshness on perishable foods.

We are in the process of writing and/or visiting many of the stores, packers and distributors in an effort to secure such information.

We are discovering that freshness codes represent an entirely new language of the marketplace. The codes are totally meaningless to the consumer because he is unaware of their existence or does not understand them.

We would certainly appreciate being kept informed as to what happens with the bill. Please notify us if hearings are planned. We would certainly want to participate.

We would appreciate any suggestions you might have.

Thank you.

Sincerely,

THERESSA H. CLARK,
Consumer Action Coordinator.

DENVER, COLO.,
April 10, 1970.

Hon. LEONARD FARBSTEIN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FARBSTEIN: I read the article concerning "food coding" with much interest. The housewives in Denver have known about the coding system for over three years, but our complaints have gone unnoticed. Perhaps you remember that in 1966 the women in Denver made one great big objection to many things about the food industry. Food coding was one of those complaints. It is a prevalent thing in Denver for the code to be outdated—or it may be moved from our more affluent neighborhoods to the poorer neighborhoods. Time after time we have asked our Congress to make an investigation into the practices of the Super Markets—time after time we have been lied to or rebuffed.

Much "to do" is being made as to the plight of the poor. Nothing is really being done to help the poor. If a study could be made of the chain store's pricing structure I think you would find a monopoly. Every time we get some one interested enough to look into the situation we run into great BLOCKS—such as the FTC–FDA–USDA.

Being a Democratic Committee woman—I am concerned about what is happening to our Party. I'm convinced that we have already lost in Colorado—simply because the Democrats only issues are concerned with the Black, the Poor, and the Young—these are idealistic issues of course—and dreams that are commendable—but they don't get votes. If the Democratic Party would insist upon doing something to get food prices down to the level where all people could afford to eat—they would have a good campaign issue. If there's hunger in this land—it is simply because you men in Congress, despite pleas from the public, have allowed a pussy cat grow into a people devouring Lion.

Food consumerism started in Denver—but no great study has been made here. True, Betty Furness was sent here—as was Virginia Knaur, but they never talked to the Middle Class or the poor housewife—they visited the huge feed lots and the American National Cattlemens Association, who, according to our men in agriculture, do not reflect the feelings of the ranchers and the farmers. I do not blame the potato farmers for burning their products when they can get only 2c a pound. The housewife must pay 12c at the market—and so far as we have been able to learn the farmer must pay for everything that happens to that spud from the time it is planted until it is in the store.

Perhaps it is time to do something instead of just making studies. I'm sure food quality and food prices are more important than the facial expression of a fish or the sex life of birds.

The women of Denver would much appreciate your thoughts on this—and perhaps you could give us some advice as to what can be done.

Sincerely,

Mrs. ROSAMOND WEST.

MINNEAPOLIS, MINN.
August 6, 1970.

Hon. LEONARD FARBSTEIN,
House of Representatives,
Washington, D.C.

DEAR SIR: The Minneapolis Star is currently carrying a series of articles on the dating of food. One article mentions that you are sponsoring a bill requiring open dating, so that consumers could know the relative freshness of the foods they buy.

I am writing to you to indicate my wholehearted support of this bill, and I am sorry to see that no Representative from Minnesota has cosponsored it with you. Please keep up the good work on behalf of the entire nation. It is shocking that food producers are consciously and deliberately keeping packaging dates and pull dates from the people who are going to eat the food. One meat wrapper in a local store, according to the Star "sits down with a calendar at the start of each month and arbitrarily gives each day a number code."

This insidious form of "caveat emptor" must be destroyed. I commend you for your efforts.

Yours truly,

Mrs. JENNIFER B. DEAN.

CHICAGO, ILL.,
July 15, 1970.

Rep. LEONARD FARBSTEIN,
House Office Building,
Washington, D.C.

DEAR SIR: I am writing in support of your proposed legislation to make codes in grocery stores readable by the average consumer. The mysterious markings now give no clue as to the quality of the meat, bread, or dairy product to be purchased. The claim by grocery store managers that such a measure would cause consumers to buy only the freshest food. Hence more waste is absolute obscenity to me. Environmental obscenity. Why are so many useless items then produced and sent out to these stores? Surely there are better ways to stock supermarkets than continually stocking them with too many goods. And surely the health of the consumer not to mention the environment is more important than continually spiraling markets and profits—they, I believe, will lead to ultimate doom. The environmental and people's bodies cannot take this continued production and poison being poured into them.

Hence, I see this bill as at least a step in letting the consumer judge more carefully in what he buys and the supplier and the manufacturer with what they produce and supply.

Thank you for your consideration.

LEJUNE HOLMAN.

HOLLYWOOD, CALIF.,
April 29, 1970.

Representative LEONARD FARBSTEIN,
New York, N.Y.

DEAR SIR: I just want to add my support to your bill to force food manufacturers to print all food dates, plainly, on each and every package, box or can.

I have been wife, mother and housekeeper for many years, and I know I would be money ahead if I had advance knowledge that the loaf of bread or carton of milk was older than it seemed to be! It's a pitiful waste, and a very unnecessary one!

Food bills these days are high enough without adding to it with waste which could have been avoided had the consumer known how old the product was when it was purchased.

Thank you for your help to all consumers, and for the chance to have my say, after these many years!

Very sincerely yours,

Mrs. E. I. SLATER.

MONROVIA, CALIF.,
March 12, 1970.

Representative LEONARD FARBSTEIN,
Democrat of New York.

DEAR SIR: I read in the Los Angeles Times March 12th, under, *Mind Your Own Money,* that you have introduced a bill to force food manufacturers to print all food dates plainly on all food packages or cans.

I will not buy food packages because there are not marked dates, that I can decode. The manufacturer and grocer may know, if there is a code, but not we homemakers.

I am all for your bill. Please let me know if I can help in anyway. I thought you might be interested in this article that appeared in the Times March 12, 1970.

More power to you!

Sincerely,

Mrs. MARGARET V. JOHNSON.

P.S.—I would appreciate a reply on your progress.

JULY 16, 1970.

DEAR REPRESENTATIVE FARBSTEIN: It was good to read in our local newspaper that you have introduced a bill to force food manufacturers to print *All* food dates plainly on each package or can.

You have my complete support in your food date decoding efforts. It will be not only

convenient but also safe to know just what we should expect out of our edible products. We deserve this for the money paid out.

Sincerely,

SANDRA JANISEH.

REPORT OF BLACK LAWYERS AND JUDGES IN THE UNITED STATES, 1960–1970

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MIKVA. Mr. Speaker, on July 21–25, 1970, the National Bar Association held its 45th annual meeting in New York City. At that meeting, the Honorable Edward B. Toles, Referee in Bankruptcy in the U.S. District Court for the Northern District of Illinois and chairman of the National Bar Association's Committee on the Judiciary, submitted a report on black lawyers and judges in the United States. Since Mr. Toles' report differs significantly from the estimates of the U.S. census in 1960, I believe it will be of interest to place the report in the CONGRESSIONAL RECORD.

The document referred to follows:

REPORT OF BLACK LAWYERS AND JUDGES IN THE UNITED STATES, 1960–1970

(By Edward B. Toles)

The following comparative chart records the number of black judges and lawyers in all 50 States and the District of Columbia for the period 1960–1970. Population figures are based on the 1960 census; lawyer figures are from the Journal of American Judicature Society, Vol. 49, No. 9, page 192, February 1966. The statistics as to the number of black judges and lawyers were obtained by questionnaire survey from the Governors of the 50 States and from individual inquiries from National Bar Association members at the 45th Annual Meeting of the Association in New York City, July 21–25, 1970.

According to the 1960 United States Census, there were employed as black lawyers and judges in that year, 2004 black males and 176 black females, a total of 2,180 black lawyers. There are probably more than 4,000 black lawyers, but the nature of the legal profession among blacks is such that considerable numbers of blacks may be qualified to practice law but be employed and classified in other occupational categories; presidents of black banks, newspapers, insurance companies, colleges, law school instructors, teachers and government officials, who are lawyers, are listed in census reports in their respective businesses rather than as lawyers.

45TH ANNUAL CONVENTION NATIONAL BAR ASSOCIATION

JUDICIAL COMMITTEE REPORT, JULY 24, 1970—BLACK LAWYERS AND JUDGES IN THE UNITED STATES ACCORDING TO U.S. CENSUS, 1960 POPULATION, AND AMERICAN BAR ASSOCIATION CENSUUS OF U.S. LAWYER POPULATION

EDWARD B. TOLES.

RISING STAR OF RED STACK

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MILLER of California. Mr. Speaker, I am privileged to include as part of these remarks an article that appeared in the San Francisco Chronicle pertaining to Thomas B. Crowley, president of the Crowley Launch & Tugboat Co., of San Francisco, who has been selected by the Secretary of Defense and the Joint Chiefs of Staff as a recipient of the National Transportation Award.

For many years I served on the House Post Office and Civil Service Committee and was privileged to know and work very closely with Tom Crowley during that period.

I was not unfamiliar with his distinguished father who recently passed on at the age of 94.

The "Red Stack" Tugboat Co. is an institution in the San Francisco Bay area, and those of us who know of the fine service that it has given to the maritime industry and to this country during the period of wars appreciate the fine leadership that Tom has given it.

The article follows:

CROWLEY HONORED: RISING STAR OF RED STACK

(By Sidney P. Allen)

Thomas B. Crowley, president of Crowley Launch and Tugboat Co., San Francisco, has just been selected by the Secretary of Defense and the Joint Chiefs of Staff as the recipient of the National Transportation Award. This annual award is for achievements that have contributed most to the transportation and logistics industry in support of the national security.

The silver trophy emblem will be presented to Crowley at the annual award luncheon September 23 at the Hilton Hotel here during the convention of the National Defense Transportation Association.

The "Red Stack" tug fleet, keystone of the Crowley organization, has of course been a familiar sight around this port over the years. But not much has been written about the closely held, family-dominated operation.

When founder Thomas Crowley died a month ago, at age 94, the ramifications of the shipping services empire his son has been piloting (and building) for the past decade began to come into focus.

The Transportation Award citation, plus a brief look at the organization's new command post a San Francisco's Pier 50, make it apparent this is a huge, complex, and highly innovative operation.

For instance, the famed "Red Stack" tug fleet, now operating under more than 100 different corporate entities, numbers somewhere near the 200 total. Some of these tugs are seagoing vessels ranging from 2800 to 7000 horsepower and designed for long-cruising range.

They tow military vessels and equipment to Southeast Asia, take assignments for coast-to-coast hauls, even make delivery of cargo to the icy reaches of the oil rich North Slope at Prudhoe Bay, Alaska, in what has to be one of the great transport accomplishments of history.

There's danger and drama in the business.

Right now, for instance, a flotilla of tugs and barges en route from Prudhoe Bay back to Point Barrow is trapped by ice. Hopefully the ice flow will permit passage of the equipment and several score of personnel before summer ends.

Be that as it may, the Crowley organization—and specifically Thomas B. Crowley—get credit for providing another daring and vital transport service link.

It's one in a series.

In 1958, says the citation, Crowley took personal direction of the first commercial resupply of military DEW Line installations on the Arctic Coast of Alaska and later on the Bering Sea and throughout the Aleutian Island chain. This resupply reaches 46 of the most isolated and inaccessible military facilities in the world.

And in 1959 he established the first large scale container shipments by van-carrying barges between West Coast ports and Alaska. This was followed in 1963 by the Hydro-Train service through which the important direct rail-water-rail link has been established between the lower 48 States and Alaska.

The seat of this service inevitably became Seattle.

And now Crowley Northwest interests, which pivot around Puget Sound Tug & Barge, exceed the San Francisco operations built around the old Shipowners and Merchants Tugboat Co.,

Dollar figures and organization charts don't tell all, to be sure. But they tell something.

Nobody says flatly, but there are indications the organization has gone on the line for upwards of $20 million just in the last few years on special new equipment primarily for the northwest work.

The staff is now estimated at about 1000—based from Alaska to San Diego. Headquarters here houses the computer center for the works.

It also houses most of the 1000-plus corporate seals of Crowley-owned or dominated companies—some just one tugboat in asset size. (Included are seals for Merritt Ship Repair, and Pacific Drydock & Repair, both of the East Bay, and of course the Long Beach-Catalina as well as Tiburon and Angel Island Ferry Companies.)

Parenthetically, the old original Shipowners and Merchants Tugboat Co. is a stock company, but Crowley family holdings dominate the list of about 100 shareowners.

And the organization has applied to start Binnacle Insurance Co., to provide its own admiralty insurance coverage, naturally.

Award winner Thomas B. Crowley, incidentally, observes his own 56th birthday this week. Maybe gross business this year will approximate $56 million in honor of his anniversary.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

LEGISLATION TO REQUIRE THE OPEN DATING OF PACKAGED FOODS—XV

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FARBSTEIN. Mr. Speaker, Helene Lippincott recently conducted a 6-week survey of food coding practices in the San Francisco area. Her results appear in an excellent feature article of the San Francisco Bay Guardian.

Miss Lippincott found rotting vacuum-packed meats a regular item in area stores. She found milk commonly being sold 2, 3, and even 4 days past the pull date. Her survey of independent grocery stores disclosed that of some 100 cartons of cigarettes only one carton was fresh. The others averaged from 4 to 6 months old, and one was pull-dated February 1969.

A county food inspector told her "it is possible to get some pretty stale stuff in the marketplace. Imported anchovies can be as old as 10 years. They keep the codes from the consumer with deliberate intent to deceive them."

Despite the claims of the National Association of Food Chains that open dating would increase the cost of foods, Miss Lippincott found supermarket chains like Jewell Food Stores, which provide consumers with information on their codes, actually make a profit because they are able to attract the freshness conscious housewife.

In California, the Berkeley co-op posts explanations of dairy codes right on the refrigerator case. "The store clerks are more careful to anticipate the sale and more careful about the rotation of the products in the dairy case," Berkeley co-op home economist Mary Gullberg testified last January before the Senate consumer subcommittee.

Miss Lippincott discovered that most delicatessen merchandisers were enthusiastic about open pull date legislation. But then most of them have been subscribing to the American Meat Institute's voluntary system of coding for years. Said the distributor for Oscar Mayer:

More and more government agencies are trying to educate the consumer—and they should. You don't want a pack date—you want a pull date on a package. A quality insurance day. It's a real commitment to freshness.

Finally, the Bay Guardian reporter found that the law required the food manufacturer to provide a number of State and Federal agencies with their codes. However, these agencies refused to release them to the public. A secretary to the California Food and Drug Administration told Miss Lippincott:

The codes are confidential to *protect* the canner.

One wonders what the canners are being protected from.

The text of the San Francisco Bay Guardian article follows:

FOOD CODING PRACTICES

(By Helene Lippincott)

Almost everything in grocery stores—bread, bologna, cigarettes, even babyfood—is coded as to freshness—either by pull date, the last day it should be sold as fresh, or by pack date, the day the food was wrapped.

Little numbers. If you have eyes like microscopes or can read Braille, maybe you can figure them out. But once you find the numbers, you still must find the system to unscramble them and turn them into dates.

I have spent the past six weeks breaking the codes.

Daily, I entered the stores and cruised the aisles for two hours at a time with nothing but a bag of English muffins (code-dated by blue plastic twister) in my shopping cart.

I inspected everything in reach—pulled jars of coffee off the shelf to look at hieroglyphics on each label, up-ended one by one all the cottage cheese containers to read the stamped code on the bottom and rummaged through the meat bins to squint at the blue blurr on each hot dog package pull tab—the code date.

Occasionally, store detectives would hover near by, smiling patiently, while I took notes. Store clerks would grow edgy at my frequent questions, then evasive and, finally, downright hostile—and totally absorbed in their work of stocking shelves.

THE RUNAROUND

My conversation with the clerk in the Mayfair Market on Geary Blvd. was typical of the run-around I got in checking out the codes. It was a slow Saturday morning in the vacuum-packed meat section. The clerk was stirring the meats into place—oldest in the front, newer packages carefully buried in the back.

I asked her what the number on the back of the package meant.

"Those are a code," she snapped. "You aren't supposed to know it."

But I thought I did. "Take 0128," I said. I said "Doesn't it mean that the last day this should be sold is August 12?"

"Yes," she mumbled, suddenly becoming very busy.

I picked up a package of Mayfresh luncheon loaf marked 0247. "Doesn't this mean the last day it should have been on the shelf was July 24? Today is August 1."

But she was wise in the ways of coding. "No, that's not a code. Those are just numbers. Watch it—you're messing up the meat."

Codes are complex, say store executives, to simplify stock rotation for the food clerks—to tell clerks when to remove outdated shipments. Management insists it has perfect controls now. "We don't handle stale products," Mayfair's regional director Rick Richardson told me indignantly.

Executives say that by keeping freshness coded, they are not being paternalistic—just practical. If the foolish housewife were allowed to know the exact variations of freshness (which are, of course, so small as to be inconsequential) she would paw through displays, leaving behind older but perfectly good food, and thus eventually increasing the cost of food to herself.

BREAKING THE CODE

The codes are so complex that store clerks often can't figure them out. But if you combine luck with a persistence approaching fanaticism, you can break the codes.

I doped out some myself. I stopped bread drivers in the street. A Kilpatrick bakery driver, for instance, doffed his cap and explained both Kilpatricks' color code and Wonderbread's.

I met and telephoned government officials and supermarket executives and worked my way up the chain to command. Once I explained the codes to them, the supermarket executives would reluctantly confirm them.

If the codes mean what the store executives say they do, then the stores all over the Bay area—from chains like Lucky, Mayfair and Safeway to the mom and pop stores—are selling outdated and unfresh food at fresh food prices.

I found rotting vacuum-packed meat a regular item. A Lucky clerk at the Eddy Street store removed the moldy salami when I pointed it out, but in the Bush Street Safeway on July 15, though the clerk was only too happy to identify several packages of bologna as pull-dated June 5, he put them back on the shelf.

Milk, one of the most perishable products, is commonly sold two, three, even four days past the pull date. Cigarettes get stale, too. A Guardian survey of independent grocery stores in the Richmond district disclosed that of some 100 cartons of cigarettes, only one carton was fresh. The others averaged from four to six months old, and one carton was pull-dated February, 1969.

"It's possible to get some pretty stale stuff in the market place," says a county food inspector who asked not to be identified. "Imported anchovies can be as old as ten years. They keep the damned codes from the consumer with deliberate intent to deceive them."

A 1969 Congressional survey disclosed that poorer quality food is being sold at high prices in low income neighborhoods. But the sale of outdated food appears to be widespread, regardless of income bracket.

On July 20, I found, Safeway's classy Marina store would have sold you 10 day old "fresh" haddock fillets, just as eagerly as the small Safeway on Bush—just above the Tenderloin—would have sold you week-old "fresh" chicken fryers on July 15.

Many markets also re-wrap and thus re-date their products. For instance, at the middle-income Lucky store on Eddy, I discovered on July 23 that Lady Lee cooked ham was streaked a yellow-pink—like a rainbow—or an oil slick.

Four packages bore a smudge and then a new stamp—013–8 meaning pull date Aug. 13. But on one package, the smudge was still legible. It was a stamp reading 017–7, meaning July 17 pull date.

BAD EGGS?

On July 27 in the South Van Ness Safeway, the pull date on the end of the carton of Lucerne eggs read, 8 214–1, meaning pull Aug. 2. The store clerk attempted to reassure me that the store would not be confused by the code. "I suppose on Aug. 16, we could just throw them up to the front and everyone would think they were dated 8–21 and were fresh . . . But we wouldn't do it."

Since the Safeway's management is trying to maintain simple, legible open dates on all Safeway brands, executives apologized for the ambiguous code I found on their eggs. "Some of our packers haven't gone along with our policy," said Lorenzo Hoopes, a vice-president.

Fresh meat, usually wrapped in the stores, bears a simple two digit pack date or, as in the Mayfair stores, a letter meaning the day of the week. But if the food remains unsold for a month, or a week, the ambiguity of the code date makes it read as fresh.

"The meat moves out of here so fast we don't even have a code," said one Mayfair clerk at the Geary Blvd. store, though the empirical evidence of his own meat counter—where everything was code-dated after all—pointed to the opposite conclusion.

The practice of re-wrapping and re-coding old food is also common in Washington, D.C., as disclosed by surveys conducted by the staff of Leonard Farbstein (D-N.Y.) and in Chicago by the National Consumers Union and the Chicago Journalism Review.

However, selling old food is not illegal, nor are secret codes. San Francisco Public Health and California Food and Drug Administration officials can only take action against stores which are selling either short weight, harmful or adulterated food. And stale food is not necessarily any of these.

"The laws don't cover nutritional value of foods," said FDA cannery inspector James McElwee. "Just whether or not it's harmful." In the case of meat or bread, it may become shortweight as it ages. Then inspectors can move in and threaten to revoke licenses.

But this catches the offender on a technicality. Besides, officials don't have time to care much about freshness. "If we had to worry about food codes, we'd have to triple our staff," said San Francisco health center supervisor Santos Sanchez.

However, some government regulatory agencies know the food codes. The San Francisco inspectors, for example, have codes for dairy products. Also, cannery inspection officials in the California Food and Drug Administration have the codes for canned goods with low acid content. Since low acid products could support the growth of botulism, a deadly bacteria. California law requires that the codes of these products be registered with the FDA.

But since there is no requirement for the agencies to release their codes to the public, they adamantly refuse to do so. "The codes are confidential to protect the canner," secretaries for FDA officials say routinely before hanging up on you.

What the canner is being protected from is not a topic they will discuss. State meat inspection supervisor Mel Wahl said, "We can't as a public agency give out the codes. It would be like giving out the formulas of the plants."

Legislation is pending in Washington and Sacramento which would require legible, understandable pull dates on perishable foods, making the degree of food freshness a legitimate item for both government regulation and consumer information.

In Washington, the bill is an amendment to the Fair Packaging and Labeling Act (H.R. 17005), authored by Rep. Farbstein and sponsored by some 58 congressmen, including San Francisco's Philip Burton. The issue, now in the House Sub-committee on Agriculture, has been postponed until January, 1971, but observers generally agree that if any food-coding bill can pass, it will be this one.

Farbstein also is petitioning the Federal Trade Commission, asking that its section 5 on deceptive practices be amended to include food codes. When the FTC meets Sept. 1 to make its staff report on perishable and canned foods. Farbstein's petitions will ask for a definite shelf-life to be listed clearly on such products' labels.

MORE DISMAL

In Sacramento, the picture is more dismal. State Senator Anthony C. Beilenson (D–Los Angeles) has authored two bills which are now dying in committee—one on open pull dating of bakery products, another on open dating of dairy products.

Bob Toigo, Sen. Beilenson's legislative aide, attributes the bills' demise to pressure on the legislators from the powerful grocers' lobbies—and to the lack of strong public opinion.

Consumer spokesmen testified for the bills before the committees, but did not conduct any all-out drive on food codes. Mrs. Sylvia Siegel, executive director of the Association of California Consumers, said, "It wasn't one of the key consumer issues. In relation to the total volume of consumer complaints, incidents of stale food are relatively small." How-

ever, Mrs. Siegel has recently changed her mind. She said she was shocked by some of the Guardian's findings and is currently organizing local consumer groups to do a complete survey on conditions in the markets.

The grocers' position is unchanged. They vehemently and almost unanimously oppose the open-dating bills. Stan Johnson, director of the San Francisco Bay Grocer's Association—representing some 17 counties and 1400 stores—stated the reasons for opposing the Beilenson bill.

"The grocer puts forth every effort to get fresh products at the lowest price to the consumer," Johnson said. "He's got to in order to be competitive; he's vulnerable.

"Actually we're getting more complaints about out-of-stock fod than food which is not fresh. The happy medium is not open-dating but well-trained store people who are regularly rotating stock."

BREAD DEALERS

John McCarthy, distributor for Langendorf Bakeries said, "Open dating is useless. You just get housewives confused. Fresh bread isn't good for you anyway—it's not healthy."

Milk and dairy executives are distraught over the prospect of requiring open dating. "Is it your purpose to raise the cost of milk 50 to 100 per cent for the poor people of the city?" screamed Mickey Davis, general manager of Christopher Milk, when I asked him about open dating. "As long as we know how to control our products, we think that's all we need to do."

The milk industry has marshalled surveys of the cost effects of open-dating to bolster its point. The most recent, done in February, 1970, for the Milk Industry Foundation, comes to the same conclusions as earlier milk industry surveys—(1) that the quality of open-dated and code-dated milk is comparable, (2) that milk sold past the code-dated is generally still fresh, and (3) that costs do generally increase under open dating because more deliveries are required to keep freshest milk in stock.

John Kaczor, manager of the Northern California Dairy Association, stands by that report. "Open dating on milk is an anachronistic phenomenon," he said emotionally, "The quality of a bottle of milk is better than it was five years ago, and milk-dating was anachronistic even then. If there's a problem, let a consumer handle it on an individual complaint basis, not impose upon an entire industry—a struggling industry—an uneconomic prospect."

The milk industry report states that the average shelf life of pasteurized grade A milk at 40 degrees F is 20 days. However, Farbstein and other sponsors of the bill for open-dating accept the shelf life of milk when stored at a lower temperature—33 degrees F—as only seven days.

Stores now using open-dating report none of the cost increases which opponents of open-dating fear. The Berkeley Co-op, which handles Gold'n Rich and Knudsen's dairy products, posts explanations of codes right on the refrigerator case.

"The store clerks are more careful to anticipate the sales. . .and more careful about the rotation of the products in the dairy case," Berkeley co-op home economist Mary Gullberg testified last January before the Senate Subcommittee for Consumers on the Fair Packaging and Labeling Act.

Two months ago in Chicago, the Jewell Food Stores chain began an experimental campaign to educate consumers about codes. They gave consumers access to their complete guidebook for the codes. And last week Jewell reported that profits, not costs, had increased with open dating. In a telephone interview, Jane Armstrong, Jewell's director of home economics, scoffed at the concern over the cost increases. "Initially we maybe had some out-of-stock problems—clerks hesitating to order for fear of losing sales. But most of our sales people know how much to order," she said.

SAFEWAY PARADOX

Paradoxically, Safeway stores, which pride themselves on having maintained an "open-dating" system since the 1940s, oppose the open-dating bills. "The customer has a right to know and should be informed, as to what she is buying," states a Safeway position paper. But later it reveals its true colors. Safeway says regulations which would standardize the shelf-life of foods are uneconomic. ". . . Experiments with open 'pull' or 'off-sale' dates . . . have been unfavorable and, in our opinion, may even lessen our ability to rotate stocks in a manner at all times to assure fresh products for our customers." Shelf life standards, it says, would be "a disincentive" to improving the quality, freshness and thus the shelf-life of its products.

Perhaps we can concede Safeway's point about the question of incentive, but Safeway's opposition to the open-dating bills does not suggest the constructive alternative of requiring open pack dates on all products. Nor is it currently planning a consumer-education program, on the line of the Jewell chain, to explain its "open-dates" to customers, though executives suggest they might someday.

So let us examine the sincerity of Safeway's claim that it does indeed have consumer-oriented "open-dating." Many Safeway products, Mrs. Wright's salad dressing, for instance, are plainly marked with a simple number pull date. For instance, 10–6–70 means that October 6, 1970 is the last date the product should be sold or anyway, sold at full price.

WITH A SMILE

At the Safeway headquarters in Oakland, in the executive inner sanctum, Lorenzo Hoopes, the vice president in charge of supply, leaned over his broad mahogany desk and, with a young public relations aide at his side, said with a smile, "In as many products as we produce ourselves, our philosophy is one of pull dates that can be and are easily recognized by the consumer. We've got a large number of steady customers who shop milk by the date."

But milk is one of those items where the pull date is concealed—imprinted in wax (no ink used) on the pour spout of the carton. Hoopes explained that Safeway packing machinery cannot print clearly on wax, but, he said, the clerks can understand the date to rotate the milk efficiently.

However, I told them I checked three different San Francisco Safeways on July 15, 24 and 26, and found Lucerne milk that was past the code date and that, by Safeway rotation policy, should have been dumped as many as four days earlier. This was a revelation to P.R. man Duane Carlstrom who worked his way through college in Safeway stores. "If we had outdated milk when I was a clerk, I was stood up in the corner and often almost reduced to tears," he said. "You cannot find a more pure and wholesome product than our milk."

Other code dates on Safeway products are more difficult to read than the code on Safeway's milk. Code dates are color-camouflaged or placed on the back of products. Numbers on vacuum-packed meat are especially deceptive—carefully stamped in blue ink on the only red portion of the Safeway label. Also, the numbers contain zeroes and no break between the month and day of month so the code is not easily read as a date.

I found the greatest number of outdated goods on vacuum-packed meats, Safeway "guaranteed fresh." For instance I checked nine packages of bologna on July 15 in the Bush St. Safeway that read 0605, 710 and 708, meaning pull date June 5, July 10 and July 8.

"It's not a code," said Hoopes of these findings. "I use numbers to date my checks." On June 5, he writes 0605?

THE PLASTIC TWISTER

Also, the freshness of Safeway bread is code-dated by the color of the plastic twister. Hoopes said there is also a number on the twister, indicating a pull-date. Though I have often looked for such a number, I have never found it.

I asked Mr. Hoopes about Safeway's color code. "I don't think we would want to educate the consumer as to our color coding," he said, "It would be meaningless to her." (See chart for breakdown of code.)

Again, Safeway bread—Airway, Ovenfresh and Skylark—is often sold as fresh after the pull date. For instance, in the Safeway on Ocean Ave. on Friday July 24, blue twister sesame rolls (fresh the previous Saturday) were selling as fresh. According to a Safeway rotation chart, they should have been sold at reduced prices on Tuesday—about three days after they were fresh.

Mayfair and Lucky use more complex codes (see chart). On request, executives and store clerks will explain them to consumers. But they offer little justification for the continued use of codes.

"There isn't much of a rationale," said James Stell, Lucky vice president in charge of administration and finance. "A lot of this is a mechanical problem. Our older machines can only print letters and numbers, not clear dates." He said Lucky may try to switch to less deceptive kinds of dating.

But like Mayfair and Safeway, Lucky management has qualms about the open-dating legislation. "No one argues with the need for a meaningful code," says Stell. "But I'm not sure a pull date should be uniformly applied."

Oddly, most delicatessen merchandisers are enthusiastic about open pull date legislation. But then most of them have been subscribing to the American Meat Institute's voluntary system of coding (see chart) for some years. Said the distributor for Oscar Mayer, "More and more government agencies are trying to educate the consumer—and they should. You don't want a pack date—you want a pull date on a package. A quality insurance day. It's a real commitment of freshness."

Even as this goes to press, the coding game goes on. George Schaefer, the purchasing agent for Orowheat Bakeries, called the other day to ask whether the Guardian was printing Orowheat's bread code. I told him we were.

He was distressed. "We can't let our competition know the code," he said. "If you've got it and we are going to publish it, we're going to change it, even if it is the first time we've changed it in 18 years."

CIGARETTE CODES

Codes are printed or stamped on end of carton.

American Tobacco: Brands—Carlton, Lucky Strikes, Pall Mall, Herbert Tareyton, Tareyton and Silva Thins. SK (example of code).

A two letter month-year pull date. First letter stands for month based on the word "Ambidextrous." Second letter is year: i.e., A is Jan. and I is 1970; M is Feb., J is 1971; B is Mar., K is 1972; I is Apr., L is 1973. SK means pull after Dec., 1972.

Brown & Williamson: Brands—Bel Air, Kool, Raleigh and Viceroy. OE (example of code).

A year-month pull date. Digit refers to year, letter refers to month: i.e., O is 1970 and A is Jan.; 1 is 1971, B is Feb.; 2 is 1972, C is Mar. OE means pull after May, 1970.

Liggett & Meyers: Brands—Chesterfield, L&M and Lark. SO (example of code).

A letter-number pull date. Number stands

for year. Letter stands for month, based on the words "quality smoke": i.e., Q is Jan. and 0 is 1970; U is Feb., 1 is 1971; A is Mar., 2 is 1972. SO means pull after Aug., 1970.

P. Lorillard: Brands—Kent, Newport, Old Gold, Spring and True. HO (example of code).

A letter-number pull date. Number stands for year. Letter stands for month based on the words "black or white"; i.e., B is Jan. and 0 is 1970; L is Feb., 1 is 1971; A is Mar., 2 is 1970. HO means pull after Sept., 1970.

R. J. Reynolds: Brands—Camel, Doral, Salem and Winston. HJ (example of code).

A two letter pull date. First letter refers to month, second to year: i.e., A is Jan. and J is 1970; B is Feb., K is 1971; C is Mar., L is 1972. HJ means pull after Aug., 1970.

Do Not Buy Stale Bread, Sour Milk, Rotting Meat—Break Your Supermarket Codes

(A special Guardian offer—The main supermarket codes and how to break them)

BASIC DEFINITIONS

Pull date—Last date product should be sold at regular price. After that date, it should be reduced in price, returned to distributor, thrown out or (sometimes in the case of meat) ground into hamburger.

Pack date—Date the product was wrapped or packaged. Judge for yourself how fresh it is.

Shelf life—Length of time that the product will stay fresh under ideal handling and temperature.

Main codes—1. Calendar or month-date—a four or five digit number telling year (usually 0 at front or end of code means 1970, 1 is 1971, etc.), then month and day. For instance 0117 is Nov. 7, 1970.

2. Day of year—numbers 1 through 365 represent the consecutive days of the year starting Jan. 1. Usually indicates pack date. Aug. 19 is 231st day.

3. Calendar subtraction—reverse method of day of year code. 365 is Jan. 1, 1 is Dec. 31. Count down. Aug. 19 is 134th day.

4. American Meat Institute or Supermarket Institute—a four digit code, usually a pull date. Add the first and last numbers for the month. The middle two digits (do not add) are the day of the month. For instance 5313 is Aug. 31.

BREAD

Color coded by color of plastic twister and, occasionally, by letter stamped on end of package.

Safeway: Brand—Mrs. Wright, Skylark, and Ovenfresh. Fresh Monday—orange twist, fresh Tues.—yellow twist, fresh Weds.—no delivery, fresh Thurs.—red twist, fresh Fri.—white twist, fresh Sat.—blue twist.

Lucky: Brand—Harvest Day and Variety. Fresh Monday—blue twist—L, fresh Tues.—green twist—U, fresh Weds.—no delivery, fresh Thurs.—gray twist—C, fresh Fri.—pink twist—K, fresh Sat.—white twist—Y.

Mayfair: Brand—Mayfresh. Fresh Monday—blue twist—B, fresh Tues.—red twist—R, fresh Weds.—no delivery, fresh Thurs.—orange twist—O, fresh Fri.—green twist—G, fresh Sat.—Yellow twist—Y.

MILK AND CREAM

(Shelf life of 7 days at 35-40° F.)

Safeway: Brand—Lucerne. 7–28 (example of code).

Located on spout flap of carton, imprinted in wax (no ink). A simple three digit pull date. First number is month. Second and third digits show date of month. 7–28 MEANS July 28 is last date milk should be sold.

Lucky: Brand—Lady Lee. S0128 or S1131 (example of code).

Located on spout flap of carton, imprinted in wax (no ink). A one-letter, four-digit pull date. Ignore letter which is plant. Middle digits are date of month. First and last digits (do not add) are month. S0128 MEANS pull Aug. 12. S1131 MEANS pull Nov. 13.

Mayfair: Brand—Arden. 23 or 23SF1 (example of code).

Located on spout flap of carton, imprinted in wax (no ink). A two, sometimes three, digit-two letter pull date. First two digits mean date of month. Letters stand for city. Ignore final digit. 23 or 23SF1 MEANS July 23 (or the 23rd of whatever month it happens to be) is last date milk should be sold.

BUTTER

(Shelf life of 2 months at 32–40°F, 1 year at 0 to 10°F.)

Safeway: Brand—Lucerne. 10 (example of code).

Located on left end flap; imprinted in wax (no ink). A two digit pull date indicating last day of month it should sell. 10 MEANS pull after 10th of whatever month it is.

Lucky: Brand—Lady Lee. 813 (example of code).

Located on left end panel of carton. A three or four digit pull date. Last two digits are date of month. First are month. And then add 30 days, and that's the last date product should be sold. 813 MEANS Aug. 13, but pull Sept. 12.

Mayfair: Brand—Mayfresh. 1109 (example of code).

Located on left end flap, imprinted in wax (no ink). A four digit pull date. Use American Meat Institute system (see definitions). 1109 MEANS pull after Oct. 10.

COTTAGE CHEESE

(Shelf life of 10 days at 35–40° F)

Safeway: Brand—Lucerne. A81BA or A731A (example of code).

Located on bottom of plastic container. A four or five unit code. Ignore letters. First number is month. Second and perhaps third numbers show date of month. A81BA means Aug. 1 pull date. A731A means July 31 pull date.

Lucky: Brand—Lady Lee. 082 or K122 (example of code).

Located on bottom of plastic container. A three or four unit pull date. Ignore letter (if there is one) which is the plant. First and second digits are date of month. Final digit is month in system of 1–6 is Jan. thru June, then 1–6 is July thru Dec. 082 means pull Aug. 2. K122 means pull Aug. 12.

Mayfair: Brand—Arden or Mayfresh. NO3 or N31 (example of code).

Located on bottom of plastic container. A three unit pull date. Ignore letter. Two digits refer to date of whatever month it is. NO3 means Aug. 3 pull date. N31 means Aug. 31 or probably July 31, whatever month it is.

FRESH MEAT, FISH AND POULTRY

(Shelf life approx. 1 week, 33° F., but varies per cut.)

Safeway: Brand—Safeway "guaranteed fresh" ("Manor House" poultry). 4 or 24 (example of code).

Located on price label, just below kind of meat, imprinted (no ink used). A two digit pack date. 4 means meat was wrapped on 4th of whatever month it is. 24 means meat was wrapped on 24th.

Lucky: Brand—Lucky. 1 or 13 (example of code).

Located on green portion of Lucky price label. A two digit pack date. 1 means meat was wrapped on 1st of whatever month it is. 13 means meat was wrapped on 13th.

Mayfair: Brand Mayfair. HH, TS (example of code).

Located on price label. A two letter pack date code. First letter designates pack date. Second (ignore this) is letter of packer. H is Mon., K is Tues., L is Weds., N is Thurs., O is Fri., T is Sat., S is Sun., HH means packed Mon., TS means packed Sat.

EGGS

(Shelf life of 5 to 9 months at 20–31° F, but actual avg. is 21 days in your refrigerator.)

Safeway: Brand—Lucerne and Cream O' Crop. 8 214–1 (example of code).

Located on left panel of carton. Usually three but here five digit pull date. Read only first two (or three) digits, first is month, then date of month. 8 214–1 means pull date of Aug. 2!! (when in doubt, ask.)

Lucky: Brand—Lady Lee. W220 (example of code).

Located on left panel of carton. A one-letter three digit code. Ignore letter which is plant. A day of the year code (see definitions). W220 means pull 220th day, Aug. 15.

Mayfair: Brand—Mayfresh. L7–222 or 7–222 (example of code).

Located on left end of flap. A four digit pull date. Ignore first letter and digit. Digits following dash refer to day of year (see definitions). L7–222 or 7–222 means pull after 222nd day, which is Aug. 10.

VACUUM-PACKED MEAT AND BACON

(Bacon shelf life is 1 week, for meats—shelf life ten days after pull date.)

(Note—bacon code date is located on left panel of package.)

Safeway: Brand—Safeway "guaranteed fresh" 0813, 813 or 8–13 (example of code).

Stamped on red portion of package label. A two to four digit pull date. Read first digit(s) as month. Last two digits are date of month. 0813, 813 or 8–13 means Aug. 13 is last date meat should be sold.

Lucky: Brand—Lady Lee. 0139 or 0192 (example of code).

Stamped on back and bottom of package where opening instructions are. A two to four digit pull date. Like Lucky milk, middle digits are date of month. First and last digits are month. 0139 means pull Sept. 13, 0192 means pull Dec. 9.

Mayfair: Brand—Mayfair. 8171 or 817–1 (example of code).

Located on back, on bottom of pkg. A four digit pull date. Use American Meat Institute system (see definitions). 8171 or 817–1 means Sept. 17 is last date it should be sold.

VACUUM PACKED MEATS

(Bologna, salami, luncheon meats, etc. Not bacon.)

Morrell/Bob Ostrow: 0908 and 5084 (examples of code).

Located on bottom seal of pkg., near pull tab if there is one. A four digit pull date. When first digit is zero, code is a month-date code—first two digits are month, last two digits are date of month. When first digit is NOT zero, code follows American Meat Institute format—add outside digits for month. Middle digits are date of month. 0908 is month-date code, means Sept. 8, pull date. 5084 is A.M.I. code, means Sept. 8, pull date.

Exception—Morrell smoked ham, 31 (example of code). Located on price label, upper left hand corner. A two digit PACK date. Digits are day of month product was packed, 31 means product was packed 31st of whatever month it is.

Oscar Mayer: 4274Y and 44 (example of code).

Four or five unit code is located on bottom, back of pkg.

Two digit code is located on price label.

Four or five unit code is pull date. Ignore final letter. See American Meat Institute code format. Two digit code is pull date referring to the last week product should be sold, in system where first week in Jan. is #1, last week in Dec. is #52.

4274Y MEANS pull date Aug. 27.

44 MEANS pull 44th week of year, which is last week in Aug.

Armour: 3314 (example of code).

Located at bottom of pkg., at right angle to Armour label.

A four digit pull date. See definition, American Meat Institute Code.

3314 means pull July 31.

BACON

(All codes located on left side of pkg.)

Morrell/Bob Ostrow: 0816 and 4164 (examples of code)

A four digit pull date. See MORRELL/OSTROW vacuum-pked. meats.

0816 MEANS pull Aug. 16.

4164 MEANS pull Aug. 16.

Dubuque: 0820 (example of code)

A four digit month-date code.

First two digits are month. Second two are date of month. Code is a PACK date, not a pull date.

0820 MEANS bacon was packaged Aug. 20.

Hormel (George A. Hormel Co.): 851 199F and 12132 199F (examples of code).

A three to nine unit code. Ignore 199F which refers to an inspection number. Code is a month-date PACK date. First digit refers to month. Second digit refers to day of month. 1 means packed in A.M. 2 means packed in P.M. 851 199F MEANS packed on Aug. 5 in morning. 12132 199F MEANS packed on Dec. 13 in afternoon.

BREAD

(Coded by colored twister or letter stamped on end of bag.)

American Bakeries/Langendorf/Mayfresh: Fresh Mon.—blue twist—B, fresh Tues.—red twist—R, fresh Weds.—no delivery, fresh Thurs.—orange twist—O, fresh Fri.—green twist—G, fresh Sat.—yellow twist—Y.

Kilpatrick: fresh Mon.—orange twist, fresh Tues.—white twist, fresh Weds.—no delivery, fresh Thurs.—yellow twist, fresh Fri.—blue twist, fresh Sat. red twist.

ITT Continental/Wonderbread: fresh Mon.—red twist, fresh Tues.—white twist, fresh Weds.—no delivery, fresh Thurs.—yellow twist, fresh Fri.—organge twist, fresh Sat.—green twist.

Orowheat: fresh Mon.—blue twist—B, fresh Tues.—yellow twist—Y, fresh Weds.—no delivery, fresh Thurs.—green twist—G, fresh Fri.—pink twist—P, fresh Sat.—white twist—W.

DAIRY PRODUCTS

Christopher/Berkeley Farms: Tricky code. We couldn't break it and they wouldn't tell us how, except that it changes each week. Readers are invited to break it.

4333 (example of milk code).

NOH6 (example of code on cottage cheese and sour cream).

Borden's/Knudsen's: milk, cottage cheese and sour cream.

SOH7, SF7OH7 or DOH7; and S1H7 (examples of code)

Located on pour spout of milk, on bottom of plastic container on cottage cheese and sour cream.

A four to six unit pull date. Ignore everything but last three units. Of those, the letters stands for month in system of A is Jan., B is Feb., C is Mar. etc. except X is Sept. date. Digits stand for date of month.

SOH7, SF70H7 or DOH7 means pull Aug. 7.

S1H7 means pull Aug. 17.

Spreckels/Southland Corporation:

Milk: OC7 (example of code).

Located on pour spout.

A three unit pull date. Ignore letter. Digits are date of month.

OC7 MEANS pull 7th of whatever month it is.

Cottage cheese and sour cream: OH6 (example of code).

Located on bottom of plastic container.

A three unit pull date. Letter is month in system of A is Jan., B is Feb., C is Mar., etc. Digits are day of month.

OH6 MEANS pull Aug. 6th.

Foremost/Marin Dell:

Milk: SF–08 (example of code).

Located on pour spout, imprinted in wax (no ink).

A two digit pull date. Ignore SF.

Digits stand for date of month.

SF–08 MEANS pull on 8th of whatever month it is.

Cottage cheese:

1A8 (example of code).

Located on bottom of plastic container.

A three unit pull date. Ignore letter. Digits stand for date of month.

1A8 MEANS pull on 18th of whatever month it is.

Sour cream: H172 (example of code).

Located on bottom of plastic container.

A one letter-three digit pull date. Ignore letter. First and second digits are date of month. Last digit is month in system of 1–6 is Jan. thru June, then 1–6 is July thru Dec.

H172 MEANS pull August 17.

CANNED GOODS

Even on the stores own brands, the codes are different for every product.

For instance Safeway's Townhouse diced beets are coded 9N908 PFQDJ, but Townhouse canned beets are coded 1682.

Though canned goods are eventually perishable, right now there is no way for the consumer to unscramble each code in a systematic way. Just hope that what is inside is only a year old.

HOW CLOSE CAN YOU GET TO BEING A CASUALTY?

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. MILLER of California. Mr. Speaker, I was happy to learn that a young Army officer from my district was one of two survivors of the recent tragic helicopter crash that took the lives of 32 men in Vietnam. Capt. Eric P. Reid, a career soldier with a fine record of service during 5 years in the Army and two tours of Vietnam, copiloted the big CH–47 Chinook helicopter which was shot down by enemy fire near Saigon. Captain Reid is the son of Mr. and Mrs. Monte Reid of San Lorenzo. His wife, Patricia Lewis Reid, and two sons also reside in San Lorenzo. I join with his family in thanksgiving for his safety, and I include in the RECORD the Oakland Tribune account of the incident:

HOW CLOSE CAN YOU GET TO BEING A CASUALTY?

SAN LORENZO.—Mrs. Patricia Reid was concerned yesterday when she heard a radio news report that an Eastbay soldier was injured in a helicopter crash in Vietnam.

She was shocked and relieved when a Tribune reporter called her later and informed her that Capt. Eric P. Reid, her husband, was one of the two survivors of the crash that took the lives of 30 others on the chopper, killed two soldiers on the ground and injured five other ground troops.

Capt. Reid, 23, was the co-pilot of a big CH47 Chinook helicopter that was transporting troops of the 196th Brigade when it was hit by a burst of enemy machinegun fire and crashed near Saigon.

"As we started falling," Reid said in an interview at Chu Lai yesterday, "I noticed that my aircraft commander was dead, and there was an orange glow coming from behind me. I turned and saw the entire inside of the ship was on fire.

"The ship stopped falling, and I remember loosening my shoulder rig and safety belt and pushing myself out the emergency exit," he said. "When I hit the ground, I started rolling away, down the slope. I don't remember what happened for a while after that."

One other person aboard the craft escaped with severe burns, but military officials declined to identify him immediately.

Reid said the next thing he remembers was crawling back up the hill and finding the Chinook destroyed—"being magnesium, it burned completely and left only ash."

Reid suffered only bruises, and was released from the Chu Lai hospital yesterday.

Mrs. Reid, who lives in a townhouse at 15716 Washington Ave., said her husband is due home from Vietnam in 38 days.

"I wrote him just last night that with only five weeks to go, everything is just about through," said the pretty housewife as her sons, Ricky, 1½, and Les, 4, scurried around the living room.

"I just can't explain how lucky I feel and how grateful that out of all the victims, my husband walked away with just a few scratches."

She said her husband is a career man with the Army, and is completing his second tour of duty in Vietnam. He has been awarded two Bronze Stars and an Air Medal during his two year-long tours in the combat zone.

Mrs. Reid said both she and her husband enjoy their military life, although she said the separations are difficult. They have been married for five years, and they've been separated more than two-and-one-half years.

But her husband has received rapid advancement in the Army. He enlisted as a private in 1965, after graduating from San Lorenzo High School. The following year he attended officers candidate school and was commissioned a second lieutenant.

He was then sent to Vietnam as a tank commander, where he won the Bronze Stars, one for gallantry and the other for meritorious service.

Last year he attended the Army's flight school and won his wings. He just began his second Vietnam tour last October.

Reid is currently serving as executive officer of the 178 Assault Support Helicopter Co., of the 23rd Infantry Division, stationed at Chu Lai.

HON. G. ROBERT WATKINS

HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1970

Mr. KING. Mr. Speaker, because of my recent hospitalization, I was unable to participate in the many fine tributes paid to our late colleague, the Honorable G. ROBERT WATKINS of Pennsylvania. I was indeed shocked and saddened to learn of the sudden death of my good friend who I will always consider one of the most likable persons I have ever known. BOB WATKINS was a man's kind of man and his word was always his bond. Not only was he an outstanding public servant, he was a successful businessman, a successful sportsman, and a successful leader. He possessed a certain quality of human understanding, working hard to help his fellow man to make this a better world in which to live. Those of us who knew BOB WATKINS well considered him a great American and a great gentleman and no man could ever hope for a finer epitaph. I most sincerely count it as a privilege and an honor to serve in the same Congress in which he served.

Mr. Speaker, BOB WATKINS' untimely death has created a void in the 91st Congress. We are comforted, however, in the knowledge that he lives in the minds and hearts of all of us who served with him.

Mrs. King joins me in extending to his wife and beloved family our deepest and sincerest sympathy.

PROUD POLISH RECORD

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. DADDARIO. Mr. Speaker, 31 years ago on September 1, 1939, Nazi troops launched an unprovoked attack against Poland, signaling the first of Hitler's military drives to dominate the European continent. Unaided by any ally, Poland's small army was the first to offer any forceful resistance to the Nazi invasion.

Polish cavalry faced tanks, while the infantry stood up to the fearsome Nazi blitzkrieg, unintimidated by the awesome superiority of the most powerful army the world had ever seen. Though the Polish forces could hold off their invaders for only a few weeks, underground resistance to the occupation plagued the Nazis throughout the war. On August 1, 1944, 200,000 Poles gave their lives during a massive uprising in the capital city of Warsaw. Thousands of other, less dramatic instances of resistance bear witness to the tenacity of the Polish people in their struggle to regain their freedoms.

Elsewhere in Europe, Polish forces played a significant role in the Western war, fighting with allied troops in the battles of Britain and Narvick, and elsewhere in Italy, France, Belgium, and the Netherlands.

On September 1, we observe both an infamous aggression against a peaceful people, and the courageous efforts of those people to resist and overcome their invaders. Americans of Polish descent are justly proud of that record.

SENATE—*Tuesday, September 8, 1970*

The Senate met at 12 noon and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, we thank Thee for Thy providence which has brought us to this hour, for Thy protection and guidance in work and in travel, and for the knowledge that underneath are The Everlasting Arms. We thank Thee for work completed and for the challenge of work yet to be undertaken.

Guide the Members of this body that the rule of Thy higher will may transcend all lesser wills. Make us worthy of these demanding days which try men's souls and cry aloud for wisdom and courage. Help us to lengthen our days by intensity of living, to fill the swift hours with mighty deeds and to lay up treasures where neither moth nor rust doth corrupt.

Be with all nations of the world. Draw them together in firm spiritual alliance. Lift all consultations for peace into the higher order of Thy kingdom and lead all men in paths of righteousness for Thy name's sake.

Through Jesus Christ our Lord. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., September 8, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

MESSAGE FROM THE HOUSE RECEIVED DURING ADJOURNMENT—ENROLLED BILLS SIGNED

Under authority of the order of the Senate of September 2, 1970, the Secretary of the Senate, on September 2, 1970, received a message from the House of Representatives, which announced that the Speaker had affixed his signature to the following enrolled bills:

H.R. 13434. An act to provide for the disposition of judgment funds on deposit to the credit of the Hualapai Tribe of the Hualapai Reservation, Arizona, in Indian Claims Commission dockets Nos. 90 and 122, and for other purposes;

H.R. 13716. An act to improve and clarify certain laws affecting the Coast Guard Reserve;

H.R. 14097. An act to authorize the use of funds arising from a judgment in favor of the Citizen Band of Potawatomi Indians of Oklahoma in Indian Claims Commission docket No. 96, and for other purposes;

H.R. 14827. An act to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indian Claims Commission docket No. 220, and for other purposes; and

H.R. 16416. An act to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes.

REPORT OF A COMMITTEE SUBMITTED DURING ADJOURNMENT

Under authority of the order of the Senate of September 2, 1970, Mr. BIBLE, from the Committee on Interior and Insular Affairs, reported favorably, with an amendment, on September 4, 1970, the bill (S. 368) to authorize the Secretary of the Interior to make disposition of geothermal steam and associated geothermal resources, and for other purposes, and submitted a report (No. 91-1160) thereon, which was printed.

EXECUTIVE REPORT OF A COMMITTEE SUBMITTED DURING ADJOURNMENT

Under authority of the order of the Senate of September 1, 1970, Mr. FULBRIGHT, from the Committee on Foreign Relations, on September 4, 1970, reported favorably, without reservation, Executive F, 91st Congress, second session, the Supplementary Extradition Convention with France, signed at Paris on February 12, 1970, and submitted a report (Ex. Rept. No. 91-23) thereon, which was printed.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, September 2, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that the President had approved and signed the following acts:

On August 24, 1970:

S. 3102. An act to amend section 4 of the Fish and Wildlife Act of 1956, as amended, to extend the term during which the Secretary of the Interior can make fisheries loans under the act, and for other purposes.

On August 28, 1970:

S. 3547. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Narrows unit, Missouri River Basin project, Colo., and for other purposes.

EXECUTIVE MESSAGE REFERRED

As in executive session, the Acting President pro tempore laid before the Senate a message from the President of the United States, submitting the nomination of Herman Nickerson, Jr., of Maine, to be Administrator of the National Credit Union Administration, which was referred to the Committee on Banking and Currency.

ORDER FOR ADJOURNMENT UNTIL 10 A.M. TOMORROW AND FOR THE REMAINDER OF THE WEEK

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 10 a.m. tomorrow, and for the rest of the week, up to and including Friday, September 11, 1970.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PROGRAM FOR THE REMAINDER OF THE SESSION

Mr. MANSFIELD. Mr. President, I must say, in all candor, that I am some-

what disturbed at the reported lack of attendance today and express the hope that, with the concurrence of the leadership on the minority side, and the Senate, beginning tomorrow, it will be possible to operate on a two-shift basis, so that items on the calendar, which are being held and are debatable, can be brought up and considered. Whether this can be done will, of course, depend upon the consent of the Senate as a whole; but I would point out that we have much important legislation left, including six appropriation bills, and that we have some important legislation still coming out of the committees. There is also a certain number of important legislative items on the calendar.

I, therefore, believe that the Senate had better try to clear the calendar, so that an adjournment can be reached as soon as possible.

May I say that unless there is a great deal of cooperation and understanding on the part of every one of the 100 Senators, it will be well nigh an impossibility to adjourn sine die by the middle of next month. So, with those few words, I yield to the acting minority leader.

Mr. GRIFFIN. I thank the distinguished majority leader. I know I speak for the minority leader, the Senator from Pennsylvania (Mr. SCOTT), when I say that the leadership on this side wants to cooperate in every possible way with the majority leader in his efforts to complete the business of the Senate, if at all possible, before election day so we can adjourn sine die.

Even though it may appear, as a practical matter, that such a goal is impossible, we all know that sometimes the impossible is accomplished.

So far as the request of the majority leader that the Senate come in early each day and work late, on a two-shift basis, I want to indicate that the procedure certainly has the approval of the minority leadership. I wish to commend the distinguished majority leader for his approach and his attitude which points strongly in the direction of expediting the business of the Senate. And I wish to assure him that he will have every possible cooperation from the leadership on this side of the aisle.

Mr. MANSFIELD. I thank the distinguished acting minority leader.

Mr. WILLIAMS of Delaware. Mr. President, I am glad the majority leader is outlining a program by which we may be able to complete our business. I certainly want to cooperate with him. I am sure all Senators do.

I wonder whether it would not be a good policy, rather than have all committees meeting during a session of the Senate, which means that all we do in this Chamber is spin our wheels and do nothing while the committees are in session, that the leadership on both sides of the aisle get together to establish the priorities and decide which bills need most to be considered during this session, then give permission for those committees which have those bills in hand to meet and shut down the other committees.

As long as we keep grinding out the bills, even though they are referred to as minor bills or "cats and dogs," they are expensive cats and dogs. Bills that are passed in the last days of a session are ofttimes bills which should not pass. Therefore, it might be better to let them go over to next year, rather than to give blanket permission for all committees to meet, to keep grinding out the bills and holding hearings on legislation, which it is known will not be promoted or pushed until next year. Why not just stop committees from meeting during the session of the Senate except as they deal with legislation of high priority.

In that manner we could bring this session to an end and I am sure by so doing we would gain the thanks of the taxpayers.

Mr. MANSFIELD. The distinguished Senator from Delaware (Mr. WILLIAMS) has been reading my thoughts. I hope everyone can hear me. I have been out in Montana where the air is dry and invigorating, and I have returned to Washington with a touch of laryngitis. But I have instructed the Policy Committee to start compiling such a list, and I intend to discuss the matter with the Republican leadership, to see just what we jointly can consider as most important in the way of items to be taken up the remainder of this year.

I hope to have that ready for the regular luncheon of the Republican membership of the Senate, which I understand will be held tomorrow, rather than today.

I also want to discuss with the Republican leadership the possibility of an executive session, with only Members of the Senate present, both Republicans and Democrats, so that together we can discuss the program and see what we can do in the way of cooperating and considering bills in order to get them passed and wind up this session at some reasonable date.

But I want to say that the leadership cannot do it alone. It will take the cooperation and understanding and the pulling together of the entire membership—all 100 Members. The leadership can propose but the membership disposes.

Mr. GRIFFIN. If the Senator from Montana will permit me to correct an error, I indicated earlier that the Republican policy luncheon would be held on Wednesday of this week. I understand now that I was in error, and that the luncheon is virtually scheduled for Thursday of this week.

Mr. MANSFIELD. We will have the list for the Senator then.

Mr. BAYH. I would like to express a special word of appreciation to the distinguished majority leader for his willingness to make the electoral reform bill the pending business.

I realize that it was not an easy decision to make because the electoral reform proposal will, in all probability, create heated debate and discussion.

I believe the decision was right: that in the history of the country, this could be one of the most critical decisions the majority leader has made.

As one who is very anxious to see this matter debated and discussed, I should like to say now, at least from my standpoint, that I see no reason for prolonged debate. But I hope that the people of the country will not be denied the opportunity to have the Senate vote on the joint resolution, inasmuch as the House passed it by a 339-to-70 vote.

So far as the proponents are concerned, probably by the end of this week we could be persuaded to vote on the joint resolution, if the opponents are ready to vote. I hope that will happen, and in short order, so that we can get on with the other important items of business before the Senate, to which the majority leader has already referred.

Mr. MANSFIELD. Mr. President, I am in full accord with the remarks just made by the distinguished Senator from Indiana. I feel the same way about the equal rights amendment which, I hope, will be given expeditious consideration when it is laid before the Senate, as well as the President's proposal to reform the present welfare assistance in the name of what I think is referred to as the Family Assistance Act.

Personally, I have some grave questions in my own mind about that particular proposal. But I think that President Nixon's interest in this matter should be given every consideration and that the Senate should give the President the courtesy of having the bill reported out so that it can be discussed, debated, and disposed of and receive the same consideration as other important legislation which is coming to us in the shank of the evening, so to speak.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR A PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business with the statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR THE UNFINISHED BUSINESS TO BE LAID BEFORE THE SENATE

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at the close of the period for the transaction of routine morning business, the unfinished business be laid before the Senate.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the role.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO 10 A.M. ON WEDNESDAY, THURSDAY, AND FRIDAY THIS WEEK

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate adjourn tonight, Tuesday, Wednesday, Thursday, and that for the rest of this week, Friday included, the Senate convene at 10 a.m.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Is there further morning business?

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ANNUAL FEDERAL EXPENDITURES FOR CIVILIAN PAYROLL IN THE EXECUTIVE BRANCH FOR FISCAL YEARS 1960–70

Mr. WILLIAMS of Delaware. Mr. President, the Joint Committee on Reduction of Federal Expenditures has just compiled a report summarizing the annual Federal expenditures for civilian payroll in the executive branch for the fiscal years 1960 through 1970.

This report shows that the average civilian employment for 1970 for civilian agencies was at an all-time high, totaling 1,694,157, or an increase of 374,125 over 1960, or an increase of 38,181 over 1969.

Civilian employment in the Defense Department for 1970 declined 41,457, but this was still 209,467 over 1960.

The annual cost of a civilian payroll in 1970 was $26,834,000,000, or more than double the $12,564,000,000, total cost in 1960.

The annual cost of the payroll in civilian agencies alone has climbed from $6,804,000,000 in 1960 to an all-time high of $15,621,000,000 in 1970 while the civilian employment payroll in the Defense Department has risen from $5,760,000,000 in 1960 to $11,213,000,000 in 1970.

I ask unanimous consent that this statistical report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ANNUAL FEDERAL EXPENDITURES [1] FOR CIVILIAN PAYROLL IN EXECUTIVE BRANCH—FISCAL YEARS 1960–70

Fiscal year	Civilian agencies	Defense Department [2] (civilian employment)	Total
1960	$6,804,000,000	$5,760,000,000	$12,564,000,000
1961	7,546,000,000	6,026,000,000	13,572,000,000
1962	7,898,000,000	6,318,000,000	14,216,000,000
1963	8,659,000,000	6,603,000,000	15,262,000,000
1964	9,297,000,000	6,818,000,000	16,115,000,000
1965	10,043,000,000	7,102,000,000	17,145,000,000
1966	10,875,000,000	7,732,000,000	18,607,000,000
1967	11,727,000,000	8,668,000,000	20,395,000,000
1968	12,919,000,000	9,395,000,000	22,314,000,000
1969	13,840,000,000	10,298,000,000	24,138,000,000
1970	15,621,000,000	11,213,000,000	26,834,000,000

[1] Dollars in rounded amounts.
[2] Excludes pay for foreign nationals not on regular rolls ($390,000,000 for fiscal year 1970).

Civilian employment in the Executive Branch during fiscal year 1970 averaged 2,958,364 as compared with 2,961,640 in fiscal year 1969. This decrease of 3,276 reflects inclusion in 1970 of an annual average of about 32,300 temporary 19th Decennial Census employees.

The average Executive Branch employment total of 2,958,364 for fiscal year 1970 includes an average of 2,592,549 full time employees in permanent positions; the total of 2,961,640 for fiscal year 1969 includes an average of 2,623,472 full time permanent employees. This was a decrease of 30,923 in average full time permanent employment.

The following tabulation shows average civilian employment for the Executive Branch broken between civilian military agencies for fiscal years 1960 through 1970.

AVERAGE CIVILIAN EMPLOYMENT BY FEDERAL AGENCIES IN EXECUTIVE BRANCH—FISCAL YEARS 1960–70

Fiscal year	Civilian agencies	Defense Department [1] (civilian employment)	Total
1960	1,320,032	1,054,740	2,374,772
1961	1,323,567	1,037,356	2,360,923
1962	1,373,485	1,058,676	2,432,161
1963	1,417,937	1,063,720	2,481,657
1964	1,434,104	1,042,552	2,476,656
1965	1,443,376	1,024,482	2,467,858
1966	1,500,349	1,074,080	2,574,429
1967	1,605,919	1,234,474	2,840,393
1968	1,654,973	1,280,853	2,935,826
1969	1,655,976	1,305,664	2,961,640
1970	1,694,157	1,264,207	2,958,364

[1] Excludes foreign nationals not on regular rolls (averaging 109,237 for fiscal year 1970).

Mr. WILLIAMS of Delaware. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report on the examination of financial statements of the Federal Home Loan Bank Board for the fiscal year ended December 31, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report on the need for improved operation and maintenance of municipal waste treatment plants, Federal Water Quality Administration, Department of the Interior, dated September 1, 1970 (with an accompanying report); to the Committee on Government Operations.

REPORT COVERING PROPERTY DONATED TO PUBLIC HEALTH AND EDUCATIONAL INSTITUTIONS AND CIVIL DEFENSE ORGANIZATIONS

A letter from the Acting Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report covering personal property donated to public health and educational institutions and civil defense organizations and real property disposed of to public health and education institutions, for the period January 1 through June 30, 1970 (with an accompanying report); to the Committee on Government Operations.

REPORT ON RECLASSIFICATION OF LANDS WITHIN THE MIDVALE IRRIGATION DISTRICT OF THE RIVERTON PROJECT IN WYOMING

A letter from the Secretary of the Interior, reporting, pursuant to law, on the reclassification of lands within the boundary of the Midvale Irrigation District of the Riverton project in Wyoming; to the Committee on Interior and Insular Affairs.

THIRD PREFERENCE AND SIXTH PREFERENCE CLASSIFICATIONS FOR CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports relating to third preference and sixth preference classifications for certain aliens (with accompanying papers); to the Committee on the Judiciary.

ADMISSION INTO THE UNITED STATES OF CERTAIN DEFECTOR ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting admission into the United States of certain defector aliens (with accompanying papers); to the Committee on the Judiciary.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

Two letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law pertaining to each alien, and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

REPORT OF THE LAW ENFORCEMENT ASSISTANCE ADMINISTRATION

A letter from the Associate Administrators, Law Enforcement Assistance Administration, U.S. Department of Justice, transmitting, pursuant to law, the second annual report of the Administration for fiscal year 1970 (with an accompanying report); to the Committee on the Judiciary.

TEMPORARY ADMISSION INTO THE UNITED STATES OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to

law, copies of orders entered, granting temporary admission into the United States of certain aliens (with accompanying papers); to the Committee on the Judiciary.

ENROLLED BILLS SIGNED

The ACTING PRESIDENT pro tempore (Mr. ALLEN) announced that on today, September 8, 1970, he signed the following enrolled bills, which had previously been signed by the Speaker of the House of Representatives:

H.R. 13434. An act to provide for the disposition of judgment funds on deposit to the credit of the Hualapai Tribe of the Hualapai Reservation, Ariz., in Indian Claims Commission dockets numbered 90 and 122, and for other purposes;

H.R. 13716. An act to improve and clarify laws affecting the Coast Guard Reserve;

H.R. 14097. An act to authorize the use of funds arising from a judgment in favor of the Citizen Band of Potawatomi Indians of Oklahoma in Indian Claims Commission Docket No. 96, and for other purposes;

H.R. 14827. An act to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indiana Claims Commission docket numbered 220, and for other purposes; and

H.R. 16416. An act to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project. Utah, and for other purposes.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MCCLELLAN:

S. 4322. A bill for the relief of Vincenzo Li Mandri; to the Committee on the Judiciary.

By Mr. YARBOROUGH (for himself, Mr. KENNEDY, Mr. COOPER, and Mr. SAXBE):

S. 4323. A bill to create a health security program; to the Committee on Labor and Public Welfare.

(The remarks of Mr. YARBOROUGH when he introduced the bill appear below under the appropriate heading.)

S. 4323—INTRODUCTION OF THE HEALTH SECURITY ACT

Mr. YARBOROUGH. Mr. President, today I introduce a bill along with Senator EDWARD KENNEDY of Massachusetts, Senator JOHN SHERMAN COOPER of Kentucky, and Senator WILLIAM SAXBE of Ohio, to create a national health security program, to be funded out of general revenue appropriations. While I jointly introduced S. 4297 along with Senator KENNEDY and 14 other Senators on Thursday, August 27, 1970, that bill was to be financed through the establishment of a Health Security Trust Fund and therefore was referred to the Senate Finance Committee. The bill I introduce today is financed out of general appropriations and therefore is to be referred to the Senate Labor and Public Welfare Committee.

I give notice that I intend to hold hearings on the national health security program on Wednesday, September 23, 1970, and Thursday, September 24, 1970. While this bill would normally be heard by the Health Subcommittee, of which I am chairman, I have had requests from members of the full committee to be able to participate in this hearing. Because of these requests and because of the significance of this bill and its relation to our national health problems, I will hold these hearings as chairman of the full Labor and Public Welfare Committee, rather than as chairman of the Health Subcommittee. In this manner, all the members of the full committee will be afforded an opportunity to participate. It is hoped that further hearings in addition to the 2 days in September will be held this year by me.

The need for improved health care is obvious and grows more persistent every day. The figures that used to shock us have now become common place: The United States ranks 13th in death of infants during the first year of life; seventh in the percentage of mothers who die in childbirth; no better than 18th in the life expectancy of males and 11th for females; and 16th in the death rate of males in their middle years.

This is the comparison of the United States with other industrial countries of the world, which are the countries that surpass us in their health programs. In all instances, the United States ranked better than 15 or 20 years ago. The fact is that the health of Americans is lagging behind our other national improvements and the national response to this fact is inadequate.

Not only are the facts becoming commonplace, but the rhetoric is also. At a press conference last year, President Richard Nixon said:

> We face a massive crisis in this area [health care] and unless action is taken both administratively and legislatively to meet that crisis within the next two or three years, we will have a breakdown in our medical care system which could have consequences affecting millions of people throughout the country.

Yet, the President's response to the crisis was to veto this year the two major bills that Congress put before him to improve health care.

It should be pointed out that Americans have not just sat idly by, but we have attempted within the framework of the present health system to secure adequate health care. In 1969, Americans spent $63 billion for health care—seven percent of the gross national product. This expenditure exceeded 1950 figures by over 500 percent. Since 1950 when health spending amounted to $12 billion the total health expenditures have risen at an average of 8.8 percent per year—an average of 12.2 percent in the past 3 years.

Furthermore, we have tried to cover the costs of health care through insurance, but the coverage has been inadequate. In 1968, health insurance was a giant $12 billion industry but benefit payments met only about one-third of the private costs of health care, leaving two-thirds to be paid from elsewhere by the recipients of the services. Twenty-four to 34 million Americans under age 65 have no private health insurance benefits at all.

That is a wide spread, Mr. President, but exact figures are impossible to obtain. We have searched this out, and we know that somewhere between those brackets is the accurate figure. The fact is that despite huge expenditures for health care and for medical insurance in this country, we still have not developed a system of adequate financing of health care for the people.

Even if we were to develop a better system of financing health care, however, there would still be an intense need to revamp the system to provide efficient care for all our citizens. That is, it is not simply a matter of more money to be spent on the present system, since experts maintain that $14 billion of the $63 billion we spend on health care is wasted and hospital overuse runs over 25 percent of the beds. With this great shortage in hospital beds, the medical people who have worked on the problem say there is 25 percent overuse, use of beds which is not needed.

The lessons of medicare and medicaid should teach us that the system needs to be changed so as to provide the motivation for better care at a more reasonable cost, not the motivation to provide more health care whether needed or not. Unfair advantage has been taken of the public health care programs of the past and the bill that I introduce today is designed to prevent that abuse.

Let me repeat, Mr. President, that health experts in this country think that, of this $63 billion, $14 billion is wasted, and that we could, with better planning, get health care to all the people for much less money.

Under the national health security program bill which I offer today, costs of necessary health care would be paid for in full. This includes physician services, psychiatric services, hospital and other institutional care, dental services, medicines, therapeutic devices, appliances, and equipment, as well as needed supporting services.

Furthermore, money will be provided to develop a more adequate supply and appropriate distribution of health professionals and supporting personnel. The program will actively encourage more efficient organization of existing health manpower, provide funds for special training of physicians, dentists, and other health workers needed for this program, and apply financial incentives to stimulate the movement of health manpower to medically deprived areas.

We have heard talk all during this Congress that there were "new" proposals forthcoming from the administration, that we should wait and see.

Mr. President, I have been urged for months to wait and see, that the administration will have a bill. And I have been waiting. But it is late in the session. The time for waiting is now past. We can no longer wait for a band-aid approach for our disintegrating health system that needs major surgery. While the bill I introduce today is not the complete answer, it is the best answer we have yet come up with.

Mr. President, I have been on the Health Subcommittee of the Senate for

nearly 13 years, up until last year under the great Lister Hill as chairman. I have listened to the evidence for 13 years. We have talked to the experts, and we have studied this question for years. Last January, when I became chairman of the subcommittee, I expressed a desire to introduce such a comprehensive health care bill. This, I repeat, is the best we have been able to come up with after hearing testimony from the people who have worked in this field over in the private structure of the economy, made a study of the problem, and come in with their recommendations.

I ask unanimous consent that the bill be printed in the RECORD.

The PRESIDING OFFICER (Mr. BELLMON). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD in accordance with the Senator's request.

The bill (S. 4323) to create a health security program, introduced by Mr. YARBOROUGH (for himself, Mr. KENNEDY, Mr. COOPER, and Mr. SAXBE), was received, read twice by its title, and was referred to the Committee on Labor and Public Welfare.

ADDITIONAL COSPONSOR OF A BILL

S. 3220

At the request of the Senator from West Virginia (Mr. BYRD) the Senator from Nevada (Mr. CANNON) was added as a cosponsor of S. 3220, to protect a person's right of privacy by providing for the designation of obscene or offensive mail matter by the sender and for the return of such matter at the expense of the sender.

PROPOSED AMENDMENT TO THE CONSTITUTION RELATING TO DIRECT POPULAR ELECTION OF THE PRESIDENT AND VICE PRESIDENT—AMENDMENTS

AMENDMENT NO. 878

Mr. GRIFFIN submitted amendments, intended to be proposed by him, to the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States, which were ordered to lie on the table and to be printed.

ANNOUNCEMENT OF HEARINGS: FEDERAL DATA BANKS AND THE BILL OF RIGHTS

Mr. ERVIN. Mr. President, in recent months, with the discovery of each new Federal data bank and data system, public concern has increased that some of the Federal Government's collection, storage, and use of information about citizens may raise serious questions of individual privacy and constitutional rights.

The Constitutional Rights Subcommittee has received countless letters and telegrams from Members of Congress and from interested persons all over the United States, urging that hearings be scheduled to consider the total impact of some of these data programs on preservation of individual rights.

I wish to announce that, in response to these demands, the subcommittee has scheduled a new series of hearings on "Federal data banks and systems and the bill of rights." The first stage of the hearings will be held October 6, 7, and 8.

The subcommittee has already undertaken a survey of Federal data banks and automated data systems to determine what statutory and administrative controls are governing their growth and what rights and remedies are provided for the citizen. The analysis of the executive branch replies to that subcommittee questionnaire, together with the hearings held in the last session on "privacy and Federal questionnaires," and the hearings which begin in October, will assist Congress in determining the need for a new independent agency to control Federal data banks on behalf of the privacy and due process rights of citizens. It has been my conviction that such an agency is needed, along with new remedies in the courts and other corrective actions. I detailed the reasons for my belief in a Senate speech in November 1969.

The purpose of the hearings is: First, to learn what Government data banks have been developed; second, how far they are already computerized or automated; third, what constitutional rights, if any, are affected by them; and, fourth, what overall legislative controls, if any, are required.

Witnesses familiar with the constitutional and legal issues, as well as the practical problems raised by some current and proposed data programs will document these for the record. The Secretary of the Army and other representatives of the Defense Department have already been invited to attend the October hearings to describe how and why the Army and other armed services have collected and stored information on civilians, and to what extent the records have been automated for easy access and retrieval.

Prof. Arthur R. Miller of the University of Michigan Law School, author of a forthcoming book, "The Dossier Society: Personal Privacy in the Computer Age," has been invited to describe the state of the law governing information flow in our society and its relationship to legal rights. Another witness will be Christopher Pyle, an attorney and former Army intelligence officer, who has investigated the Army's civil disturbance data programs, and has written widely on the subject.

In later hearings, other representatives of the executive departments and agencies will be invited to respond to the complaints and fears which have been expressed by the public. They will be afforded the opportunity to explain exactly what their data programs on people involve, and how, if at all, the privacy, confidentiality and due process rights of the individual are respected.

The subcommittee has received enthusiastic support from specialists in the computer sciences, in both the computer industry and in the academic community. We hope to receive the benefit of their expertise for our hearing record.

Mr. President, our Nation is predicated on the fundamental proposition that citizens have a right to express their views on the wisdom and course of governmental policies. This involves more than the currently popular notion of a so-called right to dissent. Our system cannot survive if citizen participation is limited merely to registering disagreement with official policy; the policies themselves must be the product of the people's views. The protection and encouragement of such participation is a principal purpose of the first amendment.

More than at any other time in our history, people are actively expressing themselves on public questions and seeking to participate more directly in the formulation of policy. Mass media have made it easy for large numbers of people to organize and express their views in written and oral fashion. Rapid means of transportation have aided our mobile population to move easily to sites of central and local authority for the purpose of expressing their views more publicly. The freedom of our form of government and the richness of our economy have made it possible for individuals to move about freely and to seek their best interests as they will in vocations and avocations of their choice, or indeed, to pursue none at all for a time, if that is what they wish. If modern technology has provided citizens with more efficient means for recording their dissent, or for registering their political, economic, or social views, it has also placed in the hands of executive branch officials new methods of taking note of that expression of views and that political activity. For these reasons, those individuals who work actively for public causes are more visible than ever before.

These new sciences have accorded those who control government increased power to discover and record immutably the activities, thoughts and philosophy of an individual at any given moment of his life. That picture of the person is recorded forever, no matter how the person may change as time goes on. Every person's past thus becomes an inescapable part of his present and future. The computer never forgets.

To be sure, recordkeeping is nothing new in the history of government; nor indeed, is the habit all governments and all societies have of surveillance, blacklisting and subtle reprisal for unpopular political or social views. Men have always had to contend with the memories of other men. In the United States, however, we are blessed with a Constitution which provides for due process of law. This applies to the arbitrary use of the recordkeeping and information power of government against the individual.

Despite these guarantees, the new technology has been quietly, but steadily, endowing officials with the unprecedented political power which accompanies computers and data banks and scientific techniques of managing information. It has given Government the power to take

note of anything, whether it be right or wrong, relevant to any purpose or not, and to retain it forever. Unfortunately, this revolution is coming about under outdated laws and executive orders governing the recordkeeping and the concepts of privacy and confidentiality relevant to an earlier time.

These developments are particularly significant in their effect on the first amendment to our Constitution.

No longer can a man march with a sign down Pennsylvania Avenue and then return to his hometown, his identity forgotten, if not his cause.

No longer does the memory of the authorship of a political article fade as the pages of his rhetoric yellow and crumble with time.

No longer are the flamboyant words exchanged in debate allowed to echo into the past and lose their relevance with the issue of the moment which prompted them.

No longer can a man be assured of his enjoyment of the harvest of wisdom and maturity which comes with age, when the indiscretions of youth, if noticed at all, are spread about in forgotten file cabinets in basement archives.

Instead, today, his activities are recorded in computers or data banks, or if not, they may well be a part of a great investigative index.

Some examples come readily to mind from the subcommittee survey.

The Civil Service Commission maintains a "security file" in electrically powered rotary cabinets containing 2,120,000 index cards. These bear lead information relating to possible questions of suitability involving loyalty and subversive activity. The lead information contained in these files has been developed from published hearings of congressional committees, State legislative committees, public investigative bodies, reports of investigation, publications of subversive organizations, and various other newspapers and periodicals. This file is not new, but has been growing since World War II. The Commission has found it a reasonable, economical and invaluable tool in meeting its investigative responsibilities. It is useful to all Federal agencies as an important source of information.

The Commission chairman reports:

> Investigative and intelligence officials of the various departments and agencies of the Federal Government make extensive official use of the file through their requests for searches relating to investigations they are conducting.

In its "security investigations index," the Commission maintains 10,250,000 index cards filed alphabetically covering personnel investigations made by the Civil Service Commission and other agencies since 1939. Records in this index relate to incumbents of Federal positions, former employees, and applicants on whom investigations were made or are in process of being made.

The Commission's "investigative file" consists of approximately 625,000 file folders containing reports of investigation on cases investigated by the Commission. In addition, about 2,100,000 earlier investigative files are maintained at the Washington National Records Center in security storage. These are kept to avoid duplication of investigations or for updating previous investigations.

For authorization for these data banks, the Commission cites Executive Order 10450, an order promulgated in 1953.

Another department, the Housing and Urban Development Department, is considering automation of a departmental procedure. According to the report made to the subcommittee:

> The data base would integrate records now included in FHA's Sponsor Identification File, Department of Justice's Organized Crime and Rackets File, and HUD's Adverse Information File. A data bank consisting of approximately 325,000 3x5 index cards has been prepared covering any individual or firm which was the subject of, or mentioned prominently in any investigations dating from 1954 to the present. This includes all FBI investigations of housing matters as well. In addition, HUD maintains an index file on all Department employees which reflects dates and types of personnel security investigations conducted under the provisions of Executive Order 10450.

In the interest of preparing for possible civil disturbances and for protecting the armed services from subversion, the Department of the Army and other military departments have been collecting information about civilians who have no dealing with the military services.

The Secret Service has created a computerized data bank in the pursuit of its programs to protect high Government officials from harm and Federal buildings from damage. Their guidelines for inclusion of citizens in this data bank refer to "information on professional gate crashers; information regarding civil disturbances; information regarding anti-American or anti-U.S. Government demonstrations in the United States or overseas; information on persons who insist upon personally contacting high Government officials for the purpose of redress of imaginary grievances, and so forth."

In the area of law enforcement, the Bureau of Customs has installed a central automated data processing intelligence network which is a comprehensive data bank of suspect information available on a 24-hour-a-day basis to Customs. The initial data base, according to the Secretary of the Treasury, is a "modest" one comprising some 3,000 suspect records: He states:

> These records include current information from our informer, fugitive and suspect lists that have been maintained throughout the Bureau's history as an enforcement tool and which have been available at all major ports of entry, though in much less accessible and usable form. With the coordinated efforts of the Agency Service's intelligence activities, steady growth of the suspect files is expected.

This data bank, which is used by the Bureau to identify suspect persons and vehicles entering the United States, is an "essential tool" in performance of Customs officers' search and seizure authority, Secretary Kennedy has stated.

The Department of Justice is establishing comprehensive law enforcement data systems in cooperation with State governments, and is funding State data programs for law enforcement, civil disturbance and other surveillance purposes.

The National Science Foundation has created a data bank of scientists.

The Department of Health, Education, and Welfare has established a data bank on migrant children to facilitate the transfer of school records.

During our subcommittee hearings last year, case after case was documented of the vast programs to coerce citizens into supplying personal information for statistical data banks in the Census Bureau and throughout other Federal agencies.

These are only a few of the data programs which have raised due process of law questions from Congress and the public.

How do these things come about? It would be unfair, perhaps, to attribute suspicious political motives, or lack of ethics to those responsible for any one program or for any group of programs for collecting and storing personal information about citizens. Frequently, they just grow over the years. Sometimes, executive department data banks are either merely good faith efforts at fulfillment of specific mandates from Congress; or they are based on what some officials think to be implied mandates to acquire information necessary for Congress to legislate. If so, then Congress has no one to blame but itself when such programs unnecessarily threaten privacy or other rights. But it then has an even greater responsibility for acting, once its own negligence is discovered.

Perhaps the most such officials can be charged with is overzealousness in doing their job within narrow confines, to the exclusion of all other considerations.

Sometimes the issue of threats to individual rights is presented only after a data system has developed, and only after practical problems are raised which were not envisioned on paper.

At times, due process may be threatened by the failure of the computer specialists to consider only the information on a person absolutely essential for their programing.

There are political reasons also. One is the failure of heads of executive departments and agencies to mind their own stores and stay out of the business of other agencies. Each department does not need to seize the total man when it administers a program; only those portions of him necessary for the job. Another reason is the tendency of executive branch officials in the interest of political expediency and shortcuts to law and order goals, to seize upon the techniques of data banks, intelligence gathering, and surveillance activities as a substitute for hard-hitting, practical law enforcement work by the proper agencies, and for creative administration of the laws.

All of these excuses will not help the law-abiding citizen who, at the whim of some official, is put into an intelligence-type data bank which is part of a network of inquiry for all manner of governmental purposes.

No one would deny that the Government of such a populous and farflung country should not avail itself of the efficiency offered by computers and scientific data management techniques. Clearly, Government agencies must, as Congress has charged them, acquire, store, and process economically the information it obtains from citizens for administrative purposes. There is an ever increasing need for information of all kinds to enable the Congress to legislate effectively and the executive branch to administer the laws properly.

Furthermore, there is an obvious need in such a complex mobile society for recording and documenting amply the official relationship between the individual and his government.

More and more frequently, misguided individuals are resorting to violence and violation of the law. Communities are faced with rising crime rates. Local, State, and Federal Government have a right and a duty to know when a person has a legal record of violation of the law which, under the law, would deny him certain rights or benefits. They should be able to ascertain these matters quickly.

There are always some problems of accuracy and confidentiality with such records, especially when automated. It is not the carefully designed individual law enforcement data banks which concern the public. Rather, the subcommittee study is revealing that data programs which have aroused the most apprehension recently are those—

Which bear on the quality of first amendment freedoms by prying into those protected areas of an individual's personality, life, habits, beliefs, and legal activities which should be none of the business of Government even in good causes;

Which are unauthorized, or unwarranted for the legitimate purpose of the agency;

Which keep the information they acquire too long, and which by the very retention of unknown data may intimidate the individual subject;

Which are part of a network of data systems;

Which make little, if any provision for assuring due process for the individual in terms of accuracy, fairness, review, and proper use of data, and thereby may operate to deny the individual rights, benefits, privileges, reputation, which are within the power of Government to influence, grant or deny.

There is growing concern that the zeal of computer technicians, of the systems planners, and of the political administrators in charge of the data systems threatens to curtail the forces of society which have operated throughout our history to cool political passions and to make our form of government viable by allowing a free exchange in the marketplace of ideas.

The new technology has made it literally impossible for a man to start again in our society. It has removed the quality of mercy from our institutions by making it impossible to forget, to forgive, to understand, to tolerate. When it is used to intimidate and to inhibit the individual in his freedom of movement, associations, or expression of ideas within the law, the new technology provides the means for the worst sort of tyranny. Those who so misuse it to augment their own power break faith with those founders of our Constitution who, like Thomas Jefferson, swore upon the altar of God eternal hostility against every form of tyranny over the mind of man.

Mr. President, it has become dangerously clear in recent times that unless new controls are enacted, new legal remedies are provided, and unless Federal officials can be persuaded to exercise more political self-control, this country will not reap the blessings of man's creative spirit which is reflected in computed technology. Rather, if the surveillance it encourages is allowed to continue without strict controls and safeguards, we stand to lose the spiritual and intellectual liberty of the individual which have been so carefully nourished and so valianty defended, and which our Founding Fathers so meticulously enshrined in the Constitution.

I say this out of my conviction that the undisputed and unlimited possession of the resources to build and operate data banks on individuals, and to make decisions about people with the aid of computers and electronic data systems, is fast securing to executive branch officials a political power which the authors of the Constitution never meant any one group of men to have over all others. It threatens to unsettle forever the balance of power established by our Federal Constitution.

Our form of government is the fruition of an ideal of political, economic, and spiritual freedom which is firmly rooted in our historical experience. Basic to its fulfillment has always been the monumental truth that such freedom is truly secure only when power is divided, limited, and called to account by the people. For this reason the central Government was divided into three separate and equal branches.

For this reason, the bill of rights was added to secure certain areas of liberty against incursion by Government and the exercise of Federal power was limited to certain purposes.

For this reason, we cherish and protect the legal freedom of each citizen to develop his mind and personality and to express them free of unwarranted governmental control.

I differ with those who say that there are no existing checks on this developing power of computer technology, for I believe they already exist in our form of Government. The guarantees are established in our Constitution.

The forthcoming hearings will help Congress determine how these guarantees may best be implemented to meet the demands of the computer age.

In the interest of responding to the many inquiries from scholars, reporters and members of the public who are working on this subject, I should like to refer to other sources of materials which provide useful background information.

The subject of how Government manages its information systems, and its paperwork, how and when it uses computers and automation to assist in this effort, has been a continuing subject of concern by a number of congressional committees and their efforts should interest those working on this subject.

The Senate Administrative Practice and Procedures Subcommittee has contributed valuable hearings, reports and studies on the subject of computers, privacy, and Government dossiers. Particularly informative is their 1967 report "Government Dossier: Survey of Information on Individuals Contained in Government Files."

The Senate Government Operations Committee has, in other years, conducted comprehensive hearings and issued reports on Government information systems and management uses of computers.

In the House of Representatives, the Committee on Science and Astronautics has held a provocative and stimulating series of hearings and panel discussions on the impact of technology, especially on the management of Government information.

The House Government Activities Subcommittee of the Government Operations Committee, chaired by Representative JACK BROOKS, has produced valuable hearings, reports, and legislation on "Data Processing Management in the Federal Government."

More than anyone else, Representative CORNELIUS GALLAGHER has continually pointed out the dangers to individual rights and privacy of the establishment of a national data center, and his Special Subcommittee on Invasion of Privacy, after stimulating hearings, produced a classic and concise report entitled, "The Data Bank Concept." The record of his hearings contains testimony from many expert witnesses on the philosophy of privacy and computer technology.

The Census and Statistics Subcommittee of the House Post Office and Civil Service Committee produced a thought-provoking and influential report in the 89th Congress entitled "The Federal Paperwork Jungle." Scholars will find most informative that subcommittee's hearings and reports dealing with the paperwork requirements placed upon business, industry, and the public by the Federal departments.

I commend the publications of all of these committees and the thoughtful speeches of the chairmen and the members of these committees to persons interested in this subject.

It is my hope that the hearings and study by the Constitutional Rights Subcommittee will add a unique and valuable dimension to the public and congressional dialog on the role of data banks, information systems, and computers in our constitutional form of government.

Ben A. Franklin, in an excellent article in the New York Times on June 28, 1970, has described some of the current data banks and computers in the Federal Government and their possible effect on individual rights and privacy. I ask unanimous consent that his most perceptive article be printed in the RECORD at this point, together with the following

thoughtful articles and editorials. These are only a few of the excellent editorials and articles on this subject which have come to my attention, and they suggest a nationwide interest.

Editorials from the Greensboro, N.C., Daily News, July 1, 1970; Asheville, N.C., Times, June 18, 1970; Omaha, Nebr., World Herald, January 15, 1970; Sioux Falls, S. Dak., Argus, January 16, 1970; New York Post, June 30, 1970; Washington, D.C., Post, April 24, 1970; Asheville, N.C., Citizen, July 2, 1970; New York Times, July 4, 1970; Computerworld, March 4, 1970, and August 27, 1969; Huntsville, Ala., Times, July 12, 1970; Washington, D.C., Evening Star, March 16, 1970; and Houston, Tex., Post, March 16, 1970.

An article by Tom Wicker, entitled "In the Nation: A Right Not To Be Data-Banked?" from the New York Times, July 7, 1970, and an article from the Boston, Mass., Herald Traveler by John S. Lang, entitled "Big Brother, U.S., Is Watching You," April 19, 1970, an article from the Morning Call, Allentown, Pa., entitled "Guardian of Freedom," June 30, 1970, "Mitchell Defends Justice Department's 'Big Brother' Role," by Jared Stout, Staten Island, N.Y., Advance, July 19, 1970, and "Justice Department Keeps Files on Activists," by Morton Kondracke, Roanoke, Va., World News, March 11, 1970.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, June 28, 1970]

FEDERAL COMPUTERS AMASS FILES ON SUSPECT CITIZENS—MANY AMONG HUNDREDS OF THOUSANDS LISTED HAVE NO CRIMINAL RECORDS—CRITICS SEE INVASION OF PRIVACY

(By Ben A. Franklin)

WASHINGTON, June 27.—The police, security and military intelligence agencies of the Federal Government are quietly compiling a mass of computerized and microfilmed files here on hundreds of thousands of law abiding yet suspect Americans.

With the justification that a revolutionary age of assassination, violent political dissent and civil disorder requires it. The Government is building an army of instantly retrievable information on "persons of interest."

The phrase is an agent's term for those citizens, many with no criminal records, whom the Government wants to keep track of in an effort to avert subversion, rioting and violence or harm to the nation's leaders.

Critics of this surveillance, so far few in number, believe that the collection and dissemination of such information on noncriminals—for whatever purpose—is unauthorized by law and raises the most serious constitutional questions.

The foremost among them, Senator Sam J. Ervin, Jr., Democrat of North Carolina, has said that computerized files already in existence here are leading the country toward a "police state."

Discussions with officials, an examination of some known data files and information supplied by the Senator show that the files often contain seemingly localized and mundane information, reflecting events that today are virtually commonplace.

The leader of a Negro protest against welfare regulations in St. Louis, for example, is the subject of a teletyped "spot report" to Washington shared by as many as half a dozen Government intelligence gathering groups.

The name of a college professor who finds himself unwittingly, even innocently, arrested for disorderly conduct in a police roundup at a peace rally in San Francisco goes into the data file.

A student fight in an Alabama high school is recorded—if it is interracial.

Government officials insist that the information is needed and is handled discreetly to protect the innocent, the minor offender and the repentant.

The critics—including the Washington chapter of the American Civil Liberties Union and Representative Cornelius E. Gallagher, Democrat of New Jersey—charge that the system is an invasion of privacy and a potential infringement of First Amendment rights of free speech and assembly.

MASS SURVEILLANCE SYSTEMS

Senator Ervin, a conservative, a student of the Constitution, a former judge of the North Carolina Superior Court, and the chairman of the Senate Subcommittee on Constitutional Rights, says that the advent of computer technology in Government file keeping is pushing the country toward "a mass surveillance system unprecedented in American history."

In a recent series of Senate speeches, Mr. Ervin said that the danger was being masked by a failure of Americans to understand "the computer mystique" and by the undoubted sincerity and desire for "efficiency" of the data bank operations and planners.

The Government is gathering information on its citizens at the following places:

A Secret Service computer, one of the newest and most sophisticated in Government. In its memory the names and dossiers of activists, "malcontents," persistent seekers of redress, and those who would "embarrass" the President or other Government leaders are filed with those of potential assassins and persons convicted of "threats against the President."

A data bank compiled by the Justice Department's civil disturbance group. It produces a weekly printout of national tension points on racial, class and political issues and the individuals and groups involved in them. Intelligence on peace rallies, welfare protests and the like provide the "data base" against which the computer measures the mood of the nation and the militancy of its citizens. Judgments are made; subjects are listed as "radical" or "moderate."

A huge file of microfilmed intelligence reports, clippings and other materials on civilian activity maintained by the Army's Counterintelligence Analysis Division in Alexandria, Va. Its purpose is to help prepare deployment estimates for troop commands on alert to response to civil disturbances in 25 American cities. Army intelligence was ordered earlier this year to destroy a larger data bank and to stop assigning agents to "penetrate" peace groups and civil rights organizations. But complaints persist that both are being continued. Civilian officials of the Army say they "assume" they are not.

Computer files intended to catch criminal suspects—the oldest and most advanced type with the longest success record—maintained by the Federal Bureau of Investigation's National Crime Information Center and recently installed by the Customs Bureau. The crime information center's computer provides 40,000 instant, automatic teletype printouts each day on wanted persons and stolen property to 49 states and Canada and it also "talks" to 24 other computers operated by state and local police departments for themselves and a total of 2,500 police jurisdictions. The center says its information is all "from the public record," based on local and Federal warrants and complaints, but the sum product is available only to the police.

A growing number of data banks on other kinds of human behavior, including, for example, a cumulative computer file on 300,000 children of migrant farm workers kept by the Department of Health, Education, and Welfare. The object is to speed the distribution of their scholastic records, including such teacher judgments as "negative attitude," to school districts with large itinerant student enrollments. There is no statutory control over distribution of the data by its local recipients—to prospective employers, for example.

WARNING BY ERVIN

Senator Ervin has warned: "Regardless of the purpose, regardless of the confidentiality, regardless of the harm to any one individual [that might occur if there were no computer files], the very existence of Government files on how people exercise First Amendment rights, how they think, speak, assemble and act in lawful pursuits, is a form of official psychological coercion to keep silent and to refrain from acting."

But despite his sounding of such alarms, Senator Ervin has noted that there is "unusual public and Congressional complacency." When he speaks on the Senate floor of "techniques for monitoring our opinions" and of "grave threats to our freedoms," the chamber is more often than not nearly empty. He has gained little Congressional support and scant attention outside the Congress.

Meanwhile, various official and high-level pressures on Government agencies to acquire computers and to advance their surveillance are producing results.

The pressures include a stern recommendation for the broadest possible surveillance of "malcontents" and potential assassins by the Warren Commission, which investigated the assassination of President Kennedy. The commission's mandate is widely cited in the Government as the authority for citizen surveillance.

The commission, headed by former Chief Justice Earl Warren, disapproved as too narrow, the criteria for persons to be bought under "protective" surveillance proposed in 1964 by the Secret Service. The guidelines were "unduly restrictive," the commission declared, because they required evidence of "some manifestation of animus" by disgruntled and activist citizens before those persons could be brought under Secret Service surveillance as poential "threats to the President."

EVERY AVAILABLE RESOURCE

"It will require every available resource of the Government to devise a practical system which has any reasonable possibility of revealing such malcontents," the commission said.

The guideline was broadened. A computer was installed by the Secret Service last January. The commission's edict became a surveillance bench mark.

For surveillance of persons who may be involved in civil disturbances, the riots of 1967 and 1968 served the same purpose.

"The Warren Commission and the riots legitimized procedures which, I grant you, would have been unthinkable and, frankly, unattainable from Congress in a different climate," one official said. "There are obvious questions and dangers in what we are doing but I think events have shown it is legitimate," the official declined to be quoted by name.

Senator Ervin contends that in the "total recall," the permanence, the speed and the interconnection of Government data files there "rests a potential for control and intimidation that is alien to our form of Government and foreign to a society of free

men." The integration of data banks, mixing criminal with noncriminal files, is already underway, according to his subcommittee.

INTEGRATION OF FILES

The subcommittee has been advised by the Department of Housing and Urban Development, for example, that its data systems planners have proposed to integrate on computer tape files concerning the following: the identities of 325,000 Federal Housing Administration loan applicants; the agency's own "adverse information file," the Justice Department's organized crime and rackets file, and F.B.I. computer data on "investigations of housing matters." The object, the Department said, is a unified data bank listing persons who may be ineligible to do business with H.U.D.

As another example of how computer data proliferates, the subcommittee cites a report it received from the Internal Revenue Service.

The I.R.S., with millions of tax returns to process, was one of the earliest agencies to computerize. It has also had a reputation as a bastion of discretion. The privacy of individual tax returns has been widely regarded as inviolate, to be overcome only by order of the President.

But the subcommittee has been told that the I.R.S. has "for many years" been selling to state tax departments—for $75 a reel—copies of magnetic tapes containing encoded personal income tax information. It is used to catch non-filers and evaders of state taxes.

The District of Columbia and 30 states bought copies of the I.R.S. computer/covering returns from their jurisdictions in 1969, the service has told the subcommittee. Each local jurisdiction was merely "requested" to alert its employees that the unauthorized disclosure of Federal tax data was punishable by a $1,000 fine.

FIREARMS DATA FOR SALE

The I.R.S. also sells at cost—apparently to anyone who asks—the copies of its data files of registrants under the various Federal firearms laws it enforces.

The Secret Service computer file is capable of instant, highly sophisticated sorting and retrieval of individuals by name, alias, locale, method of operation, affiliation, and even by physical appearance.

The agency's Honeywell 2200, with random access capability, makes it possible to detect, investigate and detain in advance "persons of interest" who might intend—or officials concede "they might not but we don't take chances"—to harass, harm or "embarrass" officials under its protection.

Unknown to most Americans, the names, movements, organizations and "characteristics" of tens of thousands of them—criminals and noncriminals—are being encoded in the Secret Service data center here.

The names of other thousands have been inserted in less specialized computers operated by the Justice Department and the F.B.I. Although the agencies insist that they do not, the computers can—and Senator Ervin stresses that no law says they may not—"talk" to each other, trading and comparing in seconds data that may then spread further across the nation.

The Secret Service can now query its computer and quickly be forewarned that, say, three of the 100 invited guests at a Presidential gathering in the White House Rose Garden are "persons of protective interest."

Under current Secret Service criteria, they may have been regarded by someone as the authors of reportedly angry or threatening or "embarrassing" statements about the President or the Government. The action taken by the Secret Service may range from special observation during "proximity to the President" to withdrawal of the invitation.

What constitutes a computer-worthy "threat" thus becomes important. The Secret Service asserts that it applies relatively easy-going and "sophisticated" standards in deciding who is to be encoded. But the critics point out that the vast capacity of a computer for names and dossiers—unlike that of a paper filing system, which has self-limiting ceiling based on the ability to retrieve—is an encouragement to growth.

The information or "data base" for a Secret Service computer name check flows into the protective intelligence division from many sources—abusive or threatening letters or telephone calls received at the White House, F.B.I. reports, military intelligence, the Central Intelligence Agency, local police departments, the Internal Revenue Service, Federal building guards, individual informants.

Much of it that may be "of interest" to the Federal monitors of civil disturbance data is screened out, Secret Service spokesmen say, or is merely name-indexed by the computer with a reference to data reproducible elsewhere.

According to guidelines distributed by the Secret Service last August, the types of information solicited for insertion in the computer—broadened at the insistence of the Warren Commission—included items about:

Those who would "physically harm or embarrass" the President or other high Government officials.

Anyone who "insists upon personally contacting high Government officials for the purpose of redress of imaginary grievances, etc."

Those who may qualify as "professional gate crashers."

Participants in "anti-American or anti-U.S. Government demonstrations in the United States or overseas."

In an interview, Thomas J. Kelley, assistant director of the Secret Service for protective intelligence, said the computer name insertions already totaled more than 50,000. The Secret Service is extremely careful, he said, both in evaluating the encoded subjects and in checking to determine that those who receive a printout are entitled to it.

But there apparently is no formal guideline or list of criteria for dissemination, as there is for insertion. And direct, automatic, teletype access to the computer from distant Secret Service bureaus—the system used by the airlines and the National Crime Information Center—may be the next step, Mr. Kelley said.

Nothing demonstrates how remote access multiplies the output of a computer better than the crime information center's system, staged by the F.B.I. in 1966.

With direct-access teletype terminals in 21 state capitals and large cities, the information center computer here can be queried directly by local police departments on the names, aliases, Social Security numbers, license tag numbers and a broad array of stolen goods (including boats) that come hourly before the police.

An officer in a patrol car tailing a suspicious car can radio his dispatcher, ask for a check of a license number, and be told by teletype and radio in less than a minute that the automobile is stolen and that its occupants may be "armed and dangerous."

With one of the newest and most sophisticated random access computers in Federal service the Secret Service data center can also perform some wizardry that no other equipment here can master. It can be ordered, for example, to print out a list of all potential trouble makers—"persons of protective interest"—at the site of a forthcoming Presidential visit. The random access scanning can be geographical.

Photographs and descriptions can be assembled for the traveling White House detail. Investigations, even detentions, can be arranged at the site.

"You take a waiter in a hotel dining room where the boss is going to speak," a Secret Service spokesman explained. "Let's say the computer turns up his name and we investigate and decide it would be better for him to be assigned to some other duties. No one has a constitutional right to wait on the President, you know. That's how it works."

Cued by another more elegant electronic program, the same computer can also produce all the information it contains on the "characteristics" of subjects encoded on its tapes—all the short, fat, long-haired, young white campus activists in Knoxville, Tenn., for example. Only the Secret Service computer can do that.

The American Civil Liberties Union office here protested last October that the Constitution protects such acts as an effort merely to "embarrass" a Government official, the persistence of citizens in seeking redress even of "imaginary" grievances, and their participation in "anti-U.S. Government demonstrations." The Secret Service, however, has declined to withdrew or amend its intelligence reporting guidelines.

"They seem satisfactory to us," Mr. Kelley said. "If we weren't getting the information we want, we'd change them."

Under the heading, "Protective Information," the guidelines read as follows:

"A. Information pertaining to a threat, plan or attempt by an individual, a group, or an organization to physically harm or embarrass the persons protected by the U.S. Secret Service, or any other high U.S. Government official at home or abroad.

"B. Information pertaining to individuals, groups, or organizations who have plotted, attempted, or carried out assassinations of senior officials of domestic or foreign governments.

"C. Information concerning the use of bodily harm or assassination as a political weapon. This should include training and techniques used to carry out the act.

"D. Information on persons who insist upon personally contacting high Government officials for the purpose of redress of imaginary grievances, etc.

"E. Information on any person who makes oral or written statements about high Government officials in the following categories: (1) threatening statements; (2) irrational statements, and (3) abusive statements.

"F. Information on professional gate crashers.

"G. Information pertaining to 'terrorist' bombings.

"H. Information pertaining to the ownership or concealment by individuals or groups of caches of firearms, explosives, or other implements of war.

"I. Information regarding anti-American or anti-U.S. Government demonstrations in the United States or overseas.

"J. Information regarding civil disturbances."

Senator Ervin, who is noted for a piquant sense of humor, said in a speech a few months ago: "Although I am not a 'professional gate crasher,' I am a 'malcontent' on many issues.

"I have written the Persident and other high officials complaining of grievances that some may consider 'imaginary.' And on occasion I may also have 'embarrassed' high Government officials."

Based on the guidelines, the Senator asserted, he himself is qualified for the computer.

[From the Greensboro (N.C.) Daily News, July 1, 1970]

PERSONS OF INTEREST

Are you a "person of interest" to the United States government? You may be whether you know it or not, and regardless of whether you have a criminal record or even an arrest record.

You are if you:

Are a "professional" gate crasher.

Have attempted or plan to attempt, either individually or as a member of a group or organization, to "physically harm or *embarrass* the persons protected by the U.S. Secret Service, or any other high U.S. government official at home or abroad."

Have made any oral or written statements about high government officials that might be interpreted as "threatening," "irrational," or "abusive."

Occasionally or regularly "insist upon personally contacting high government officials for the purpose of redress of imaginary grievances, etc."

These are some of the guidelines certain federal agencies are using as they quietly build up information (some of it almost certainly false information based on rumors) dossiers on hundreds of thousands of law-abiding, but for one reason or another suspect, American citizens.

Among the federal agencies engaged in this sort of information gathering are the Secret Service, The Federal Bureau of Investigation, Justice Department, Internal Revenue Service and the Army's Counterintelligence Analysis Division. These agencies swap information freely and make their files available to certain other federal agencies.

The agencies involved cite as the source of their authority the recommendations of the Warren Commission. The commission recommended the broadest possible surveillance of "malcontents" and potential assassins. Although the commission's recommendations have not been enacted into law, the federal agencies now in the surveillance business are going far beyond them. Participation in an anti-war demonstration is enough to get on the list.

This is taking place apparently with the tacit consent of a majority of American citizens, possibly because most of them are unaware of the extent of the information gathering and its implications.

The broad language of the guidelines the agencies use is dangerous in itself. So is the practice of integrating the files on criminals with the files on law-abiding citizens. Together with certain provisions of the Nixon administration's omnibus crime bill, such as the preventive detention and "no-knock" search clauses, they lay the ground work for a police state of a sort Americans have never known except by hearsay.

Few public critics of this developing surveillance system have emerged. The only two in Congress are Senator Sam J. Ervin Jr. of North Carolina and Rep. Cornelius Gallagher of New Jersey. Mr. Ervin charges that the system is a threat to the right of privacy and a potential infringement of the First Amendment rights of free speech and assembly.

Senator Ervin, chairman of the Senate Subcommittee on Constitutional Rights, takes the view that the government's information gathering about the lives and habits of its citizens is pushing the country toward a mass surveillance system "unprecedented in American history." The federal gumshoes are getting by with it because Americans fail to understand the computer mystique and its implications, Mr. Ervin says.

Briefly, the computer mystique is the doctrine that the computer is foolproof, 100 per cent objective, and naturally superior to the human brain that created it. Emotion clearly does not enter into a computer's decisions. And a computer can perform a routine task much faster than a man. But thousands of Americans on computer billing lists know the computer can make the same errors that men make.

The difference is that when a computer makes a mistake it is almost impossible to get it to correct itself without the intervention of the humans who guide it. But it is not in the self-interest of those who program and operate the computer to catch it in too many mistakes. That would tend to undermine the computer mystique upon which their jobs and power depend.

Senator Ervin contends, and we agree, that within the government data files there exists "a potential for control and intimidation that is alien to our form of government and foreign to a society of free men." Based on the guidelines, the Senator told reporters, he is himself qualified for the computer files.

"I have written the President and other high officials complaining of grievances that some may consider 'imaginary.' And on occasion may also have 'embarrassed' high government officials," he said.

How do you break up the snoopers' playhouse in Foggy Bottom? The quickest way is to let your congressman and senators know you don't like it. Congress can put the national data bank out of business. Congress will put it out of business when the public demands it, but not before.

[From the Asheville (N.C.) Times, June 18, 1970]

BIG BROTHER WINS ANOTHER ONE

Overruling a lower court, the New Jersey Supreme Court has decreed that police agencies in that state may indeed compile exhaustive dossiers on persons who take part in demonstrations—whether or not the demonstrations involved disorder and whether or not the person investigated committed any illegal act.

The range of this Big Brotherism is dangerously wide. It permits the compiling of information on the individual's family, employment, finances, personal habits and past activities. The danger is that it makes people who may have been only innocent bystanders subject to the most intensive kind of official prying. The mere gathering of the information, which involves police questioning of friends, employers and others, can all too often arouse unjustified suspicion among acquaintances.

This prying trend is by no means confined to New Jersey. It has been revealed recently that Army Intelligence has dossiers on millions of Americans with the only excuse that such persons *might* some day be investigated for sensitive posts in the military establishment. Just recently the White House instigated a check into the personal backgrounds of 250 State Department employees who protested the Cambodian invasion. The FBI of course has voluminous files.

It would seem that the point is right here at which to draw the line on this ever-increasing snooping into the private lives of presently uninvolved citizens. The line should be at the point where an individual has actually applied for a sensitive position, or has actually been involved in illegal disorders. Mere participation in an orderly demonstration should be no authorization to open a file.

North Carolina's Senator Sam J. Ervin has been the leader in Congress in defending federal employees from the often outrageous lengths to which security checks go. He could well lift his sights and take in the whole range of official prying into private lives.

Enforcement agencies have the right and duty to learn all they can about individuals who seek sensitive posts or who are suspected of committing illegal acts. Investigation before the act is indefensible.

Hopefully, the New Jersey ruling will be taken into the federal courts and there overturned. Big Brother has too much power already.

[From the Omaha World-Herald, Jan. 15, 1970]

ERVIN ON GUARD

The trouble with letting government agencies have all those data processing machines is that it helps create a demand for more data to be processed.

This can lead to the government's having much more information than it needs or than is good for it or the country, especially when the information consists of files on individual citizens.

Sen. Sam. J. Ervin, D-N.C., chairman of a subcommittee on constitutional rights, thinks he detects an instance in which the government is trying to collect too much about too many people, and for insufficient reason.

Ervin has questioned the Secret Service's attempt to enlist other government agencies in the compiling of computer dossiers on persons who make threatening, irrational or abusive statements about high government officials; professional gate crashers; persons who insist on personally contacting high government officials for the purpose of redress of grievances, or people who take part in demonstrations.

This sort of information gathering Ervin characterized as "conducive to a mass surveillance unprecedented in American history." He wrote a concerned letter about it to Treasury Secretary David M. Kennedy, whose department includes the Secret Service.

Kennedy replied that the Secret Service limited such activities to its mission of protecting the President and others for whose safety it is responsible.

He said the information Ervin referred to was being sought only from law enforcement agencies, not from "run of the mill" government workers. He also said that the information relating to people who had taken part in demonstrations was required only in connection with the safety of the President while traveling.

Ervin also questioned whether the information the Secret Service was gathering would be in safe hands. He said he was concerned over who would have access to the files.

Kennedy replied that all computer personnel have top secret clearances and that no other persons or agencies had direct access to the files.

That, perhaps, is the key to maintaining continued freedom from mass surveillance by the government. If the information on individuals obtained by one branch or department is kept in its own files and used only for its own necessary purposes, the likelihood of untoward government surveillance is reduced.

However, if all the agencies of government started comparing notes and collecting individual files into master dossiers, Washington could end up with a frightening array of weapons that could be used, at the whim of a bureaucrat, for any number of unsanctified purposes.

Sen. Ervin has suggested several approaches to computer control and legislative safeguards, including prohibitions on transfer or use of data collected for one purpose only.

Perhaps, in the case of the Secret Service, nothing particularly ominous is involved in the gathering of information. At least Secretary Kennedy's reassurances to Sen. Ervin sound convincing.

But this assuredly will not be the last time when the government's use of information gathering and storing techniques will be called into question. The best way to keep 1984 from getting here before it is due on the calendar is to be alert to the dangers, and we hope Sen. Ervin and others will continue to be.

[From the Sioux Falls (S. Dak.) Argus Leader, Jan. 16, 1970]

A HINT OF BIG BROTHER

Sen. Sam J. Ervin of North Carolina, chairman of a Senate subcommittee on constitutional rights, has expressed concern about what he sees as a new threat to First Amendment freedoms.

The threat, he fears, is embodied in new Secret Service guidelines for gathering and storing information about many citizens. Ervin has performed a valuable public service by calling attention to this matter.

It is the old story: Little exception could be taken to what the Secret Service is doing if there were firm guarantees against misuse of the data, but there are no guarantees.

Congress had better get busy and provide for some. Ervin thinks "the criteria for filing information about individuals are questionable from a due process standpoint, are impractical and are conducive to a mass surveillance unprecedented in American history." That is something to worry about.

[From the New York Post, June 30, 1970]

BIG BROTHER'S NEW TOYS

There has been little response on Capitol Hill to disclosures about the government's growing industry in recording the names and activities of "malcontents" on its computerized and milcrofilmed tapes. But the Senate's leading lecturer on Constitutional law, Sam Ervin (D-N.C.), has suggested that under the government's criteria, he could well be suspect.

According to Secret Service guidelines, among the dissidents the computer should know about are:

—Those who would "physically harm or embarrass" the President or other high officials.

—Those who seek personal contact with high officials "for the purpose of redress of imaginary grievances."

Obviously there's room there for more than just one Senator.

Consider the phrase "imaginary grievance." To whom is a grievance imaginary—the lawmaker who brings it or the official who rejects it? The answer, of course, is the official; he's also the guy with the computer.

That section, then, nets all of Sen. Ervin's colleagues in Congress. The only remaining Capitol Hill figure unaccounted for is the president of the Senate, Vice President Agnew, and he could fit the composite for section one.

That he feels to embarrass the President has been adequately proven. That he might physically harm him would seem implausible. But it should be noted that he has had to look elsewhere than the White House for his golfing companions and tennis partners.

[From the Washington Post, Apr. 24, 1970]

IN THE NAME OF SECURITY

A fear of unorthodoxy is the first symptom of insecurity. It marks national administrations that have no clear sense of purpose or direction. Such administrations quite naturally, like a stream seeking its own level, tend to seek in their personnel mediocrity, conformity, conventionality. Innovation frightens them; dissent dismays them. And so they bar from employment anyone who has ever displayed any signs of eccentricity or independence. It is all the more disquieting that such a system of selection is always undertaken in the name of national security. It operates, manifestly, to diminish security rather than enhance it.

Sen. Sam J. Ervin Jr., chairman of the Senate's Constitutional Rights Subcommittee wrote to the chairman of the U.S. Civil Service Commission last week to inquire about report "new rules governing qualifications for federal employment which would exclude persons who have engaged in demonstrations and protests." The CSC says that no new rules have been adopted; the old rules are simply being applied with a bit more stringency. In this connection it is alarming indeed—although by no means surprising—to learn that the Civil Service Commission maintains a blacklist containing the names of at least 1.5 million Americans who might, at some time, have been involved in "subversive activity." The blacklist is largely compiled, without any fixed standards, from references to individuals in the publications of so-called radical student movements.

Shades of Titus Oates and Joe McCarthy! These scraps of information squirreled away in the files of the CSC are like so many pellets of deadly poison. Although they are not supposed to be taken in themselves as proof of subversive activity or intent, they operate inevitably, nonetheless, as flags disqualifying their subjects for federal employment. The injustice of this system to the individuals damaged by it is the least of the problem. The worst of it is the impact on the public service. As Senator Ervin observed, it is essential to assure that any denial of a security clearance or of a federal job is rendered on equitable, just and timely standards of social behavior. Otherwise we face dangerous conformity in our national life and a bleak future of mediocrity in the federal service.

[From the Asheville (N.C.) Citizen, July 2, 1970]

YOU CAN BE A PERSON OF INTEREST

Despite the fact that a few voices are raised in opposition—notably that of Senator Sam J. Ervin—intelligence agencies of the Federal government are still quietly compiling informational files on hundreds of thousands of law-abiding—though presumably suspect—Americans.

Declaring that violent political dissent and civil disorder require the policy, the government is building a mass of computerized information on "persons of interest."

The phrase is a term for those citizens, many with no criminal records, whom the government wants to keep track of, just in case trouble breaks out.

The files often contain seemingly unimportant data, which can be shared—almost instantaneously—by half-a-dozen intelligence gathering groups.

The operation does not disturb us particularly, though it is unauthorized by law and raises serious constitutional questions.

Critics claim the computerized "who's who" is leading the country toward a police state.

Possibly so, and much of the action seems senseless. But think what a convenient tool the files would be if the country—God forbid—ever drifts toward dictatorship.

[From the New York Times, July 4, 1970]

OUR ALIENATED RIGHTS

One hundred and ninety-four years ago the Founding Fathers asserted their independence with a ringing Declaration of man's "unalienable rights."

Today, as too often before, those rights are once more threatened. They are threatened not by some tyrannical foreign monarch, but by domestic governmental agencies whose actions and proposed actions against crime and dissent endanger constitutional guarantees designed to safeguard the rights of Americans to "life, liberty and the pursuit of happiness."

Typical of these new dangers is the spreading web of Federal prying into the private lives of citizens. Utilizing modern computer technology, Federal police, security, military intelligence and other agencies are accumulating vast stores of data on the activities of hundreds of thousands of unsuspecting "suspect" Americans.

There is nothing wrong with the use of the computer to help make more efficient and effective the legitimate work of law-enforcement and other agencies. A modern society must use modern techniques to help enforce and administer its laws and to protect itself from those who would do violence to its leaders and institutions.

But a subcommittee headed by the highly respected Senator Sam J. Ervin Jr., Democrat of North Carolina, has unearthed alarming evidence that Federal agencies have been employing the new technology to amass data that has little or no direct relation to criminal or other activities of legitimate Federal concern. Particularly disturbing are persistent reports that the Army's Counterintelligence Analysis Division is disregarding orders to stop collecting information on peace and civil rights organizations. Furthermore, the subcommittee reports that restrictions on the dissemination of "intelligence" accumulated by some agencies is woefully inadequate.

Among the "persons of interest" on whom the Secret Service collects data are individuals who have merely threatened to "embarrass" a high Government official, who "insist upon personally contacting high Government officials for the purpose of redress of imaginary grievances, etc.," and who participate in anti-American or anti-United States Government demonstrations.

Senator Ervin, a conservative and a student of the Constitution, has observed: "I am a 'malcontent' on many issues. I have written the President and other high officials complaining of grievances that some may consider 'imaginary' and on occasion I may also have 'embarrassed' high Government officials."

Senator Ervin is obviously a "person of interest" by Secret Service definition and therefore grist for a Federal computer. Indeed, any American today who vociferously articulates unpopular or unorthodox views is in danger of being digested by a Federal computer, along with common criminals, and of being exposed to potential harassment and humiliation.

If Americans still cherish the Declaration of Independence and the rights we celebrate today, they will insist that their representatives in Congress support Senator Ervin's efforts to place strict legal limits on Federal collection and dissemination of information on the activities of private citizens.

[From Computerworld, Aug. 27, 1969]

PRIVACY LOST?

The bill to implement President Nixon's national computerized job bank program does give the secretary of labor the power to prescribe "rules and regulations to assure the confidentiality of information submitted in confidence" to one of the banks.

But nowhere is there any mention of the key point made by President Nixon during his election campaign. At that time, he stressed that only jobs would be stored. Applicants would not have to input their names, he said, only their qualifications. This would assure privacy and eliminate any possibility that additional personal records would be gathered and stored.

While the absence of this precaution from the bill does not mean this safeguard will not be included in the final program, we would be much happier if it were spelled out in the bill.

POLITICAL PRESSURE NEEDED

At present, the individual has no protection against the use or misuse of personal information in data banks, and it now appears that it will be several years before adequate protective legislation can be formulated.

But the most important data banks are being set up now, and there is a need for immediate protection. Several congressmen have suggested that a person or group be named as a data bank ombudsman, with the power and responsibility to protect the individual against the misuse of information in data banks.

Such an ombudsman provides an immediate solution to an immediate problem. And he would also help to find a long-term solution, because he would be able to use his experience to help formulate laws regulating data banks.

Ombudsmen should be appointed on both the state and federal level. But the appointment of such ombudsmen will occur only if pressure is brought on legislators now. This is an election year and consumer protection is an important issue—congressmen and state legislators will be more responsive this year than at any other time.

We propose that individuals and local chapters of professional societies immediately begin a campaign for data bank ombudsmen. Such a campaign should be primarily educational at first: informing local newspapers, state legislators, and congressmen of the dangers posed by computerized data banks and proposing the appointment of ombudsmen as an immediate solution. And we must keep the pressure on.

Data bank ombudsmen offer the only hope of protecting the rights of the individual in the near future. Concerted action by computer professionals could make such protection a reality.

[From the Washington Evening Star, Mar. 16, 1970]

PRIVACY AND THE COMPUTER

The cliche about people having skeletons in their closets is woefully out of date. These days, the skeletons are in computerized data banks. What's worse, the figurative skeletons may be mislabeled with the wrong owners' names, or they may be the figment of a computer's imagination.

The dangers of the mysterious, hard-to-refute data banks have been much discussed in the last few years. The discussion is about to accelerate again, and it's a good thing, because eventually something may be done about the problem.

The National Academy of Sciences has a $149,500 Russell Sage Foundation grant to conduct a broad study of how to preserve privacy and civil liberties against the onslaught of the computer age. The study will be conducted by Columbia Professor Alan Westin, an expert on the subject, and will focus on how to protect the rights of persons (meaning everybody) on whom information is collected and stored for a variety of uses. Westin will be backed by a panel including Ralph Nader, James Farmer, former Attorney General Katzenbach and Representative Cornelius Gallagher of New York, who heads the House subcommittee on invasion of privacy.

On another front, House committee hearings are to start tomorrow on the proposed Fair Credit Reporting Act, which already has Senate approval. The bill aims at giving consumers a way to counter erroneous or malicious information on file against them in credit data banks. Included in the bill's provisions are rules to limit disclosure of information, to let the consumer know what's in his own file and to give him the right to dispute the information.

Still dormant is the 5-year-old proposal for a National Data Bank, a menacing centralization of the information collected by federal agencies. The plan raised congressional howls in 1966 and was quickly put down as an Orwellian step toward Big Brotherism. But don't count it out—it makes too much computer-type sense to have one big control panel able to spill the beans on all our lives.

Future studies are likely to add to the growing pile of horror stories about people whose lives were marred because a computer dredged up some embarrassing fact from the sooner-forgotten past—or from nowhere. It's too bad the comprehensive National Academy of Science investigation, which could lead to important reforms, is scheduled to take 2½ years. Because that will bring us 2½ years closer to 1984.

[From the Houston (Tex.) Post, Mar. 16, 1970]

DATA BANK IDEA ALIVE

The proposal advanced a few years ago to establish a national "data bank" in which information collected by federal agencies would be stored and made available at the push of a computer button appears to be far from dead.

It is being talked up again, at least sufficiently for Sen. Sam J. Ervin of North Carolina, chairman of the Senate's subcommittee on constitutional rights, to say that he will reopen the hearings this year.

Despite assurances that there would be all kinds of safeguards to protect the privacy of individual citizens, the mere thought of the pooling of all the information gathered by government agencies was enough to arouse in the minds of a great many people Orwellian nightmares of a "Big Brother" watching their every move constantly.

Even though it was promised that the stored information would be impersonal and not linked with any individual, being of the general type collected by the Census Bureau, there were fears that, once the information bank should be established, this could be changed. It would be a relatively simple matter to compile and file away a fairly complete dossier on every citizen, containing all kinds of highly personal information. This information might or might not be accurate.

The great fear was that any concentration of data could be abused and the information misused, perhaps not immediately but at some time in the future. The instinctive reaction of most people that it would be much safer, so far as the privacy and perhaps the freedom of the individual citizen is concerned, not to permit the proposed "bank" to be created.

Potentially, there could be a great concentration of power in the hands of whoever assembled and controlled the information, and it is elementary that the diffusion of power is the best protection against tyrannical government.

Federal agencies now collect a great deal of information about a great many people in the course of their normal operations, but the data collected by one in most cases is not available to the others. For the "data bank" idea to be acceptable to most people, it would be necessary that there be strong restrictions upon the information that is pooled, on how it is to be used and to whom it is to be made available. It remains for advocates of the idea to prove that adequate, foolproof safeguards against misuse and abuse are possible.

Although efforts to establish a national "data bank" have been blocked thus far, vast quantities of highly personal information already are stored in computers about practically every American citizen, and if the data ever should be brought together, it would make fairly complete dossier on him and all of his personal affairs.

The tremendous expansion of this country's credit system has made necessary the compilation of information about everybody who buys anything on credit. It is necessary for those who extend credit to know a great many facts, much of it very personal, about those seeking credit to determine how good credit risks they are. This has given rise to many private agencies that collect this information. Many of these co-operate and exchange information.

It is estimated that one credit agency alone has data on millions of Americans on file in its computers. Every time a citizen draws a paycheck or answers a census question, the information is recorded on somebody's computer somewhere.

There is relatively little reason for alarm in this because the information is fragmentary and widely scattered. What arouses concern are continuing efforts to bring all these bits and pieces of information together in one vast computer bank, with the possibility that the data might fall into the wrong hands and/or be misused.

[From the New York Times, July 7, 1970]

IN THE NATION: A RIGHT NOT TO BE DATA-BANKED?

(By Tom Wicker)

WASHINGTON.—Do you have a right not to be stored in a computer, where you can be called up for instant investigation by any bureaucrat or law officer who considers you a "person of interest" or who may want to provide someone else—maybe your employer—with "facts" about you? If you haven't thought about that, it's high time you did.

Ben A. Franklin detailed in The New York Times of June 28, for example, how Government "data banks" are mushrooming out of computer wizardry. Literally hundreds of thousands of individual dossiers now are being stored on tape by various agencies. The tape can be fed to computers with instant recall; and the computers and tapes can be interconnected from one agency or region to another in an ominous national network. Numerous state agencies have easy access to the material in this computer network, and are under little or no pressure to keep it confidential.

At the very least, therefore, some guidelines on the compilation of these banks and some safeguards on disseminating the material appear in order. An interesting case pending in Federal court here (*Menard v. Mitchell and Hoover*) may help provide them.

A Maryland man was arrested in California in 1965 on suspicion of burglary, held for two days, then released when police found no basis for charging him with a crime. Subsequently, a brief record of the detention, together with the Maryland man's fingerprints, appeared in F.B.I. criminal files.

Maintaining that the record is misleading and incomplete and that it is not properly a "criminal record," the Maryland man moved in Federal District Court here to have it purged from the F.B.I. files.

COURT CONCERN INDICATED

The Court denied this motion, and the man appealed. On June 19, the Court of Appeals for the District of Columbia, while finding no fault with the district court's ruling on the motion, ordered the case remanded for trial and "more complete factual development." The supporting opinion, although limited to the case, suggests the circuit court's concern about what ought to go into Government files, under what rules, and whether proper safeguards surround its dissemination.

The judges (Bazelon, McGowan and Robinson) pointed out that the fact that the police had been "unable to connect" the Maryland man with a crime did not necessarily acquit him of having committed one, and they conceded that certain arrests not followed by a charge or a conviction might be a proper part of someone's criminal record. But, they asked, did the mere fact that a man had been picked up and held for two days justify the F.B.I. in retaining the record in its criminal identification files?

An arrest record (the distinction between a "detention" and an "arrest" is considerably less than a difference) can be terribly damaging to one's opportunities for schooling, employment, advancement, professional licensing; it may lead to subsequent arrests on suspicion, damage the credibility of witnesses and defendants, or be used by judges in determining how severely to sentence. Moreover, thousands of arrests are made every year without any further action against the arrested person, usually for lack of evidence.

DISSEMINATION ISSUE

Thus, the court asked, if a person is arrested, even properly, but no probable cause for charging him is developed, should he "be subject to continuing punishment by adverse use of his 'criminal' record"?

This has particular point because of the lack of established safeguards on dissemination. The Maryland man's record, for instance, could be made available by statutory authority to "authorized officials of the Federal Government, the states, cities, and penal and other institutions" and also, by an Attorney General's regulation, to government agencies in general, most banks, insurance companies, and railroad police.

When New York recently passed a law requiring employes of securities firms to be fingerprinted, several hundred were dismissed for "criminal records," but about half of them had only arrests, not convictions, on their records. The Appeals Court, noting this, reasoned that F.B.I. records had been passed directly to the securities firms involved.

As data banks proliferate, so will the indiscriminate use of the material they contain. And that raises the question whether an American citizen has a constitutional or legal right not to be data-banked, computerized, stored exchanged and possibly damaged—materially or in reputation—by the process.

[From the Huntsville (Ala.) Times, July 12, 1970]

"MAFIA MACHINE" GOES TO WORK

(By Jared Stout)

WASHINGTON.—A computer nicknamed the Mafia Machine has gone to work in the Justice Department, giving organized crime fighters their most powerful weapon to date. But it may be a mixed blessing.

While the machine is enabling heretofore impossible analysis of the activities of organized criminals, it is also raising new questions about computers in law enforcement and invasion of individual privacy.

Within the computer's memory, the department is storing histories of the major and minor figures in confederated crime, how and where they travel, even details on their eating habits.

But the department is also computerizing the names of those legitimate individuals with whom the Mafiosi often deal, persons against whom no charges have been brought or proved.

Thus while members of the Organized Crime and Racketeering section are highly pleased with the workings of their still embryonic system, they are deeply troubled by the privacy issue.

"I feel like I'm walking around with a bomb in my hands," said one official who has worked on the project and who declined to be quoted by name. "Some of this information is really dynamite."

"The fact is the privacy issue is one of paramount importance and we haven't yet figured out a way to balance the law enforcement needs with the constitutional safeguards for privacy," the official said.

For the moment, however, the privacy question is being put to one side as the department fine-tunes the computer and explores its use in analysis of what's going on within the organized crime community.

Individuals now included within its memory against whom there may be no more than a suspicion—a person who, for example, is frequently seen in the company of a known hoodlum—are protected by tight security.

According to the department, only law enforcement, agencies with a need to know are given information drawn from the computer, and they insist that individuals listed because of unverified suspicions are made known to none outside the federal investigative family.

The basic data for the computer has come from reports given the organized crime section by 26 other federal agencies, principally the FBI, the Internal Revenue Service and others that regularly join the section in cooperative investigations.

The information is, however, keyed into portions of the 400,000 file cards containing 250,000 names of Mafia or Mafia-related individuals.

Until six weeks ago, the file cards were the major source of section information, a system that prevented recall of the data they contained without spending days, perhaps weeks, of manual sorting.

The computer makes possible high-speed searches of the records the section has incorporated within its memory, yielding up in minutes, for example, a list of all those Mafia figures nicknamed "Sonny."

Such information becomes useful because the operators of big crime often speak of one another only in nickname references.

Gerald Shur, the man-in-charge of the computer program, said in a recent interview "the kinds of questions we can ask are limited only by the data we can feed into the computer."

Shur said ultimately the department hopes to store enough information to enable predictions about the impact of investigations or develop economic theories to estimate what kinds of business situations organized crime may be heading toward.

[From the Boston Herald Traveler]

BIG BROTHER (U.S.) IS WATCHING YOU

(By John S. Lang)

(NOTE.—The government knows far more about you than you may suspect. And if you've ever taken part in protest marches or the like, even the military services probably have been keeping tabs on you. Some agents have seized garbage in hunting incriminating evidence.)

WASHINGTON.—Behind the closed door of Room 2439, a handful of government clerks search through radical newspapers, methodically snipping out names. They are hunting Americans favorably mentioned by the publications of dissent.

Found, snipped, checked, reviewed, the names are conveyed down a wide clean corridor to be fed into a "subversive activities" data bank already bulging with names of 1.5 million citizens.

The name-hunters in Room 2439 are low-level servants of the Civil Service Commission, the agency set up to oversee federal employment.

The commission's security dossier—not to be confused with its separate files on the 10 million persons who have sought federal jobs since 1939—are indicative of the watch the government keeps on Americans in this age of dissent and social turmoil.

An Associated Press study showed:

Military intelligence agents have spied on civilian political activities and kept secret computerized files on thousands of individuals and organizations although Pentagon counsel cannot cite any law authorizing this surveillance.

The Army has kept a so-called blacklist which included the names, descriptions and pictures of civilians "who might be involved in civil disturbance situations."

A second list has been circulated by the Pentagon's counter-Intelligence Analysis Division as a two-volume, yellow covered, loose-leaf publication entitled "Organizations and Cities of Interest and Individuals of Interest"—according to a court suit.

The FBI, with the most extensive security files and 194 million sets of fingerprints, has infiltrated the leadership of virtually every radical organization in the United States.

Agents of the FBI, Naval Intelligence and local police have seized citizens' garbage in hunts for incriminating evidence. In one case Navy agents examined garbage from an entire apartment house to find information about one tenant.

The Secret Service has set up a computer with 100,000 names and 50,000 investigative dossiers on persons who it says could be dangerous to top government officials.

A Senate subcommittee found that federal investigators have access to 264 million police records, 323 million medical histories and 279 million psychiatric dossiers. In each category, that's more numbers than there are people in the United States.

And the massive files of investigative and intelligence agencies contain but a small portion of the information the government collects on its citizens.

Millions of scraps of information go into federal files routinely when citizens pay their taxes, answer the census, contribute for Social Security, serve in the military, or apply for a passport.

In fact, a Senate subcommittee calculated that the names of U.S. citizens appear 2.8 billion times in federal records. This means, the panel said, that the statistical odds are that a dozen different agencies have files on the typical law-abiding citizen.

Much of this data is held in strictest confidence. Census questionnaires, for example, can be inspected only by Census Bureau employes—and they're sworn to secrecy.

Federal income tax returns also are considered confidential by the IRS. But they may be seen by the heads of federal agencies, some congressional committees, the governors of every state and by a special counsel to President Nixon.

A proposal three years ago to gather files of all agencies into a National Data Bank and use them for statistical purposes kicked up such a furor in Congress that, according to one official, "now that issue is dead as a dodo."

But the AP study showed that investigative and intelligence agencies can—and do—share the information they gather.

For example, investigative agencies of the executive branch have access to the "subversive activities" data bank in the Civil Service Commission's downtown Washington headquarters.

According to an official commission publication, the data bank "at present . . . contains approximately 2.5 million index cards containing information relating to Communist and other subversive activities."

The document adds: "No information is added to this file until it has been determined after careful review by a responsible official who is experienced in this field that an actual question of subversive activity is involved. . ."

A quick thumbing through the file discloses names like:

Charles Garry a white San Francisco attorney who represents the Black Panthers.

Robert Shelton, a leader of the Ku Klux Klan.

Staughton Lynd, a professor and radical writer.

Robert DePugh, head of the Minutemen.

The files are kept as index cards in mechanized rotary cabinets. There are thick bundles of cards for some individuals, only one

card for others. The cards do not state anything about a person; they are more like a bibliography, citing publications which mention him. Until evaluated, the clippings are considered "raw data" and are kept in other filing cabinets.

One name in the raw data is that of William Kunstler, civil rights attorney who represented the defendants in the "Chicago 7" conspiracy trial and who faces a jail term for contempt of court.

Kimball Johnson, director of the commission's Bureau of Personnel Investigations, says the security file is kept up to date by 17 clerks, "experts in the field," who read Communist publications, the Black Panther newspaper, the free presses, underground papers and other publications such as The Guardian, Workers World, The Militant and Liberation News Service.

"We read these and clip the names of people supported by them," Johnson says. "It's all in the public domain. It's simply that unless you clip it and title it there's no one mind that can comprehend it."

Section Chief Pierce waves a hand toward a stack of publications on a table in his office and says: "That's what we check. It's full of subversive material. Note the Commie art, Picasso and others all tied in to Communism."

Asked to cite a statute or regulation authorizing the security file, Johnson replied there is no specific law. But, he added:

"The file is an essential tool to the commission's legal function of investigating the fitness of people for federal employment for security positions. And there is Public Law 298 which shifted responsibility for making personnel investigations from the FBI to the Civil Service Commission."

The commission says its security file aids in personnel investigation which give "the reasonable assurance that all persons privileged to be employed in . . . government are reliable, trustworthy, of good conduct and character, and of complete and unswerving loyalty to the United States."

It also says that when any subversive information from the security file is identified with a person under investigation the case is referred to the FBI for a full field loyalty probe.

The FBI has overall responsibility and broad powers—based on presidential directives dating back to 1939—for investigating matters relating to espionage, sabotage and violations of neutrality laws.

FBI Director J. Edgar Hoover told Congress last year his agency had placed informants and sources "at all levels including the top echelon" of such groups as the Student Nonviolent Coordinating Committee, the Ku Klux Klan, the Black Panther Party, the Republic of New Africa, the Nation of Islam, the Revolutionary Action Movement, the Minutemen and the Third National Conference on Black Power.

Hoover also gave a hint of the scope of FBI security files when he outlined how agents keep tabs on sympathizers *who contribute money for radical causes.*

"Included among these," he testified, "are a Cleveland industrialist who has long been a Soviet apologist, the wife of an attorney in Chicago who is a millionaire, an heiress in the New England area who is married to an individual prominent in the academic community who has been active in New Left activities, and a wealthy New York lecturer and writer who for years had been linked to more than a score of Communist-front organizations and has contributed liberally to many of them.

"These individuals alone have contributed more than $100,000 in support of New Left activities."

Hoover also said agents have identified most of the writers of antiwar newspapers—which he termed "the work of the dedicated revolutionaries who are against ROTC and against our war effort in Vietnam"—and had referred that information to the Justice Department for possible prosecution.

Don Edwards, a member of the subcommittee which oversees FBI budget requests, complains that Congress does not exert proper authority over the FBI. He believes one reason for this is fear stemming from long standing rumors that the FBI, among its many dossiers, has files on each member of Congress.

"There are lots of congressmen who think that probably they do have files," Edwards told an interviewer.

But the rumors have never been proven and there have been few complaints from congressmen.

There was, however, much alarm expressed in Congress with the recent disclosure that, for the past several years, military intelligence agents have conducted surveillance of civilian political activists and have fed information on individuals and organizations into data books.

In response to 50 congressional inquiries, the Army admitted that it:

Kept a so-called blacklist which included the names and descriptions and pictures of civilians "who might be involved in civil disturbance situations."

Operated a computer data bank for storage and retrieval of civil disturbance information.

Used its intelligence agents in some instances for direct observation and infiltration of civilian organizations and political meetings.

But in making these admissions, the Army said that during the past year it has sharply curtailed such activities after realizing they weren't needed to prepare for any civil disturbances.

The Army said the blacklist—a term to which it objected—had been ordered withdrawn and destroyed. It said the computer data bank had been discontinued and that its agents have conducted no overt operations in the civilian area during the past year.

Extensive details of the military's domestic intelligence activities were disclosed in January in an article written by a former intelligence officer, Christopher H. Pyle of New York, for the Magazine Washington Monthly.

Pyle wrote that the Army's Intelligence Command, headquartered at Ft. Holabird, Md., was in a position to develop one of the largest domestic intelligence operations outside the Communist world.

A few weeks later, the Pentagon announced that Ft. Holabird would be closed in an economy move and the Army Intelligence School there would be moved to Arizona.

An Army spokesman said the domestic surveillance operations were expanded in 1967 after the outbreak of serious civil disorders.

"There was a feeling we had to be in a position to predict when federal troops would be used again. We need more information to inform tactical commanders on the streets and to guide them. This led to widespread collection efforts," he said.

The information gathered by the military was funneled into Ft. Holabird, summarized and sent out on the Army's Teletype system.

One weekly summary, marked "Pass to DIA Elements," was distributed to Army commands throughout the world. It contained this dispatch:

"The Philadelphia chapter of the Women's Strike for Peace sponsored an anti-draft meeting at the First Unitarian Church which attracted an audience of about 200 persons. Conrad Lynn, an author of draft evasion literature, replaced Yale chaplain William Sloan Coffin as the principal speaker at the meeting."

Lynn, the Women's Strike for Peace and a dozen other individuals and groups identified in the summary have filed suit through the American Civil Liberties Union, claiming the Army has violated their constitutional rights of free speech and association.

The suit, filed in U.S. District Court in Washington, contends that in addition to the surveillance and computer operations the Army admits conducting, it is concealing from Congress the existence of:

A large microfilm data bank on civilian political activity indexed by computer and maintained by the Counterintelligence Analysis Division.

A second computerized domestic intelligence data bank maintained by the Continental Army Command at Ft. Monroe, Va., as well as extensive regional files at other locations.

The "two volume, yellow-covered, looseleaf publication entitled Counterintelligence Research Projects Organizations and Cities of Interest and Individuals of Interest, which describes numerous individuals and organizations unassociated with either the Armed Forces or with domestic disturbances."

The Army said it would not comment on the lawsuit's charges.

But, in an interview, a spokesman for the office of the Army's chief counsel could cite no legal basis for surveillance of civilian activities.

"In the civilian sphere the FBI has jurisdiction," the spokesman said. "We must get approval for what we do from the FBI. There is no specific law on domestic intelligence as such applying to the Army."

To determine the range of domestic military surveillance, The Associated Press submitted a list of 20 questions to each branch of the service. Army spokesmen declined to answer the questions specifically, preferring to speak generally about the program. The Air Force said it does not have any domestic program. The Navy never responded.

But Navy intelligence operations slipped into public view last August when the ACLU complained that agents were sifting through garbage from the apartment house of Seaman Roger Lee Priest accused by the Navy of soliciting members of military forces to desert in an underground newspaper he published.

A spokesman for the District of Columbia government acknowledged garbage from all apartments in the building where Priest lived was searched because it couldn't be separated from the seaman's prior to collection.

"We ended up with an ONI agent posing as a sanitation worker and picking up trash and bagging the garbage," he said.

"Then the Civil Liberties union got in, raising hell."

Searching citizen's garbage apparently is not uncommon for government security agencies. Last summer a D.C. Sanitation Department official disclosed that the city, on request of investigators, makes up to a dozen special garbage collections yearly "in the interests of law and order."

Besides garbage, private mail also is often watched by government law enforcement agents.

The most commonly used means is the "mail cover," recording from a letter the name and address of the sender, the place and date of postmarking and the class of mail.

The Post Office declines to say how many mail covers are in effect. A Senate committee asked for a list of several years ago, but the agency objected.

"The list you have requested would contain the names of about 24,000 persons, a large percentage of whom are innocent of any crimes," a postal official said.

More recently, the Post Office confirmed a new regulation allows federal agents to open

all mail coming into this country frim virtually every nation in the world.

"However," a spokesman said, "it's not intended to be used on personal mail."

When threatening letters are received by the President or other high government officials, the Secret Service moves into action.

Operating under guidelines adopted after President John F. Kennedy's assassination, the agency collects "protective information" which is fed into its computers.

One of the 1963 guidelines asked other federal agencies to relay information on citizens who make abusive statements or attempt to "harm or embarrass" high government officials.

Civil libertarians objected that this guideline means that any citizen who writes a strongly worded letter of complaint to a government official might come under the agency's scrutiny.

A Secret Service spokesman responded: "At the time the guidelines were passed emotions were high. Everyone was saying, 'Let's protect the President.' Now people are apparently forgetting the tragedy of that year . . ."

Several years ago when Congress was considering proposals to establish a National Data Bank to gather files from all agencies and use them for statistical purposes, author and sociologist Vance Packard raised the spectre of Big Brother, the symbolic totalitarian government in George Orwell's book "1984."

Noting that the year 1984 would come in the next decade, Packard told a congressional committee:

"My own hunch is that Big Brother, if he ever comes to the United States, may turn out to be not a greedy seeker, but rather a relentless bureaucrat obsessed with efficiency."

[From the Morning Call, (Pa.) June 30, 1970]

GUARDIAN OF FREEDOM

Sen. Sam J. Ervin Jr. is a conservative Democrat from North Carolina. But he is also a guardian of constitutionlly guaranteed freedoms.

Sen. Ervin is currently worried about the massive record-keeping which has come into vogue in government agencies. And press reports concerning the type of records being kept give substance to his fears.

It is all very well for the FBI to utilize computers to process information on criminals and persons sought in connection with crimes. This type of service has been credited with speeding the apprehension of suspects.

But it is a different matter when the Justice Department, the government's prosecutor, maintains dossiers on participants in peace rallies and welfare protests. Moreover, Justice takes it upon itself to categorize such persons as "radical" or "moderate" although it is unclear upon what criteria it bases this distinction.

The Secret Service, which says it is trying to spot potential assassins, also has recourse to the computers: It keeps files on miscontents, persistent seekers of redress and those who would "embarrass" the President or other high-ranking government officials.

These are just a few of the agencies which maintain voluminous files on the activities of citizens in a wide variety of fields. The reasoning behind this extensive bookkeeping is valid. Agencies believe that to be forewarned is to be forearmed. In brief, it is a continuing hunt for potential troublemakers.

But when the government gets into the business of gathering intelligence about its own citizens, it can easily go too far. And there is evidence that it has already done so.

For what reason should an agency keep notes on persons who are doing nothing more than exercising their right to freedom of speech, assembly and petition? Since when has it become a crime to persistently seek redress of grievances?

When it gets into these areas, government is dangerously close to trampling on constitutional freedoms and on the individual's right to privacy. It is easy to see how Sen. Ervin reached the conclusion that such methods have "the potential for control and intimidation that is alien to our form of government and foreign to a society of free men."

[From the Advance, July 19, 1970]

MITCHELL DEFENDS JUSTICE DEPT.'S "BIG BROTHER" ROLE

(By Jared Stout)

WASHINGTON.—The Justice Department has asserted a virtually unchecked right—not subject to the Constitution—to keep records on persons who are "violence prone" in their protests of government policies.

The right, Atty. Gen. John N. Mitchell said through a spokesman, arises from the inherent powers of the federal government "to protect the internal security of the nation. We feel that's our job."

It was the first time Mitchell had outlined the legal basis for the collection and computerization of dossiers on protesters within the department's special Civil Disturbance Unit.

The assertion matches in breadth the claim made June 13, 1969 when the government said it had unlimited powers to eavesdrop on those the Justice Department thinks are seeking to "attack and subvert the government by unlawful means."

The eavesdropping claim was made in defense of electronic eavesdropping against some defendants in Chicago Seven riot conspiracy trial.

The extension of this doctrine to the department's domestic intelligence operation came in response to questions arising from Mitchell's news conference last Tuesday.

Mitchell declined to give the legal foundation for the intelligence operation last Tuesday. He said only "there are no court decisions that would restrain us from compiling this type of information."

Later, however, he acknowledged through the department's spokesman that the legal argument used to justify the Chicago Seven eavesdropping also applied to the intelligence operation.

In the Chicago case, the department said nothing in the Constitution's ban on unreasonable searches and seizures limits the powers of the President—and the Attorney General—to eavesdrop, and now keep records on, those who try to "foment violent disorders."

This position has been sharply attacked by critics including Sen. Sam Ervin Jr. (D-N.C.) as a step toward "a police state" and a potential violation of First Amendment rights to free speech and association.

Earlier this past week, it was disclosed that Treasury Department agents had been seeking the names of those who had checked out books on bombs and explosives from public libraries in Atlanta and other cities.

Ervin attacked this step as he has other intelligence efforts, including those of the Secret Service which lists in computer files all those who may pose a threat to the President.

Throughout his opposition to such activities, Ervin has stressed the lack of standards in deciding who shall be listed within such files, and how once a person is catalogued, he may learn of the step and question his inclusion.

The Justice Department spokesman said the definition of "violence prone" persons for its purposes included those who either acted violently, counselled violence or appeared in the ranks of violent confrontations.

He said the dossiers were not kept on "as broad a range as those compiled by the Army," a reference to the watch military intelligence agents have kept on civilian protesters. No notice is given to those whose names have been recorded.

According to the spokesman, this means those individuals listed in department records at least had to be present or in the leadership of violent events. Army records included, for example, those who subscribed to New Left publications.

It was learned, however, that the justice intelligence unit still has access to the records compiled by the Army, which said in February it had discontinued its record-keeping but has hung on to those it made in four years from 1966.

[From the World News, Roanoke, Va., Mar. 11, 1970]

JUSTICE DEPARTMENT KEEPS FILES ON ACTIVISTS

(Note.—In the last few weeks members of Congress have responded with cries of outrage to a magazine article that reported on how the Army was maintaining a computerized data bank on persons it considered politically dangerous. As a result, the Army announced it was closing down the data bank and that it only began it because the Justice Department, which is responsible for political intelligence functions, was unable to handle them. Now the Justice Deparmtent says it is ready to take over. Morton Kondracke, who reported the government's political intelligence activities in this article.)

(By Morton Kondracke)

WASHINGTON.—While the Army has closed down its political computer, the Justice Department maintains an even bigger one in its "war room" containing data on thousands of individuals, including many whose activities are entirely nonviolent.

Political computers were part of the federal government's response to the problem of controlling ghetto riots. Now that the riots have subsided, the government is more and more devoted to gathering intelligence on campus disorder, antiwar activity and militant left and right-wing groups.

The government's justification for such surveillance is its need to be aware of potential violence, but thousands of persons are drawn in whose activities are peaceful and lawful.

For example, the Army continues to maintain a microfilm file that reportedly contains information on such persons as Mrs. Martin Luther King Jr., Georgia State Rep. Julian Bond and retired Adm. Arnold E. True, a critic of the Vietnam war.

The Army file is primarily, made up of FBI reports, and FBI reports are also the chief source of data feeding the Justice Department's computer. The FBI makes it a point to keep its information in "raw" form—unevaluated as to truth or falsity.

Those who process the FBI data at Justice say it is impossible to tell whether or not any of it comes from wiretaps. Atty. Gen. John Mitchell has declared that taps may be used without court permission on domestic organizations believed seeking to "attack and subvert the government."

Besides input from the FBI, Justice's computer contains information supplied by 93 U.S. attorneys around the country and by other government agencies, such as the Treasury department's Alcohol and Tobacco Tax Division, which enforces federal firearms laws.

Some information comes also from the Secret Service, which has lately begun assembling a data bank of its own. The service's primary concern is with threats to the

President, but its data bank will also contain information on demonstrations, "abusive statements" and plans to embarrass government officials.

Each week, the Justice Department computer disgorges its intelligence onto printout paper. The product is four books, each about two inches thick and enclosed in brown cardboard covers.

Each book refers to a region of the country. It contains a city-by-city assessment of the potential for civil disorder, indicating what marches, rallies or meetings are occurring, the organizations and individuals sponsoring them and the city's disturbance history.

The books are combed by officials of the department's interdivisional information unit, which sends pertinent data to the attorney general and the various divisions of the department.

The community relations service gets information, for example, on potential racial problems for it to try to conciliate. The civil rights division gets reports on possible violations of the laws it enforces. The criminal division gets data on such violations as interstate movement to incite riots.

Besides city print-outs, the computer can produce a run-down on a specific upcoming major event, listing all stored information on the individuals and organizations who are planning it.

This was done, for example, prior to the Nov. 15 antiwar march on Washington organized by the New Mobilization Committee to End the War in Vietnam and the Vietnam Moratorium Committee.

Special print-out reports have also been done on at least one organization, the Black Panther Party.

Whether special reports have been prepared on individuals is not known, although interdivisional information unit director James T. Devine said it could be done if needed.

Devine, also chief of the department's civil disturbance group, declined to identify any individual whose name is on computer tape.

He said, however, that it is "impossible not to have information on nonviolent individuals." He added, "I think it's realistic to expect that what would normally be in the files of the Justice department would reflect itself in the computer. You can make your own assumptions (about who is listed). It should not be difficult."

Another Justice department official said that a specific unput report on an individual might tell "he made a speech on such-and-such a night at such-and-such a place. This is what he said. This was the result."

Government officials differ on whether computerized storage of political information is dangerous to the civil liberties of Americans.

Devine contended that it is not. He said it is "a ghost" to see danger.

"The information is here anyway, in the records of the department. Putting it on a computer is just a matter of systematizing it and making it more retrievable," he said.

He added: "Having your name on a computer does not involve the question of guilt or innocence."

This is not the attitude of the two chief congressional defenders of the right to privacy, Sen. Sam Ervin, (D-N.C.) and Rep. Cornelius Gallagher, D-N.J.

The two were responsible, along with 13 other congressmen who wrote letters, for forcing the Army to abandon its political computer at Fort Holabird in Baltimore. Ervin and Gallagher are continuing inquiries into other Army political files.

Neither has commented about the Justice Department computer. It is not known whether they are even aware of its existence, for no specific authorization was sought from Congress to set it up. Justice does not believe legislation was necessary to computerize files already maintained in the department.

ADDITIONAL STATEMENTS OF SENATORS

PRISONERS OF WAR STILL A MATTER OF PRIORITY

Mr. BAKER. Mr. President, as we return to do the work of the people after the Labor Day recess I would call attention once again to one of the great unsolved problems of the year—the plight of the Americans held prisoner by the North Vietnamese.

The Communist regime remains adamant against abiding by the Geneva Convention on Prisoners to which it is a signatory power. Those agreements provide the bare minimum of guarantees for the captured men. They are entitled to health care, an adequate diet, proper shelter, and at least minimal communications with their families. In addition the government is required to notify our Government of their capture, listing their names and condition when captured.

The North Vietnamese have abided by none of these agreements.

It must remain a matter of top priority with the Government of the United States to ease the lot of these men and to continue every possible avenue of negotiation for their safe return to their waiting families.

EVERY DAY THE STAKES GROW HIGHER FOR HUMAN RIGHTS: THE LEGACY OF ROBERT F. KENNEDY

Mr. PROXMIRE. Mr. President, the past few days have been frought with senseless violence and bloodshed, both here and abroad. The tragic bombing at the University of Wisconsin and the terrorism so prevalent in the Middle East made me think back to a speech of the late Senator Kennedy that is memorable in its insight and compassion. In his speech at Fordham University and also to students in South Africa in 1967, Senator Kennedy spoke poignantly of what must come close to being his personal philosophy:

Each time a man stands up for an ideal, or acts to improve the lot of others, or strikes out against injustice, he sends forth a tiny ripple of hope, and crossing each other from a million different centers of energy and daring, those ripples build a current that can sweep down the mightiest walls of oppression and resistance.

Mr. President, a little more than 3 years ago, Robert Kennedy spoke of political courage in the quest for human rights. It was his firm conviction, both in his words and his acts, that "only those who dare to fail greatly can ever achieve greatly."

I ask unanimous consent that this stirring and provocative statement by one of the most gifted leaders of our time be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE WORK OF OUR HANDS

If you fly in a plane over Europe, toward Africa or Asia, in a few hours you will cross over oceans and countries that have been a crucible of human history. In minutes you will trace the migration of men over thousands of years; seconds, the briefest glimpse, and you will pass battlefields on which millions of men once struggled and died. You will see no national boundaries, no vast gulfs or high walls dividing people from people; only nature and the works of man—homes and factories and farms—everywhere reflecting man's common effort to enrich his life. Everywhere new technology and communications bring men and nations closer together, the concerns of one more and more becoming the concerns of all. And our new closeness is stripping away the false masks, the illusion of difference that is at the root of injustice and hate and war. Only earthbound man still clings to the dark and poisoning superstition that his world is bounded by the nearest hill, his universe ended at river shore, his common humanity enclosed in the tight circle of those who share his town and views and the color of his skin.

Each nation has different obstacles and different goals, shaped by the vagaries of history and experience. Yet as I talk to young people around the world I am impressed not by the diversity but by the closeness of their goals, their desires and concerns and hope for the future. There is discrimination in New York, apartheid in South Africa and serfdom in the mountains of Peru. People starve in the streets of India; intellectuals go to jail in Russia; thousands are slaughtered in Indonesia; wealth is lavished on armaments everywhere. There are differing evils, but they are the common works of man. They reflect the imperfection of human justice, the inadequacy of human compassion, the defectiveness of our sensibility toward the sufferings of our fellows; they mark the limit of our ability to use knowledge for the well-being of others. And therefore, they call upon common qualities of conscience and of indignation, a shared determination to wipe away the unnecessary sufferings of our fellow human beings at home and around the world.

TO RELY ON YOUTH

Our answer is the world's hope; it is to rely on youth—not a time of life but a state of mind, a temper of the will, a quality of the imagination, a predominance of courage over timidity, of the appetite for adventure over the love of ease. The cruelties and obstacles of this swiftly changing planet will not yield to obsolete dogmas and outworn slogans. It cannot be moved by those who cling to a present that is already dying, who prefer the illusion of security to the excitement and danger that come with even the most peaceful progress. It is a revolutionary world we live in; and this generation, at home and around the world, has had thrust upon it a greater burden of responsibility than any nation that has ever lived.

"There is," said an Italian philosopher, "nothing more difficult to take in hand, more perilous to conduct, or more uncertain in its success than to take the lead in the introduction of a new order of things." Yet this is the measure of the task of this generation, and the road is strewn with many dangers.

First is the danger of futility, the belief that there is nothing one man or one woman can do against the enormous array of the world's ills—against misery and ignorance, injustice and violence. Yet many of the world's great movements, of thought and action, have flowed from the work of a single man. A young monk began the Protestant Reformation, a young general extended an empire from Macedonia to the borders of the earth, and a young woman reclaimed the territory of France. It was a young Italian ex-

plorer who discovered the New World, and the thirty-two-year-old Thomas Jefferson who proclaimed that all men are created equal. "Give me a place to stand," said Archimedes, "and I will move the world."

These men moved the world, and so can we all. Few will have the greatness to bend history itself, but each of us can work to change a small portion of events, and in the total of all those acts will be written the history of this generation. Thousands of Peace Corps volunteers are making a difference in isolated villages and city slums in dozens of countries. Thousands of unknown men and women in Europe resisted the occupation of the Nazis and many died, but all added to the ultimate strength and freedom of their countries. It is from numberless diverse acts of courage and belief that human history is shaped. Each time a man stands up for an ideal, or acts to improve the lot of others, or strikes out against injustice, he sends forth a tiny ripple of hope, and crossing each other from a million different centers of energy and daring, those ripples build a current that can sweep down the mightiest walls of oppression and resistance.

"If Athens shall appear great to you," said Pericles, "consider then that her glories were purchased by valiant men, and by men who learned their duty." That is the source of all greatness in all societies, and it is the key to progress in our time.

The second danger is that of expediency, of those who say that hopes and beliefs must bend before immediate necessities. Of course, if we would act effectively we must deal with the world as it is. We must get things done. But if there was one thing President Kennedy stood for that touched the most profound feelings of people across the world, it was the belief that idealism, high aspirations, and deep convictions are not incompatible with the most practical and efficient of programs—that there is no basic inconsistency between ideals and realistic possibilities, no separation between the deepest desires of heart and mind and the rational application of human effort to human problems. It is not realistic or hardheaded to solve problems and take action unguided by ultimate moral aims and values. It is thoughtless folly. For it ignores the realities of human faith and passion and belief, forces ultimately more powerful than all the calculations of economists and generals. Of course, to adhere to standards, to idealism, to vision in the face of immediate dangers, takes great courage and self-confidence. But we also know that only those who dare to fail greatly can ever achieve greatly.

It is this new idealism that is also, I believe, the common heritage of a generation that has learned that while efficiency can lead to the camps of Auschwitz or the streets of Budapest, only the ideals of humanity and love can climb the hill to the Acropolis.

A RARER COMMODITY

A third danger is timidity. Few men are willing to brave the disapproval of their fellows, the censure of their colleagues, the wrath of their society. Moral courage is a rarer commodity than bravery in battle or great intelligence. Yet it is the one essential, vital quality for those who seek to change a world that yields most painfully to change. Aristotle tells us that "at the Olympic games it is not the finest and the strongest men who are crowned, but they who enter the lists. . . . So too in the life of the honorable and the good it is they who act rightly who win the prize." I believe that in this generation those with the courage to enter the moral conflict will find themselves with companions in every corner of the world.

For the fortunate among us, the fourth danger is comfort, the temptation to follow the easy and familiar paths of personal ambition and financial success so grandly spread before those who enjoy the privilege of education. But that is not the road history has marked out for us. There is a Chinese curse that says, "May he live in interesting times." Like it or not, we live in interesting times. They are times of danger and uncertainty, but they are also more open to the creative energy of men than any other time in history. And all of us will ultimately be judged, and as the years pass we will surely judge ourselves, on the effort we have contributed to building a new world society and the extent to which our ideals and goals have shaped that effort.

Our future may lie beyond our vision, but it is not completely beyond our control. It is the shaping impulse of America that neither fate nor nature nor the irresistible tides of history, but the work of our own hands, matched to reason and principle, will determine our destiny. There is pride in that, even arrogance, but there is also experience and truth. In any event, it is the only way we can live.

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. BAYH. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Indiana? The Chair hears none, and it is so ordered.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND VICE PRESIDENT

The ACTING PRESIDENT pro tempore (Mr. ALLEN). In accordance with the previous order, the Chair lays before the Senate the unfinished business, which will be stated.

The assistant legislative clerk read as follows:

A joint resolution (S.J. Res. 1) proposing an amendment to the Constitution to provide for the direct election of the President and Vice President of the United States.

The Senate proceeded to consider the joint resolution.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAYH. Mr. President, today the Senate begins an historic debate on one of the most pressing issues facing this Nation—determining the best method of electing the President and Vice President. Nothing short of the very best method will suffice.

I am sure, because of the gravity of this question, that the debate will be active, enthusiastic, and perhaps at times heated, but I hope that by the time we are through we will have provided a major change which will correct some of the shortcomings of the present system.

Mr. President, I ask unanimous consent that there be printed in the RECORD immediately following my remarks a copy of Senate Joint Resolution 1 as reported from the Committee on the Judiciary, together with a section-by-section summary and analysis.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 1.)

Mr. BAYH. Mr. President, I want to emphasize the point I made a moment ago as strongly as I know how. I have said before, and I say once again, Mr. President, that as long as man is frail and as long as an occasional human being, either within Government or without, will yield to the temptation not to walk the straight and narrow, any system for choosing our President could have shortcomings. In short, no system devised by man can be perfect, and prevent an unscrupulous individual from trying to distort it to give him more advantage than he should have under the system.

So, Mr. President, at the start of this debate, I hope we will lay aside the effort to find a perfect system. As one who has studied this matter for 4 or 5 years, I do not know of any perfect system, but rather, I think what we are striving for in this debate today, is to find the best system, that which has the fewest shortcomings and the fewest possibilities of malfunctioning. Because, Mr. President, nothing short of the very best method for choosing our President will suffice. I believe that the measure now pending before this body, Senate Joint Resolution 1, is the very best method for selecting the President. It is the only system that is truly democratic, truly equitable, and truly responsive to the will of the people.

Having already been fortunate enough to be a principal in the successful effort to secure passage of the 25th amendment, Mr. President, I know that amending the Constitution is an awesome responsibility. It is a responsibility that I do not take lightly.

I think our Founding Fathers were correct in requiring two-thirds of both Houses and three-fourths of the State legislatures to join in concurrence before a major change could be made in the bedrock constitutional law of this land. Because of this responsibility, I say to the Senate at the outset that today, after 4½ years of exhaustive committee study not only in the Halls of Congress, but by many organizations throughout the country, I urge the Senate to approve a constitutional amendment providing for direct popular election of the President.

The burden in this debate will be on those of us who support direct popular election—as it rightly should. Certainly, Congress should approve constitutional amendments only when there has been exhaustive study and the need for constitutional change has been clearly demonstrated. In the case of our antiquated electoral college system, where

the prospect of electing a man who is not the popular choice of the voters is an ever-present danger, I believe the need for change is clear. But more than change, the archaic and dangerous method by which we elect our Presidents and Vice Presidents requires substantial reform. Mr. President, I have not taken a poll of the Members of this august body, but I would hazard a guess that if we were to poll the 100 Senators, more than 90 of them would suggest some change that they think should be made in our present system.

So, as we embark upon our discussion and our study on the floor of the Senate, I think we should emphasize, while trying to achieve the best change we possibly can, that change alone is not enough. We need a basic reform that will minimize the inequities and the malfunctioning of the present system; and it is in this respect that I suggest that the direct election of the President would be a change of the type that is necessary.

There has developed, over the past few years, a strong amount of support for this type of change. It is, I think we can accurately say, an idea whose time has come.

In view of the national consensus on the need to replace the electoral college system with direct popular election, I am hopeful that two-thirds of the Senate will agree with the more than 40 of us who already have joined in sponsoring Senate Joint Resolution 1: that now is the best time to reform—and that direct popular election is the best reform available to us.

"The road to reform in the method of choosing the Presidents and Vice Presidents of the United States," Arthur Krock wryly commented more than 20 years ago, "is littered with the wrecks of previous attempts." The first attempt, I might point out, was as long ago as 1816, almost before the ink on the original Constitution itself had dried.

For more than a century and a half, Mr. President, we have recognized the perils of a system that leaves the choice of President to a group of independent electors—electors whose freedom to disregard the will of the people is presently guaranteed by the Constitution. We have recognized the inequities in a scheme that allocates all of a State's electoral votes to the candidate who wins a popular vote plurality in that State, regardless of whether that plurality is 1 vote or 1 million votes—a scheme, I should add, that is nowhere to be found in the Constitution itself. We have recognized the grave risks that the popular will of the people can easily be thwarted, either by the strange arithmetic of the electoral system or by the mischievous deeds of a handful of power brokers.

Having long recognized these obvious inadequacies, we have yet to correct them. Why? Because repeatedly in the past we have failed to achieve agreement as to the most desirable route to reform. As I said a moment ago, I am fully convinced that 90 percent of the Members of this body want some type of change.

For that matter, there has always been near unanimous agreement as to the need for reform, but never before has there been a national consensus as to what specific type of reform was needed.

Today we have that elusive national consensus. That is why now is the best time to reform.

Mr. CURTIS. Mr. President, would the distinguished Senator from Indiana care to yield at this point?

Mr. BAYH. I am glad to yield to my distinguished colleague from Nebraska.

Mr. CURTIS. I should like to ask the distinguished author of this resolution to explain lines 23 to 26 on page 4 of the resolution, also including the word "except" in the previous line: "except that for electors of President and Vice President, the legislature of any State may prescribe less restrictive residence qualifications and for electors of President and Vice President the Congress may establish uniform residence qualifications."

What does the Senator mean by that?

Mr. BAYH. I shall be glad to answer the question, but does the Senator from Nebraska have a series of questions to which he would like to address himself? If so, I would feel better if the RECORD could show my entire opening statement first.

Mr. CURTIS. Very well. I withhold further questions.

Mr. BAYH. I think the Senator's question is very pertinent, but I should like to have continuity in my opening remarks. After I have concluded them, I shall be glad to answer any questions the Senator from Nebraska cares to ask.

Mr. CURTIS. I withdraw my question.

Mr. BAYH. I was saying that I feel now is the best time for reform, Mr. President.

I feel that at the outset of this debate, perhaps a bit of study as to what has gone on before the debate would be helpful to the Senate in its consideration.

In February 1966, Mr. President, the American Bar Association established a Special Commission on Electoral Reform. As some Members of this body will recall, the American Bar Association, with a similar commission, was very helpful to us in preparing the ground work for the consideration of the 25th amendment, and I thought it would be helpful, and indeed it has proved to be very helpful, for the Bar Association to appoint another such commission to help us with this different constitutional problem.

The commission was composed of distinguished political scientists, lawyers, legal scholars, public officials, and other leaders from every section of the country and reflecting various political views. It studied the present electoral system and considered all of the various proposals for reform. After an extensive 10-month study, the commission concluded that the existing electoral system is: "Archaic, undemocratic, complex, ambiguous, indirect, and dangerous."

The Bar Association's blue-ribbon commission further concluded that:

> While there may be no perfect method of electing a President, we believe that direct, nationwide popular vote is the best of all possible methods. It offers the most direct and democratic way of electing a President and would more accurately reflect the will of the people than any other system.

In urging the abolition of the present electoral system and replacing it with direct popular elections, the commission foreshadowed an emerging national consensus on the question of electoral reform.

The Harris and Gallup polls have shown, for example, that 78 percent and 81 percent of the American people, respectively, favor direct popular election. The extent of this feeling, it is important to note, is nationwide—and fairly evenly distributed throughout the country. To quote excerpts from one of Mr. Gallup's polls, the figures reveal that 82 percent of the people in the East, 81 percent in the Midwest, 76 percent in the South, and 81 percent in the West think direct popular election is both desirable and necessary.

Despite some speculation to the contrary, this debate should not result in a sectional type dispute, because the people themselves, when they are asked, "Do you think you should have a right to vote for your President? Do you think direct popular election is today the best way to choose our President?" by an overwhelming majority, as the figures show, respond in the affirmative.

In addition, Senate Joint Resolution 1 has been publicly endorsed by a unique and formidable array of national organizations, among them the American Bar Association, the Chamber of Commerce, the AFL–CIO, the United Auto Workers, the National Federation of Independent Business, the National Small Business Association, and the League of Women Voters—indeed a rather prestigious group of organizations representing broad philosophical and nationwide support.

For years, one of the arguments often raised against direct popular election was that it could not be ratified by the legislatures of three-fourths of the States. In fact, even a few direct popular supporters, including the late Senator Estes Kefauver and Senator Henry Cabot Lodge, were deterred from pushing it because of their doubts as to whether direct election could be ratified.

In 1966, the distinguished Senator from North Dakota (Mr. BURDICK) dramatically refuted this argument by polling 8,000 State legislators and finding that of the 2,500 who responded. nearly 60 percent favored direct election. The results, once again, revealed very little variation from State to State. More recently, Senator GRIFFIN polled 4,000 legislators from the 27 States thought most likely to oppose direct election—and 64 percent of those responding endorsed direct election.

If I might make a brief detour, it would seem to me, as an ex-State legislator, that the average State legislator is probably not too far from the thinking of his average constituent. And as the polls of Harris and Gallup show, and the polls of the various State legislators show, there is strong grassroots support throughout the country for this major constitutional change.

In September 1969 the House of Representatives reflected this national consensus by approving a constitutional amendment for direct election by an overwhelming 339 to 70 vote. Now it is the Senate's turn to act. The people of the United States will not put up with the electoral roulette of the present system. They want reform. They want direct popular election of the President. Now is the time for reform. Now is the time for direct popular election.

There is another equally compelling reason for acting now, Mr. President—before it is too late. Why not eliminate, once and for all, the ominous prospect of elevating to the Presidency a man who is not the choice of the American voters? Why not take an ounce of prevention now, before the antiquated electoral college backfires, and it is too late for the proverbial pound of cure?

Mr. BAKER. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. BAKER. Mr. President, I am in thorough accord with the statement just made by the distinguished Senator from Indiana. Not only am I a cosponsor of this joint resolution, but also, I have long advocated the abolition of any system that dilutes the full effectiveness of one man's vote in relation to any other man's vote in the selection of our chief magistrate and the Vice President.

But may I say at this point that I believe it is urgent and essential, as the Senator from Indiana points out, to take action on this matter now, and to take affirmative action. In 1968, this country witnessed one of the several significant third-party efforts in our history, in the form of the American Independent Party, supporting the candidacy of Governor Wallace; and I believe that most Members of this body would agree that the principal strength claimed by former Governor Wallace, and his principal claim to support in that campaign in 1968, was not that he would receive a majority of the votes but, rather, that he would receive enough electoral votes to deny a candidate a major and therefore to create for himself a bargaining position.

If we are to avoid that again—and all the forces and factors present in 1968 are still there and will be, I suppose, in 1972—if we are to avoid that in 1972, we have to get about the business of changing the machinery now. It is the machinery, it is the mechanism, that creates the opportunity for the third party effort to create a bargaining position.

I believe, as I think the Senator from Indiana believes, that our President and the Vice President ought to be chosen on some basis other than a bargaining position, and they ought to be chosen by the clear expression of the sentiment of the people themselves, not by some three-cornered set of forces and powers which throw the election to the House of Representatives.

At this point and without undue interruption, I hope, of the Senator's excellent statement on this subject, may I say that I want to underscore the imperative nature of early and affirmative action, so that we can prepare ourselves for the 1972 election without again subjecting ourselves to the risk of a bargaining election.

Mr. BAYH. I appreciate the comments of the Senator from Tennessee. His cosponsorship and his active support of this measure provide not only comfort but also assurance, in my judgment, that the measure has an excellent chance of being accepted by the Senate.

As this debate proceeds, I am sure that some of our colleagues—the distinguished Senator from Nebraska, I am sure, will be one—not only will express reservations with respect to certain sections dealing with technicalities and how the mechanics of this proposal is to operate, but also will express broad philosophical disagreement with the right of the people to vote directly on a one-man, one-vote basis for the President. I think there is room for difference of opinion in this body. But I think the Senator from Tennessee touched the keystone of our argument. Today, perhaps more than ever before in the history of our country—at least, since the great War Between the States—the ability of our system to respond and to be a viable system of governing 200 million people is being tested. Some very critical questions are being asked now that were not asked 20 years ago. Hopefully, they will not be asked 20 years from now. But they are being asked today.

I think that one of the major reasons why we need to prevent an occurrence such as that described by the Senator from Tennessee, which almost happened in 1968, is the recognition of the fact that it would be extremely difficult, if not impossible, today for the President of the United States to govern if he were chosen in the manner mentioned by the Senator from Tennessee.

Mr. BAKER. If the Senator will yield further, I agree entirely with that observation. As ominous as it is, I am afraid it is entirely accurate; and I think it underscores another important point in support of the basic necessity for electoral reform of this type.

At the time of the creation of the electoral college, this was a great, sprawling nation, even though smaller in geographical size than it is today. Now it is a homogeneous nation. It is for the first time, I suppose, a nation-state. The United States is no longer an aggregation of dissimilar States but a federation of 50 States in which the people are more nearly alike. By and large they think the same things, they are concerned about the same problems, they are moved along by the same impulses, they respond to the same stimuli, and they dislike the same things. We live in an era of instantaneous communication by reason, primarily, of the electronic media, and of almost instantaneous transportation because of the advent of the jet airplane and other swift means of transportation.

The point is that as the electoral college may once have served a useful purpose for an undereducated or poorly educated populace in a federation of colonies or States with respect to the nomination of candidates capable of serving as President, or to be selected by the House of Representatives, which after all was the rationale, no longer is that condition applicable to a nation-state such as we have today, but is positively destructive of the ability of this Republic to resonate fully to the range of desires, demands, and dissents of 200 million Americans.

Thus, I suggest most respectfully, especially in view of the high esteem in which I hold Senators who disagree with this statement, that not only is it necessary to accommodate every one of those items now, but we are incurring great and grave risks by jeopardizing our ability to govern efficiently and effectively in these trying times, if we are to do our best to fine-tune the democratic system so that every citizen is a fully participating citizen; so that every person regardless of the State in which he lives or the congressional district in which he resides, no matter how heavily Republican or how overwhelmingly Democratic that State or that congressional district may be, can have his vote counted.

I have only this additional comment to make, with apologies once more to the Senator from Indiana for this lengthy interruption. I remember, as I was growing up in my native State of Tennessee, that the National Democratic Party paid very little attention to us because they assumed the State would vote Democratic, and the National Republican Party paid no attention to us because they assumed that they could not carry the State. Yet, Tennessee always has had 35 percent, 40 percent, 45 percent Republican voters—until recently, mostly in the eastern third of the State—but they were ignored. In fact, they were disfranchised because the Democratic Party—and the Republican Party, as well—paid no attention under the winner-take-all theory, which is what the electoral college process amounts to, and it did not make that much difference whether one campaigned for the Republican candidates or not.

Only by the direct popular election of a President and a Vice President can that minority of 40 percent or 45 percent, as it was in Tennessee for many years, or 1 percent, as it is in some States, regional, ethnic, or otherwise, be fully counted with the same vitality, strength, and energy that the vote in every other State is counted.

I believe that it is not unseemly for me to say, in this time of much talk about a southern strategy, and the Senator from Indiana, who is not of my party, will not be offended by my saying that I hope that there is a southern strategy by both parties; that never again will either party take the South for granted or ignore it, but, rather, that both parties will compete for the support and dedication of the South and the Southeast, just as they compete for every other State in every other area.

I believe, and I say on my own experience, that one-partyism in the United States is a unique, direct product of the defective design of the electoral college

system in modern times, and that it will never again exist with all of its attendant evils if we resort to the direct popular election of a President and a Vice President.

Mr. BAYH. I certainly appreciate the thoughts of the distinguished Senator from Tennessee and hope, during debate and discussion of this issue, that we can drive home that point.

Coming from Indiana, I have seen the national political strategy work the opposite way, in that in most elections in this century the Democratic Party voters have been ignored because it looked as though the Republicans would carry, and the Republicans on the other hand thought they had such a big majority they did not need to pay much attention to the State, either. As a result, this is not conducive to strong, two-party activity. I think this is one of the items that strongly recommends our proposal.

Mr. President, what I should like to do now, if I may, is to touch on and briefly review some of the obvious defects and deficiencies of the electoral college that make it such a clear and ever-present danger.

DEFICITS AND DEFICIENCIES IN THE ELECTORAL COLLEGE

There is no need for me to dwell on the historical accidents that led the framers to compromise on the hybrid electoral college system, but it is interesting to note what a make-shift arrangement the framers were forced to devise.

The appearance of political party candidates as early as 1800, for example, meant that Alexander Hamilton's original design of a "select assembly" of independent electors already had lost its purpose only a decade after its embodiment in the Constitution. Alexander Hamilton was one of the original Founding Fathers and he wanted to create electors to be an elite group that had complete freedom of choice. He made no apologies for this. But 10 years after the measure was put on the books, parties developed that had not been anticipated by the Founding Fathers. When the party system did develop, Alexander Hamilton's ideas of a "select assembly" went out the window. A Senate report published in 1826 caustically noted that the free and independent electors had "degenerated into mere agents in a case which requires no agency and where the agent must be useless if he is faithful and dangerous if he is not."

This danger was accurately reflected in the remarks of the distinguished Senator from Tennessee (Mr. BAKER) a few moments ago.

But today, more than 125 years later, the elector still retains his constitutionally guaranteed independence.

The elector is to the body politic what the appendix is to the human body. As Henry Cabot Lodge said:

> While it does no good and ordinarily causes no trouble, it continually exposes the body to the danger of political peritonitis.

The prospect of unknown electors auctioning off the Presidency to the highest bidder remain all too real. That is the lesson of 1968, when the present electoral system brought us to the brink of constitutional crisis. A shift from Nixon to Humphrey of only 42,000 popular votes in three States would have denied Nixon an electoral majority. No one would have had an electoral majority on election day. It would have given Wallace, with his 46 electoral votes, the balance of power.

Let me add there that a recent study showed that a change of less than 1½ percent of the vote in one State alone—in California—would have produced the same outcome.

We can avoid this dangerous disease simply by eliminating the elector. But that is not a cure-all for what ails our present electoral machinery. The elector, in fact, is merely a symptom of more fundamental flaws in our system of electing the President.

Mr. President, one of the well-intentioned suggestions that I am sure will be made by one of our colleagues is to remove the elector and just count the electoral votes, so that we remove the independence. That is a step forward, but it is a very small step when we need a great leap forward. We need a major reform to clear up the fundamental flaws of the present system.

Among other things, the present system can elect a President who has fewer votes than his opponent and thus is not the first choice of the voters. The present system awards all of a State's electoral votes to the winner of the State popular vote, whether his margin is one vote or 1 million votes. As I discussed a moment ago, it cancels out all of the popular votes cast for the losing candidate in a State and casts these votes for the winner; it assigns to each State a minimum of three electoral votes regardless of population and voter turnout; and provides for a patently undemocratic method for choosing a President in the event no candidate receives an electoral majority. How can we possibly justify the continued use of such a patchwork of inequity and chance?

One of the major difficulties of the present electoral system is the unit rule, which is not even a constitutional provision. I wonder whether all our colleagues realize that this is the way we operate and have been operating for some time. The State of Maine, I think, made a change at its last legislature. How permanent that will be, we do not know, but prior to that time all of the States, for a great period of time, during most of this century, operated on the winner-take-all unit system, although it is not provided for in the Constitution.

Mr. BAKER. Mr. President, will the Senator yield on that point?

Mr. BAYH. I yield.

Mr. BAKER. Mr. President, I would note also that while Maine has changed the winner-take-all effect by changing the unit rule provision as it pertains to its electoral votes, the action of the State of Maine probably creates a constitutional question in itself that we will not really need to grapple with if we act affirmatively on this amendment. It may be said that some legal scholars will say—and I am sure that some will—that if the State of Maine in its legislative discretion decides to abolish and prohibit the unit rule that the equal rule provision of the Constitution would require an investigation of the unit rule requirement in any other State and that it might be possible that the validity of an election could be challenged on the basis of the equal rule just as it has been challenged on the 18-year-old vote.

I am not sure that a good case could be made. But it seems to me that the very last thing we need is to have a challenge of the electoral system. Even though it is archaic, it is the only thing we have until we act.

Mr. BAYH. Mr. President, I thank the Senator from Tennessee for pointing out the shortcomings that indeed decrease the capability of our system as we indicated a moment ago.

In effect, millions of voters are disenfranchised if they vote for the losing candidate in their State because the full voting power of the State—its electoral vote—is awarded to the candidate they opposed. The obvious injustice of this was pointed out by Thomas Hart Benton—a former U.S. Senator—over a century ago. He said:

> To lose their votes is the fate of all minorities, and it is their duty to submit; but this is not a case of votes lost, but of votes taken away, added to those of the majority and given to a person to whom the minority is opposed.

I found myself about a year ago addressing a joint session of the Arkansas Legislature on this very subject. Suddenly it came to me like a bolt out of the blue—I do not know why it took that long a period after studying the matter for years—as I looked around that beautiful, ornate chamber in Little Rock, that all the representatives were either Democrats or Republicans. Yet, every citizen in Arkansas who voted for either a Democratic or Republican candidate in the 1968 election not only lost his vote but had it cast for Governor Wallace who received barely 38 percent of the popular vote but got 100 percent of the Arkansas electoral vote. That is how the unit rule operates.

One practical consequence of this disenfranchisement is that it discourages the minority party in traditionally one-party States. Simply stated, where there is no hope of carrying the statewide popular vote, the size of the voter turnout for the likely loser is meaningless. This necessarily leads to the atrophying of the party structure in many States. By the same token, the prospective winner has little incentive to turn out his vote because the margin of victory likewise is meaningless. In sum, the unit rule has the unhealthy political effect of both maintaining weak second parties and discouraging voting. This is reflected most clearly in the poor voter turnout in U.S. presidential elections in comparison to most other democratic nations.

Another byproduct of the unit rule is the distortions it produces in the value

of individual popular votes. The unit rule tends to inflate the voting power of a small number of well-organized voters in the handful of large, closely contested States where blocs of electoral votes can be won on the basis of narrow popular vote margins. A candidate, for example, could win an electoral majority by capturing slim statewide pluralities in the 11 largest States—even if he did not receive a single popular vote in all of the other States. This means, in effect that under the present system in 1968, 25 percent of the popular vote could have elected a President. For these reasons, some of those opposed to direct election urge that the present system be retained because it represents "the only effective hold on power that the urban population centers have in the Federal Government today."

On the other hand, some spokesmen for rural America have suggested that the present electoral vote formula should be preserved because it enhances the voting power of citizens of the less populous States. This argument has, I admit, a certain theoretical appeal. The ratio of electoral votes to population indicates that the smaller States would have a voting advantage, because each State is entitled to at least three electoral votes regardless of its size. On this basis, it would appear that a voter in Alaska has five times the power of a voter in California. This argument, however completely ignores the practical advantage of the unit rule. A careful analysis will show that because of the unit rule an individual voter in a more populous State has greater voting power than his small State neighbor, since his vote could swing a much larger number of electoral votes.

But even if one could conclude—as some apparently have—that the present system favors one citizen over another, one region over another, or one group over another, that would not be the end of the question. There is something more important at stake in the debate over electoral reform—a fundamental question of national fairness. The President represents every American, regardless of region or State, and he should be elected by all Americans, fairly and equitably. Every vote should count the same, urban or rural, black or white, rich or poor, North, South, East or West. Any system which favors one citizen over another or one State over another is inherently inconsistent with the most fundamental concept of a democratic society.

Any student of the electoral college system can point out examples of how when all of the large States go one way the voters in the large States have an advantage. However, when the large States are divided, the mathematical advantage of the small States take effect.

I think the important question to ask ourselves here in the United States of America in 1970, in the country that we believe is the world's greatest democracy, is why under any circumstances should any voter have an advantage over another. The answer is that he should not. Everyone ought to have the same right and opportunity to choose the President.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. BAKER. Mr. President, I agree entirely. I think that the time when the President is elected by land space or territory, as distinguished from people, is over and that we are in fact a nation of States and demand to be a nation of States and demand equality in the election of magistrates, Vice President, and Presidents and demand that they be elected by people and not by area.

It is unique indeed that the advocates of the popular election and the foes of popular election each claim that it favors one side or the other. The fact of the matter is that the numerical balance tends to be absolute neutrality, which is where it ought to be.

It is a paradox that those who come from smaller States—and I come from a small State; Tennessee has a population of about 4 million which puts us near the median—point out that the minimum guarantee of two Senators gives them some slight advantage in the selection of a President.

I agree with the Senator from Indiana that even a slight advantage is an unconscionable advantage. Those from urban areas say that the 11 most populous States could choose a Vice President and President without any remaining votes at all from the other 39 States.

If it is true, then it is wrong and is an unconscionable advantage. If the electoral system does create an advantage in any way, it is demonstrably improper. The direct popular election of the President is the only way to have absolute equality.

I believe that those who claim that the system of the election of the President grew up as the result of a great compromise by our Founding Fathers have misread history. The great compromise was the creation of a bicameral system with two Members of the Senate from each State and one Representative in the House of Representatives for each representative district.

The electoral colleges was created according to that formula—that is, the sum total of the Senators and Representatives—almost as an afterthought to that great compromise; not a product of the compromise, but a corollary to it. The system was designed to work, as the Senator pointed out, in the nature of an electoral college serving as a nominating committee. After they had nominated five people who were eminently qualified to serve as President and Vice President, the House, which, according to our Founding Fathers, was established on a one-man, one-vote basis—or a representative basis and not a territorial basis—then chose a President. But in usage it did not work that way, and as a result we now have the historical mobilization of a patent inequity; that is, a proportion of electoral votes of the sum total of elected Representatives plus two Senators from each State.

Mr. President, to conclude this interruption, the fact that both urban areas and small States claim the perpetuation of the electoral college system creates some slight advantage in favor of one or the other, depending on which group one talks with, is a demonstration of the clear inequity of the system.

(At this point Mr. NELSON assumed the chair.)

Mr. BAYH. Mr. President, I thank the Senator from Tennessee for elaborating on that point.

I must say, sitting through two or three volumes of hearings over the last 4 or 5 years was not at all times an inspirational experience. Some of the testimony was repetitive. Nevertheless, as chairman of the Subcommittee on Constitutional Amendments, I sat there. I thought it amusing, if not ironic, that on the last day—and I am not going to name individuals or organizations—and after 4 years of study, the last two witnesses appeared before our committee. One witness came before our committee suggesting the present system should be maintained because it gave an advantage to the larger States and the next witness suggested the present system should be maintained because it gave an advantage to the small States.

I think the Senator is absolutely correct. These two advantages balance each other out. We should go ahead with direct election because regardless of what a person believes, no person will have a greater opportunity to choose the President and Vice President than his neighbor across the street.

But despite the seriousness of these defects in the electoral college system, they are not so dangerous as the most fundamental flaw: the fact that the present electoral vote system cannot guarantee that the candidate with the most popular votes will be elected. This dangerous prospect, more than anything else, condemns the present system as a faulty device for recording the sentiment of American voters. In 1824, 1876, and again in 1888, this system produced Presidents who were not the popular choices of the voters. On seven other occasions in this century, a shift of less than 1 percent of the popular vote would have produced an electoral majority for the candidate who received fewer popular votes.

To give an example of how extreme this can be, in 1948, a shift of less than 30,000 popular votes in three States would have given Governor Dewey an electorial vote majority—despite President Truman's 2 million-plus popular vote margin. I suggest to Senators that that is the type of malfunctioning which would bring our Nation to its knees.

Good fortune, not design, has produced Presidents who were the popular choices of the people. A glance at past elections reveals that there have been very few elections where the candidates' percentage of the electoral vote reasonably resembled their percentage of the popular vote.

In runaway elections, of course, any system will produce an electoral victory

for the popular vote winner. It is the accuracy of the results produced in closely contested elections, however, that determines the true soundness of an electoral system. Based on this criterion, the present system is clearly defective. A recent computer study of presidential elections over the last 50 years revealed, for example, that in elections as close as 1960 the present system offered only a 50–50 chance that the electoral result would agree with the popular vote. For an election as close as 1968, where some 500,000 popular votes separated the candidates, there was one chance in three that the electoral vote winner would not be the popular vote winner as well. According to the evidence, the danger of an electoral backfire is clear and present. And as President Nixon said during the 1968 campaign:

> If the man who wins the popular vote is denied the Presidency, the man who gets the Presidency would have very great difficulty in governing.

The tests of an equitable modern electoral system are threefold. First, it must guarantee that the candidate with the most votes is elected President. Second, it must count every vote equally. Third, it must provide the people themselves with the right to directly make the choice. Only direct popular election meets all three tests.

DESCRIPTION OF SENATE JOINT RESOLUTION 1

Senate Joint Resolution 1 proposes an amendment to the Constitution of the United States to abolish the antiquated electoral college and undemocratic "unit vote" system and substitute direct popular election of the President and Vice President. The proposed amendment contains several major features worthy of discussion at this time.

First, the amendment requires the winning candidate to obtain at least 40 percent of the total popular vote. During the past 5 years, questions have been raised as to what percentage of the popular vote—if any—should be required for election. On one hand, it is necessary to establish a reasonable plurality requirement indicating a legitimate mandate to govern. On the other hand, such a requirement should not be set so high that it would disrupt the stability of our political system.

Requiring a majority of the popular vote for election might too easily proliferate the party system and needlessly trigger the runoff. Historically, 15 Presidents have been elected with less than 50 percent of the popular vote. But only once in our history has no candidate for President received 40 percent of the popular vote: In 1860, Lincoln received 39.79 percent of the vote, although his name did not appear on the ballot in 10 States.

It should be pointed out that he came this close to the 40-percent mark. It is fair to assume that if the same rules applied across the board in that election as they have subsequently, at no time has a President failed to get the 40-percent required under Senate Joint Resolution 1.

Mr. President, I believe that a 40-percent plurality requirement would assure a reasonable mandate to govern, while not unnecessarily triggering the runoff election. It is extremely unlikely that neither major party candidate would receive a 40-percent plurality—even with a third party candidate in the race. In 1968, for example, the most significant third party bid since 1924 could only produce 13.5 percent of the popular vote for George Wallace.

Even more to the point, in 1912, in the face of challenges by an incumbent President and a popular former President, Woodrow Wilson still received more than 40 percent of the popular vote. It should be pointed out that in 1912 1 million votes went to the Socialist candidate, Eugene V. Debs. Yet the winner, Woodrow Wilson, had more than the 40-percent mark provided in Senate Joint Resolution 1. The four-way race in 1948, involving Truman, Dewey, Thurmond, and former Vice President Wallace, likewise produced a candidate with well over 40 percent of the popular vote. The likelihood of a major party candidate receiving the required plurality, therefore, is not confined merely to third party races but to multiparty contests as well.

The 40-percent requirement, in short, is a prudent cutoff point because it avoids the likelihood of frequent runoffs, places reasonable limits on the growth of third parties, and provides a sufficient mandate to govern.

Since a 40-percent plurality requirement was established, a contingent election procedure was necessary in the unlikely event that no candidate received the requisite 40 percent. I believe that the popular vote runoff is the most appropriate contingency in a situation where the country is so divided that no candidate receives 40 percent of the popular vote. No other contingency procedure would insure as much legitimacy and would be less susceptible to intrigue and closed-door deals.

A question has been raised as to whether the runoff might unnecessarily encourage third parties to enter presidential elections. Prof. Paul Freund, a distinguished member of the Harvard Law School, is both eloquent and very persuasive on this point, and I should like to quote from Professor Freund's testimony before our subcommittee:

> This provision for a run-off is important not only as a democratic solution to the problem of a deadlock, but as a deterrent to the rise of splinter parties. Some critics of a direct popular vote have feared that by giving effect to every voter in the final tally, the plan would jeopardize the two-party system. If, however, the only achievement that such splinter parties could hope for would be to force a run-off between the two leading candidates, their gain would probably not seem to be worth the candle in the first place, and there would be an incentive to come to terms with a major party, as at present.
>
> The two-party system, in addition, is buttressed by more than the unit count of the present electoral system; it rests on the foundations of the party system in Congress and the States, and there is no solid reason to expect that these foundations would be shaken by the direct election of the President.

In the long run the political health of our democratic system would be strengthened if the final choice rests with the people. A choice by any body other than the people is either useless or mischievous—useless if it reflects the will of the people and mischievous if it does not.

The proposed amendment strikes a necessary balance between traditional State authority and compelling Federal interests in the conduct of presidential elections. I believe such a balance is workable and sound. The proposed amendment empowers the States to establish voter qualifications and election machinery similar to the responsibilities the States now exercise for the election of Senators, Representatives, and for electors of the President and Vice President. Senate Joint Resolution 1 provides that the qualifications for voting in presidential elections are to be prescribed by State law and shall be the same as those voting for members of the most numerous branch of the State legislature. These provisions are identical to the present constitutional requirements spelled out in article I, section 2, relating to the qualifications for voting for Members of the Congress.

The States are further authorized to prescribe less restrictive residence requirements for voting in presidential elections. This provision was deemed necessary in order to prevent the invalidation of existing laws in many States where less restrictive residence requirements for voting in presidential elections are already in effect. Congress, moreover, is expressly empowered with a reserve authority to establish uniform residence requirements. In this age of great mobility, State residence requirements for voting in presidential elections often work an undue hardship on millions of Americans. It is estimated, for example, that in 1968 approximately 5 million voters were arbitrarily disfranchised because of restrictive State residency requirements.

These features do not reflect any doubt whatsoever as to the constitutionality of the Voting Rights Act Amendments of 1970, now awaiting a Supreme Court test.

The mechanical details of providing for a direct popular election, including provision for the runoff, prescribing a uniform election date, and the manner in which the vote is to be ascertained and declared, are left to Congress to legislate.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. BAYH. I am glad to yield.

Mr. BAKER. I agree with the Senator's statement. There are other factors to be left to a later date as to which it might be necessary to take further action. My statement is prompted by a recent decision of the Supreme Court to the effect that a 1 year's residency requirement in order to vote in Tennessee was unconscionably long and deprived a citizen of due process and equal protection. If that be the case, it seems to me that there is another area of great uncertainty that might require some action with respect to statutory election reform.

I inject that note not for the purpose of complicating the subject before the Senate, or of diverting our attention from the obvious necessity of correcting the

defects in the electoral college system, which the Senator from Indiana and I agree should be corrected, but to suggest that we will not have finished our job when we successfully ratify an amendment to the Constitution to provide for direct election of President and Vice President.

I think we ought to give consideration to universal suffrage as far as any citizen is concerned, regardless of his location in whatever State, but reserve the right to every State to fix such requirements as residency and others for a citizen to cast a vote in each State election. I think we ought to provide for a 24-hour vote. I think we have an abominable record of votes cast by those who are eligible to cast them.

Mr. BAYH. It is my honor and privilege to have joined the Senator in providing for corrections in that area.

Mr. BAKER. I thank the Senator for his assistance. We will fight that battle on another day.

The last suggestion I have is that we provide for a national primary, also requiring State preferential primaries for each of the two of our great political parties, making them more responsive, so that the delegates to the national conventions, who ought to be elected, in my judgment, will have a better view of what the people think.

So that is my view of a broader range of refinement and fine tuning of the electoral system that we have to undertake after we complete the first, Herculean task of putting at rest the greatest inequity we have, and that is correction of the inequity under the electoral college system.

Mr. BAYH. I appreciate the Senator's journey into the future. I concur in his statement that the proposed constitutional amendment is the beginning and not the end of our efforts to revitalize and make more equitable and open our electoral process. Certainly, this is a major step, and one which I think provides us with the opportunity to make some uniform recommendations, by statute, if Congress at a later date might prefer to do so.

I am not going to deal in detail with that field now, because I am sure the Senator from Tennessee is fully aware that we are proceeding to the electoral process at this time and leaving the nominating process for consideration on some future date. It is our judgment that, if we were to commingle the nominating process with electoral reform, it would sound the death knell of the basic electoral reform. This whole matter, of course, needs consideration.

Prescribing the times, places, and manner of holding such elections and provision for inclusion on the ballot remain the primary responsibility of the States. The Congress, however, is given a reserve power to make or alter such regulations. In the event a State attempts to exclude the name of a major party candidate from the ballot, for example, the Congress would have the authority to prevent such arbitrary action. Furthermore, such action appears unlikely in view of the Supreme Court's recent decision in *Williams* v. *Rhodes*, 393 U.S. 23 (1968), holding that the equal protection clause of the 14th amendment and the right of assembly guaranteed by the first amendment impose limitations upon a State's freedom to restrict parties in their access to the ballot.

Mr. President, it has been 4½ years since the Subcommittee on Constitutional Amendments began its most recent study of electoral reform. After 4½ years of continuous study and debate, the full Judiciary Committee voted 11 to 6 to report Senate Joint Resolution 1. I believe it is the only authentic reform proposal, the only proposal that guarantees the election of the popular choice, counts every vote equally and works in the manner in which most Americans expect the electoral process to work—directly and democratically.

ALTERNATIVE PLANS

I might take a moment or two of the Senate's time here to discuss very quickly some of the alternative plans, because I am certain that there are a number of our colleagues who share the concern of the Senator from Indiana that reform is necessary, but do not share the judgment of the Senator from Indiana that a direct popular vote is the best alternative.

Because we have studied these alternative proposals in some detail, it might be helpful to the Senators to make a cursory examination of the alternative plans.

There can be no disagreement that direct popular election would produce these results though some may disagree as to the desirability of such basic reforms. Over the years, several other plans have been offered. They may be offered in the course of this debate, and I expect they will. I would like to discuss the drawbacks in these proposals.

I say this without for an instant impunging the motives of those who make these suggestions, because I think it is possible for men of good will and sound judgment to examine a difficult and complicated problem like the morass of the present electoral college system, and come up with different conclusions as to what would be the best reform to propose to the Senate.

THE DISTRICT PLAN

The district plan would retain the electoral vote, with electors chosen from single-member districts within each State and two electors running at large statewide.

The district plan, like the present electoral system, is based on the winner-take-all principle—merely shifting its application from the State level to the district level. As a result, the district plan would continue to produce significant disparities between the popular vote and the electoral vote.

Mr. BAKER. Mr. President, will the Senator yield for an observation on the district plan, which I believe is quite relevant to the remarks of the Senator from Indiana?

Mr. BAYH. I yield.

Mr. BAKER. In a book by Neal R. Peirce entitled "The People's President," he tells what the results of the election of 1960 would have been under a district plan. I quote from page 11 of his book:

> Had the nation, for example, been voting in 1960 under the often-proposed plan that would give each state two electoral votes and each Congressional district one, Nixon would have been elected by 278 to 245—a small but clear electoral majority that would have done nothing to clear up the clouded popular vote and might well have made him a minority President.

I agree with the Senator from Indiana that although the district plan diminishes the inequity of the electoral system, it does not eliminate it, but preserves all of the disadvantages of the winner-take-all theory.

Mr. BAYH. I appreciate the comments of the Senator from Tennessee. A number of comments have been expressed suggesting that the district plan might even produce a popular vote loser or a minority vote winner. We can play all sorts of games with figures. The best example I have found of the disparity which can be produced in any one election was brought to our attention in the 1964 election. To cite just one example of the consequences of the district plan, compare the returns for the First and 15th Illinois Congressional Districts in 1964. These were adjoining congressional districts. President Johnson carried the First District by 167,458 votes. Senator GOLDWATER, in contrast, won the 15th district by only 71 votes. Under the district plan, each candidate would have received one electoral vote. The unit rule operating at the district level would have wasted a net popular vote margin of 167,387 votes for President Johnson.

Mr. CURTIS. Would that have been bad?

Mr. BAYH. Of course, it would have. By wasting large numbers of popular votes, the district system can easily elect a President who is not the popular choice of the voters. I am sure one could find instances, in that same election or other elections prior or since, of the same exaggeration in favor of the Democratic candidate. I say that if we were to allow this unit rule to operate, whether at the National, State, or local level, we would be tossing on the scales of chance the election of the President.

Mr. BAKER. Mr. President, one of my distinguished Republican colleagues was overheard to say, "Would that have been bad," with reference to the outcome of the 1960 elections.

Far be it from the Senator from Tennessee to suggest that from his point of view a different outcome would have been bad, if the Senator will permit me to say so, for the welfare of the country. But the point I am making, and I believe the point the Senator from Indiana makes, is that any election system short of a direct popular election creates circumstances where one party or the other may win under circumstances where it receives fewer votes than the other; and the only system which affords absolute equality of opportunity, and no advan-

tage for any candidate, but straight, undiluted equality of opportunity, is by popular election of the President and Vice President.

Mr. BAYH. I appreciate the analysis of the Senator from Tennessee. It is not the first time his statesmanship has shown that there are things more important than partisan politics, though both of us are strongly partisan. In this particular reform effort, we join hands as partisan Republicans and Democrats, with the best interests of our country as our sole goal.

I thought it might be helpful to pursue one of the other items that was brought to the attention of the Senate by the Senator from Tennessee, namely, the effect of the present electoral college system on the strength of the two-party system.

As in the case of the present system, the district plan would discourage the minority party's voters within each electoral district, thus reducing the incentive to vote. The district plan, in fact, would operate even more effectively to discourage voters because a larger number of congressional districts are safely controlled by one party than are States. Defining a "safe" State or district as one carried by 60 percent of the vote or more, for example, 32 percent of the districts were safe in 1960 and only 10 percent of the States.

So I think this erosion of strength in the 2-party system would also be present under the district plan, well-intentioned as it is, thus providing the same shortcoming as under the present electoral system.

Furthermore, despite the specific requirement of Senate Joint Resolution 12 that electoral districts be "compact, contiguous, and nearly equal in population" it still would be possible for partisan State legislature to gerrymander electoral units. The impracticality of enforcing this vague constitutional standard is another major obstacle to the district plan.

I should add that there is no provision within this well-intentioned alternative plan that the districts from which presidential electors would be chosen should be the same as congressional districts to elect Congressmen. I cannot think of anything that would be more confusing to the general public.

THE PROPORTIONAL PLAN

The proportional plan would retain the electoral vote, but replace the unit rule with a proportional division of a State's electoral vote on the basis of the popular vote in that State.

Had the proportional system been in effect in 1968, it would have produced the following distortions in two States having the identical number of electoral votes:

First, President Nixon captured 43 percent of the popular vote in Virginia and under the proportional plan this would have produced 5.2 electoral votes. Vice President Humphrey's 43 percent of the popular vote in Missouri, likewise, would have produced 5.2 electoral votes. President Nixon, however, only required 590,315 popular votes, whereas Humphrey had to poll 791,444 votes in order to produce 5.2 electoral votes—a startling difference of 201,129 popular votes.

A similar distortion can be found in both Idaho and Utah, which have four electoral votes. In both States, Nixon captured 56 percent of the statewide popular vote, and this would have entitled him to 2.2 electoral votes under the proportional plan. The interesting point is that it required 238,728 popular votes in Utah to produce the same number of electoral votes as 165,369 popular votes in Idaho.

The practical political consequences of the proportional plan is that it enhances the political influence of the "safe" States, which traditionally have had poor voter turnouts. Simply, a popular vote in a State where the voter turnout is poor is worth more than a vote in a State of equal size with a heavy voter turnout.

States sharing marked sectional interests, moreover, would have a great incentive to maximize their electoral influence by encouraging one-partyism. As a result, regional third party challenges are likely to be encouraged. In 1948, for example, the States Rights Party polled only 2.4 percent of the total popular vote, but under a proportional plan, it would have received more than three times that percentage of the electoral vote.

Under certain political conditions, the proportional plan would produce a President who was not the popular choice of the voters. If one candidate won handily in most of the States where the turnout was poor and the results in the remaining States were almost evenly divided, it is likely that the electoral winner would have been the popular vote loser. A perfect example of this division occurred in the election of 1896. Bryan captured 46.7 percent of the popular vote and McKinley won 51.1 percent. McKinley's majority of the popular vote under the present system produced 61 percent of the electoral vote. Under a proportional plan, however, Bryan would have won a 6 vote electoral victory-despite being a popular vote loser.

A recent computer study presented to the committee examined the electoral results produced under a proportional system in close popular elections. The random survey, based on several thousand two candidate races with a popular vote distribution varying from a wide 60–40 split to a 50–50 division, revealed that with a plurality of less than 1 million votes, there was a 14-percent chance of an electoral mishap. In an election as close as 1968, moreover, there was a 25-percent chance—one in four—of electing the popular vote loser.

THE MODIFIED PRESENT SYSTEM

The modified present plan would write into the Constitution for the first time the major defect of the present system—the unit rule. It would leave the election of the President to the strange arithmetic of the unit rule and perpetuate the other inequities in the present system—including the distortions in voting power, the built-in advantage for low voter turnout, and above all the great risk of electing a candidate who is not the first choice of the voters. The adoption of the "Automatic Plan" would not only write into the Constitution the evils of the winner-take-all rule, but also is likely to preclude meaningful reform indefinitely.

THE "FEDERAL SYSTEM PLAN"

The "federal system plan" would provide that in order for a candidate to be elected he would have to receive at least 40 percent of the popular vote and have "confirmed" his mandate by achieving a plurality of the votes in more than one-half of the States or in States having at least one-half the total number of voters. If no candidate received such a plurality, the decision would be made on the basis of the distribution of the popular vote in accordance with the present electoral college system. If none of the candidates received a majority of the electoral vote under this proposal, the electoral votes received by candidates other than the two receiving the greatest number of popular votes would be divided among the first two candidates in accordance with the proportion of the popular vote these two candidates received in the State.

This would be an extremely complicated and confusing method of electing the President and Vice President. Moreover, the plan might tend to fragment the presidential election process, with one candidate hoping to "confirm" his victory by concentrating on the most populous States and the other by concentrating on the smaller States. Such divisiveness should be minimized, not magnified, by the system of selecting our President. Finally, and above all, the plan does not correct the fundamental flaw in the electoral college system. It would not prevent the possibility of electing a President and Vice President who had not received the most popular votes.

CONCLUSION

Mr. President, these are the alternative plans. None of them has the support of a significant segment of the American public. None of them has the slightest possibility of securing passage by a vote of two-thirds of the Members of the Senate. None of them would be ratified by three-fourths of the States.

Indeed, Mr. President, if one of these plans were somehow to be adopted by the Senate and were to secure a two-thirds vote for passage, it would in my opinion foreclose all possibility of reform in this Congress—perhaps in this generation. The House has already expressed its preference in the strongest possible terms, by a vote of 339 to 70, for direct popular election.

No one has put it more succinctly than President Nixon, in his statement of last September 30 in support of direct popular election:

> The House of Representatives has overwhelmingly supported the direct election approach. It is clear that unless the Senate follows the lead of the House, all opportunity for reform will be lost this year and possibly for years to come.

I repeat:

> All opportunity for reform will be lost this year and possibly for years to come.

The President continued:

Accordingly, because the ultimate goal of electoral reform must prevail over differences as to how best to achieve that goal, I endorse the direct election approach and urge the Senate also to adopt it. While many Senators may prefer a different method, I believe that contrary views are now a luxury—that the need for electoral reform is urgent and should be our controlling consideration. I hope, therefore, that two-thirds of the Senate will approve the House-passed amendment as promptly as possible so that all of us together can then urge the States also to give their approval.

The question that confronts the Senate is whether we will have direct popular election or no reform at all.

EXHIBIT 1

S.J. RES. 1

A Joint Resolution proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

ARTICLE —

SECTION 1. The people of the several States and the District constituting the seat of government of the United States shall elect the President and Vice President. Each elector shall cast a single vote for two persons who shall have consented to the joining of their names as candidates for the offices of President and Vice President. No candidate shall consent to the joinder of his name with that of more than one other person.

SEC. 2. The electors of President and Vice President in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature, except that for electors of President and Vice President, the legislature of any State may prescribe less restrictive residence qualifications and for electors of President and Vice President the Congress may establish uniform residence qualifications.

SEC. 3. The pair of persons having the greatest number of votes for President and Vice President shall be elected, if such number be at least 40 per centum of the whole number of votes cast for such offices. If no pair of persons has such number, a runoff election shall be held in which the choice of President and Vice President shall be made from the two pairs of persons who received the highest number of votes.

SEC. 4. The time, places, and manner of holding such elections and entitlement to inclusion on the ballot shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations. The days for such elections shall be determined by Congress and shall be uniform throughout the United States. The Congress shall prescribe by law the time, place, and manner in which the results of such elections shall be ascertained and declared.

SEC. 5. The Congress may by law provide for the case of the death, inability, or withdrawal of any candidate for President or Vice President before a President and Vice President have been elected, and for the case of the death of both the President-elect and Vice-President-elect.

SEC. 6. The Congress shall have power to enforce this article by appropriate legislation.

SEC. 7. This article shall take effect one year after the 15th day of April following ratification.

ANALYSIS OF THE RESOLUTION

The resolution contains the customary provisions that the proposed new article to the Constitution shall be valid as part of the Constitution only if ratified by the legislatures of three-fourths of the States within 7 years after it has been submitted to them by the Congress.

Section 1 of the proposed article would abolish the electoral college system of electing the President and Vice President of the United States and provide for their election by direct popular vote. The people of every State and the District of Columbia would vote directly for President and Vice President. This section prevents a candidate for either office from being paired with more than one other person. Candidates must consent to run jointly.

Section 2 provides that voters for President and Vice President in each State must meet the qualifications for voting for the most numerous branch of the State legislature in that State. The term "electors" is retained, but instead of referring to the electoral college, the term henceforth means qualified voters, as it does in existing provisions dealing with popular election of members of Congress. This clause also permits the legislature of any State to prescribe less restrictive residence requirements and is necessary in order to prevent invalidation of relaxed residence requirements already or hereafter adopted by the States for voting in presidential elections.

The Congress is also empowered to establish uniform residence qualifications. This authority would in no way affect the provisions dealing with residency requirements in presidential elections adopted as part of the proposed Voting Rights Act of 1970. The Voting Rights Act would abolish residency requirements for voting in presidential elections and establishes nationwide, uniform standards relating to absentee registration and absentee voting in presidential elections. This provision, moreover, does not modify or limit in anyway existing constitutional powers of the Congress to legislate on the subject of voting qualifications. The District of Columbia is not referred to in section 2 because Congress now possesses the legislative power to establish voting qualifications for the District under article I, section 8, clauses 17 and 18.

Section 2 is modeled after the provisions of article I, section 2, and the 17th amendment to the Constitution regarding the qualifications of those voting for Members of Congress. As a result, general uniformity within each State regarding the qualifications for voting for all elected Federal officials is retained. Use of the expression "electors of the most numerous branch of the State legislature" does not nullify by implication or intent the provisions of the 24th amendment that bar payment of a poll tax or any other tax as a requisite for voting in Federal elections. The Supreme Court, moreover, has held that a poll tax may not be enacted as a requisite for voting in State elections as well, *Harper* v. *Board of Supervisors*, 383 U.S. 663 (1966).

Section 3 requires that candidates obtain at least 40 percent of the whole number of votes cast to be elected President and Vice President. The expression "whole number of votes cast" refers to all valid votes counted in the final tally. The term "whole number" is consistent with prior expressions in the Constitution, as in the 12th amendment. Section 3 further provides that if no pair of persons receives at least 40 percent of the whole number of votes cast for President and Vice President, a popular runoff will be held among the two pairs of persons who receive the highest number of votes.

Section 4 embodies provisions imposing duties upon the Congress and the States in regard to the conduct of elections. The first part of this section requires the State legislatures to prescribe the times, places, and manner of holding presidential elections and entitlement to inclusion on the ballot—subject to a reserve power in Congress to make or alter such regulations. This provision is modeled after similar provisions in article I and the 17th amendment dealing with elections of members of Congress. States will continue to have the primary responsibility for regulating the ballot. However, if a State sought to exclude a major party candidate from appearing on the ballot—as happened in 1948 and 1964—the Congress would be empowered to deal with such a situation.

Section 4 also requires Congress to establish by statute the days for the regular election and any runoff election, which must be uniform throughout the United States. This conforms to the present constitutional requirement for electoral voting (article II, section 1), to which Congress has responded by establishing a uniform day for the election of electors (3 U.S.C. 1).

Section 4 further requires Congress to prescribe the time, place, and manner in which the results of such election shall be ascertained and declared. The mandatory language is comparable to the mandatory duties imposed upon the States to provide popular election machinery for Members of Congress. In implementing this section, Congress may choose to accept State certifications of the popular vote as it now accepts electoral vote certifications under the provisions of 3 U.S.C. 15. Federal enabling legislation will be required to provide the specific legislative details contemplated in the broad constitutional language of the amendment.

Section 5 empowers Congress to provide by legislation for the death, inability, or withdrawal of any candidate for President and Vice President either before or after a regular runoff election, but before a President or Vice President has been elected. Once a President and Vice President have been elected, existing constitutional provisions would apply. Thus, the death of a President-elect would be governed by the 20th amendment and the death of the Vice President-elect would be governed by the procedure for filling a Vice Presidential vacancy contained in the 25th amendment. Section 5 also empowers the Congress to provide by legislation for the case of the death of both the President-elect and Vice-President-elect.

Section 6 confers on Congress the power to enforce this article by appropriate legislation. The power conferred upon Congress by this section parallels the reserve power granted to the Congress by numerous amendments to the Constitution. Any exercise of power under this section must not only be "appropriate" to the effectuation of the article but must also be consistent with the Constitution.

Section 7 provides that the article shall take effect 1 year after the 15th day of April following ratification. The committee was of the opinion that since State and Federal legislation will be necessary to fully implement and effectuate the purposes of the proposed amendment, a reasonable period of time should be provided between the date of ratification and the date on which the amendment is to take effect. The committee believes that this provision affords both the Congress and the States an adequate opportunity to legislate, but does not foreclose the possibility of securing ratification in time for the proposed article to be in effect before the 1972 Presidential election.

Mr. CURTIS. Mr. President (Mr. CASE) will the Senator yield?

Mr. BAYH. I am glad to yield to the distinguished Senator from Nebraska, and I certainly appreciate his patience.

Mr. CURTIS. I commend the distinguished Senator for a most eloquent defense of a proposition that is both unsound and weak. He has done an excellent job, and I congratulate him upon it.

I should like to ask the Senator a few questions——

Mr. BAYH. If the Senator will yield, I certainly appreciate that compliment.

Mr. CURTIS. The Senator is entitled to it.

In how many States do the voters actually vote for the President and Vice President by name on the ballot?

Mr. BAYH. I do not know the exact number, but in most of them.

Mr. CURTIS. In most of them, yes.

It is probable that many of the people have this in mind, as contrasted to voting for a list of electors when the direct election is used, is it not?

Mr. BAYH. No, I do not think it is. I think most people associate direct election with the same elections they are familiar with in all other offices. When they go into the booth and choose a Senator from Indiana, a Senator from Tennessee, a Governor of Oklahoma, a legislator, or a mayor, they choose by direct popular election. I think that is what the people understand, and I think that is what they want to do with respect to the President.

To answer the Senator's other question, I think 12 States do not specifically name the candidates but list the elector.

Mr. CURTIS. Yes; and in those 12 States they do not get the opportunity to vote for their candidates by name; is that not correct?

Mr. BAYH. That is accurate; yes.

Mr. CURTIS. Now, the Senator spoke of the danger that could have arisen out of the last election with reference to Governor Wallace, and that the danger was based on the fact there was the possibility the other two candidates might lack a majority in the electoral college; is that not correct?

Mr. BAYH. That is one of the specific dangers that the Senator from Indiana and the Senator from Tennessee discussed. There are others, of course, that we also discussed.

Mr. CURTIS. Would the Senator from Indiana state that in order to deal with that particular danger, a lack of a majority in the electoral college, the only solution is to go to a direct election of President and Vice President?

Mr. BAYH. No. I do not think that is the only solution.

Mr. CURTIS. There is a great deal of criticism about the unit rule. Would it be possible—I am not asking would the Senator approve—but I am asking, would it be possible to retain the electoral system of voting and eliminate the evils of the unit rule?

Mr. BAYH. It is rather obvious that there is one proposal that would eliminate the unit rule. But if we are concerned about electing a President and Vice President who have the most votes, if we are concerned about everyone's vote being equal, and if we are concerned about giving the people the opportunity to participate directly in the election of their President and Vice President, without interposing a mathematical formula or agent, there is only one proposal that would meet these three criteria. That is the direct popular vote.

Mr. CURTIS. I am fully aware that the distinguished Senator and many of our other colleagues favor direct election, but the point is that the system of counting electoral votes could be retained and we could still eliminate the unit rule, could we not?

Mr. BAYH. Under the proportional plan——

Mr. CURTIS. Yes.

Mr. BAYH. I understand that the Senator from Nebraska is one of the chief advocates of the district plan. Would he suggest that same shortcoming could be overcome by the district plan?

Mr. CURTIS. I would agree to any plan to stop direct election of a President and Vice President.

Mr. BAYH. Even if it brought the country to its knees, and the chaos we had in 1968?

Mr. CURTIS. We did not have any chaos in 1968.

Mr. BAYH. We came close to it.

Mr. CURTIS. What is the Senator's alternative?

Let me ask this question in regard to the holding of the second election. I realize that the date will be fixed by law, but when would the Senator hold the runoff as provided for in lines 4 and 5 of page 5 of the proposal? When would the Senator hold it?

Mr. BAYH. That would be determined by Congress.

Mr. CURTIS. Yes.

Mr. BAYH. That is a very good question. It is a question and an aspect of Senate Joint Resolution 1 which has given both the Senator from Indiana and the Senator from Michigan pause, and has caused several other Senators pause. Frankly, I do not like to anticipate a runoff election. I think, and I gather that the Senator from Nebraska was listening carefully, that the mathematical possibility of that happening is remote. It would never happen if the same rules applied in all elections. I would suggest that if the Senate endorsed this plan and passed it by a two-thirds vote, and if it were then ratified by three-fourths of the State legislatures, it would become incumbent upon Congress to pass a measure which would govern the possibility of a runoff. I do not think it will happen, but we have to be prepared for it in advance.

Specifically, I could suggest a date, if the Senator would like me to.

Mr. CURTIS. I would like very much for the Senator to suggest a date, because I do not believe any catastrophe happened in this country in 1968, and it did not. It did not. So the fact that we do not expect it to happen has nothing to do with what we write into the Constitution. But I should like to ask the distinguished Senator, as the chief spokesman of this proposal and plan that provides for a runoff election, when would he suggest that election be held?

Mr. BAYH. The Senator from Indiana is not prepared to bind the Senate——

Mr. CURTIS. I understand that.

Mr. BAYH (continuing). By his suggestions. I would suggest that if the people of France are sophisticated enough to have an electoral system in which they can have a runoff election the people of the United States, and Congress in particular, should be sophisticated enough and intelligent enough to pick a date that would work. I would, however, like to point out that if the 40 percent provision contained in Senate Joint Resolution 1 had been operative in France, that country would not have had to have a runoff.

Mr. CURTIS. I am taking the amendment as written here.

Mr. BAYH. Why does not the Senator from Nebraska pick a date?

Mr. CURTIS. I think that is the fatal defect in the proposal.

Mr. BAYH. Would the Senator put a date in there?

Mr. CURTIS. I believe the Senator is forcing the country to choose between one of two alternatives, one wherein we might have a minority President elected by as little as 40 percent, or else we must hold two elections. The runoff election would cause confusion in this fast-moving age. I think that the Senator, as the chief sponsor of this proposal, should give us an idea as to when he would hold that second election. That is my question.

Mr. BAYH. I believe that the Senator from Indiana——

Mr. CURTIS. I know the Senator cannot bind the Senate.

Mr. BAYH (continuing). Would be very glad to give his idea. I would suggest such a time as 2, 3 weeks—I believe that would be ample. I am just saying that. We now have a group of distinguished authorities who have been studying this question.

When we take into consideration the fact that we have recounts now, I think that the Senator from Nebraska must consider that although there is a contingent possibility that we might have to have a recount following the first election, we have that same liability under the present system. We have recounts in the present system, and that system is still functioning. I see no reason why it cannot continue to function, although I think that the runoff possibility is the weakest part of Senate Joint Resolution 1. However, I think that weakness is insignificant compared to the real liability presented by the present system, or by any other well-intentioned alternative.

Mr. CURTIS. I listened carefully to the distinguished Senator and he talked a long, long time about the evils of the electoral vote going to someone who did not have the greatest number of votes, yet here we are asked to hold two elections. Because it is bad on the face of it, then we write into the Constitution that we can elect a President with only 40 percent of the choice of the people.

Now, coming back to the date that the Senator fixed, of 3 weeks, how long does the Senator think it would take to certify the first election, and who would do the certification?

Mr. BAYH. I think that the certifica-

tion could be done either by the States, or as Congress by law would prescribe. We will have to have some reasonable feature in the statute to safeguard and protect what we already have. Does the Senator from Nebraska realize that there are several States today operating with runoff election provisions? I have not seen any of them brought to chaos.

Mr. CURTIS. That is much simpler because that is all within one sovereign State. Who would certify to the grand total of a popular vote that a pair of candidates would receive?

Mr. BAYH. That would be up to the Senate and the House of Representatives.

Mr. CURTIS. I know, but this is the Senator's proposal and I believe that we are entitled to know, before we make a fundamental change in the Constitution, what will flow from that? Will those votes be canvassed by Congress in the manner that the electoral votes are, or does the Senator suggest that an official in the executive branch be ordered to do it?

The Senator is proposing that there be a total vote of all of the votes in the United States in one column. My question is simple. Who will do that?

Mr. BAYH. Mr. President, I suggest that if the Senator wants me to be a bit more specific—and I am not trying to be evasive—this body will work its will and determine the best way in which to do this.

I say that each vote in the popular vote should be certified as it is now.

It is a very simple matter, whether it is done in a joint session in the House of Representatives or by the head of the GAO or the Bureau of the Census. I think this is a mathematical thing that can be handled very simply.

I would be happy to see the popular votes cast the way the electoral votes are cast so that we would know the result.

We now have some freedom of choice by which electors are free when they cast their votes. On the floor of the House the popular votes could be counted in the same way.

Mr. CURTIS. How much time would the Senator provide a State? The Senator says that we would hold a second election within 3 weeks. How much time would the Senator give a State to certify the votes?

Mr. BAYH. However long the Senator from Nebraska or a majority of this body would like.

Mr. CURTIS. Mr. President, I think that is buying a pig in a poke. Under our present system, it takes a number of days in the various States for local counties and boards to certify the votes. They then go to a State agency.

What I am trying to get at is how the Senator justifies holding the second election 3 weeks after the first election.

Mr. BAYH. Mr. President, would the Senator rest easier if it were 4 weeks instead of 3?

It should be whatever period of time the Senate and House determine to be a reasonable time in which to determine the vote count of each State. I think that immediately following that period of time, and without any lengthy campaign period, we could have a second election from the top two candidates.

This is done in States where they have runoff elections. We do not find any great difficulty on a State-by-State basis, and I do not see why it could not be done on a national basis.

Mr. CURTIS. The Senator is dealing with one sovereign State.

Mr. BAYH. Is that not also the case insofar as the electors of each individual State are concerned? They multiply that by 50 and get the certified popular vote in each State before determining who gets the electoral votes.

Mr. CURTIS. Mr. President, the Senator has studied these things for years. How long does it take to do that? Could it be done by the first of December?

Mr. BAYH. Mr. President, I have discussed this matter with Richard Scammon, among others. He was former director of the Bureau of the Census and is a noted writer in this field. He suggests that with the capabilities we have now, this could be done in 3 days.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. BAKER. Mr. President, I would make the observation that the electors are elected within one sovereign State and the results are certified.

The Senator from Nebraska was elected within one sovereign State, as was the Senator from Tennessee and the Senator from Indiana. I foresee no difficulty in having each of the 50 States certify the results of the popular election any more than there is difficulty in having States certify to the Secretary of the Senate the results of a State election.

Mr. CURTIS. Mr. President, that is very helpful. Would the Senator suggest that be done according to the presently existing State law?

Mr. BAKER. I think each State ought to have a reasonable latitude in deciding how to do that.

May I ask a question, if the Senator from Indiana would yield briefly, that has occurred to me in the course of his colloquy with the Senator from Nebraska.

I wonder if the Senator from Nebraska is telling the Senator from Indiana and the Senator from Tennessee that if the runoff provision were put at 50 percent, instead of 40 percent, that would remove his objections, at least as far as the imbedding of the minority requirement in the Constitution is concerned.

I have to confess if that is the case, except for my concern over having it passed on now in the well of the House, that I would be tempted as far as I am personally concerned to change it to 50 percent. Would the Senator from Nebraska feel better with 50 percent?

Mr. CURTIS. Mr. President, I feel that the runoff is a fatal defect in the measure.

The State Legislature of Nebraska, which certifies the results of the election of Members of Congress from Nebraska, does so after the Member of Congress has been sworn in on the basis of no objection because the legislature does not meet until after Congress convenes. That is usually in January and is before the State legislature could certify the election results.

Mr. BAYH. Mr. President, the Senator said that the Legislature of Nebraska has to certify the votes.

Mr. CURTIS. The Senator is correct.

Mr. BAYH. Mr. President, I suggest to the Senator from Nebraska, so that we can keep the record straight, that 41 days now exist between the time the people may vote and the time that the statutes mandate that the votes of the electors be cast.

That means that between the election and the third week in December, that legislature has to meet. If they can do it to confirm the vote so that the electors can cast their votes, it seems to me they can do it to ratify the popular vote.

Mr. CURTIS. Mr. President, I am trying to figure out the timetable proposed by the Senator.

Mr. BAYH. I am not proposing any timetable. I have tried to be as courteous as possible to the Senator from Nebraska.

Mr. CURTIS. But the Senator is requiring that that be done. The Senator is the chief sponsor of a proposal not to change the law, but to change the Constitution and call for a runoff election. I think that we have the right to know, not what the Senator's guess is that Congress would do, but what the Senator as the chief spokesman of this measure would feel would be ample time in which to hold that election.

I cannot quite see that we could get that done in 3 weeks.

I believe there are States that have to have as much as 10 days for their tabulations because they involve absentee voters, disabled voters, and others. Those results have to be certified by some State authority. Then some State authority would have to certify that to someone in Washington, I would assume.

I will not dwell on the point. However, I cannot see any way in which we could handle this without the lapse of several weeks and ascertain whether we would have to have a runoff. Then, after that is determined, if we are going to allow some time for the parties and candidates to prepare for the second election, we would have a period of doubt and confusion and a period when the country, particularly in world affairs, would suffer because of this period of indecision.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. BAKER. Mr. President, listening attentatively to this further colloquy between the Senator from Nebraska and the Senator from Indiana, I have neglected to hear any criticism by the Senator from Nebraska of the merit and equity of the election of the President and Vice President by popular vote, except those technical requirements for certification. I ask the Senator from Nebraska if there is some technical way in which Senate Joint Resolution 1 could be changed so that popular election of the President and Vice President would be acceptable to the Senator from Nebraska?

Mr. CURTIS. I would say that in my opinion it would be a better proposal if it did not carry the risk of calling for two

elections at this time of tremendous happenings all over the world, and happenings that occur instantly.

But I will leave that point. I will have something to say on my own time about the merits of electing a President by States, and that is all it is, or electing them by individuals. There is nothing evil about either one.

Mr. BAKER. Will the Senator agree that the real issue is the relative desirability of the people electing the President and Vice President or the States electing the President and Vice President, and the rest is technical?

Mr. CURTIS. The people elect the President in any event. It takes people to go in and cast ballots and vote. But whether they vote through instrumentalities of the States or in one great adding machine operation is the issue.

I would like to ask the distinguished Senator from Indiana a few questions about section 2 of the bill.

Mr. BAYH. While we are on this one item could we just proceed a little further?

Mr. CURTIS. Surely.

Mr. BAYH. I make that request for the sake of continuity. I salute the Senator for bringing up this point about the runoff. As I suggested earlier, it has been a point that has bothered me; that there would be some uncertainty if we got into a situation where we would have to have a runoff. Given the past 200 years of history, we would never have had a runoff if the ballots had been treated across the board. Certainly that is a desirable criterion for an election scheme.

Is the Senator suggesting the present system has created certainty at each election?

Mr. CURTIS. Not necessarily. But in regard to the problems the Senator raises about a play for power in the case of a tie, or the lack of a majority, I would say there are other approaches to that, other than the one the distinguished Senator from Indiana has offered. It seems to me that the issue of voting for the President as individuals through the instrumentality of their States or of voting directly should be debated on its merits, and not given a free ride to this untried method as the only way to meet the threat of someone having undue power in the case of a lack of a majority in the present system. They are two different problems and they do not have to be tied together.

Mr. BAYH. I suggest that the Senator from Indiana in talking about the uncertainty is not alluding to the problem of neither candidate getting a majority. I was talking about the uncertainty that exists even if one of the candidates does get a majority. I hope the remarks of the Senator from Nebraska, which I am anxious to hear, dwell on the 1960 election, when there was a runoff, a recount in Hawaii. In the original count Vice President Nixon was awarded the electoral vote of Hawaii. The recount turned out differently and the electoral vote went to President Kennedy. This was not consumated until some time in July under the present system. It was only then that a recount was vacated or not pursued in Illinois.

As I said at the outset, I felt any system devised by man would have the imperfections of man built into it. But life itself is a choice of alternatives, and if we are dealing with the question of certainty, whether it is the certainty of the Senator from Indiana or not, it has not happened in 200 years. The matter that concerns the Senator from Nebraska has never happened in 200 years, but the matter that concerns the Senator from Indiana happened 10 years ago. We weigh the alternatives and hopefully we get the best package with the least uncertainties.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. BAYH. I am glad to yield to the Senator from Nebraska.

Mr. HRUSKA. Of course, the situation in Hawaii was a situation that was very extreme, and it was a limited and compartmentalized situation. There was no hope of overturning the result of that election whichever way those three votes went. That would not be true under the Senator's proposal because if there were a difference of 6,000 votes or 8,000 votes every State would have the opportunity to participate and would cast votes. Instead of a contest in one State there would be contests and recounts and proceedings that would be raised in as many as 10 or 12 States. That matter was discussed thoroughly in the testimony before the Committee on the Judiciary and it was generally agreed that that would be the result. There was no advantage in the recounts in 1960 in most of the States because the result in these States was such a foregone conclusion. But that would not be true if the result were very close and if a combination of actual votes in any series of States would have the impact of throwing the majority—that is, the total votes in favor of one candidate—over into the other column. Conceivably those recounts and election contests—honest-to-goodness election contests and not a mechanical recounting of the votes—where legal questions are involved would take months.

Recently in a case that reached the Supreme Court that involved a race for the office of attorney general in Oregon, it was not until May the following year that the case was considered by the Supreme Court, and that was pretty much by default rather than a conscientious effort to get those proceedings extended further.

So when we say that no system is perfect, we can grant that, but that does not justify or warrant the adoption of a measure which would proliferate and make serious, dangerous, menacing, and even disastrous the alternatives, and that is precisely what this would do.

Mr. BAYH. The Senator is eloquent, as usual. I must say I am proud to serve with him on this subcommittee as well as on the Committee on the Judiciary. However, his memory of the 1960 election is different than mine. If the recount in Hawaii had turned out the other way in 1960, then there would have been a recount in Illinois where a change of less than 8,000 votes could have shifted the electoral votes of Illinois. To suggest otherwise flies in the fact of history. The suggestion that the present system has merit because a handful of votes can be distorted and magnified, because changing a few popular votes would change a large proportion of electoral votes, hardly recommends this system as equitable.

Mr. HRUSKA. Is not that process limited to those States where the vote margin is small under the present compartmentalized system of votes for each State? How much further would it have gone besides Hawaii and Illinois? In most of the States there was such a big difference that it would have availed them nothing to challenge the results of the electoral process. So there is an automatic braking system in there. If it were nothing but a popular vote, then the whole system, the whole recount, could go on indefinitely; but that is not true under the present system. There are only a few States now where the margin is so small that there can be any hope of overturning the results on a recount. Therein lies the trouble with the proposed system.

Mr. BAYH. Mr. President, I yield now to the Senator from Tennessee.

Mr. BAKER. Mr. President, I think we are anticipating problems in the colloquy between the distinguished Senator from Nebraska and the distinguished Senator from Indiana that we do not now have to face, because under Senate Joint Resolution 1 as now framed, and as overwhelmingly adopted by the House of Representatives, it is still the province of Congress to decide how it shall be handled, to whom certificated, and on what basis. Congress can, in its judgment and wisdom, provide that each of the 50 States can certify, just as they decide now, as to who will be certified as electors. So the question of fraud and dilution of the fraud would be the same under that system as it is today.

If we followed a different route and said, "We will simply certify the votes cast and there will be a single national certification," that would be different. There would be a further dilution of the fraud.

I do not intend to be caustic, but I observe that the argument on the compartmentalization because it tends to restrict the election process smacks a little of saying that if the fraud were a little fraud, it might be challenged, but if the fraud were a massive and overwhelming fraud, or if the election were embedded in a massive and overwhelming fraud, then it would be beyond the pale and no one could consider it.

It seems to me one of the advantages of the proposed election process is the dilution of fraud—that is, the margin of the 8,000 votes which were in dispute in Illinois in 1966 was extraordinarily significant in terms of the electoral vote in Illinois—but if we followed the second method I have suggested, with our further implementation of it by statute, those votes would have been diluted greatly if they had been included in the total number of votes cast in the United States.

I think, once again, we have a rather considerable leeway in deciding the question of certification and compart-

mentalization after we ratify the constitutional amendment. That probably is the way it ought to be—that something having the permanency and dignity of a constitutional amendment ought to decide the theory and the general practice, and that we leave to statute, which may be changed more readily, the matter of implementation, because circumstances will change more rapidly.

That is why I asked the distinguished junior Senator from Nebraska a moment ago whether or not there was some change in method of certification for his State on a runoff, or the percentage required to avoid a runoff, or the elimination of runoff entirely that in his judgment would make direct popular election of President and Vice President acceptable and agreeable to him.

We look forward to hearing him on that question, and he said he would speak further on that subject later.

This final observation: I think there is a tendency in our colloquy to confuse, as the saying goes, apples and oranges. We are talking about two different things. When we speak of the election of a minority President, that is one thing, which Senate Joint Resolution 1 is directed to. The other thing is the absolute equality of every vote cast for President and Vice President. There we have taken care of it by the same solution, Senate Joint Resolution 1. But they are separate problems. They are interrelated only casually.

In this entire colloquy I have heard nothing that attacks the proposition that direct popular election of President and Vice President is the only method by which we have absolute equality of every vote cast in every State by every person under every circumstance.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I am glad to yield to the Senator from Nebraska.

Mr. CURTIS. I think it is incumbent upon the proponents of this measure to give the Congress and the country a general idea of what they think would be a reasonable time for the determination as to whether or not there would have to be a runoff election, and then how long a time they would allow afterward for the printing of the ballots, the appearance of the candidates before the electorate, even though it is done by television.

I am not going to press for an answer now. I am aware that not all the details should be embodied in the Constitution, but in debating an amendment to the Constitution that calls for certain procedure, it is incumbent that we have the best possible estimate as to the time in which that procedure could be carried out. I would like to go to another——

Mr. BAYH. Before the Senator leaves that point, let me ask unanimous consent to have printed in the RECORD at this point an article from the Dickinson Law Review. This article points out rather eloquently, and perhaps amazingly to some, that under the present provisions of the electoral colleges, the electors meet on the Monday after the second Wednesday in December, only 40 days after they are appointed by election. Therefore, if there is a contest in any of the States, it must be completed 6 days prior to that date, only 34 days after the election, in order for those votes to have a binding effect when they are cast.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Dickinson Law Review, June 1961]

ELECTION CONTESTS AND THE ELECTORAL VOTE

(By L. Kinvin Wroth*)

The extremely close presidential election of 1960 stirred a problem that has long lain dormant. As the result of a recount of the popular vote in Hawaii, Congress, in its joint meeting to count the electoral vote, was presented with conflicting returns from a state for the first time since the Hayes-Tilden controversy of 1877. Since the outcome of the election was not affected, the joint meeting accepted the result of the recount proceeding, and the votes given by Hawaii's Democratic electors were counted.[1] The once fiercely agitated question of the location and nature of the power to decide controversies concerning the electoral vote was thus avoided.

This question, arising from an ambiguity in the Constitution, has long been deemed settled by the statutory provisions for the count of the electoral vote made in the aftermath of the Hayes-Tilden controversy.[2] The system for resolving electoral disputes which this legislation embodies has never been tested, however. The events of 1960 raise serious doubts as to whether the present provisions would be effective either in resolving election contests on their merits or in producing a smooth solution to a political crisis on the order of 1877. Moreover, Mr. Kennedy's narrow margin is a reminder that the possibility of controversy is always present. With broad electoral reforms once again under consideration in Congress,[3] it seems appropriate to take a fresh look at the present constitutional and statutory scheme for dealing with disputed electoral votes.

The basis of our system of electing a President is laid down in the Constitution, which provides that

"Each State shall appoint in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in Congress; but no Senator or Representative, or person an office of trust or profit under the United States shall be appointed an elector.

* * * * *

"The Congress may determine the time of choosing the electors and the day on which they shall give their votes, which day shall be the same throughout the United States.[4]

"The Electors shall meet in their respective states and vote by ballot for President and Vice President, one of whom, at least shall not be an inhabitant of the same state with themselves; . . they shall make distinct lists of all persons voted for as President and of all persons voted for as Vice President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President to the Senate;—The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be President, if such number be a majority of the whole number of Electors appointed." [5]

The only other constitutional limitations on the election of a President are those which establish the age and citizenship requirements for eligibility to the office.[6]

Pursuant to the constitutional plan the electors are "appointed"—now uniformly by popular vote—on the Tuesday after the first Monday in November.[7] The procedure for counting the vote and ascertaining the results varies from state to state,[8] but in general it is something like this: The ballots, or the contents of the voting machines, are tabulated at the polls by precinct election judges, who send their tally sheets forward to a county canvassing board. This board makes an abstract of the votes shown for each candidate in the precinct returns, which it sends to a state canvassing or returning board. The state board tallies all the county returns and determines who have been appointed electors. This result is then relayed to the governor of the state, who under federal law is required to make a certificate of the result based on this ascertainment and forward it to Washington.[9] The electors, who have also received the governor's certificate meet on the Monday after the second Wednesday in December to cast their votes, which they certify and send to the President of the Senate.[10] On January 6th, at a joint meeting of Congress, these votes are opened and tabulated and the result declared.[11]

At a number of points in this process, controversies may arise which could affect the validity of a state's electoral vote. (1) There may be fraud or error at the polls on the part of voters or election officials. (2) There may be fraud or error in the initial count of the ballots at the precinct level. (3) There may be fraud or error on the part of the county or state canvassing board, or one of these agencies may abuse whatever powers are given to it by state law. (4) The governor may act fraudulently or erroneously in certifying the electors. (5) An elector may be appointed who is constitutionally ineligible for the office. (6) The electors may act erroneously in the signing and sealing of their certificates of the vote. (7) The electors may cast their votes for an ineligible person. (8) The electors may vote on a day other than that ordained by Congress. (9) The electors may be influenced by fraud or a third party may somehow tamper with their deliberations. (10) The right of a state to participate in an election, or of a particular government to attest to the acts of a state may be called in question.

This group of controversies may be divided into those concerning the recognition of state governments and the status of states; those concerning the qualifications and acts of the electors in giving their votes; and those concerning the manner in which the popular vote is given, counted, canvassed and communicated to Congress. The problems of greatest importance are those of the last class. Questions of statehood and the recognition of state governments are unlikely to arise short of another Civil War. When they do come up, Congress has sole jurisdiction.[12] Questions concerning the electors would be important in a great crisis such as that of 1877,[13] but they involve technicalities which are no longer of the essence of our electoral system. We view our presidential elections as popular elections. If the President is to take office free of uncertainty or scandal that might weaken his authority, controversies concerning the popular vote in a close election must be promptly resolved by a method that leaves no doubt of its fairness on the merits.

Problems of all three classes arose during the stormy century of legislative history which culminated in the Electoral Count Act of 1887.[14] Controversy focused on the congressional counting sessions, where three great questions were continually agitated. First, does the Constitution give the President of the Senate sole power to exercise whatever discretion the count involves, or

Footnotes at end of article.

are the two Houses of Congress the final judge of the validity of votes? Secondly, is the power to count merely the power to enumerate votes given by electors declared by state authority to have been appointed, or is there power to determine the correctness of the state authority's declaration and to examine the validity of the acts of the electors? Thirdly, whatever the scope of the power, how is the evidence necessary to a decision to be presented, and by what means is the decision to be made?

Close scrutiny of the debates of the Constitutional Convention reveals no direct discussion of these problems. The possibility that a dispute might arise with which Congress would have to deal does not seem to have been considered. In fact, the machinery of the Electoral College, a compromise between popular election and election by Congress, was designed to provide a means for the election of a President free from any hint of the evils of Congressional influence.[15] The plain implication of the original scheme is that the states in their control of the manner of appointment were to provide for the settlement of whatever controversies might arise. Only local interests would be at stake in the appointment process, because the electors were to be independent of any presidential candidate[16] and would thus be chosen solely on their own merits. Local authorities would naturally resolve any contest.

While state control guarded state interests, other features of the plan protected the national interest. If certain states failed to appoint electors, the President was still elected by a majority of those who were appointed.[17] If no state had appointed electors, the provisions for failure of a majority would come into play, and the election would devolve upon the House.[18] The method for electing a President may be contrasted with the provisions for congressional elections. In the latter instance, as Hamilton pointed out in the *Federalist*,[19] Congress must have ultimate control over the manner of election of its own members, lest the states, by refusing to elect Congressmen, cause the whole structure to fall. In the case of the presidency, since the House was ready to carry out the election if the states failed, congressional control was not only undesirable but unnecessary.

The absence of two elements in the original plan made is impossible to determine when a state had failed in its obligations. No provision was made for the states to validate their choice of electors to Congress, and the power to determine what were valid votes was neither defined nor expressly granted. The former gap was filled in 1792 by a statute providing that the "executive authority" of each state was to give to the electors a certificate of their appointment which they were to forward to the President of the Senate with their votes.[20] That this provision did not solve the problem, however, became apparent as the result of a development unforeseen in the Convention. After a very few elections the electors virtually lost their independence.[21] Their election thus took on a national interest, requiring that the electoral votes counted be those given by electors who were actually chosen, whatever the executive certificate might say. In the absence of provision as to the second missing element, it was considered that the President of the Senate had the power to "count," and thus to determine what votes were to be counted.[22] The dangers in such a system, especially when that officer was a presidential candidate soon appeared, however, and it was urged that Congress could by legislation provide a more satisfactory procedure.[23]

These problems were first faced after the good will surrounding Washington's administrations had been dissipated by strife over John Adam's efforts to deal with the foreign and domestic consequences of the French Revolution. In the spring of 1800 both Houses of the Federalist Congress, in a last ditch effort to stem the tide of Jeffersonian Republicanism,[24] passed different versions of a measure under which a joint committee was to meet prior to the count of the vote, with "power to examine into all disputes relative to the election of President and Vice President of the United States, other than such as might relate to the number of votes by which the electors may have been appointed." All petitions for the contest of electoral votes were to be referred to the Committee, which was to take any necessary additional evidence, and make a report of its entire proceedings, without opinion, to both Houses. Congress was then to meet in joint session, for the count of the vote. If objection was made to the vote of any state, the Houses were to decide it without debate in separate session. As passed by the House the bill provided that a disputed vote was to be counted unless the Houses concurred in rejecting it.[25] The Senate, agreeing in every provision of the bill but this one, passed an amendment providing that a disputed vote was to be *rejected* unless the Houses concurred in counting it. The House, would permit rejection by vote of the Senate alone. The bill failed when neither House would yield.[26]

The bill of 1800 was a measure designed to achieve partisan ends. While it prohibited Congress from questioning a state's popular vote, it did not bind Congress to accept a particular determination of the popular result. Since the facts reported by the Committee were in no way made the basis of the ultimate decision, there was not even a procedural guarantee that the result reached by the two Houses would be based on a fair assessment of the facts. If the bill did not provide a satisfactory means of validating a state's votes, however, it left no doubt as to where the power to validate lay. Even the Republican members of both Houses seemed to concede that Congress had full power to deal with the matters over which the bill gave it jurisdiction.[27] In light of this understanding it can be argued that the Twelfth Amendment, the remedy for other defects appearing in the election of 1800, embodied the view that the power to count the vote lay in Congress, rather than in the President of the Senate.[28]

No measure materially affecting the electoral count was passed in the years prior to the Civil War,[29] but on three occasions, Congress assumed the power to reject the votes of a state which had not completed the formalities necessary for admission to the Union.[30] The only other question concerning the electoral vote during this period arose in 1857, when the votes of Wisconsin, unavoidably given on the wrong day, were counted after an inconclusive debate.[31] In all four of these cases, the disputed votes had no effect on the outcome of the election. The only consistent pattern in the debates is the call for legislation to deal with the problem of the count.[32]

Congress asserted total power over the electoral vote with the adoption of the Twenty-second Joint Rule in 1865. Even more than the bill of 1800, the Rule was a political measure, passed and used by Republican majorities of both Houses to assure control over the votes of the recently rebellious southern states. It thus contained no machinery at all for solution of disputes on the facts. The Rule first provided for the joint meeting of the two Houses, at which the certificates were to be opened by the President of the Senate and read out by tellers. The critical portion was as follows:

"If, upon the reading of any such certificate by the tellers, any question shall arise in regard to counting the votes therein certified, the same having been stated by the Presiding Officer, the Senate shall thereupon withdraw, and the question shall be submitted to that body for its decision; and the Speaker of the House of Representatives shall in like manner state the question to the House of Representatives for its decision; and no question shall be decided affirmatively, and no vote objected to shall be counted, except by the concurring vote of the two Houses, which being obtained, the Houses shall immediately reassemble, and the Presiding Office shall then announce the decision of the question submitted; and upon any such question there shall be no debate in either House. And any other question pertinent to the object for which the two Houses are assembled may be submitted and determined in like manner." [33]

Since concurrence was required to count a disputed vote, either House, by its negative, could cause rejection. This procedure created no problem, because in the post Civil War political climate there was little prospect of disagreement over which votes to reject.

The Twenty-second Joint Rule was not applied in the count of 1865.[34] In 1869, although serious questions arose, no votes were rejected under the Rule.[35] The count of 1873, in which the Rule was applied to the votes of five states, is the first case in which a dispute over the popular vote was presented to Congress.[36] In four cases objection was made to the acts of the electors and to alleged technical faults in the certification.[37] When the votes of Louisiana came up, Congress for the first time dealt with a "double return," the device with which all subsequent legislation has been designed to deal. Two bodies in the state claimed to be the final canvassing authority. One had certified the state's Grant electors, while the other had validated a slate of Democrats, who also had the certificate of the governor. After a debate in which members of both parties said that Congress could look to the fact of a disputed election, in order to prevent the acceptance of a corrupt return, the Senate Committee on Privileges and Elections was empowered to investigate the situation.[38] The Committee found that neither canvass was valid, and held that Congress itself could not canvass the votes without usurping the state's constitutional powers. The Committee's report suggested, however, that it would be proper for Congress to go behind the governor's certificate to determine whether a legal canvass had been made.[39] In the count proceedings this report was not mentioned, but objections based on its facts were made and both sets of votes were rejected by concurrent vote.[40]

Under the Twenty-second Joint Rule Congress not only claimed the power to count, but defined that power as permitting it to reject an invalid state canvass. As in 1800, however, Congress would not undertake to decide for itself which electors had actually been appointed. Moreover, the make-shift fact-finding provisions relied upon were effective only because the state contest was not material to the outcome of the national election. The solution that was reached may have been just, as far it went, but it left unresolved the question of who actually carried Louisiana.

Between 1873 and 1876 Congress tried vainly to pass permanent legislation to regulate the electoral count. A bill drafted by Senator Oliver P. Morton of Indiana passed the Senate in February 1875,[41] but the House failed to act upon it. The bill was in essence the Twenty-second Joint Rule, with a provision that a single return from a state could not be rejected unless both Houses concurred in the action, but that in case of a double return, no vote could be counted unless both Houses concurred. Brief debate was permitted in the separate sessions of the Houses, but an amendment creating a committee to find the facts was rejected.[42] Since any serious contest would present a double return the bill gave no greater guarantee of a non-political

Footnotes at end of article.

decision than did the Rule. When the 44th Congress convened in December 1875, the House was Democratic for the first time since before the Civil War.[43] In this situation the Senate did not readopt the Twenty-second Joint Rule, in effect repealing it.[44] The Morton bill was brought up again in an effort to fill the gap, but members of both parties apparently felt that the time was not ripe for a measure which would permit the action of one House to control the other. The bill was laid aside for good in August 1876.[45] The nation thus faced the election of 1876 with no machinery for resolving disputes over the electoral vote. Perhaps both sides expected a close fight and neither wished to put into effect a plan which might work to its disadvantage.

All such expectations were more than justified in the election of 1876, which resulted in the Hayes-Tilden controversy, the one great test of our electoral system.[46] In no other election have disputed electoral votes been sufficient to affect the outcome. On this occasion Tilden, the Democratic candidate, could win either by picking up one of twenty contested votes or by prevailing in an election in the Democratic House. Unless Hayes won all of the contested votes, he would lose the presidency. In the count the chief problem was presented by double returns from Florida, Louisiana, and South Carolina, where Republican returning boards, claiming that the Democrats had used force and fraud among the Negro voters, had thrown out sufficient Tilden votes to carry the states for Hayes. Questions were also raised as to the eligibility of certain Hayes electors in Florida and Louisiana, and in Oregon, where the Democratic governor had certified a Tilden elector in place of the ineligible Republican. To resolve the controversy, a bi-partisan majority of both Houses passed an act [47] creating the Electoral Commission, a body with "the same powers, if any, now . . . possessed by the two Houses," to take evidence upon and arrive at a decision of the disputes. In the joint session for the count, single returns were to be dealt with as in the Morton Bill.[48] Questions involving double returns were to be sent to the Commission. Its decision was to be binding upon Congress in the count, unless rejected by the vote of both Houses.

The composition of the Commission reflected a game but unsuccessful attempt to attain impartiality. It consisted of five Senators, five Representatives, and five Justices of the Supreme Court. In this group there were seven Democrats and an equal number of avowed Republicans. The fifteenth man, a Justice to be chosen by the other four Justices, was to be the neutral balance. After Mr. Justice Davis, an independent, thankfully declined the honor in somewhat dubious circumstances,[49] it fell upon Mr. Justice Bradley, a Republican, who seemed to the Democrats the next most likely to decide impartially. Whether for partisan reasons, or because he saw the issues that way, Bradley consistently voted with the Republicans, giving Hayes an eight-man majority on every important question before the Commission. As a result, the view that the decision was at least influenced, if not corrupted, by political considerations was widely held at the time and seems difficult to avoid today.[50]

The main issue before the Commission was its power (and thus the power of Congress) to go behind a state's own determination of the results of the popular election, as reflected in the findings of the returning board, duly certified by the governor. It seems clear, that whatever acts of violence the Democrats may have committed, in the three southern states, the Republican boards, in throwing out votes wholesale, had exceeded even the broad powers which reconstruction statutes had given them.[51] The Democrats argued that pursuant to the national interest in a true result, the Commission should look to the facts of the election and find that the Tilden electors had been appointed. In the alternative they urged that, as in the case of Louisiana in 1873, that there were no valid returns from the states in question. These arguments failed to persuade the Republican majority of the Commission, which held by an eight to seven vote in each case that it was bound by the certificates based on results reached by the validly constituted state returning boards and would look to no evidence of the facts of the election.[52] The Commission also held that it had power to look into eligibility only if ineligibility at the time of voting were alleged. In the case of Oregon it made clear that the unchallenged result reached by the returning board could not be overruled by the governor's certificate.[53] In denying that it had power to go behind the returns, the majority was careful to leave open the possibility that Congress might provide by law some proper means for determining such questions.[54]

The decision of the Commission was accepted by the Senate in each case and so was binding in the count in spite of rejection by the House. The more eager Democratic partisans threatened to prolong the proceeding past the end of Grant's term on March 4, but other forces were working for compromise. Those who honestly feared civil tumult worked with those who saw the chance for personal advantage in a series of desperate negotiations that finally persuaded a majority of the House to desist, in time for Hayes to be declared elected on March 2.[55]

Congress had again taken control of the power to validate electoral votes, but Democratic hopes that the validation would be based on the merits of the individual controversies were illusory. The Commission not only refused to make impartial findings of fact, but allowed itself to be bound by the findings of partisan state agencies that were the source of the dispute. In spite of its judicial trappings, the Commission was a political body, an arm of Congress, and so it reached a partisan result. This result did not itself resolve the great controversy. It rather provided a medium for political compromise. The legal arguments involved had merit on both sides and would have divided Congress unalterably on political lines. The Commission prevented such a split by reaching a result which one House was bound to accept. A House compromise could then be reached without loss of face on either side. Considering the potential for civil disturbance which underlay the Hayes-Tilden controversy, an acceptable political solution was of great importance. Crisis might have been avoided altogether, however, if there had already been in effect a provision for fair determination of state controversies on the merits.

The Hayes-Tilden decision marked the end of a fifteen-year period of national crisis but it did not halt congressional efforts to pass legislation that would solve the problems made manifest in 1877. The bill which finally became the Electoral Count Act was introduced by Senator Edmunds of Vermont in May 1878.[56] Spurred by two close presidential elections,[57] the Senate passed the bill three times in the next decade, but each time could not win the agreement of the House.[58] Finally, in 1887, when the passions of Reconstruction had cooled, the Republican Senate and Democratic House of the 49th Congress were able to pass a compromise measure in an atmosphere relatively free of partisan pressures.[59]

The Electoral Count Act as introduced in 1878 and passed in 1887 involved one significant change from the plan of the Morton Bills of 1875–76. If a state provided for the determination of contests over the electoral vote, the result of any proceeding under such a provision was to be binding on Congress in the count. Only in the failure of such a determination was Congress to have the power to reject votes. In its report in December 1886, the House Select Committee on the Election of President and Vice President described the effect of the proposed legislation:

"The bill provides the means of determining what is the vote, how it shall be counted, its count, and the authoritative declaration of the result.

"The two Houses are by the Constitution authorized to make the count of the electoral votes. They can only count legal votes, and in doing so must determine from the best evidence to be had, what are legal votes; and if they cannot agree upon which are legal votes, then the state which has failed to bring itself under the plain provisions of the bill and failed to provide for the determination of all questions by her own authorities will lose her vote.

"Congress having provided by this bill that the State tribunals may determine what votes are legal coming from that State, and that the two Houses shall be bound by this determination, it will be the State's own fault if the matter is left in doubt." [60]

The great problems of the first century of our electoral system seemed solved. A measure had finally been passed providing for a fair determination of the facts of individual contests that would be binding upon Congress in the count. The national interest in a true result was thus vindicated without offense to state control of the process of appointment. While Congress claimed full power to validate votes, its role was limited to cases in which a state had failed to settle its own disputes and to questions beyond state competence. If the Act worked in practice, no dispute could again disrupt the orderly process of a presidential election.

The pertinent provisions of the Electoral Count Act as presently found in the United States Code [61] are as follows:

"If any State shall have provided, by laws enacted prior to the day fixed for the appointment of the electors, for its final determination of any controversy or contest concerning the appointment of all or any of the electors of such State, by judicial or other methods or procedures, and such determination shall have been made at least six days before the time fixed for the meeting of the electors, such determination made pursuant to such law so existing on said day, and made at least six days prior to said time of meeting of the electors, shall be conclusive, and shall govern in the counting of the electoral votes as provided in the Constitution, and as hereinafter regulated, so far as the ascertainment of the electors appointed by such State is concerned." [62]

Congress is to meet in joint session in the House at one P.M. on January 6th for the count of the vote, with the President of the Senate in the chair. The latter is to open "all the certificates and papers purporting to be certificates of the electoral votes," in alphabetical order by states and hand them to tellers who are to read them out.

"Upon such reading of any such certificate or paper, the President of the Senate shall call for objections, if any. Every objection shall be made in writing, and shall state clearly and concisely, and without argument the ground thereof, and shall be signed by at least one Senator and one member of the House of Representatives before the same shall be received. When all objections made to any vote or paper from a State shall have been received and read, the Senate shall thereupon withdraw, and such objections shall be submitted to the Senate for its decision; and the Speaker of the House of Representatives shall, in like manner, submit such objections to the House of Representa-

Footnotes at end of article.

tives for its decision; and no electoral vote or votes from any state which shall have been regularly given by electors whose appointment has been lawfully certified to according to Section 6 of this title[63] from which but one return has been received shall be rejected, but the two Houses concurrently may reject the vote or votes when they agree that such vote or votes have not been so regularly given by electors whose appointment has been so certified. If more than one return or paper purporting to be a return from a State shall have been received by the President of the Senate, those votes, and those only, shall be counted which shall have been regularly given by the electors who are shown by the determination mentioned in Section 5 of this title[64] to have been appointed, if the determination in said section provided for shall have been made . . .but in case there shall arise the question which of two or more of such State authorities determining that electors have been appointed, as mentioned in Section 5 of this title, is the lawful tribunal of such State, the votes regularly given of those electors, and those only, of such State shall be counted whose title as electors the two Houses, acting separately, shall concurrently decide is supported by the decision of such State so authorized by its law; and in such case of more than one return or paper purporting to be a return from a State, if there shall have been no such determination of the question in the State aforesaid, then those votes, and those only, shall be counted which the two Houses shall concurrently decide were cast by lawful electors appointed in accordance with the laws of the State, unless the two Houses, acting separately, shall concurrently decide such votes not to be the lawful votes of the legally appointed electors of such State. But if the two Houses shall disagree in respect of the counting of such votes, then, and in that case, the votes of the electors whose appointment shall have been certified by the executive of the State under the seal thereof, shall be counted."[65]

A survey of the sessions of Congress called to count the vote under the Electoral Count Act shows that prior to 1961 no question was presented to any count that might have called any of these provisions into play.[66] It is thus necessary to look closely at the language of the Act and its legislative history in order to understand its operation and effect in dealing with the problems of single and double returns so familiar to its drafters.

(1) *Single Returns.* If those who wish to contest the vote of a state have not sent forward a paper purporting to be a certificate of the electoral votes which they urge to be the correct ones, then the return which Congress has received is given virtually binding effect. The intention here was to insure that the election result reached by proper state authority would not be questioned in Congress if it were unchallenged in the State. Even in such a case, however, Congress must have power to see that the state governor has certified the results actually reached in the state canvass, and to deal with any irregularity in the acts of the electors.[67] By concurrent action the Houses may thus reject even votes in a single return that they find not "regularly given by electors whose appointment has been lawfully certified to" by the executive authority of the state under the terms of the Act.

The power of Congress over a single return is carefully limited to these two areas, but even in carrying out this mandate, difficult problems of interpretation could arise. Presumably votes "regularly given" are given in accordance with the requirements of the Constitution as to time and form. The language undoubtedly also means that the electors have acted without mistake or fraud. Does it have the further meaning that they have voted for an eligible candidate? Likewise, votes "lawfully certified to" would seem to be votes certified to in accordance with the terms of the Act. Presumably the phrase also extends to a case in which the governor has certified electors other than those shown to have been elected by the state canvass, as in the case of Oregon in 1877. Could Congress look further under this provision and refuse to accept a governor's certificate based on a canvass illegally made? Does a vote cast by an ineligible elector otherwise properly certified to, who is ineligible to the office of elector fall within either of these categories upon which Congress may act? These unanswered questions could lead to the arbitrary congressional action which the Act sought to avoid.

(2) *Double Returns.* Since a return need only "purport" to be a certificate of the vote to merit consideration under the Act, in any serious contest, double returns will be presented. There are four situations which may arise.

(a) *Final Determination by Appropriate State Authorities.* The state contest provision was considered the central provision of the Act. Since the result of a contest was to be absolutely binding upon Congress as to the identity of the electors,[68] a return so validated would be counted if otherwise proper. The Act requires that only votes "regularly given" must be counted. The implication seems clear that votes not meeting this standard could be rejected as in the case of a single return,[69] and the problems of interpretation in that case would again be present.

Unfortunately the contest provisions present such difficulties, both of interpretation and application, that in the great majority of cases they will not apply. In the first place there is another problem of definition. Although the language of the Act was intended to give the states the broadest latitude to provide for the final determination of contests by any means—judicial or otherwise—only 19 states have passed contest legislation expressly dealing with presidential electors in any way.[70] In the remaining states a variety of provisions exist which deal generally with election contests.[71] In these states the courts would first have to decide whether they had jurisdiction in a contest involving electors.[72] If a state court took jurisdiction, Congress would then face two questions: (1) Does the language of the Electoral Court Act include contest provisions which do not specifically deal with electors? (2) If the state result is otherwise binding, is it the "final determination" envisioned by the Act? The Act does not provide for the decision of such questions. There seem to be grounds for argument that concurrence would be required to reject a state determination on these grounds, as in the case of a single return, but the question is open.

Problems of definition aside, there is a further difficulty in the time provisions of the Act. In Edmund's original bill a state determination made at any time prior to the date of the meeting of the electors would bind Congress. To insure that contests would be completed, the electors were to be appointed on the first Tuesday in October and were not to meet until the first Monday in January.[73] In the Act as passed, although a November election day was retained and the requirement that a state determination be made at least six days prior to the meeting of the electors was added,[74] contests were still practicable, because the electoral meeting was to be on the second Monday in January.[75] When the Twentieth Amendment changed Inauguration Day from March 4 to January 20, the legislation enacted to implement it made a corresponding change in these provisions.[76] The electors now are to meet on the Monday after the second Wednesday in December, only 40 days after they are appointed. In order to be of binding effect, a contest must be completed six days prior to that date, a mere 34 days after the election.

In only two states are the election contest provisions certain to produce a final result within this short period.[77] In the rest, finality would depend on a number of factors, such as the diligence of the contestant, the success of his opponent with delaying tactics, the number of votes questioned, and the time limitations of the contest procedure.

The aftermath of the 1960 election highlights the time problem. In Hawaii the official count of the popular vote showed that Mr. Nixon had carried the state by a mere 141 votes out of some 184,000 cast.[78] In the latter part of November the Democratic electors petitioned in the circuit court for a recount, which was allowed on December 13th, over the protest of the State Attorney General that federal law required a decision six days prior to the meeting of the electors.[79] Both sets of electors met on the appointed day, December 19, 1960, and cast their votes. The governor of Hawaii gave his certificate to the Republican electors. On December 30, 1960, the court handed down its decree, finding that the Kennedy electors had prevailed by 115 votes. On January 4, 1961, the governor forwarded to the Administrator of General Services a copy of the court decree and his revised certificate, validated the Democrats.[80] In the counting session the certificate of the Republican electors with its validation by the governor, the certificate of the Democratic electors, and the governor's revised certificate were all presented. After ascertaining that there was no objection, Mr. Nixon, presiding as Vice President, accepted the revised determination, with a careful statement that he was not to be considered as setting a precedent.[81] With the best will in the world the contestants in Hawaii were not able to reach a result until seventeen days after the deadline set in the Act. If Hawaii's three votes could have affected Mr. Kennedy's lead, Republican objections to the acceptance of the decree as binding would have been sound, whatever their fate in a Democratic Congress.

In Illinois, where Mr. Kennedy had prevailed by 8900 votes out of 4½ million cast, Republicans launched a vigorous campaign to uncover vote frauds in heavily Democratic Cook County and carry the state's 27 electoral votes for Mr. Nixon.[82] Amidst charges and counter-charges, they soon discovered that even without hindrance from Democratic election officials, it would be impossible to achieve a result in time.[83] They then urged that there was sufficient evidence of fraud that the State Election Board could refuse to certify the Democratic electors.[84] After maximum delay the Board, which was four-to-one Republican, certified the Kennedy electors, in the absence of "an overwhelming showing of fraud."[85] While the Republican tactics had an obvious political motivation, the episode illustrates that in a state the size of Illinois,[86] any kind of final state determination would be impossible within the time allowed by the Electoral Count Act. The combination of inappropriate procedures, large numbers of votes to be recounted, and delaying tactics would undoubtedly mean that in any serious contest no state result could be reached six days prior to the meeting of the electors.

(b) *Conflicting Determinations by Different State Authorities.* The question of which state tribunal has been empowered by the legislature to determine contests could arise either in a dispute between two groups of men, each claiming to be the same final authority, or between two different tribunals, each claiming the power to act under a different provision of state law. The drafters of the Act left the decision of this problem to Congress. The concurrence of the two Houses was necessary for an affirmative result, as in any question of the recognition of a state government.[87] If the Houses cannot agree on

Footnotes at end of article.

the authoritative determination, or, if, as in the case of Louisiana 1873, they agree that no determination was authoritative, the principle of the Twenty-second Joint Rule is applied and no vote from the state in question is counted. This result follows regardless of the governor's action. Congress in this case looks to the executive certificate only as evidence of the decision reached by a tribunal authorized by the state legislature. If the decision of the authorized tribunal cannot be made out, then there is no valid return for the governor to certify.[88] Congress must here decide a difficult factual and legal question, in addition to the problems already noted in the cases of single returns and single determinations.

(c) *No Determination by State Authorities.* As the previous discussion of state contest provisions indicates, this situation is the one most likely to arise. If the Houses are in agreement, they can decide to count any set of votes that they find to have been "cast by lawful electors appointed in accordance with the laws of the State." This language presents difficulties. If double returns are presented they must be based on conflicting versions of the true state canvass. The decision of the governor should not be permitted to bind Congress if the state has not made him its final canvassing authority, but how far may Congress go? Is it limited to determining which of the two contesting bodies is the lawfully appointed canvassing board of the state, or can it find that the lawfully appointed board has itself violated state law in the manner of its canvass? [89] If the Act really does embody a policy that Congress may act in the national interest to find the true result when the states have failed to do so,[90] then the latter course should be permissible. There might be practical limitations on reaching a fair result in the case, however. If the question were merely one of the legal effect of the board's action, the decision would be easy to make, but if the board had taken no action, and there were unresolved contests in the state, Congress would be ill-equipped to solve the problem on its merits.

If the House disagrees, then the votes certified by the state executive are counted. Presumably the Houses could then agree that some or all of the votes so certified were not "lawful," that is, not "regularly given" [91] and so reject them. This turnabout, however, is politically unlikely. The provision reflects a long-standing concern that no votes should fail merely through disagreement of the Houses, but it seems more dangerous than the ill that it is meant to cure. In an election where contested votes in one or two states are decisive, the actual choice of a President will devolve upon the governors, who may act to serve a personal interest in the outcome.

(d) *No Executive Certification; Conflicting Certificates.* None of the returns presented may have a valid certificate because the governor has refused to certify any electors, or because one who has certified votes may have done so without authority under state law. There may be two claimants to the office of governor, or to the right to exercise executive authority under state law, each of whom has certified a different return. In these cases if the two Houses concur, either return may be counted, subject to the problems noted in the case where there is a governor's certificate. If the House disagree, the clear implication of the Act is that the vote of the state fails altogether, merely through lack of concurrence.[92]

The contest provisions of the Electoral Count Act were intended to provide a balance of the state interest in the process of appointment and the federal interest in reaching a result free of fraud or unfairness in time to inaugurate the winning candidate. If these provisions work as planned, contests over the popular vote will be resolved in a fair manner, and few matters will be left to the decision of Congress. State contests are not likely to be effective, however. All disputes—even those involving the facts of the popular election—will thus be presented to Congress in the first instance.

The questions of fact or law which Congress must resolve in these disputes are problems of the sort which courts are accustomed to decide, but Congress is not a court. The facts upon which a court bases its decision are adduced according to stringent rules of evidence, and the legal questions before it are decided under long-established canons of construction and interpretation. At best Congress can get its facts at second hand through the medium of an investigating committee,[93] with only a little further light to be shed during the brief debate which the act permits. Moreover, even if the facts are carefully and completely put before it, Congress is under no obligation to justify its decision by reference to the evidence or to rules of law. Courts may not be free from bias and prejudice in their treatment of the issues before them, but the paraphernalia with which their decisions are surrounded at least forces them to carry the burden of self-justification. Moreover, courts decide single cases, whereas Congress would unavoidably be dealing with the entire range of political questions involved in the election. There is no way of demonstrating whether each Congressman who votes on a question such as an electoral contest would pose is deciding it on the merits, but it is a fair inference that he is not.[94] Perhaps he should not even be expected to so decide, since he was elected to serve the political interests of those whom he represents. Congress is thus not only ill-equipped to solve the kind of problems which it will face, but is more than likely to decide these problems according to political needs. It is difficult to imagine public confidence of a high order in an election result arrived at in this manner.

If the Houses of Congress are of differing parties, partisanship may reach such heights that no decision under the Act is possible. While there is some question as to the effect of the rejection of votes on the number needed for a majority,[95] the situation could arise in which enough votes were rejected to throw the election into the House.[96] If in spite of the provision of the Act designed to guard against dilatory tactics, the count is prolonged past January 20th, the Speaker of the House would assume the presidency until one of the candidates should have qualified, or until the next election, if the deadlock is impenetrable.[97] In either case, while the country is not left without a leader, the public is unlikely to feel that its interests have been served in the choice.

Congressional control of any phase of the appointment of electors can be justified only if it serves the interest of all the states in finality and accuracy of result. The Electoral Count Act gives to Congress a substantial measure of control, but it fails to serve the requisite national interest. If a dispute arose the mechanism of the Act would undoubtedly lead Congress to a final result, but a President chosen in this way could never completely refute the charge that his title depended on mistake or illegality in the election process.

The Electoral Count Act must be revised to provide for the impartial and conclusive settlement of all contests arising out of popular vote. It is possible that the number of such contests could be reduced by state election law reform [98] and their effect minimized by change in or abolition of the Electoral College,[99] but prospects for these developments are unclear. The dangers in an unresolved electoral dispute are clear, however, and provision must be made to meet them, whatever other reforms are enacted.

There are at least four possible methods by which the present system might be improved. The basic pattern of the existing legislation could be retained, with revisions that would make effective its original provisions for the final determination of state contests by state authority. The existing legislation could be strengthened by making a state determination within certain time limits mandatory, with an alternative action in federal court if the state failed to provide an appropriate procedure. Exclusive jurisdiction of contests could be lodged in the federal courts. Finally, federal control might be established over all phases of the presidential election. Federal contest jurisdiction is the most satisfactory of these alternatives. Technical changes in the present plan would not insure a state finding in every case, because the requirement of a timely proceeding is not binding. If the state proceeding was made mandatory, this objection would be met, but the removal proceedings would be cumbersome and subject to abuse by a dilatory defendant. A provision for total federal control, which would have to be made by constitutional amendment, would totally defeat the wisdom of the original plan by making the executive at least indirectly subject to control by Congress.

Exclusive federal jurisdiction of contests offers a number of advantages. It insures that questions which are suitable only for judicial decision are heard by a tribunal versed in the law and accustomed to the role it must play. It utilizes the federal judiciary. State judges and other state officials are often subject to election and may be dependent upon a local political leader with national ambitions. Federal judges, on the other hand, having life tenure, are less likely to be influenced by partisan considerations.[100] Other advantages are procedural. Congress can provide a schedule for filing, hearing and decision of all contests. Since this schedule and other rules of procedure applied by the federal courts will be uniform, a contest in any state will be decided according to a single standard and within the time requirements of the electoral system.

For maximum fairness and effectiveness the plan must contain certain features. Selection of judges on an impartial basis must be provided for in advance, perhaps by requiring each circuit to establish an election contest calendar prior to the election.[101] The importance of the questions to be decided and their potential for conflict with state authority might justify trial before a special three judge court.[102] The court should have jurisdiction of all questions arising out of the popular election which affect the validity of votes and the accuracy and fairness of the count and canvass. To preserve state control over the manner of appointment the court would be bound to apply state election law in these matters.[103] The court's jurisdiction should further extend to questions of the eligibility of the electors under the Constitution. It should be made clear that an objection on these grounds is waived unless it is raised during the contest proceeding. In addition to the ordinary powers of a trial court to compel testimony and subpoena documents, the court should have express power to order the preservation of the ballots for a recount under the direction of a court-appointed master.[104]

A maximum of sixty days should be allowed between election day and the date of meeting of the electors. A complaint could be filed at any time after the election and until ten days after the completion of the state canvass. Answer and hearing should follow within ten days at most. This period is none too long for settling a controversy in a major state, but the nation cannot afford

Footnotes at end of article.

a longer period of uncertainty between administrations. At this point the interest in continuity of government must prevail even over the interest in an absolutely accurate result. The shortness of the time limit will be alleviated to some extent by procedures designed to achieve the maximum speed commensurate with fairness and accuracy. Moreover, the short time limitations will tend to prevent the bringing of exploratory contests without specific claims of mistake or fraud. Provision for direct appeal to the Supreme Court within the time limit should be made.

To eliminate the double return problem altogether, the court rather than the state governor should certify the electors to Congress, even in states where no contest has been brought. Upon completion of the canvass the final state canvassing authority should certify its results to the appropriate court. If a contest has been, or is filed, the court should hear it and certify the result to Congress. If no contest is filed within ten days after the final state canvass is received, the court should forward the state certificate with the endorsement that it is uncontested. In any case Congress will be bound to accept as duly appointed and as eligible those electors named in the certificate of the court, subject to the action of the Supreme Court on appeal.

Certain questions will necessarily remain for Congress to decide. As previously noted, no other authority can determine the right of a state to participate in an election, or of a given government to represent it.[105] If such a situation arose, the court might properly refuse jurisdiction. As long as there are electors, there will be the possibility that they will carry out their trust in a fraudulent or erroneous manner. The vestigial nature of the office and the publicity attendant on any effort to corrupt them decrease the probability that such problems will arise. If they do come up, they must be left to Congress. A tribunal can be appointed to find the facts, but the action which Congress will take on the findings is not as clear as in the case of a contested election. Whether a given deviation is sufficient ground for disfranchizing all who voted for a challenged elector is a policy question which only Congress should answer.[106] Finally, if for some reason the judicial system failed to reach a result, the old problems would be present. This situation, too, is an unlikely one. Should it come to pass, Congress would have to decide the underlying questions as best it could.

In those questions which are remitted to Congress, the present provision for acceptance only by the separate and concurrent vote of the two Houses should be retained. No plan can eliminate the political motivations of individual legislators. When the two Houses act as legislative bodies, however, individual prejudice is at once removed from the final decision, and they may serve as a check on one another. If the Houses are divided, they reflect a divided sentiment in the country. In these circumstances it is better that a vote not be counted at all than that one House be able to dictate a result.

The effect of the rejection of votes on the number needed for a majority should be made clear.[107] If it is found that there was no valid election in a state, then no electors were appointed there, and the number needed for a majority should not include the votes of that state. Likewise, the votes of a state excluded from the count by Congress for failure to comply with the conditions of statehood do not reflect electors who have been appointed, and should reduce the majority figure accordingly. When votes are rejected for reasons that do not have to do with failure of appointment, rejection should have no effect on the majority.[108]

A statutory provision for federal court jurisdiction of contests over the appointment of presidential electors could be enacted by Congress under the Constitution as it now stands. Until the passage of the Electoral Count Act of 1887 Congress had always refused to look into the facts of a state election. It was often suggested, however, that Congress could, by legislation passed prior to the election, give itself the power to do so. The Electoral Count Act may be construed as an expression of this view.[109] If Congress itself can step in to protect the national interest in honest and accurate election results, there would seem to be nothing to prevent the delegation of the task to the federal courts.

The power of Congress to establish federal jurisdiction over contests in presidential elections has never been ruled on by the courts. In the absence of specific provision it is clear that no such jurisdiction exists.[110] The Supreme Court has recognized that state power over the appointment of electors is broad enough to justify state prosecution of violations of state law in presidential election.[111] This state jurisdiction is not exclusive, however. The federal courts would undoubtedly take jurisdiction of a criminal or civil proceeding under the appropriate Civil Rights Acts, based on a discriminatory deprivation by state action of the right to vote in a presidential election.[112] Moreover, the the court has upheld statutory criminal penalties for individual action which interferes with the lawful conduct of presidential elections. This decision was justified on the ground that Congress has inherent power to protect the vital structure of the nation by preserving the purity of elections.[113]

With this inherent power Congress may provide a means for settling contests over the appointment of electors. Each state has a right to control the manner of appointment of its electors, but this right does not permit a state to determine that it shall appoint no electors, or that its appointment process shall be tainted with fraud or error. Any candidate for the office of elector, or any voter for that office, as a citizen of the United States, has a right to insist that the states carry out their function in a manner that will insure the integrity of the national government. That right is one granted by the federal Constitution. The mere fact that the Constitution provides that the right shall be made effective through state law does not deprive the federal courts of jurisdiction. There are numerous other situations in which rights that are defined by state law may be enforced in federal court.[114] In each such instance a national interest is present which establishes the right to federal enforcement. Diversity jurisdiction embodies a national interest in providing justice for citizens outside of their own states.[115] The interest involved in admiralty is that in having a single forum to dispense a uniform maritime law.[116] Here, the clear national interest is in preserving national stability through a fair and accurate presidential election.

Although there are strong arguments in favor of congressional power to provide by statute for electoral contests, it would be desirable to make the necessary changes by constitutional amendment. Legislation is now pending in Congress for amendments which would provide other much-needed reforms in the electoral system.[117] In an amendment is finally passed that alters the system in such a way that the requirements for contest provisions will be radically changed, the location of the power to resolve contests under it should be made explicit. Even if the basic structure of the electoral system is altered only in minor detail, the chance to make a new provision for contests should not be overlooked. At the very least, an amendment should provide that Congress may resolve, or pass legislation to resolve, all controversies arising out of the count or canvass of the popular vote.[118] While such a provision would finally settle the question of the location of the power to resolve disputes, it would not insure a timely and accurate resolution in every contest. Even if Congress were to pass legislation, there is good reason to expect that in a real crisis the provisions might be evaded or ignored altogether. Clearly, if the President approved, legislation providing an *ad hoc* political solution for a particular crisis could be passed, whatever prior statutes said. For this reason a constitutional amendment should make clear that contests involving the popular vote are to be decided by the federal courts in a trial on the merits. The plan could then be implemented by legislation similar to that suggested in the absence of constitutional change.

In a government of divided powers, no judicial decision, however fair, can prevent Congress from exercising its political authority in the election of a President. On the other hand, a Congress which hopes to preserve political stability cannot exercise its authority in a manner that is so clearly erroneous or self-seeking that it is offensive to the electorate at large. A legislative scheme that provides stringent measures for the fair decision of election contests will act as a check on arbitrary action. If Congress ignores or evades such a scheme, it carries a heavy burden of demonstrating that it has governed fairly. The present system for resolving contests imposes no such burden. Fair-minded men could reach a fair result under it, but unfair men could easily act to serve their own interests. In either case there is no certainty that the result reached is the true one.

The President of the United States will increasingly require strength based on national and international respect if he is to guide the nation through times of mounting crisis. This respect will not come to one who is elected under the slightest suspicion of error or fraud. To insure that no electoral contest will mar or disrupt the orderly succession to the presidency in the difficult future, Congress must give to the federal courts the power to reach a timely, final, and binding decision of all controversies.

[15] See 2 RECORDS OF THE FEDERAL CONVENTION OF 1787 109, 501 (Farrand ed., 1911). The Convention wavered between election by Congress and a number of other methods. The Congressional plan was actually approved and then reconsidered. *Id.* 101, 171.

[16] U.S. CONST., art. II, § 1; 2 RECORDS OF THE FEDERAL CONVENTION, *supra*, note 15, at 500–501. THE FEDERALIST No. 68, at 452 (Ford ed. 1898) (Hamilton).

[17] Before the present language was adopted in the Convention, a motion that the provision read "who shall have balloted," intended to prevent the number needed for a majority from being increased by non-voting electors, was lost. 2 RECORDS OF THE FEDERAL CONVENTION, *supra*, note 15 at 515.

[18] U.S. CONST., art. II, § 1; *cf. id.*, amend. XII. In the original provision, if the electoral vote ended in a tie, or if no candidate had a majority, the House, balloting by states, was to choose the President from the tied pair. If there were no majority, the choice was to be from among the five highest candidates. In any case the Vice President was to be the man who placed second. The Twelfth Amendment, in providing for the separate election of the Vice President, preserved the power of the House over the Presidential election and gave the Senate similar powers in the case of the Vice President. See *infra*, note 28.

[19] The Federalist, *supra*, note 16, No. 59, at 392-393, Hamilton did not discuss the electoral count or contests over the electoral vote. *Id.*, No. 68.

[20] The Act of March 1, 1792, ch. 8, 1 Stat. 239, also established the times at which the electors were to be appointed and were to vote, as well as the date on which Congress was to meet for the count of the vote.

[21] The rise of party feeling was apparent enough by 1796 to cause outspoken comment when a Federalist elector voted for Jefferson, STANWOOD, *op. cit. supra*, note 14, at 51. While the electors retain their independence as a theoretical matter, in practice virtually every elector ever appointed has voted at his party's call. DAVID, GOLDMAN & BAIN, THE POLITICS OF NATIONAL PARTY CONVENTIONS 222n (1960); *cf.* CORWIN, THE PRESIDENT—OFFICE AND POWERS. 1787–1957 40–41 (4th rev. ed 1957). One court has gone so far as to suggest that mandamus would lie to compel an elector to vote as the party directed. Thomas v. Cohen, 146 Misc. 836, 262 N.Y. Supp. 320, 326 (Supp. Ct. 1933) (dictum), and the statutes of at least five states require a pledge. Wilkinson, *supra*, note 7 at 254. The Supreme Court has indicated, however, that while a political party may exact a pledge from a primary candidate, its enforceability is constitutionally dubious. Ray v. Blair, 343 U.S. 214, 230 (1952) dictum). Recent legislation in the southern states seems to embody express recognition of the principal of independence. CORWIN, *supra*, at 41; Wilkinson, *supra*.

[22] Resolution of September 17, 1787, 2 RECORDS OF THE FEDERAL CONVENTION. *supra*, note 15, at 665–666; *Counting Electoral Votes* 7–8 (April 6, 1789); 1 KENT, COMMENTARIES ON AMERICAN LAW 258–259 (1826); MCKNIGHT, *op. cit supra*, note 14 at 140–147, 157–167, 179–181.

[23] In 1797 John Adams did not hesitate to count for himself the four votes of Vermont, which apparently had been improperly cast by the state legislature. STANWOOD, *op. cit. supra*, note 14, at 52. Although this act gave Adams the presidency, no objection was raised in the counting session. *Counting Electoral Votes* 13, 15 (Feb. 8, 1797). In the tied election of 1800, Jefferson, also without opposition, counted dubious votes that gave a majority to himself and Burr. 2 DAVIS, MEMOIRS OF AARON BURR, 71–73 (1837); STANWOOD, *op. cit. supra*, at 69–73; *Counting Electoral Votes* 30 (Feb. 12, 1801). As to the idea that Congress could by legislation provide another agent for the count, see *Counting Electoral Votes* 16 (Senate, Jan. 23, 1800); KENT, *op. cit. supra*, note 22; H.R. REP. No. 31, 40th Cong., 3d Sess. 84–88 (1869). *cf.* 2 STORY, COMMENTARIES ON THE CONSTITUTION § 1470 (3d ed. 1858).

[24] Their purpose was to prevent the appointment of Republican electors by the Pennsylvania legislature. BEVERIDGE, THE LIFE OF JOHN MARSHALL 452–458 (1916); MCKNIGHT, *op. cit. supra*, note 14, at 262–269; DOUGHERTY, *op. cit. supra*, note 2, at 62–63.

[25] *Counting Electoral Votes* 23, 27 (April 25, May 2, 1800). The original version of the bill in the Senate had provided for a "Grand Committee" with a majority of its members drawn from the Senate, having power to arrive at a binding final determination of all disputes except those over the popular vote. *Id.*, 21 (March 27, 1800). The milder House version reflected the efforts of John Marshall, a somewhat more moderate Federalist than his New England colleagues, to prevent the passage of a measure that would have excited even greater popular ill will against his party. BEVERIDGE, *op. cit. supra*, note 24.

[26] *Counting Electoral Votes*, 28, 29 (May 8, 9, 1800).

[27] In both Houses they had urged substitute measures that gave the power to decide disputes to a majority of the joint convention. *Id.* 19 (Senate, March 25, 1800); *id.* 26 (House, April 30, 1800).

[28] The amendment did not alter the language of the original instrument regarding the count of the vote. *Cf.* U.S. CONST. art. II, § 1. As to the changes actually made, see *supra*, note 18. The amendment was passed by the Republican 8th Congress on December 8, 1803, in a strict party line vote. 2 Stat. 306; STANWOOD, *op. cit. supra, note* 14, at 77–82. The language of the act which implemented it suggests that someone other than the President of the Senate was to count the vote. Act of March 26, 1804, ch. 50, 2 Stat. 295. The language used in the count of 1805 indicates an understanding that Congress was the counting authority. *Counting Electoral Votes*, 36, 37 (Feb. 13, 1805).

[29] In 1824, another year of impending crisis, the Senate passed a bill providing that the Houses should separate to decide disputed votes, with votes to be rejected only if the Houses concurred. The bill died in the House without being considered. *Id.* 57–60 (March 4–April 21, 1824). The Act of January 23, 1845, ch. 1. 5 Stat. 721, established the present elction day and permitted the states to remedy minor defects in the electoral process. See 3 U.S.C. §§ 1, 2, 4 (1958).

[30] In 1817 the votes of Indiana were counted after a debate in which it was assumed that if Indiana were not a state her vote would not be counted. *Counting Electoral Votes* 44–47 (Feb. 10–11, 1817). In 1821, Missouri not having complied with the anti-slave conditions to its admission, Henry Clay put through a compromise resolution which provided that the result should be announced in alternative form, both as though the vote of Missouri had been counted and as though it had not. *Id.* 48–56 (Feb. 6–14, 1821). Michigan's vote was counted in similar fashion in 1837, and the ineligibility of certain electors was pointed out. *Id.* 70–76 (Jan. 26–Feb. 8, 1837). The power of Congress to make such decisions is derived directly from its power to provide for the admission of new states. U.S. CONST., art. IV, § 3. If the two Houses cannot agree as to whether a certain entity is a state, or whether certain acts are the acts of the lawful government of a state, no other authority can resolve the question. See Luther v. Borden, 48 U.S. (7 How.) 1 (1849). For the treatment of similar problems in 1865 and 1869, see *infra*, notes 34, 35.

[31] *Counting Electoral Votees* 87–144 (Feb. 11–12, 1857).

[32] *Id.* 47 (House, Feb. 11, 1871), 52 (House Feb. 14, 1821), 71 (Senate, Feb. 4, 1837), 129–132 (Senate, Feb. 12, 1857).

[33] *Id.* 224 (Senate, Feb. 6, 1865). The rule was hastily passed in sparsely attended sessions of both houses. *Id.* 223–226. *Cf. id.* 536 (March 13, 1876) (Remarks of Senator Whyte).

[34] The Twenty-second Joint Rule was only an alternative to the chief measure upon which the Radical Republicans relied to block the votes of lately reconstructed Louisiana and Tennessee. The Houses had previously resolved that no votes from those two states should be counted. *Id.* 147–149 (House, Jan. 30, 1865); *id.* 149–223 (Senate, Feb. 1–4, 1865; House, Feb. 4, 1865). In the count of the vote this resolution, reluctantly approved by Lincoln at the last minute, was relied on by the President of the Senate to keep the votes of Louisiana and Tennessee from the floor. *Id.* 227–228 (Feb. 8, 1865). In a message received two days after the count Lincoln made it clear that he deemed his approval of the measure unnecessary, if not improper, since Congress had "complete power to exclude from counting all electoral votes deemed by them to be illegal." *Id.* 229–230 (Senate, Feb. 10, 1865).

[35] The vote of Louisiana was objected to under the Twenty-second Joint Rule on the ground that no valid election had been held there. During the debate it appeared that there was no evidence of any misconduct, and the Houses concurred in accepting the questioned votes. *Id.* 237–244 (Feb. 10, 1869). The votes of Georgia, whose statehood was then pending before Congress, were counted under an alternative measure similar to those used in the pre-war crises, *supra*, note 30. The radicals of the House had sought to have Georgia's vote rejected altogether under the Twenty-second Joint Rule. Outraged, they debated a censure proposal for two days after the count. *Id.* 231–236 (Senate, Feb. 8, 1869; House, Feb. 8, 1869); *id.* 246–266; 267–320 (House, Feb. 11, 12, 1869). After the election an intensive and enthusiastically partisan investigation in New York City by a House Committee produced evidence of fraud which Republican members claimed would have given the state's electoral votes to Grant. H.R. REP. No. 31, *supra*, note 23.

[36] In several instances between 1836 and 1872, the returns of isolated counties had been thrown out in the state canvass for various irregularities, but no protest was made in the count. BURNHAM, PRESIDENTIAL BALLOTS, 1836–1892 895–949 (1955).

[37] Three votes from Georgia cast for Greeley, the Democratic candidate who had died after the election were rejected on the vote of the House, the Senate voting to accept them. *Id.* 368, 377 (Feb. 12, 1873). Objections

on various technical grounds to the votes of Texas and Mississippi were denied by both Houses. *Id.* 369–371, 380, 383, 386–389. Arkansas's votes for Grant were rejected by the Senate for lack of a seal, suggesting that the Republicans were seeking to create an impression of fairness. *Id.* 402. It later appeared that Arkansas had no seal at the time of the election. *Cf. id.* 510 (Feb. 25, 1875) (Remarks of Senator Logan).

[38] *Counting Electoral Vote* 336–345 (Senate, Jan. 7, 1873).

[39] *Id.* 358–363 (Senate, Feb. 10, 1873). The Republican returning board had been upheld by the state supreme court, but the majority voted to ignore this fact, since the decision came after the meeting of the electors. *Id.* 362. See State *ex rel.* Attorney General v. Wharton, 25 La. Ann. 2 (1873).

[40] *Counting Electoral Votes* 399, 406 (Feb. 10, 1873).

[41] *Id.* 519 (Feb. 25, 1875). Prior efforts to pass a Constitutional Amendment giving Congress "power to provide for holding and conducting the elections of President and Vice President and to establish tribunals for the decision of such elections as may be contested," had been unsuccessful. *Id.* 345–357 (Senate, Jan. 17, 1873), 408–444 (May 28, 1874, Jan. 21–27, 1875). A proposal to change the Twenty-second Joint Rule to provide that concurrence was necessary for rejection also failed. *Id.* 444–458 (Feb. 4, 1875).

[42] S. 1251, 43 Cong., 2d Sess., *id.* 459 (Feb. 25, 1875). The amendment was thought too great a delegation of the congressional power over the count. *Id.* 480–487, 498–499. An amendment to eliminate the broad language of the Twenty-second Joint Rule, *supra*, note 33, permitting decision of "any other question" was passed, in order that the bill would not be construed as covering questions over which Congress had no jurisdiction, such as the determination of state contests. *Id.* 463.

[43] U.S. BUREAU OF THE CENSUS, HISTORICAL STATISTICS OF THE UNITED STATES 692 (1960) [Hereinafter cited HISTORICAL STATISTICS].

[44] *Counting Electoral Votes* 786–787 (Jan. 20, 1876).

[45] *Id.* 519–520, 676–687 (Senate, March 13, April 19, August 5, 1876).

[46] For fuller treatment of the controversy, see HAWORTH, THE HAYES-TILDEN ELECTION (2d ed. 1927); DOUGHERTY, *op cit. supra*, note 2, at 105–213; NEVINS, ABRAM S. HEWITT 305–399 (1935); WOODWARD, REUNION AND REACTION (1951); Lewis, *The Hayes-Tilden Election Contest*, 47 A.B.A.J. 36, 163 (1961). The proceedings of the Electoral Commission are found in 5 CONG. REC., part 4 (1877), a separately paged supplement to the CONGRESSIONAL RECORD [Hereinafter cited as 5(4) CONG. REC.]. See also U.S. CONGRESS, ELECTORAL COMMISSION, ELECTORAL COUNT OF 1877 (1877).

[47] Act of Jan. 29, 1877, ch. 37, 19 Stat. 227. For a summary of the debates on the Act, see DOUGHERTY, *op. cit. supra*, note 2, at 110–135. The committee deliberations that led to the acceptance of the measure are documented in NEVINS, *op. cit. supra*, note 46, at 342–364.

[48] During the count single returns from Michigan, Nevada, Pennsylvania, Rhode Island, Vermont, and Wisconsin were objected to on eligibility grounds. All were accepted, either by concurent vote or by the vote of the Senate, 5 CONG. REC. 1720, 1728, 1938, 1945, 2054, 2608 (1877).

[49] Davis was unexpectedly chosen by the Illinois legislature to fill a vacancy in the United States Senate. It is unclear whether this transpired through Democratic stupidity or Republican cleverness. See NEVINS, *op. cit. supra*, note 46, at 361–367.

[50] The letters of Mr. Justice Miller, avowedly a Republican, leave little doubt that he was heavily in favor of Hayes and greatly relieved by the outcome. FAIRMAN, MR. JUSTICE MILLER AND THE SUPREME COURT, 1862–1890 280–291 (1939). For the torrent of abuse to which Mr. Justice Bradley was subjected both before and after the proceedings, see Klinkhamer, *Joseph P. Bradley: Private and Public Opinion of a "Political" Justice*, 38 U. of DET. L. J. 150 (1960). The role of the five justices in the controversy increased public criticism of the opinion of the Court in the Granger Cases (Munn v. Illinois), 94 U.S. 113, handed down on March 1, 1877. 2 WARREN, THE SUPREME COURT IN UNITED STATES HISTORY 583 (Rev. ed. 1926). For more recent views, see NEVINS, *op. cit. supra*, note 46, at 370–373, 378n; FAIRMAN, *op. cit. supra*, at 292; WOODWARD, *op. cit. supra*, note 46, at 155–163.

[51] The applicable Florida statute provided that the Board of State Canvassers might throw out any returns which appeared so false and fraudulent that the Board could not determine the true vote. Acts and Resolutions of Fla. 1872, ch. 1868, § 4. See FLA. STAT. ANN. § 102.131 (1960). The Board had taken testimony regarding alleged offenses and had thrown out numerous individual votes. In the gubernatorial contest the state supreme court ruled this action illegal, holding that the statute gave the Board discretion to look only to the *bona fides* of the returns, not to the votes themselves. State *ex rel.* Drew v. Board of State Canvassers, 16 Fla. 17 (1877). In Louisiana the statute set up an elective returning board. If sworn complaints regarding fraud or violence at the polls were made to it, the board could investigate the charges and exclude from the count any return which it found materially affected by these influences. Acts of La. 1872, No. 98. § 3. Without complying with these formalities, the board had thrown out some 13,000 Democratic votes. 5(4) CONG. REC. 60–61. The South Carolina statute gave the State Canvassing Board power to decide "cases under protest or contest." S.C. REV. STAT. tit. 2, § 26 (1873). See S.C. CODE § 23–476 (1952). The Board had refused to entertain Democratic allegations of fraud in certain of the county canvasses. 5(4) CONG. REC. 180. For the unsuccessful efforts of the South Carolina Democrats in the state courts, see State ex rel. Barker v. Bowen, 8 S.C. 382 (1876); *Id.* 400 (1877).

[52] 5(4) CONG. REC. 56, 119, 192. In the case of Florida the Commission further held invalid the certificate of the newly elected Democratic governor based on a state quo warranto proceeding completed subsequent to the date of meeting of the electors. In Louisiana it decided that a group of Democrats claiming to be the returning board was not authorized to act as such. In South Carolina it rejected Democratic arguments based on the failure of the state to enact a registration statute required by its constitution and on alleged federal interference in the election. *Ibid.* See generally, DOUGHERTY, *op. cit. supra*, note 2, at 136–183, 202–207.

[53] 5(4) CONG REC. 38, 57, 117, 119, 179. DOUGHERTY, *op. cit. supra*, note 2, at 153, 160, 180, 184–202.

[54] 5(4) CONG REC. 56, 192; *cf. Id.* 263–264 (Opinion of Mr. Justice Bradley).

[55] 5 CONG. R53. 2068 (1877). The story of the negotiations is told in full detail in WOODWARD, *op. cit. supra*, note 46. See also, NEVINS, *op. cit. supra*, note 46, at 379–399.

[56] S. 1308, 45th Cong., 2d Sess., 7 CONG. REC. 3739. *Cf.* Edmunds, *Presidential Elections*, 12 AM. L. REV. 1, 15–19 (1877).

[57] Garfield defeated Hancock in 1880 by only 7,368 votes out of some 9,000,000 cast, and won in the Electoral College by 214 votes to 155. In 1884 Cleveland's popular vote lead was some 68,000 out of 9,500,000, but his electoral vote lead was a mere 37. He carried New York with its 36 electoral votes by a plurality of only 1,167 out of nearly 1,200,000 votes. HISTORICAL STATISTICS 682–683, 689, *Cf.* BURNHAM, *op. cit. supra*, note 36, at 130, 137. As to the counts in 1880 and 1884, see *infra*, note 58.

[58] S. 1308, *supra*, note 56, passed the Republican Senate in December 1878, but was allowed to die in the still Democratic House. 8 CONG. REC. 51–54, 68–74, 157–170, 197 (1878). In the 46th Congress, with both Houses Democratic, efforts to pass legislation to control the count of 1881 failed, and a compromise was adopted, providing for the alternative count of the votes of Georgia, which had been cast on the wrong day. STANWOOD, *op. cit. supra*, note 14, at 399; 11 CONG. REC. 19–32, 39–48, 61–73, 132–134 (1880). The count proceeded peacefully under this device. *Id.* 1386–1387 (1881). The bill reappeared in the Republican 47th Congress as S. 613, 13 CONG. REC. 859, 2651–2652 (1882). It died in the House, after an unsuccessful effort to amend it to provide that the losing candidate might contest the election in federal court after the President of the Senate had declared the result. *Id.* 5142–5150. On its next appearance the bill passed a Republican Senate for the third time. S. 25, 48th Cong., 1st Sess., 15 CONG. REC. 430 (1883). The House, again Democratic, passed a substitute giving decision of all questions to a per capita vote of the joint session, which was unacceptable to the Senate. *Id.* 5460–5468, 5547–5551 (1884); 16 *Id.* 1618 (1885). As in 1876, neither party would give ground in an election year, but the count of the vote in 1885 passed without incident. *Id.* 1532. As to the composition of Congress, see HISTORICAL STATISTICS 692.

[59] S. 9, 49th Cong., 1st Sess. It was introduced in the form in which it had last passed the Senate. 17 CONG REC. 122, 242 (1885). After a brief debate, a substitute was reported back. *Id.* 1021, 1057–1064, 2387 (1886). This version passed the Senate without amendment. *Id.* 2427–2430. Numerous amendments were added in the House, and the final form of the bill was the result of a conference, 18 CONG REC. 29–31, 45–52, 77 (1886); 668 (1887).

[60] H.R. REP. No. 1638, 49th Cong., 2d Sess., 18 CONG. REC. 30 (1886).

[61] Act of February 3, 1887, ch. 90, 24 Stat. 373, 3 U.S.C. §§ 5–7, 15–18 (1958). Technical changes were made by the Act of October 19, 1888, ch. 1216, 25 Stat. 613, and by the Act of May 29, 1928, ch. 859, 45 Stat. 945. For later changes, see *infra*, notes 63, 76. The Act, prior provisions still in effect, *supra*, notes 20 and 29, and subsequent changes were codified as 3 U.S.C. §§ 1–20 (1958), by Act of June 25, 1948, ch. 644, § 1, 62 Stat. 672.

[62] 3 U.S.C. § 5 (1958).

[63] *Id.* § 6 provides that the executive of each state, "as soon as practicable after the conclusion of the appointment of the electors in such State by the final ascertainment, under and in pursuance of the laws of such State providing for such ascertainment," is to mail a certificate of the electors appointed and the number of votes to the Administrator of General Services. Copies of this certificate are also given to the electors, who forward them with the certificates of their votes. *Supra*, note 10. If there is a subsequent determination of a controversy under 3 U.S.C. § 5, *supra*, note 62, evidence of it is to be forwarded in similar fashion. As to the role of the Administrator of General Services, see 107 CONG. REC. 265 (daily ed. Jan. 6, 1961) (Remarks of Senator Russell). This function was transferred from the Secretary of State as part of the reorganization of 1950. Act of Oct. 31, 1951, ch. 655, §§ 4–9, 65 Stat. 711.

[64] *Supra*, note 62.

[65] 3 U.S.C. § 15 (1958). The Act also provides for brief recesses during the count, *id* § 16; for a maximum of two hours of debate in separate session, with each speaker limited to five minutes, *id.* § 17; and in joint session for no debate and consideration of no other question except a motion to withdraw, *id* § 18.

[66] In the count of 1889 there was some confusion, but no actual problems were present.

20 CONG. REC. 1859–1860. For the subsequent counts, see 3 HINDS' PRECEDENTS OF THE HOUSE OF REPRESENTATIVES, §§ 1960–1963 (1907); 6 *Cannon's Precedents of the House of Representatives*, §§ 442–446 (1935); 81 CONG. REC. 83 (1937); 87 *id.* 43 (1941); 91 *id.* 90 (1945) 95 *id.* 89 (1949); 99 *id.* 130 (1953) 103 *id.* 294 (1957). The procedure presently followed has been purely a formal ritual for many years. See *Cannon's Procedure in the House of Representatives*, H.R. Doc. No. 122, 86th Cong., 1st Sess., 193–196 (1959).

[67] See 8 CONG. REC. 54 (1878) (Remarks of Senator Edmunds); 18 CONG. REC. 30–31 (1887) (Remarks of Mr. Caldwell); *id.* 49 (Remarks of Mr. Eden); *id.* 668 (1887) (Report of Conference Committee).

[68] CONG. REC. 52 (1878) (Remarks of Senator Edmunds). In the course of the debates in 1882, the Senate rejected an amendment that would have given the two Houses power to overturn the state determination by concurrent vote. The proponents of the bill made it clear that they deemed the state's determination to be absolutely binding. 13 CONG. REC. 2651–2652. *Cf.* H.R. REP. No. 1638, *supra*, note 60.

[69] 8 CONG REC. 54 (1878) (Remarks of Senator Edmunds); 18 CONG. REC. 31 (1886) (Remarks of Mr. Caldwell).

[70] As to the legislative intent, see 17 CONG. REC. 2387, 2427 (1886). In five states the legislature has provided a special contest proceeding in an existing court. COLO. REV. STAT. ANN. §§ 49–14–1, 49–14–2 (1953); CONN. GEN. STAT. ANN. §§ 9–315, 9–323 (1958); DEL. CODE ANN. tit. 15, §§ 5921–5928 (1953); MASS. ANN. LAWS, ch. 54, §§ 119–120 (1953); S.D. CODE, §§ 16.1902–1914 (1939). In two states a special court has ben established. IOWA CODE ANN. §§ 60.1–60.6 (1949); N.D. CENT. CODE §§ 16–06—16–15 (1960). In two states express provision is made for trial in the manner decreed for contests for other offices. OKLA. STAT. ANN. tit. 26, §§ 518, 392 (1955), 391 (Supp. 1960); PA. STAT. ANN. tit. 25, §§ 3291, 3351–3352, 3456–3475 (1938). The legislature of one state has provided that it shall determine all contest for the office of elector. WERNONS ANN. MO. STAT. § 128.100 (1952). Three states have provided for final determination of contests by the canvassing authority. KANS. GEN. ANN. § 25–1433 (1949) R.I. GEN. LAWS ANN. § 17–22–4 (1956); VERNON'S ANN. TEX. STAT. EECTION CODE, § 9.29 (1952). In two other states there are similar provisions, but court decisions cast doubt on their finality. ME. REV. STAT. ANN. ch. 5 § 50 (1954) (See Rounds v. Smart, 71 Me. 380 (1880)); *cf. infra*, note 71; S.C. CODE §§ 23–475, 23–476 (1952) (See Redfearn v. Board of State Canvassers, 234 S.C. 113, 107 S.E.2d 10 (1959)). In two states the provisions specifically applicable to electors are not the exclusive form of contest. FLA. STAT. ANN. tit 9, §§ 102–121, 131; 99.192–221 (1960) (See *infra*, note 71); N.H. REV. STAT. ANN. §§ 59:94–98, 68:1–11 (1955) (See *infra*, note 71). Two southern states have passed identical legislation giving to a special board powers over the electoral vote which might be construed to include final power to determine contests. ARK. STAT. ANN. § 3–327 (Supp. 1959); GA. CODE ANN. § 34–2515 (Supp. 1960). If the Arkansas provision does not apply, then contests would be tried as for supreme court judge. ARK. STAT. ANN. § 3–313 (1947). In Georgia the contest provisions for members of the General Assembly would govern. GA. CODE ANN. §§ 34–2101, 2901, 2801–2803 (1936). One proposal for legislation to implement the Twenty-third Amendment, giving the District of Columbia the presidential vote, would provide both a recount and a special contest proceeding in the United States District Court for the District of Columbia. Washington Star, April 2, 1961, § 1, p. 7; cf S. 1883, 87 Cong., 1st Sess., 107 CONG. REC. 7478–9 (daily ed. May 16, 1961).

[71] In 17 states provision has been made for the contest in the state courts of election to "any office" "any public office," "any state office," or a similar variation. ALASKA Sess. Laws 1960, ch. 83, §§ 4.71–4.93; ARIZ. REV. STAT. ANN. §§ 16–1201–1207 (1956); CAL. ELECTIONS CODE §§ 8510–8575; FLA. STAT. ANN. tit. 9, §§ 99.192–99.221 (1960) (See *supra*, note 70); HAWAII REV. LAWS §§ 11–85.1 (Supp. 1960); ILL. ANN. STAT. ch. 46, §§23.19–.30 (1944; Supp. 1960); KY. REV. STAT. §§ 122.070–.090 (1955); MD. ANN. CODE art. 33, §§ 145–146 (1957; Supp. 1960); MINN. STAT. ANN. §§ 209.02–201.10 (Pamphlet Supp. 1959); MONT. REV. CODES ANN. §§ 23–1459–1467 (1955); NEV. REV. STAT. §§ 296.505–.515 (1959); N.J. STAT. ANN. §§ 19:29—1–11 (1940); N.M. STAT. ANN. §§ 3–9–1—3–9–10 (1953); N.Y. ELECTION LAW §§ 330–333, *cf.* N.Y. CIVIL PRACT. ACT §§ 1208–1221; OHIO REV. CODE §§ 3515.08–.15 (Baldwin, 1960); ORE. REV. STAT. §§ 251.025–.090 (1957); UTAH CODE ANN. §§ 20–15–1—15–12 (1953). Two states provide for such contests in the legislature. IND. STAT. ANN. tit. 29, §§ 5601–5617 (1949); N.C. GEN. STAT. §§ 163–99 (1952). The general contest provisions of the remaining states do not extend to presidential electors, but all of these states provide an action in quo warranto against one who "usurps, intrudes into or unlawfully holds or exercises any public office." In 11 of the states there is little doubt that a lack in the general contest provisions is to be supplied by a quo warranto proceeding. ALA. CODE tit. 17, §§ 231, 254 (1959), *id.* tit. 7, §§ 1136–1155 (1960) (Provision that no election triable under the Code may be tried by quo warranto is to be strictly construed. Walker v. Junior, 247 Ala. 342, 24 So. 2d 431 (1946); IDAHO CODE ANN. §§ 34–2001–2011, 6–602–609 (1948) (See Tiegs. v. Patterson, 79 Idaho 365 318 P.2d 588 (1957)); ME. REV. STAT. ANN. ch. 129, §§ 21, 22 (1954) (Common law right of action preserved) (See *supra*, note 70); MICH. STAT. ANN. §§ 27.2315–2326 (1938), 6.1861–1892 (1956) (Statutory recount proceeding does not abridge common law right); MISS. CODE ANN. §§ 1120–1145, 3287–3290 (1956) (Quo warranto lies in cases not covered by election contest provisions. Kelly v. State *ex rel.* Kiersky, 79 Miss, 168, 30 So. 49 (1901); Warren v. State *ex rel.* Barnes, 163 Miss. 187, 141 So. 901 (1932)); N.H. REV. STAT. ANN. § 491.7 (Supp. 1960) (Common law right of action preserved. Stickney v. Salem, 96 N.H. 500, 78 A.2d 921 (1951) (See *supra*, note 70); TENN. CODE ANN. §§ 2–1901–2017, 23–2801–2821 (1955) (Provision that no election triable under the Code may be tried by quo warranto is designed to insure that there be only one contest proceeding. State *ex rel.* Anderson v. Gossett, 77 Tenn. 644 (1882)); VT. STAT. ANN. tit. 12, §§ 4041–4045 (1958), tit. 17, §§ 1361–1365 (1959) (See State *ex rel.* Ballard v. Greene, 87 Vt. 515, 89 Atl. 743 (1914)); WASH. REV. CODE §§ 29.65.010–.130 (1951), WASH. REV. CODE ANN. §§ 7.56.010–.100 (1961) (See State *ex rel.* Holt v. Hamilton, 118 Wash. 91, 202 Pac. 971 (1921)); WIS. STAT. ANN. §§ 6.66 (1957), 294.01–.13 (1958) (See State *ex rel.* Dithmar v. Bunnell, 131 Wis. 198, 110 N.W. 177 (1907)); WYO. STAT. ANN. §§ 22–296, 22–306–324 (1957), 1–896–929 (1959) (See State *ex rel.* Walton v. Christmas, 48 Wyo. 239, 44 P.2d 905 (1935)). In the remaining four states serious doubts exist as to whether the writ would lie in an election contest. LA. STAT. ANN. §§ 18:1251, 42:76–85 (1951); NEBR. REV. STAT. §§ 25–21,121–21,134 (1956), 32–1001–1034 (1960); VA. CODE ANN. §§ 24–419–434 (1950), 8–857–865 (1957); W. VA. CODE ANN. §§ 193–207, 5310–5316 (1955). As to quo warranto generally, see MCCRARY, AMERICAN LAW OF ELECTIONS §§ 393–395, 425 (4th ed. 1897).

[72] This question in most cases would turn on the definition of the term "public" or "state" office in the applicable statute. The United States Supreme Court has held that electors are "state officers" in denying habeas corpus in a conviction under state law for vote fraud in a presidential election. In re Green, 134 U.S. 377 (1890). Interpretation in state courts has varied from case to case, however, according to the intention of the legislature. *Compare* State v. Mountjoy, 83 Mont. 162, 271 Pas. 466 (1928), *with* Spreckels v. Graham, 194 Cal. 516, 228 Pac. 1040 (1924); Harless v. Lockwood, 85 Ariz. 97, 332 P. 2d 887 (1958), *with* Lane v. Melamore, 169 S.W. 1073 (Tex. Civ. App. 1914); *cf.* Annot, 68 A.L.A. 2d 1320 (1959). See also Smith v. Ruth, 308 Ky. 60, 212 S.W. 2d 532 (1948); Lillard v. Cordell, 200 Okla. 577, 198 P. 2d 417 (1948).

[73] 8 CONG. REC. 51 (1878).

[74] In the third version of the bill, S. 25 *supra*, note 58, Senator Hoar, floor manager, insisted that it was unchanged from its previous passage in the Senate, but the six-day requirement was in the version taken up by the House. 15 CONG. REC. 430, 5076 (1884). Amendments to eliminate the provision from the final version of the bill, S. 9, *supra*, note 59, were rejected in the House. 18 CONG. REC. 77 (1886).

[75] 24 Stat. 373.

[76] Act of June 5, 1934, ch. 390, §§ 6–7, 48 Stat. 879. The Twentieth Amendment altered Inauguration Day to January 20th, and the first meeting of the new Congress to January 3d. The Act, in providing that the counting session should be on January 6th, insured that the count would not be made by a lame-duck Congress.

[77] The statutes of Connecticut and Iowa, *supra*, note 70, expressly provide that a result is to be reached prior to the deadline in the federal statute.

[78] N.Y. Times, Dec. 16, 1960, p. 28, col. 2 (city ed.).

[79] Lum v. Bush, Civil No. 7029, Circuit Court of the First Judicial Circuit. See N.Y. Times, Nov. 30, 1960, p. 29, col. 7(city ed.); *Id.* Dec. 2, 1960, p. 17, col. 6; *id.* Dec. 15, 1960, p. 39, col. 1; 107 CONG. REC. 282–3 (daily ed. Jan. 6, 1961). See Hawaii's contest statute, *supra*, note 71.

[80] For the various certificates; the court decree, and the governor's letter of explanation, see *ibid.* The governor noted that the time for appeal would not expire until January 9th, but that no appeal was planned. *Id.* 282.

[81] *Id.* 283. *Cf.* N.Y. Times, Jan. 7, 1961, p. 1, col. 4; p. 8, col 2 (city ed)

[82] N.Y. Times, Nov. 29, 1960, p. 17, col. 1 (city ed.); *id.* Nov. 30, 1960, p. 29, col. 1; *id.* Dec. 2, 1960, p. 17, col. 2; *id.* Dec. 3, 1960, p. 23, col. 3. *Cf.* 107 CONG. REC. A–1402 (1961).

[83] Under Illinois law a "discovery" recount, which is of no effect on the official count or in a subsequent contest, may be undertaken by a defeated candidate in order to determine whether or not he has grounds for contest. ILL. ANN. STAT., ch. 46, § 22–6 (Supp. 1960). This proceeding bogged down due to a difference of opinion between the parties as to the scope of the recount. N.Y. Times, Dec. 1, 1960, p. 22, col. 3; *id.* Dec. 3, 1960, p. 23, col. 3; *id.* Dec. 6, 1960, p 30, col. 1. An attempt to get mandamus requiring the Cook County Canvassing Board to change its result in accordance with the discovery proceeding failed. Id. Dec. 13, 1960, p. 23, col. 1.

[84] The Board, composed of the governor and four other executive officers, is required to meet within twenty days after the election and "proceed to open and canvass" the returns from the counties in order to ascertain which presidential electors are the winners. ILL. ANN. STAT. ch. 46, §§ 1–3, 7–14, 21–2, 21–3 (1944; Supp. 1960). The Republican claim was based on a "1912" decision which would permit the Board to reject county returns. The Democrats consistently argued that the Board had ministerial powers only and could do no more than tabulate

the county canvasses. N.Y. Times, Dec. 1, 1960, p. 22, col. 4 (city ed.); *id.* Dec. 7, 1960, p. 24, col. 3. The Republicans' case was apparently People *ex rel.* Hill v. Deneen, 256 Ill. 536, 100 N.E. 180 (1912), in which the state board was permitted to refuse a revised proclamation by a county board based on a court proceeding in which there was no jurisdiction. The board was directed to accept the original county canvass. This case is far from giving the state board power to hear facts and decide a contest for itself. If anything, it stands for the proposition that the county canvass is conclusive upon the board unless attacked in a proper proceeding, which under Illinois law is a statutory election contest. *Supra,* note 71. See People *ex rel.* Wilson v. Mattinger, 212 Ill. 530, 72 N.E. 996 (1904); People *ex. rel.* Ganschinietz v. Renner, 334 Ill. App. 302, 79 N.E. 2d 298 (4th Dist. 1948).

[85] N.Y. Times, Dec. 15, 1960, p. 39, col. 1 (city ed.).

[86] Illinois ranked fourth in the 1960 census, with 10,081,158 inhabitants. Chicago, with a population of 3,550,404 is the nation's second largest city. *World Almanac 1961* 81–82.

[87] 8 CONG. REC. 52–54 (1878). See *supra,* note 30.

[88] In the debates and in the final report of the Conference Committee, it is clear that the provision for the governor's certificate to control in the disagreement of the Houses was to apply only in the case of double returns without a state determination. See 17 CONG. REC. 1020, 1022 (Remarks of Senator Hoar); 18 *id.* 49–50 (Remarks of Mr. Eden); *id.* 668 (1887) (Conference Committee Report).

[89] This situation might have arisen if the Illinois Election Board had failed to certify the Kennedy electors. See *supra,* note 84. In 1877 the Electoral Commission would not extend Congressional power beyond an inquiry into the credentials of the state board. *Supra,* note 52.

[90] This was the view of Mr. Caldwell of Tennessee, House floor manager of the bill. 18 CONG. REC. 30–31 (1886).

[91] *Id.* 31.

[92] 17 *id.* 2427–2428 (Remarks of Senator Hoar).

[93] In the Senate the Committee on Privileges and Elections, now a standing subcommittee of the Committee on Rules and Administration, has jurisdiction over "matters relating to the election of the President, Vice President, or Members of Congress; corrupt practices; contested elections; credentials and qualifications; Federal elections generally." Senate Standing Rule XXV 1(o)(1)(D), *Senate Manual,* S. Doc. No. 2, 87 Cong., 1st Sess. (1961). Similar jurisdiction is vested in the appropriate sub-committee of the Committee on House Administration. House Rule XI.9. (K), *House Manual,* H.R. Doc. No. 358, 85 Cong., 2d Sess. (1959). See GALLOWAY, THE LEGISLATIVE PROCESS IN CONGRESS 358 (1953). *Cf.* the activities of Senate investigators in 1873, *supra,* notes 38–40, and committees of both Houses in 1877, DOUGHERTY, *op. cit. supra,* note 2, at 141, 164.

[94] Congress has long had a reputation for the partisan decision of contests over its own membership. Out of 382 cases decided in the House between 1789 and 1907 only three members not of the majority party were seated. ALEXANDER, HISTORY AND PROCEDURE OF THE HOUSE OF REPRESENTATIVES 313–324 (1916). Decisions in the years since 1907 seem to have been somewhat less partisan. 1 HAYNES, THE SENATE OF THE UNITED STATES 126n (1938); *cf.* GALLOWAY, *op. cit. supra* note 93. In the most recent contest in the House, minority members of the Sub-Committee which has conducted a partial recount agreed in seating the Democratic candidate, but accused the majority of partisanship in certain decisions regarding the application of Indiana law. Roush v. Chambers, H.R. REP. No. 513, 87 Cong., 1st Sess. 65–70 (1961). On the floor Republican members raised the same objection, urging that the state determination should have been binding, but conceded that to object was "an exercise in futility" in view of the Democratic majority in the House. 107 CONG. REC. 9647–9661 (daily ed. June 14, 1961).

[95] In 1877, because no votes were rejected, the problem never arose. Since the constitutional language, *supra,* note 5, calls for election by a majority of the electors appointed, the answer would seem to depend on whether the votes in question were rejected because of a failure in the appointment process, or because of a subsequent failure on the part of the elector. Precedents drawn from other electoral counts are inconclusive. In 1873 the total announced by the President of the Senate as necessary for a majority included the votes of Louisiana, even though both sets of electors had been rejected because neither was found to be supported by a valid canvass. *Counting Electoral Votes* 408 (Feb. 12, 1873). In the years in which the vote was counted in the alternative, the number needed for a majority was reduced by the amount of the questioned votes. In these cases, however, it is clear that a state which cannot vote at all has not appointed electors. *Id.* 266 (Feb. 10, 1869); see *supra,* note 30; *cf.* 11 CONG. REC. 1387 (1881) (electors voted on wrong day; majority not reduced). On several occasions the majority figure was reduced to account for electors who had been appointed but had not voted through death or disability, *Counting Electoral Votes* 40 (Feb. 8, 1809); *id.* 50 (Feb. 14, 1821); *id.* 226, 229 (Feb. 8, 1865); see STANWOOD, *op. cit. supra,* note 14, at 63, 113. This practice is in direct contravention of the express intention of the Constitutional Convention, *supra,* note 17. Whatever the precedents, the sponsors of the Electoral Count Act clearly intended that votes rejected under it would reduce the number needed for a majority accordingly. 17 CONG. REC. 821 (1886) (Remarks of Senator Hoar).

[96] U.S. Const. amend. XII.

[97] For the succession, see CONST. amend. XX; 3 U.S.C. § 20 (1958).

[98] See HARRIS, ELECTION ADMINISTRATION IN THE UNITED STATES (1934); *cf.* Note, 106 U. PA. L. REV. 279 (1957).

[99] See WILMERDING, THE ELECTORAL COLLEGE 85–86, 115–116, (1958); *cf.* Margolin, *Proposals to Reform Our Electoral System,* 30, 46, 66 (Library of Cong. Legisl. Ref. Serv. 1960).

[100] Federal judges owe their positions to executive appointment with the advice and consent of the Senate, but they have life tenure during good behavior and may be removed only by impeachment, U.C. CONST. art. II, §§ 2, 4; art. III, § 1; art. I, §§ 2, 3.

[101] In England, where contested seats in Parliament are tried before a two judge election court, all the judges of the King's Bench Division meet annually to select three of their number to serve on a special rota for the court during the coming year. Supreme Court of Judicature Act (Consolidation), 1925, 9 & 10 Geo. 5, c. 64, § 67. See Representation of the People Act, 1949, 12 & 13 Geo. 6, 68, §§ 119–137. *Cf.* SCHOFIELD, PARLIAMENTARY ELECTIONS: 503–544 (3d ed. 1959). Efforts to introduce such a system for congressional contests have been unsuccessful. Haynes, *op. cit. supra,* note 94, at 122n.

[102] These factors led to the present requirement that a three judge court sit on proceedings where injunction of state action is sought. 28 U.S.C. §§ 2281–2284 (1958). See HART & WECHSLER, THE FEDERAL COURTS AND THE FEDERAL SYSTEM, 47–48, 843—849 (1953).

[103] Federal courts apply state substantive law in many cases in which they serve as the forum for the enforcement of state-defined rights. See Erie R. Co. v. Tompkins, 304 U.S. 64 (1938) (Diversity jurisdiction); Hess v. United States, 361 U.S. 314 (1960) (Admiralty); cases and sources cited in Hill, *The Erie Doctrine in Bankruptcy,* 66 HARV. L. REV. 1013, 1033–34, nn.87–89 (1953) (National bank winding-up, trade-mark infringement, tax appeal, bankruptcy). Congress in deciding contested congressional elections, has often claimed the power to view state law as merely advisory in such questions as the validity of ballots. HAYNES, *op. cit. supra* note 94, at 155; H.R. 513, *supra,* note 94, at 22, 69–70. This power is justified in the complete control over its own elections and contests which the Constitution vests in Congress. U.S. CONST., art. I, §§ 4, 5. Since there is no such federal control provided over the appointment of electors, the courts should be limited to the liberty which they now exercise in appropriate cases to interpret state law freely in the absence of a clear state pronouncement on the point in question. 1 MOORE, FEDERAL PRACTICE ¶¶ 0.307–0.309 (2d ed. 1959).

[104] To insure that the recount is carried out as quickly and impartially as possible, great care must be exercised in the selection of the personnel who actually count the ballots. In the most recent contest in the House, this chore was performed by auditors from five regional offices of the federal General Accounting Office. H.R. REP. 513, *supra,* note 94, at 12. If it is objected that what are essentially executive employees should not participate in the count of the presidential vote, then the court might be authorized to assign private accountants to the job.

[105] *Supra,* p. 5; note 30.

[106] All of these problems would be resolved by what one political scientist has pointed out to be the simplest and least controversial of all Electoral College reforms—eliminating the office of elector. Burns, *A New Course for the Electoral College,* New York Times, Dec. 18, 1960 (magazine), p. 10, at 28. President Kennedy proposed such a change as a Senator in 1957. S.J. Res. 132, 85th Cong., 1st Sess. The Kennedy plan is again pending in the Senate. See *infra,* note 117.

[107] See *supra,* note 95.

[108] The distinction may be difficult to make. Has an ineligible elector been "appointed"? When votes are rejected merely because the Houses disagree, has the state appointed electors? Questions of interpretation such as this must await an actual case.

[109] See H.R. REP. No. 31, *supra,* note 23, at 84–88; *cf., supra,* note 54.

[110] See State ex rel. Barker v. Bowen, 8 S.C. 382 (1876). Congress has given the District Courts jurisdiction of election disputes in which the sole question arises out of the denial of the right to vote on account of race, creed, color, or previous condition of servitude. The offices of elector, Senator, representative, and state legislator are excluded from these provisions, however, 28 U.S.C. § 1344 (1958). The provision has been held to bar federal jurisdiction over a contest in a primary election for United States Senator. Johnson v. Stevenson, 170 F.2d 108 (5th Cir. 1948), *cert. denied,* 336 U.S. 904 (1949). After the 1960 presidential election jurisdiction over a contest proceeding was refused by the United States District Court for the Southern District of Texas. New York Times, Dec. 13, 1960, p. 23, col. 1 (city ed.).

[111] In re Green, 134 U.S. 377 (1890). As to the variety of methods of appointment permissible, see McPherson v. Blecker, 146 U.S. 1 (1892).

[112] See Nixon v. Herndon, 273 U.S. 536 (1927); *cf.* James v. Bowman, 190 U.S. 127 (1903); see Wilkinson, *The Electoral Process and the Power of the States,* 47 A.B.A.J. 251, 252–3 (1961).

[113] Burroughs v. United States, 290 U.S. 534 (1934). The decision was based on the broad language of *Ex Parte* Yarborough, 110 U.S. 651 (1884), which did not distinguish between congressional and presidential elec-

tions in holding that Congress could legislate to preserve the rights of citizens that were essential to the continuance of the government. These cases may be distinguished from Walker v. United States, 93 F.2d 383 (8th Cir. 1937), *cert. denied*, 303 U.S. 644; *reh. denied*, 303 U.S. 668 (1938) in which it was held that a conspiracy against the right to vote for presidential electors could not be prosecuted under a federal statute making conspiracy to injure a citizen in his constitutional rights a crime. The latter case holds only that the citizen's individual right to vote is not protected by the Constitution, since it is subject to the control of the state legislatures. The power of Congress to protect the integrity of elections remains unchallenged.

[114] See *supra*, note 103.

[115] See HART & WECHSLER, *op. cit. supra*, note 102, at 892–893.

[116] *Id.* 20–21, 789–790.

[117] See S. 102, a proposal for "a commission to study and propose improvements in the methods of nominating and electing the President and Vice President"; S.J. Res. 1, a proposal for a Constitutional amendment to abolish the electoral college altogether in favor of direct popular election, including power in Congress to provide by legislation for the settlement of controversies; S.J. Res. 2, a proposed amendment to abolish the electors and to apportion the electoral vote among the candidates according to the proportion of the popular vote each has received; S.J. Res. 4, a proposal similar to S.J. Res. 2, with the proviso that if no candidate gets at least 40% of the vote a combined session of the House and Senate will choose the President and Vice President; S.J. Res. 12, a proposed amendment that would divide the states into equal districts in which each person votes for a district elector and for two electors at large; S.J. Res. 17, a proposal similar in effect to S.J. Res. 1, *supra*, with no provision for settling controversies and with some additional features S.J. Res. 28, a reintroduction of S.J. Res. 2, 81st Cong., 1st Sess., in the form in which it passed the Senate in 1950, a proposal generally similar to S.J. Res. 4, *supra;* S.J. Res. 113, a proposal embodying the Kennedy plan, *supra*, note 106. Similar measures have been introduced in the House. Hearings began before the Senate Constitutional Amendments sub-committee on May 23, 1961, New York Times, May 24, 1961, p. 13, col. 1 (city ed.). For a general discussion of the various proposals, see Margolin, *op. cit. supra*, note 99.

[118] The only measure presently pending which deals with the problems of contests has such a provision. S. 102, *supra*, note 117.

Mr. BAYH. Mr. President, I call to the attention of Senators the fact that, according to that law review article, there are only two States now in which the election contests are certain to be final within the period presently called for by the 20th amendment to the Constitution.

So we are really trading uncertainty for uncertainty. I do not like uncertainty, but I think the Senator from Tennessee hit the nail on the head when he said we are straining at a gnat rather than looking at the basic grievances we are trying to correct.

I appreciate the Senator from Nebraska's bringing this matter out. The reason I have been less than enthusiastic about being tied down to a specific date is that before a law is passed, we should call upon the judgment of those in this body and the other body and ask how recounts have worked out in their States.

I would like to point out at this time that in Alabama 4 weeks are permitted for a runoff. Our colleague from Alabama can tell us how well that has worked. I refer to the time before the runoff election.

In Arkansas it is 2 weeks. In Florida it is 3 weeks. In Georgia it is 2 weeks. In Louisiana it is 6 weeks. In Mississippi it is 3 weeks. In North Carolina it is 4 weeks. In Oklahoma it is 3 or 4 weeks. In Rhode Island it is 4 weeks. In South Carolina it is 2 weeks. In Texas it is 4 weeks. In Virginia it is 5 weeks.

So to suggest that runoff is not workable flies in the face of election history. That is how it has operated in these States. I do not think runoff is foreign to our purposes, although I do not think the likelihood of this ever happening is very great, as I said before.

Mr. CURTIS. Well, has there been an election under the procedure set forth in the Senator's proposal?

We have never held such an election.

Mr. BAYH. That is accurate.

Mr. CURTIS. Yes. So we do not know. Judging from what the Senator just read, some States would have as many as 5 weeks to settle a contest. I would hardly think that the runoff could be held within 3 weeks; would the Senator say so?

Mr. BAYH. I am sure the Senator was listening when our friend from Tennessee suggested that this provision could be established uniformly across the board—and I think it would be—by this body. So whether it was 5 weeks, 3 weeks, or 2 weeks would be up to this body. I think we could find a time that would be agreeable and workable. It has worked up to now in the States, and it has worked in other countries.

Mr. CURTIS. Then at this time the Senator is abandoning——

Mr. BAYH. In the last election in France, I should point out, there was a 2-week hiatus between the first election and the runoff. This is not foreign, either to this country or other nations.

The question is whether we are going to trade one relatively insignificant uncertainty for another relatively insignificant uncertainty which exists under the present law; and at the same time, as zeroed in on by the Senator from Tennessee, deal with three or four basic inequities and malfuntions that have in fact occurred under the present system.

Mr. CURTIS. No, I do not think having this country on dead center so far as its government is concerned while we hold a runoff is a trifling matter. I do not think it is trifling at all, compared to the procedure that could be taken along other lines to deal with the question of a contested election.

Mr. BAYH. Will the Senator yield at that point?

Mr. CURTIS. Because none of them call for a runoff. I think the Senator has the floor. I would like to ask him about some of the other provisions.

Mr. BAYH. I thank the Senator. I shall not impose further on his good nature.

Mr. CURTIS. The junior Senator from Nebraska refrained from asking questions after the Senator from Indiana said he would rather finish his statement.

Mr. BAYH. That is why I say I will not impose further on the Senator's good nature, but I hope in his statement he will speculate on what might have happened if there had been a change of less than 42,000 votes in the last election; also, if he cares to so speculate, as to how long it would have taken our colleagues in the House of Representatives to elect a President. I think it could have gone on forever.

Mr. CURTIS. I think perhaps one rollcall.

Mr. BAYH. We had one President elected after 27 rollcalls. What makes the Senator from Nebraska feel that it might not be 37, 47, or 57 this time? We are playing a guessing game, and I do not think——

Mr. CURTIS. No, no. It would not take as long.

I am not defending the present system for deciding the contest. I think the Senator has latched onto a proposal that is entirely separate and apart from that. They may be related, but it is not necessary that we abandon the principle of electing the President through State action in adopting what the Senator terms a direct election of the President, that we go on record as favoring minority Presidents down to 40 percent, and that we have two elections in order to deal with what defects may now exist in the method of determining the winner under our electoral system as we now have it.

Mr. BAYH. Does the Senator see anything in this report saying we are in favor of electing Presidents down to 40 percent?

Mr. CURTIS. Yes.

Mr. BAYH. Or that we will not elect a President with less than 40 percent?

Mr. CURTIS. Well, it is "at least 40 percent"; and the Senator spent a great deal of time talking about the evil of some President being elected but not having a majority of the vote.

Mr. BAYH. No, a plurality, if the Senator will recollect. I did not say a majority; I said a plurality, because we have had several plurality Presidents. It is when we have a President elected who did not have a plurality, as we have had three times, that the Senator from Indiana is concerned. The Senator from Nebraska is not concerned, I am sure, because there is a President in the White House now who had less than 50 percent of the popular vote; is he?

Mr. CURTIS. Well, I would be much more concerned if his opponent were there.

Mr. BAYH. I think that speaks for itself.

Mr. CURTIS. The Senator asked if I was concerned.

Mr. BAYH. The Senator is expressing concern over the 40 percent. But we have had several minority Presidents, of which the present distinguished occupant of the White House is just one.

Mr. CURTIS. I would like to ask the Senator some further questions about the Senator's proposal.

Mr. HRUSKA. Mr. President, before the Senator does that, will the Senator from Indiana yield to me just briefly?

Mr. BAYH. I am happy to yield to the senior Senator from Nebraska.

Mr. HRUSKA. It has been suggested that some uniform rule could be developed, and that we could solve these

mechanical defects, and that we have heretofore solved many more complex problems.

That issue was taken care of, I believe, when Theodore White was before our committee, on two scores. One had to do with recount, and the other with this uniform rule that would have to be applied.

Professor Freund was quoted by the Senator from Indiana to this effect:

If apart from fraud, recounts are called for, this is a sign that every vote counts. This is not a bad thing itself.

And, of course, here is the answer that Mr. White gave:

Mr. WHITE. Theoretically, you see, all of the proponents of direct elections are pure and theortically sound. It is very difficult to object to a proposition which on paper seems to be noble, but on the basis of my reporting the good professor's suggestion does not work. I have a dozen questions to ask the good professor. Who decides where and what we recount? Are we going to recount the entire Federal vote, all 70 million of it, or is some electoral commission here going to decide what we recount and what not? Are we going to recount only Oregon or are we going to recount only Florida? Who decides on recounts? Is it to be decided by the local authority, as it is right now? And the local authority decides we can squeeze a few more thousand out of this.

The good professor's theory sounds perfect to me, but it does not answer my reporter's questions. I am sorry I disagree with him.

That has to do with recounts. Now, what about a uniform rule? Mr. White had this to say about that:

If you are arguing for a Federal surveillance system of 180,000 Federal agents out surveying each precinct box, I think it becomes an almost integral part of your amendment. If the polls are going to be watched by the present party officials, the same kind of fraud will go on—I hope in a diminishing measure, but if we are going to be watched by the same kind of party agents as we have right now, then fraud remains. If you say that your proposition applies to Federal surveillance in every 180,000 precincts, you have a point.

There is where we start amending the Constitution and our system of government with a venegeance, because then no longer do we have a Federal Republic, but one monolithic Nation trying to decide a question of this kind.

Those answers that I read from Mr. White are going to be debated here at great length, and I suppose they will unfold as we go along. There is only one brief comment I would like to make to my distinguished colleague from Tennessee. He says the only way that we can achieve absolute equality is to give every citizen the same kind of voting power.

Mr. President, it is that very proposition I greatly oppose, because the small States, 34 of them, will lose voting power. They have voting power under the circumstances we have now, through the assignment to each State of a certain number of electoral votes, equal to the number of Representatives in Congress added to the number of Senators from each State. I say that I am not ready to let go of that concept, because it will mean that the small States of this Nation will be heavily penalized and discriminated against and degraded in their political influence. The crux of this debate, it seems to me, as we advance in it, will be whether we are ready to abandon the small States for the sake of giving each man a supposedly equal vote. Goodness knows, in the 34 less populous States, each of which would lose some voting power, that will be a heavy factor. It will also be a heavy factor in the minds of the State legislatures that will be called upon to ratify this amendment.

President Nixon was right in his February message on this point, and his shift of position did not alter the fact that one of the greatest objections to the proposed amendment is the difficulty—in fact, the great unlikelihood—of its being ratified by the States.

If that is true, the opportunity to reform our electoral system in a reasonable way will go by the board. It will be most difficult to formulate and get another amendment before the States.

That amendment, as the Senator has indicated, does not indicate that the present system of runoff is good. That can be corrected, and the discretionary power of the elector can be corrected. In fact, the office of elector can be abolished altogether and the results certified directly by each State.

As this debate unfolds, these problems will be more and more developed, to the point where I am hopeful the Senate will turn down the proposal, on behalf of something more sensible, more workable, and more acceptable.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I yield to the Senator from Tennessee.

Mr. BAKER. I thank the Senator for yielding, so that I may respond to the remarks of the distinguished senior Senator from Nebraska, especially the portion that alluded to my previous reference about a challenge to the concept of equality.

Mr. President, I reiterate, in reply, what I said earlier in this colloquy. One of the fundamental questions we must determine is whether States or people elect the President. For my part, I believe people should; geography should not, nor should 50 sovereignties.

I believe that no one—I reiterate, no one—nor did the distinguished senior Senator from Nebraska, challenge the concept that the only way to provide equality so that every man's vote counts the same as every other man's vote is by the popular election of the President and the Vice President.

I reiterate again: The only arguments I have heard so far, including that just put by the distinguished senior Senator from Nebraska, is that it is too difficult or risky or uncertain to provide equality; therefore, we should provide something short of equality. With all deferential respect to one of the greatest men in the Senate, the distinguished senior Senator from Nebraska, I disagree with that. I believe that equality is the fundamental matter in debate here and that the balance of our consideration is one of mechanics—that is, after we dedicate ourselves to the basic proposition that every man's vote is equal to every other man's vote, we must set ourselves about the business of trying, in our collective judgment and wisdom, to devise a statutory method for doing that in the least disruptive and most satisfactory way.

I have no doubt in my mind that we can do that and that we can have equality—that, indeed, we must have equality—of the vote of every man and woman in the United States, and that we must then find the least disruptive way—not a nondisruptive way, but the least disruptive way—to implement that.

I reiterate: I reject the idea, on the part of the junior Senator from Tennessee, that we can sacrifice equality of the vote on any altar—certainly not on the altar of difficulty in drafting legislative language. Once we have established the requirement and dedicated ourselves to the necessity of equality of the vote, then we set ourselves about the business of trying to find how best to do it.

That is why I again commend the distinguished Senator from Indiana for drafting Senate Joint Resolution 1, so that we create the principle of equality, further embed it in the fabric of the Constitution, and leave full discretion to Congress and to the President to decide by statute how we do the less difficult job of implementing it.

Throughout this debate—and it will be a long debate, I judge; throughout this debate—and it will be a heated one, I judge—we ought not lose sight of the fact that we are dealing with the most fundamental of all American rights, and that is equality. For my part, I will not sacrifice it for any other purpose.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I will be glad to yield in a moment.

I appreciate the comments of the distinguished Senator from Tennessee.

For the sake of continuity in the RECORD, I think it should be pointed out that the senior Senator from Nebraska, in quoting Theodore White's reference to Professor Freund—it is somewhat like Tinker to Evers to Chance—perhaps did not emphasize one very important part of this discussion, and that is that Professor Freund and Theodore White were talking about having the same type of policing done at the local level that is now being done.

The Senator from Indiana does not anticipate the need for some giant influx of Federal policemen in each polling place. But I think the Senator from Tennessee and the Senator from Indiana were trying to point out that if we have a system whereby each vote counts, then the incentive is going to be on the Republican precinct committeeman and the Democratic precinct committeeman to make sure that each one of those votes is valid. Presently they could not care less in some States. If you are going to carry Indiana by 165,000, there is no real incentive to watch it closely and cut it down to 65,000. Nor is there is an incentive to push it up to 300,000. I think the direct popular vote, where each vote counts, is the best way of guaranteeing close, accurate policing by the precinct official who is supposed to be doing this in the first place.

I do not anticipate any big influx of Federal officials into this area. I think it is going to be done by each State, and it is going to be done better than it has been done in the past.

I must say in supporting the Senator from Tennessee—who needs no support from the Senator from Indiana—that it would be a rather ironic chapter in our history if we fail to make this needed major electoral reform because the Senate of the United States does not feel that Congress has enough ingenuity to deal with purely mathematical and technical questions. How in the world can we say that we, as a nation, have enough capacity, know-how, ingenuity, drive, and foresightedness to land a man on the moon, when we cannot write a common, ordinary, everyday election statute?

PRIVILEGE OF THE FLOOR FOR STAFF MEMBERS OF COMMITTEE ON THE JUDICIARY

Mr. HRUSKA. Mr. President, I ask unanimous consent that Judiciary Committee staff members may have access to the floor during all the debate on the pending joint resolution.

The PRESIDING OFFICER (Mr. CASE). Is there objection to the request of the Senator from Nebraska? The Chair hears none, and it is so ordered.

Mr. CURTIS. Mr. President, I direct this chief sponsor of the proposal to section 2, which states—

The electors of President and Vice President in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature, . . .

What is included in the term "qualifications"?

Mr. BAYH. It is in the Constitution right now—the same language. We took that language from the Constitution, feeling that Senators would accept it again if it was in the Constitution once.

Mr. CURTIS. There is no question about that. I ask that as a prelude to my next question. It includes such things as age, does it not?

Mr. BAYH. I think that is accurate; yes.

Mr. CURTIS. Citizenship?

Mr. BAYH. That is accurate. Residency would be another.

Mr. CURTIS. Yes, residency. Are there any others? I imagine citizenship in its broadest terms would cover that.

Mr. BAYH. Age, residency, and citizenship. Also the ability to read and write, but, as to residency and age, that is now subject to a possible Supreme Court decision on the 1970 Voting Rights Act. I might point out that these will be matters that will really go by the board if the Supreme Court upholds the 1970 Voting Rights Act.

Mr. CURTIS. Suppose it does uphold the 1970 Voting Rights Act and some State chooses to permit, through its State legislature, 17-year-olds to vote, may it do that?

Mr. BAYH. Yes. I would suppose it could.

Mr. CURTIS. If another State chose not to have any citizenship requirement, may it do so?

Mr. BAYH. For what office?

Mr. CURTIS. Electors for President and Vice President.

Mr. BAYH. Yes; I suppose it could.

Mr. CURTIS. So that if a State wants to permit aliens to vote, they can vote and those aliens would be included in the adding machine tabulation to find out who was President and Vice President.

Mr. BAYH. They could do that with convicts on death row, I suppose, if they wanted to, and go down the list, but I do not believe that is going to happen. Does the Senator?

Mr. CURTIS. Yes; I think there are States in the Union that do not require full citizenship to vote.

Mr. BAYH. Well, that would not change any, would it?

Mr. CURTIS. Yes, it would. It would give an uneven contest, if here is a State that my party is expecting to carry in a big way, and it changes the rules so that more people can vote. Yet those same kinds of people are denied the right to vote in another State, and we end up with an uneven contest; is that not correct?

Mr. BAYH. Of course, there is nothing to prevent that from happening under the present rules, is there?

Mr. CURTIS. The difference is that they vote by States under our present program. The State determines who is eligible to vote, yet here we are committing 50 States to abide by the outcome of one adding machine tabulation, and at any time the several States can write their own rules so as to add their numbers to that computation.

Mr. BAYH. Except in the vital areas, as the Senator knows, Congress retains authority for uniformity——

Mr. CURTIS. Uniformity of what?

Mr. BAYH. The Senator knows—residency——

Mr. CURTIS. Just residency?

Mr. BAYH. Congress already has the power to act in relation to age and literacy. That question is before the Supreme Court right now for final resolution. So we may, in effect, already have a uniform law in these areas.

Mr. CURTIS. Did I not understand the Senator to say that if the 1970 Voting Rights Act is upheld by the Supreme Court, they all could go below that if they wanted to?

Mr. BAYH. Yes; that would be my judgment.

Mr. CURTIS. Yes, so it would be possible for States, with the exception of residency, to write their own rules which will result in a number of votes that they can cast that will go into a contest, where other States have a more restrictive voting requirement; is that not correct?

Mr. BAYH. Does not the Senator realize that although the States have flexibility to do what they please, so far as some of the State offices are concerned, we are talking about the election of the President, a Federal officer. Congress can, if this type of thing gets out of hand, set uniform provisions across the board.

Mr. CURTIS. As to what?

Mr. BAYH. For example, suppose the statute is——

Mr. CURTIS. There is no such language in the proposal. We have the right to set uniform requirements as to residency——

Mr. BAYH. Would the Senator please repeat his question?

Mr. CURTIS. I think I can restate it. Is it true that under the Senator's proposal as written, the States can determine who could vote, with the exception of residency requirements, and thus could have a greater input or "advantage" over the other States that had a more restrictive set of qualifications for voting?

Mr. BAYH. Any State that is willing to let 17-, 16-, 15-, 14-, 13-, 12-year-olds vote for its State legislature can also let these same people vote for President. The Founding Fathers showed great wisdom, I think, by incorporating that same criteria into the Constitution so far as voting for Congress was concerned. Thus I think the question has worked very well. We do not see any rash of people rushing on out to get a bigger input as to who should vote for Congressmen. I do not believe that will happen, because the average legislator is thinking about who will vote for him. I do not think we will lower the barriers as promiscuously as the Senate suggests.

Mr. CURTIS. The Senator from Indiana talked about 12-, 13-, and 14-year-olds——

Mr. BAYH. I was just anticipating the Senator's next question——

Mr. CURTIS. In New York State, or in California, if we took their rules, if we are closer to 18- and 17-year-olds, they can vote, there would be nothing ridiculous about that, but the Senator could add hundreds of thousands of votes. The fact remains that the Senator has written some rules here that would be uneven so far as the States are concerned.

My next question is this, Is it not true, to make the Senator's system work properly, we should have uniform qualifications for voting throughout the country?

Mr. BAYH. Well, with a very few exceptions, as I think I have said twice already, that is just about what we have right now. I, for one, would be willing to permit the States to have the leeway if the 1970 Voting Rights Act is affirmed by the Supreme Court. If that is upheld, then we will have established the right of Congress to set uniform age requirements, and to establish the 18-year-old age, and we can deny them the right to go down to 17. We have established the 30-day uniform Federal residency law. We have stricken from the books all literacy laws. The question as to whether a person is an alien, I do not anticipate that as being a significant problem.

Mr. CURTIS. What is the answer to my question, that in order to have the Senator's system work, we should have uniform qualifications for voters throughout all the States?

Mr. BAYH. Mr. President, I think to have this resolution work properly, it ought to have the provision in it that the Senator from Nebraska refers to there.

Mr. CURTIS. Mr. President, the Senator is evading my question.

Mr. BAYH. This was passed by the House and was given extensive hearings

by the House Judiciary Committee. It was gone over and over. We tried to walk a very delicate line between giving the States an opportunity to take into consideration the local customs and that type of thing and yet give Congress authority under the section referred to by the Senator from Nebraska.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BAYH. I yield.

Mr. CURTIS. We have had the high privilege of hearing a lot of oratory this afternoon about the equality of voting. We will hear a lot more in the weeks and months ahead in which we will be considering this measure. So, I want to ask the Senator if, in all seriousness, he feels that to carry out this proposal he should have uniform qualifications for voters throughout all States.

Mr. BAYH. Mr. President, I will be glad to answer the question again.

Mr. CURTIS. The Senator has not answered the question.

Mr. BAYH. I appreciate the Senator's perseverance. The second answer and the third answer will be the same as the first.

I think the measure deals with it very well. We have basic uniformity throughout the country and provide some flexibility for States. If it gets out of hand, we have the authority to impose the type of authority that the Senator from Nebraska says he supports.

Does that concern the Senator?

Mr. CURTIS. Very much so. I think that before the Senate passes on it and the State legislatures consider it for ratification, we should know whether we will have uniform voting requirements for voters throughout the country.

That may be a good thing. But I think that the forthright thing to do is to take a position on that so that we know what to expect.

Mr. BAYH. Mr. President, I will read this and we will let the RECORD stand.

It reads:

SEC. 2. The electors of President and Vice President in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature, except that for electors of President and Vice President, the legislature of any State may prescribe less restrictive residence qualifications and for electors of President and Vice President the Congress may establish uniform residence qualifications.

That is rather specific. I do not think there is much question about what that says. That says what the Senator from Indiana feels we need.

Mr. CURTIS. Mr. President, I will ask another question. I do not think that I got an answer to my other question.

I have the right to elicit from the chief sponsor of this proposal whether he feels there ought to be uniform requirements for voters in all 50 States to implement the type of proposal he suggests.

Mr. BAYH. Mr. President, I appreciate the perseverance of the Senator. I think I have answered the question. If the Senator feels that the answer is not the answer the Senator is seeking, that is another thing.

I am suggesting that we permit each State to set the same qualifications they set for their State legislature. We reserve the right to establish uniform residence qualifications. If the Voting Rights Act goes through, we have established literacy and age as congressional prerogatives in all elections. These two matters are satisfactory to the Senator from Indiana because he supported that act.

Beyond that, I do not know why it is incumbent upon Congress to go through all of these minutiae involving local and State customs that might be taken into consideration in determining qualifications for the State legislature.

I appreciate the concern of the Senator from Nebraska. As a former member of the State legislature, I must say that I think a lot of my former colleagues in the Indiana General Assembly were probably more concerned about the qualification of the voters to cast votes for them than they were about the qualifications of the voters to cast votes for the President.

If the Senator from Nebraska has any concern over the fact that there would be hordes of voters who would be qualified to vote for the President, I suggest that that same horde of voters would be qualified to vote for the members of the State legislatures.

Mr CURTIS. Mr. President, I never referred to any group of voters as a horde of voters. I have stood on the position that if we choose the President on one tabulation of voters, we should have the same requirements prevail in all sections of the country to determine who is eligible to vote.

The Senator from Indiana merely refers me to this language. I am not critical of him as an individual. But I do not take the view that the Senate or the people of the country generally cannot answer until after the Supreme Court rules that the Federal Government should impose uniform rules.

I will pass that and ask another question.

Mr. BAYH. Mr. President, I do not want to evade the question that the Senator persists in asking. I think I have answered it. I will try to answer it again.

I think that the language proposed in section 2 of the proposed constitutional amendment deals with the criteria imposed by each State. These criteria are the criteria applied to the most numerous branch of the State legislature. They are the same criteria that have been applied for almost 200 years in the election of Members of Congress.

In the area of age and literacy tests, the Senator from Indiana is perfectly comfortable with uniformity. I can see that if we let the 18-year-olds vote in one State and not in another, it would pose a problem.

Mr. CURTIS. Mr. President, I think it poses very much of a problem. It cannot be likened to the discrepancy under our present system. Certainly it cannot be likened to voters participating in their own States to elect Congressmen or a member of a State legislature. All voters participating in those elections are subject to the same rules.

Here we have a proposal for a method of choosing the President, and on the face of it different rules will be applied to different voters in different States on an uneven basis.

We do not need to get ridiculous and suggest that we are proposing that the 12-year-olds vote. Not at all. However, the life insurance rule, to which I referred a while ago, says, "If you are closer to 18 than you are to 17, you are 18." If the State of California adopts that rule, they would probably pick up votes that would be greater in number than the difference in some of these elections. I do not know how many votes it would involve.

Does the Senator from Indiana believe that it would be necessary under his proposal to have Federal registration of voters?

Mr. BAYH. No.

Mr. CURTIS. That disturbs me, because the right to vote must be preceded by registration.

If one State can adopt one procedure of registration and another State can be very, very lax in its rules of registration, it makes an uneven contest. In other words, the proponents of this measure have failed to distinguish this point about voting jurisdiction, where all the votes which are to be tabulated and counted, must have within that jurisdiction equality of voter qualifications and equality of registration laws because they are competing against each other. It is totally inconceivable that we would have before us a proposal suggesting that we choose a President by tabulating the total vote in one pool, one adding machine tabulation, if you choose, when the different States could have different rules to decide who was going to vote and they would have different rules, different methods as to who would register and how registration would be accomplished.

Mr. President, if you are going to have that all one jurisdiction, one voting arrangement, you must have uniformity. Before this debate is over I hope the proponents will tell us something about the national registration of voters that they propose. I think that is pertinent here.

Mr. BAYH. The Senator has not found one word in that measure that talks about national registration. The patience of the Senator from Indiana is not unlimited. If the Senator can find one word about national voter registration, I would be glad to have him do so.

Mr. CURTIS. The Senator knows there is nothing in there.

Mr. BAYH. Why does the Senator blatantly suggest the sponsors are for national registration? If the Senator is for national registration, let him offer such a proposal. But I understand he is not for national registration.

Mr. CURTIS. That is my point. The Senator is suggesting a nationwide contest without a nationwide set of rules as to who would vote or how they would register.

Mr. BAYH. Because the Senator feels there should be a national registration provision, I think it is unfair for him to suggest that I suggested it.

Mr. CURTIS. I did not——

Mr. BAYH. We could have the reporter

read what the Senator said. A moment ago the Senator said the proponents should discuss the questions about the national registration plan they are proposing.

Mr. CURTIS. No; the national registration plan to carry out what they have proposed.

Mr. BAYH. With all due respect, I do not think that will be necessary.

Mr. CURTIS. I think it will after the Senator thinks it over. I do not understand how any Senator would seriously contend that voters participating in the same contest to be decided by the same totals should not have the same ground rules in all the States. Therefore, I think the question is pertinent as to the thinking of the proponents of this measure.

The Senator has been very generous in yielding. I do want to say one thing; then I will yield the floor.

I hope it will not be understood by anyone in the country that we have on one side a direct election of the President and on the other side an evil system where individuals' votes count differently. What we have is a federal system of 50 sovereign States, and there is not an argument made here today for the direct election of the President, and each man having the same vote, that could not be applied to the election of U.S. Senators. There are Senators serving in this body who are here by reason of a few hundred thousand votes or very few total votes in their States. There are other Senators here who have the mandate of millions of people. That is part of our federal system. Just as the States have equal representation in the Senate and representation in the House based on population, our country has chosen a federal system and the counting of the votes for the election of the President is a blend of those two things. No man can insist on one man, one vote for the choosing of a President and thus wipe out the significance of the sovereign States and at a later time come in and defend equal representation of the States in the Senate.

That is why I have referred to the excitement that has been raised about a possible contest last election when Governor Wallace was in the race. Instead of dealing only with better and more modern methods of dealing with such a contest if no one gets a majority, we have before us a proposal to change the fundamental structure of the country, to wit, the abandonment of our federal system ending of the election of the President through State action. At the present time every State has as many electoral votes as has Senators and Representatives. That is our system. There has not been an argument made that that has not worked well. It has nothing to do with the method of how we determine the contest if no one receives a majority. We can deal with any questions involving electors if we keep them and the system of voting according to the way the States vote. It is not necessary that we change our basic system in choosing a President.

Mr. President, the distinguished Senator from Indiana has been very gracious in yielding to me.

Mr. BAYH. Mr. President, I have enjoyed this opportunity to share views with my distinguished colleague from Nebraska. I would like the RECORD to show I do not believe that my earlier remarks could accurately be described as being uncritical of the way the system has worked. The item about which the Senator from Nebraska expressed concern, the possibility that no candidate would receive a majority of the electoral votes on election day, is just incidental compared to the real problem that the people now do not vote directly for their President; they vote for electors who are free to ignore their vote. As the Senator from Tennessee and I described, all votes are not counted the same way, some are not counted, and some are cast for candidates not listed.

There is no need to pursue this matter at great length. We have discussed at considerable length our desire to strive for equality.

I wonder how the people of the Second Congressional District of North Carolina must have felt in 1968, particularly those who cast their votes for the present President of the United States, Richard Nixon. The only way one could vote for Richard Nixon in the Second Congressional District of North Carolina was to vote for the Republican elector. If a citizen wanted to vote for Hubert Humphrey, he could vote for that elector. If he wanted to vote for Wallace, he could vote for that elector. But if he were a dues-paying Republican in 1968, the only way he could express his vote for Nixon in that election was to vote for the Republican elector.

How would that person feel when he suddenly learned that the man he had voted for as the Republican elector had gone to the State capital and cast that vote for Wallace, totally disfranchising the Republican voters in the Second Congressional District of North Carolina?

I point that out as an actual malfunction of the system we have today. We do not have to resort to hypotheticals of what may have happened or what could have happened. We looked at the way the system now functions and found it wanting.

It is for that reason that I, the Senator from Tennessee, and the distinguished Presiding Officer of the Senate at this moment, the Senator from Oklahoma (Mr. BELLMON), who, I may point out, was one of the original, one of the charter members of the American Bar Association's Commission on Electoral Reform, have made our proposals. I am looking forward, hopefully in the near future, to hearing the Senator from Oklahoma describe the tortuous process that the Commission went through and the studies and processes that the Senator from Oklahoma, a former Governor of the State of Oklahoma, went through in his own mind.

The fact is that the direct election proposal is one, it seems to me, that embraces a broad range of party and philosophy and is geographically dispersed, for one basic reason. It comes closest to solving the problem which confronts us. It is not perfect, as I have said two or three times. It comes the closest to perfection, we think. It is the only one that gives the people the right to vote for their President and Vice President. It is the only proposal that counts each vote equally. It is the only one that guarantees that the candidate who gets the most votes in the election will win the election.

I yield now to the Senator from Tennessee.

Mr. BAKER. Mr. President, I thank the Senator for yielding.

On tomorrow, assuming I gain recognition, I intend to have further statements of my support of Senate Joint Resolution 1.

I think it is vitally important to face up to the problem that confronts the public and the need of fine-tuning our electoral system.

I think that it would not be amiss for me to reiterate what I said before. I hope we do not lose sight of the several considerations which are involved in this debate. There are several, not the least of which is the method of implementing the election of President and Vice President by direct popular vote.

I disagree with our distinguished junior colleague from Nebraska when he indicates, as I understood him, that Senate Joint Resolution 1 would destroy the federal system in the United States. I would point out that the several States now prescribe the method by which the electors will be elected and the electors in turn will elect the President.

Senate Joint Resolution 1 provides nothing as to whether the States provide for the certification of their returns to the State boards of election, the legislatures, or otherwise. It provides nothing with respect to national registration of voters or national uniformity of voting requirements; and, very properly, in my judgment, leaves it to this and future Congresses to decide the method of implementation according to their judgment at that time.

The point of the matter is that nothing contained in Senate Joint Resolution 1, in the judgment of the junior Senator from Tennessee, detracts in one iota from the nature and strength of federalism in the United States. The one immutable argument that I have not heard attacked today is that nothing else except direct popular voting for the President and Vice President provides equality of the vote of every man to that of every other man.

I think it is fundamental to this debate that we commit ourselves to the proposition that nothing will subvert the nature of equality in this field at this time.

I thank my colleague from Indiana for affording me the opportunity to make these random remarks from time to time. I look forward to continuing my participation in this debate as it progresses.

Mr. BAYH. Mr. President, once again I wish to express appreciation to the distinguished Senator from Tennessee for the enlightenment that he has brought to this debate. He is a long-time student of this problem, as I am. He expresses, in a very articulate and convincing manner, the real need. He also points out that, although some persons would suggest we are interjecting some foreign mechanism into the American electoral

system, in fact we are trying to make consistent with the rest of the elections in the country that part of the electoral process that is inconsistent.

I think we will be successful. We have had a warning. I hope we will heed the warning bell and take action.

I appreciate the contributions of the Senator from Tennessee, the Senator from Oklahoma, and other Senators who have helped and who will help in this matter. Because of their perseverance, I think, and I hope, we will be successful.

I yield the floor.

Mr. HRUSKA. Mr. President, one of the most distinguished witnesses in our series of hearings on the pending resolution while it was considered by the Committee on the Judiciary was Mr. Charles Black, Henry Luce professor of jurisprudence at the Yale Law School. He stated:

I think a case can be made for the proposition that this amendment, if it passes, will be the most deeply radical amendment which has ever entered the Constitution of the United States.

Mr. President, during the 91st Congress we in the Senate have considered many extremely important issues—ABM, our continuing presence in Vietnam, crime legislation, postal reorganization, tax reform, to name just a few—but not one of these is, in my judgment, as vital to the continued existence of this Nation as we know it as the issue we now take it—constitutional change in the manner in which we select our Chief Executive.

For 180 years our system of electing our Presidents has worked extremely well. In the main we have chosen wise and capable leaders, quite often great and prescient ones. It is no accident that this has come about. Our present electoral college method for selecting the President guarantees a leader who has a true mandate to govern; a man who has the majority of the votes in a majority of the States behind him.

The framers, in creating the college, sought an instrument which would give the States as well as the people a say in the choice of our Presidents, an instrument which would carry out the general Federal principle of the Constitution. Just how wise their selection was can be seen in the 46 times we have chosen the Chief Executive and the 46 times power has changed hands efficiently and peacefully. What other nation on earth can make that claim? Not once has a constitutional crisis arisen; not once has the legitimacy of the new Government been challenged. In large measure we owe our stable Government and our unparalleled prosperity and well-being to this smooth transition from one President to another; often from one of our great political parties to another.

There are those who claim that the present electoral college system is not the perfect or ideal method for choosing our Chief Executive.

To this I believe there is general agreement. I happen to be one who has suggested some changes in the college. For many years now I have joined with many of my colleagues in looking for an alternative to the winner-take-all method of electoral vote counting. Ten years ago I first testified on this question to the Senate Constitutional Amendments Subcommittee upon which I now sit. Since that time that subcommittee has earnestly sought to find a proper manner in which to amend the present system. Some of us have favored the district plan, others the proportional, others the automatic, while still others favor the plan before us today: direct election without any intervening electoral colege at all and without any intervening State entities.

I am certain that all those who champion one plan or another believe they do so with the best interests of the Nation uppermost in their minds.

But, in all seriousness and all candor, I must say that those who espouse direct popular election of the President are wrong if they believe this plan is best for this Nation. It is the most mischievous and dangerous constitutional amendment that has ever received serious consideration by the Congress.

To adopt it would be to set out on a vast uncharted sea, with no guarantee that the slightest political breeze might not capsize and destroy our ship of state. During discussion on this resolution I expect to have a great deal more to say concerning the dangerous consequences that adoption of this plan may have for this Nation.

In the Judiciary Committee report which accompanies this resolution, six senior members from both parties have included a minority report which is on each Senator's desk today. I urge each of my colleagues to read that report with special care and then compare it with the views of the majority. Which is the most persuasive? I earnestly believe that a fair reading of the entire document will convince many that the minority has carried the day.

Those who seek to alter our Constitution have the burden of proof to show that there is a legitimate need for change and that their proposed substitute is an improvement over the original. I do not believe that those who champion Senate Joint Resolution 1 today have successfully carried that heavy burden.

In our report we suggest that direct election of the President would:

Destroy the two party system and encourage the formation of a host of splinter parties;

Undermine the federal system by removing the States as States from the electoral process;

Remove an indispensable institutional support for the separation of powers;

Radicalize popular opinion and endanger the rights of all minorities by removing incentives to compromise;

Create an irresistible temptation to electoral fraud;

Lead to interminable electoral recounts and challenges;

Necessitate national direction and control of every aspect of the electoral process.

Each of these seven consequences of direct election seem to me to pose grave dangers to our system of government as we have it today. Many of us shall be most anxious to see if the supporters of direct election answer these indictments of their proposal. We do not believe that it can be done satisfactorily, just as we do not believe that under a system of direct election of the President, our federal form of government can survive. Doomsday language is not popular but sometimes it is essential. I believe that this is one of those times. It is impossible to overstate the case against direct election.

As one eminent scholar of jurisprudence told our committee—I opened my remarks with this quotation, but it is so important that I am going to repeat it:

I think a case can be made for the proposition that direct election, if it passes, will be the most deeply radical amendment which has ever entered the Constitution of the United States.

Mr. President, those who advocate direct election assume that our political system will remain basically unchanged if this resolution is adopted. That assumption is totally unwarranted. I believe that a completely different electoral system cannot help but affect profoundly the political institutions that have grown up around the present arrangement. We began with the electoral college system and the Presidency; our political institutions, customs, and traditions came later. Now to destroy the keystone is to remove the underpinnings from our entire political structure.

The proposed constitutional amendment, like the statement of the proposition itself in the minority report, is disarmingly short and succinct. On the surface the change is made to appear simple and reasonable. Direct election is touted as a panacea which will sweep away all the obsolete and antiquated features of the present system. It promises to erect a shiny perfection in its stead where the voters will have direct and final control over who occupies the White House through the simple instrumentality of the ballot box.

Those who oppose this fundamental change will seek to show the churning turmoil which will occur below the surface should this proposal be adopted.

As an American, I am deeply committed to preserving our present form of government against any challenge. As a Nebraskan, I am committed also to do those things which are in the best interest of my State. Direct election would, in my opinion, lead to a new form of tyranny which would number Nebraska and other less populous States among its victims. Thirty-four States and the District of Columbia—more than two-thirds of the primary governmental jurisdictions in this Nation—would be adversely affected should direct election be approved. I urge my colleagues to pause for a moment and consider whether this resolution is in the best interests of this Nation and their States. I believe their answer must be negative.

In addition to all the problems which could be created by the adoption of the direct election amendment, there is one very practical consequence which should

be considered. That is the very real likelihood—in fact, I would say virtual certainty—that direct election would never be ratified by the requisite number of States.

After Congress has approved any amendment, the legislatures of three-fourths, or 38, States must ratify it. There are in this Nation 99 State legislative bodies—every State having two except my own State of Nebraska, which has only one. Therefore, just 13 houses of the State legislatures which refuse to approve the amendment could end any chance of electoral college reform. It is not unreasonable to think that many more than 13 would fail to register their approval, especially in light of the statement made earlier in these remarks that 34 States and the District of Columbia would lose voting power under the direct election proposal.

Would it not be far better to use this time to work on and approve a revision of the present electoral college system which has a substantial chance of ratification? Those of us who are serious in our desire for reform believe that such a course would be more useful and more prudent.

It could be accomplished, Mr. President, by first abolishing the electoral college, or at least by removing from the electors the personal discretion now vested in them as to the candidates for whom they can vote; and second, by devising a different system for resolving college deadlocks, perhaps substituting a joint session of Congress instead of giving each State one vote in the body at the other end of the Capitol.

As I mentioned earlier, I intend to have a great deal to say before the Senate consideration of the pending proposal is concluded. At a later time, I shall expand on the points I have alluded to today. Those of us who perceive a grave danger in this proposed amendment intend to bring before the Senate a great deal of evidence and learned opinion to support our case. It is my sincere belief that, in the end, direct election will be rejected.

Mr. President, let me conclude this opening statement by saying that before we reject the electoral college and 180 years of testing, adaptation, and stability, let us make certain that what we erect in its stead is an improvement on the old. Direct popular election of the President is not an improvement; it could be a disaster.

Mr. President, I yield the floor.

Mr. BAYH. Mr. President, I have listened with great interest as the distinguished Senator from Nebraska described the opposing position expressed in the minority views in the report of the Committee on the Judiciary. I, too, am hopeful that Senators will look at the majority and minority views and base their judgments on the relevant arguments presented therein.

I thought it might be helpful if the distinguished Senator from Michigan (Mr. GRIFFIN), who had the foresight to conduct a poll of State legislators, would let us have the benefit of his thinking relative to what the legislators might do.

I must say that I hope the Senate will not base its judgment on what any one Senator or, indeed, more than one Senator might anticipate a State legislature might do or not do on this matter. It is rather risky business to base our judgment on something that certainly is not scientifically proved, if there is any evidence of proof to the contrary. I do not want to interfere with what the Senator from Michigan has done, but he might give us some background on what he found when he took the leadership in this field and polled State legislators.

Mr. GRIFFIN. Mr. President, I would respond to the Senator from Indiana in this way: It is true that during several weeks preceding August 7, 1969, my office did undertake to conduct a survey among State legislators in 27 States. We selected 27 States having the smallest population, States which had the most to lose through the adoption of the direct election proposal. We put to each State legislator the question whether he, individually, would vote in his State legislature to ratify a direct popular election proposal to amend the Constitution. We also asked, whether he would vote to ratify a proportional plan or a district plan, which were and are the other two major alternatives.

I must say that the junior Senator from Michigan had been reluctant to support the direct election plan because he had assumed prior to the survey that the direct election proposal would not have a chance for ratification.

I feel strongly that the present system of electing the President of the United States does need reform. Prior to the survey I leaned in the direction of favoring the proportional plan because I felt that it would stand a better chance of ratification by the several States.

Mr. President, I ask unanimous consent to have printed in the RECORD a summary of the results of the questionnaire which I sent to each State legislator in the 27 States.

There being no objection, the questionnaire was ordered to be printed in the RECORD, as follows:

RESULTS OF ELECTION REFORM QUESTIONNAIRE

[Percent]

State	Legislators responding	Direct election				If direct election fails, legislators would favor					
		Individual support [1]		Predicts legislative approval [1]		Proportional plan			District plan		
		Yes	No	Yes	No	Yes	No	Undecided	Yes	No	Undecided
Alabama	32	60	40	49	45	62	27	11	33	31	36
Alaska	43	69	31	57	23	35	50	15	30	55	15
Arkansas	52	75	23	59	34	61	12	27	50	23	27
Delaware	41	63	37	50	42	66	17	17	25	12	63
Georgia	44	56	39	41	50	49	29	22	54	24	22
Hawaii	34	92	8	92	8	69	12	19	38	19	43
Idaho	50	47	53	27	70	38	30	32	66	21	13
Louisiana	25	79	15	67	22	56	16	28	62	8	30
Maine	43	63	37	52	42	43	29	28	54	26	20
Maryland	48	70	30	51	35	62	24	14	36	34	30
Mississippi	53	59	40	47	47	55	35	10	38	30	32
Montana	63	65	34	57	32	53	36	11	42	28	30
New Hampshire	41	69	31	48	41	62	20	18	37	27	36
New Mexico	42	70	30	67	31	50	26	24	39	43	18
Nevada	50	73	27	67	30	83	7	10	14	43	43
North Carolina	36	58	42	30	60	53	27	20	65	28	7
North Dakota	51	37	60	20	72	44	31	25	46	29	25
Oklahoma	29	53	47	35	47	47	24	29	50	21	29
Oregon	52	66	32	54	36	42	37	21	52	29	19
Rhode Island	37	81	19	78	18	71	16	13	33	38	29
South Carolina	47	62	35	51	43	58	28	14	43	34	23
South Dakota	55	66	34	50	45	42	30	28	52	20	28
Texas	43	60	38	53	40	63	23	14	44	25	31
Utah	40	69	29	64	31	67	20	13	28	33	39
Vermont	52	77	23	62	30	59	25	16	34	34	32
Virginia	54	55	43	39	50	61	32	7	44	35	21
Wyoming	54	55	43	37	55	53	32	15	27	47	26
Total	44	64	34	50	41	55	26	19	43	29	28

[1] Where total of those responding to direct election questions does not equal 100 percent, the difference represents those legislators who were undecided.

Mr. GRIFFIN. Mr. President, to my surprise and great interest, there were only two States in which less than a majority of those responding indicated they would ratify the direct election plan; and furthermore, to my surprise and great interest, I found that the proportional plan and the district plan alternatives enjoyed less support among the individual State legislators than the direct election proposal.

So among the three, at least at that particular stage in debate in August 1969, it appeared clear to me that if reform were to be based on any of the three proposals, the best chance to achieve ratification was through the route of the direct election plan rather than approval by Congress of either the proportional or the district plan.

I have no reason to believe that the attitude of State legislators has changed since August 1969, although I recognize that a considerable period of time has elapsed.

I hope that this information will be of assistance during the debate.

Mr. BAYH. I appreciate the Senator's permitting me to impose upon him. As I stated in my earlier, prepared remarks, the Senator from Michigan has made a significant contribution toward putting this question in proper perspective. We can all speculate—indeed, the Senator from Michigan would be the first to admit it, as I am sure he has mentioned—but there is really no way of knowing how legislators who are to be elected in 1970 will vote in 1971. I have had 8 years' experience as a State legislator, but I do not think State legislators are a unique breed. I think they pretty well represent their constituencies. Although the Senator from Nebraska (Mr. HRUSKA) would be the first to take issue with me, I just cannot conceive of a State legislator making such an important judgment on this question by some sort of mathematical formula. When 80 percent of the people of a State feel that something ought to be done, I think there is a reasonable chance that the State legislature will respond, just as I think there is a reasonable chance that this body will respond, as the House has already responded, because this is an idea whose time has come.

I should like to quote a statement made by our lovely lady colleague, who has put this proposal in exactly the right perspective. The distinguished Senator from Maine (Mrs. SMITH), who has been a longtime supporter of direct election, said about what might happen if this proposal is agreed to:

> The foremost objection to the popular election vote proposal is that under it the small population States like my own State of Maine would lose proportional power to the large population States.
>
> My answer to that argument is that it is the will of the people—the will of a majority of the voters—rather than the proportional power of any State that is important and that should prevail—the people should not be secondary and subservient to the States.

I think the Senator from Maine put it very well. Interestingly enough, if we go down the list of some 40 cosponsors, we find the names of both the Senators from Maine, both the Senators from Rhode Island, one Senator from Alaska, one Senator from Hawaii, both Senators from Montana, and one Senator from New Mexico. There does not seem to be any indication that they are concerned about supporting direct election while being from a small State.

I respect the judgment of anyone who looks at the matter differently. But I think that basically most Senators will look at this situation from the best interests of their country and not try to figure out whether they are losing a proportionate share of their influence in the electoral college, particularly when one takes into consideration the very real and practical consequence of the unit rule and how this is a tremendous advantage to the large States. I think that sometimes the large States have an advantage and sometimes the small States have an advantage.

I do not know whether we have to play this electoral roulette business and hope that everyone comes out well.

I must say that as I listened to the comments of the Senator from Nebraska, my recollection of history is a bit different than his. I think that we can look back and see some malfunctions and constitutional crises that developed under this system. We can see some very near misses.

Thank God for our Founding Fathers and we are grateful for their wisdom, but it was not infinite wisdom. And if there was one area in which they did not have foresight, it was in the way in which they drafted the electoral college system. It is not functioning today in the way in which they intended to have it function.

Although the Constitution was not finally concurred in by the requisite number of States until late in the 18th century, by 1804 we had the 12th amendment to the Constitution which was the direct result of the constitutional crisis brought on in 1800 by the very electoral college which, according to the Senator from Nebraska, has never subjected us to a constitutional crisis.

The John Quincy Adams-Andrew Jackson race in 1824, in my judgment, came very close to presenting us with a constitutional crisis.

I do not see how we can call the Tilden-Hayes matter anything but a constitutional crisis. We ended up by choosing a man as President who had fewer votes than his opponent.

In 1948, if there had been a change of 30,000 votes, we would have sent to the White House a man with an electoral majority but with 2 million fewer votes than his opponent.

We are all familiar with what happened in 1968.

If we take the situation in 1948 and apply it to 1972 or 1976, I am deeply concerned that we would have chaos that would be unparalleled in this country. We cannot expect the President of the United States to be an effective leader if he had 2 million votes less than the man he was running against.

Those are not isolated examples of what could happen. Those things very nearly did happen. Those are numbers that actually did result. We have had what I feel were malfunctions of the system which I alluded to in my earlier remarks.

As the Senator from Nebraska knows, I strongly disagree with his feeling that this would destroy the two-party system. Frankly, I think it would strengthen it. It is the only plan that would guarantee to the Democratic or Republican precinct workers that they should get out and hustle the votes because the votes will count. Sometimes they do not count. Sometimes they count for the person for whom the voters did not vote.

I think the best way to strengthen our two-party system is to assure the men and women who work at the grass roots level that the direct election system does bear fruit and that they should go out and get the votes.

I will not go down the point-by-point indictment given so eloquently by the Senator from Nebraska. However, later we will have a chance to see what the historians say happened in Philadelphia. I was not there and no other Senator was there. We do not know.

Most historians say that the electoral college had nothing to do with the "grand compromise." As the Senator from Tennessee has pointed out, the "grand compromise" established the Senate and the House of Representatives. It had nothing to do with the electoral college. The matter of fraud, recount, challenges, and national control were dealt with earlier.

Rather than delay the Senate any longer at this time by going over the same ground a second time, I will wait until later.

Mr. HRUSKA. Mr. President, the Senator from Indiana and the Senator from Nebraska are in agreement on one point. There will be ample time during which we can knock down each other's arguments.

I would imagine that if the arguments advanced on both sides are all knocked down, we would find that those who want very drastically to change our Constitution had not met their burden of proof.

With reference to 1804 when the 12th amendment was adopted, it must be said that that amendment left untouched and unchallenged and fully effective the assignment of a given number of electoral votes to each State. Indeed, I find it striking that, even though there was an unanticipated tie in the electoral vote in 1800, no one dared to suggest in the discussion over the 12th amendment that the concept of electoral votes be destroyed. The 12th amendment is striking proof that the electoral system can be intelligently reformed when necessity requires it, without destroying the system altogether.

Now then as to the idea that State legislatures are not judged by a strict mathematical formula of approval or disapproval on the pending amendment, let me suggest this very simple statistic. It is something that is going to interest every one of the legislatures of the less populous States. Each one of the less populous States has a larger agricultural orientation than industrial. Some of the larger States, like Indiana, have a vast orientation toward the agricultural votes of their State.

Last Saturday, a preliminary report of the Bureau of the Census was pub-

lished. It showed that the farm population in 1960 was roughly 15 million people. The report for 1970 shows 10 million people—a reduction of 5 million people or 33⅓ percent.

Are we to think that the legislatures and the legislators of those States—and we can just imagine that tremendous bread basket area in the Midwest—are going to look at those figures and say, "We will concede to these heavily populated States with metropolitan areas—conceivably not more than a dozen of them—the power to overrule any semblance of choice we have?"

I think not.

They have a little leverage power now. Nebraska has a total of three Representatives plus two Senators. It is not enough to dominate but it is enough to neutralize and contain in a reasonable way any excesses that might be practiced upon the less populous States by the more populous States. That would not appeal to those who seek strict mathematical equality; but it appeals to us as a matter of survival.

We know the relative position of the farm bloc 25 years ago and 30 years ago, and the position now. It used to be big and it used to be influential; it no longer is. We who come from States comprising the farm bloc no longer have the power we used to have. It is a battle now to get a sensible farm plan and have it adopted, particularly in the other body. The only way we have been able to contend with the situation in a reasonably effective way has been to adopt such features as appeal to metropolitan areas such as food stamp plans and the free distribution of food to the poor, the oppressed, and the hungry and to say, "We will do this much for your people but you will have to do these things which have a direct impact on the agricultural population in order that that segment of our Nation can continue to remain economically feasible."

That is the only way we have been able to do it. Given the impact of the heavily populated areas, this minority will be shunted to one side and its impact destroyed. That is not the only minority. There are many minorities in America: the poor, the black, the yellow, the red. Mr. Richard Goodwin testified most eloquently on that point. I know of no one who has been more eloquent than he in speaking on behalf of minorities.

The impact and the influence of minorities will be heavily, heavily handicapped and discounted and in some places totally obliterated if the mass monolithic direct election process is approved.

Mr. BAYH. It is interesting to see that the Senator from Nebraska used Richard Goodwin to support his contention when Richard Goodwin is arguing that the large States have the advantage under the present system; but the Senator from Nebraska is arguing that the small States have the advantage under the present system.

Mr. HRUSKA. No. Mr. Richard Goodwin said that the minorities are virtually snuffed out.

Mr. BAYH. Would that suggest that when an expert agrees with you he speaks the Gospel but when he reaches another conclusion he is no longer accepted?

Mr. HRUSKA. That is poetic license in which all debaters engage. The Senator from Indiana and the Senator from Nebraska are no exceptions to that rule.

Now, I wish to turn to the so-called poll of the State legislatures taken by the Senator from Michigan. I have before me an analysis of the poll that was prepared for me, and I shall read it in the RECORD. I wish to call attention to some of the points in this analysis.

I understand the Senator did ask that the poll be printed in the RECORD.

Mr. GRIFFIN. That is correct.

Mr. HRUSKA. This analysis was prepared by a member of my staff in whom I have great confidence and I have high regard for his integrity and honesty in these computations. If there is anything in here that is in error, I will make corrections on the floor of the Senate.

My analysis indicates that the national mail poll was sent to 3,943 legislators in 27 States. Responses were received from 44 percent of them. Of those answering, 65 percent, or a total of 28.2 percent of those polled indicated they favored direct popular election.

In weighing the value of the poll in each of the 27 States, it must be noted that the percentage of legislators who responded from each State varied tremendously. It ranged from a low of 25 percent in Louisiana to a high of 55 percent in South Dakota. In 16 of the 27 States less than 50 percent answered. In no States were the responses from legislators favoring direct election high enough to establish that the State would approve direct election.

We can extrapolate and conjecture and say that so many went this way and so many that way, but the figures are the facts to which I advert now.

This poll does not establish the existence of a groundswell of support for direct popular election. The percentage of any State legislature actually "voting" for direct election never exceeded 41 percent. That was in Montana. Vermont followed closely with 40 percent.

What kind of basis is this upon which to base the conclusion that legislatures would be for direct election? Why, in this body, when we do not have 50 percent, we suspend operations until we get 50 percent to continue operations. I think that example would be well followed in this instance.

Responses from five other States showed that more than one-third of the legislators favored direct election. Between one-fourth and one-third of the legislators in 13 States were favorable, and less than one-fourth were favorable in the other seven States polled. A State-by-State breakdown has been placed in the RECORD by the Senator from Michigan.

There was no breakdown of the responses by the houses within a State; that is, between members of the lower house and the upper house. That is very important. There could be a 90–10 break in the composite legislature but if they voted separately, that breakdown could be very important. I do not know what it would show but we should consider it in this composite picture.

The legislators in seven States predicted the amendment would not be ratified by their State: Georgia, Idaho, North Carolina, North Dakota, Oklahoma, Virginia, and Wyoming. In three other States, fewer than 50 percent of those answering predicted victory: Alabama, Mississippi, New Hampshire.

The only other recent poll was conducted by the UPI, May 12, 1969. UPI interviewed legislative leaders in all 50 States. The result, in several cases are in direct conflict with the Griffin poll. UPI listed the following States as unlikely to approve direct election while the Griffin poll showed they were likely to approve: Alabama, Arkansas, Utah. The Griffin poll showed opposition while UPI showed a liking for direct election in North Dakota and Oklahoma. UPI listed Nebraska and Arizona as unlikely to approve direct election. Senator GRIFFIN did not poll those States.

I want to say that in the State of Nebraska the legislature has gone on record very overwhelmingly against direct election. The majority party of the State of Nebraska, hopefully to become the majority party in this body next January, held a State convention last Saturday and overwhelmingly opposed the idea of direct election. They understand full well what is here involved—not only a throwing to the wolves of the voting power of the less populous States, but also the idea of losing a very great part of their present vote.

I make these remarks not in a personal way at all, but as an analysis of figures that have been compiled. I am sure that in due time additional polls will be taken, perhaps too late for the purposes of debate, but I think these polls should be the subject of a little cogitation and thought and analysis and criticism and should well be explored before we accept the conclusion that a predominant number of States are in favor of this proposal.

Now I am happy to yield to the Senator from Michigan who, I am sure, has some telling points to make.

Mr. GRIFFIN. I do not know that that is the case. I thank the Senator for yielding.

Concerning the statement made by the Senator from Nebraska on the survey—and those facts are obtainable from an examination of the report and a summary of the results—I would say to the Senator from Nebraska that a return on any questionnaire survey of 40 percent is an extraordinarily high return. I have often heard that if a Member of Congress or a Senator receives a 15-percent response to a questionnaire sent out to his constituents it is considered very high.

Of course, I would be much more satisfied and pleased with the survey if every one of the State legislators had responded. In evaluating the results, I think it is appropriate to point out that we did not get a 100-percent response. Nevertheless, I do not think the results can be easily discounted because the percentage of return was 40 percent, or 35 percent, in this or that State.

As I indicated earlier, I sent out the survey, believing, without any basis, that the so-called proportional or perhaps the

district plan would stand a better chance for ratification by the legislatures of the several States than would a direct popular election proposal.

In his comments the distinguished Senator from Nebraska did not touch on the fact that the survey does reveal, in an interesting way, that there is more support, among those who responded, for the direct popular election plan than for either of the other two proposals.

I could not avoid the conclusion, looking at the results of the survey, that if we are to have election reform, and the choice is to be among those three alternatives, we stand the best chance of achieving reform by approving the direct popular election proposal.

Mr. HRUSKA. I could not quite agree with that last suggestion and conclusion by the Senator from Michigan, and I will tell the Senator why, frankly. A little while ago a statement was made that there was no division between the two Chambers of the legislature. That further dilutes what is already a skinny basis on which to form any conclusion. Normally, 40 per cent is a very high response, especially on a rank-and-file basis. We have heard of Professor Gallup and others taking 13 or 14 percent and then extrapolating it from that. That was done in England, and they got "fouled up" on it, and they did not quite get the drift of things, to the delight of Mr. Heath.

But when we are representing people in a representative capacity and when there is no known alliance between those in one House and those in the other House, each of which must vote separately, a great deal of doubt is cast onto the picture. There is no doubt about that.

There is this further element which is going to come out very soon, because when the dangers that led to Professor Black's conclusion—the conclusion he reached and articulated in the course of the hearings—becomes known to the legislatures—the seven grounds upon which the minority views are predicated—I have an idea that when that concept is coupled with the loss of voting power, with the likely destruction of the political party system in the country, with the disappearance of one of the two remaining characteristics of a federated republic concept, when all those factors sink into the consciences and thinking of the legislatures, and they hear from their voters, the outcome will be a resounding "No."

I might observe that there are only two vestiges, two traces, two evidences of the federated system. The Chamber in which we sit, which houses 100 Members of the U.S. Senate, is one. The electoral college is the other. Given the approval of the direct election amendment, there will be only one, because the election of a President by that system will destroy any role of States as States in the election process.

All the other Federal institutions having been taken away. Not even the States can say how they want their legislatures composed. We were not guilty of that. A body of nine men down the street did that. No longer is there intrastate commerce; it is only interstate commerce, because those words and clauses have been defined as anything which affects interstate commerce, and there is not anything that does not affect interstate commerce.

The list is long, but the process of erosion and the process of destruction of the federated system is almost complete. The only two aspects that we have that are recognizable, that are identifiable, and that are so fundamental and so important are the electoral college and the Senate of the United States.

Mr. President, already the literature has been printed and the declarations by those interested in politics have been set into motion—the Senate is next.

In the hearings on the one-man, one-vote rule and the resolution for a constitutional convention to consider that subject, in the legislature of the great State of Illinois, a man representing a large segment of the political picture in that State frankly said, "Yes; when we get through this and see to it that the legislatures are what the Supreme Court said they should be, and not what each sovereign State determines that they should be, the next target is the U.S. Senate."

Mr. President, if and when that becomes a reality, and we face the type of debate which we are commencing today, then I do fear for the durability of this Republic. Then there will be dominance of the national picture by the populous States, and they will number a dozen, more or less. The rest of the States can resign themselves to the proposition of taking a highly inferior role, and one that will degrade their standing and their rights, and will represent a total obliteration of consideration, even in the limited fashion which they now receive.

I say again, the weighting of the electoral votes assigned to each State does not give them control or a veto; it gives them just a little assistance, so that collectively, in the Mississippi Valley, for example, it would have some slight effect on the voting power of that vast area which has so many common interests.

If the small States are deprived of that, then indeed they will be consigned to the tender mercies of those States which, even now, under our present system, sometimes rush pellmell into situations that might subserve their respective States, particularly in the matter of garnering votes, but which, on a national basis, are not good, and which could even portend disaster, because, in the long run, economic losses cannot be defined by legislation. Too many unsuccessful attempts have been made in that direction.

So, Mr. President, I say, as we proceed in this debate, I hope these points will be considered laboriously. I hope the debate will not be tedious, but will be thorough, and I feel satisfied that when the scales are measured out, this body will not follow the path of discarding one of the most fundamental, deeply rooted, and highly necessary elements in our federated system of constitutional government as we have known it from the outset.

Mr. BAYH. Mr. President, I have listened with a great deal of interest to my friend from Nebraska as he has pleaded the cause of the farmers of this country. He is looking at one of them. I have had dirt under my fingernails and other ingredients of farm life on my clothes, and I am a little bit familiar with the plight of the American farmer.

I suggest to the Senate that for us to think that the farmer is being saved by the electoral college system totally ignores the fact of what has been happening to the farmer under the electoral college system.

Come, let us stand shoulder to shoulder, I say to my colleagues from Nebraska and others who are concerned about the plight of the farmer in America, but let us not rely on such faulty evidence as would suggest that the present presidential election system is any safeguard for the farmers of America. The rural economy of this country is going right down the drain, but that fact has no relationship at all, I say to my friend from Nebraska, to the type of electoral system we have been using.

If the electoral college system is the savior of the farmers of America, with friends like that the poor farmer does not need enemies.

What we are talking about is an entirely different type of thing. I share the Senator's concern that we not ignore the vast reaches of this country which provide the sustenance for America; but I must say I wonder just how much influence they really have under the present system.

The Senator from Nebraska speaks eloquently of the fact that, at the rate we are moving toward large metropolitan areas, before long a dozen or so will be able to control the country and elect the President.

Right now, as the Senator from Indiana reads the 1970 Census figures, 11 States, under the unit rule, can indeed elect the President of the United States, and all a candidate has to do is carry each of those States by a handful of popular votes. It does not have to be any broad mandate. If you carry those 11 States, theoretically, by one vote each, your man is elected President of the United States. This is so even if the Nevadas, the Utahs, the Nebraskas, the Arizonas, the New Mexicos, the Idahos, and the Montanas all vote the other way.

What sort of a voice does the farmer in those areas really have under the present system in electing his President? Why is it that in the last election campaign, the major candidates did not go to Omaha, Nebr., with its 380,000 people? They all went to Oakland, Calif., with its 380,000 people.

It is obvious why they went to Oakland and did not go to Omaha: Because they were after those electoral votes. It did not make any difference how many people lived there; but they thought, If you can change a few votes in Oakland, you are not really dealing with 380,000 people, you are dealing with those 40 electoral votes.

They have done this time and time again. There is Topeka, Kans., with about 110,000 people. In the last election, none of the major candidates went to speak in Kansas. They did go to Battle Creek, Mich. They did go to Springfield, Ill., Canton, Ohio, Lancaster, Pa., and

Rochester, N.Y., each with 110,000 people.

The answer is the same. I ask the Senator, Why do we not want a system, why do we not urge a system whereby, if you live in a hometown that has 110,000 people, or 380,000 people, or a half million, the candidates will go there because there are that many people who live there? Why do we have to interject the artificial factor of electoral votes?

When I was in Anchorage, Alaska, last summer, I was approached by the democratic floor leader of the State senate, a very fine young man.

He said, "Senator BAYH, I want to tell you frankly that I have followed your proposal very carefully, and I want to tell you that when that direct popular vote thing gets up here to Alaska I am going to have to be against it."

I asked, "Why is that?"

He said, "We would lose our vote. We would lose our influence."

I said, "I do not want to step on your toes, but how much influence do you now have?"

He asked, "What do you mean?"

I said, "When is the last time we had any candidates who were so interested in your influence that they came up here?"

Of course, he said, 1960, when Richard Nixon came up there.

I repeated to him what Theodore White, whom we have been quoting so profusely here today, said in his book. He said that Nixon would have been elected in 1960 if he had not gone to Alaska, but instead had campaigned around Cook County.

But we do not know. We are playing a numbers game, and do not gain a great deal from it. There are some instances when small States can have great advantage; there are other situations where the large States can come in together and elect the President of the United States. I must say I think we are going to find more patronage, more campaigning, and all those things in the more populous States as time goes on.

I think we must not overlook that what is important in this country is not political advantage, but people. We now have a system which largely ignores the people, and that is why I hope this measure will be successful; because then, instead of being concerned about State boundary lines, we will be concerned about the people, where they live, and what their problems are, and will not always be thinking about that angle of how to be successful in getting a few more electoral votes. Instead we will really be concerned about the problems of the people who live in the various areas.

As I have pointed out—I do not think the Senator from Nebraska was here, but it will be in the RECORD—it was interesting to me, while sitting there listening to those hearings, to have one very learned individual come in and suggest that the present system ought to be kept sacrosanct because it protects the large States that have an advantage, and to have the very next fellow, equally expert, come along and say he thinks it ought to be kept intact because it protects the interests of the small States.

I think it is a compounding of that irony when my friend from Nebraska quotes Richard Goodwin to sustain one of his points, because Goodwin is one who is arguing contrary to the Senator from Nebraska. Unlike the Senator from Nebraska, Goodwin feels that the large States have an advantage.

I do not know whether Goodwin is right or our distinguished friend from Nebraska is right. But I say that if we are really worried about equity, duty, justice, and equality, we are going to wipe away all the disadvantages. We are going to see that each vote counts one time, and one time only, and see to it that the man who wins is the man who gets the most votes; and the only system that guarantees that result is direct popular election.

I want to say one word in defense of the Senator from Michigan, although after listening to him, I do not think he needs any defense. I must say his poll includes the sort of mathematics we need. His poll is one of the most sophisticated polling efforts I have ever seen, especially when compared with some of the polls sent out by some of our brothers here or over on the other side. The Senator from Michigan was obviously concerned about what those legislators felt. He gave them the alternative solutions. Perhaps a 40-percent return does not speak as well as it should for direct election. But the Senator from Nebraska, as I recall, has been supporting the district plan. That fares much worse in this poll. In fact, I have not been out of the State legislature too long to be unsympathetic to State legislators. However, we are in the U.S. Senate now, and the Senator from Nebraska suggests that there are those who say that now it is the Senate's time, the Senate is next.

But I wonder whether there really is any place for the U.S. Senate if we make our final judgment as to whether there should be a constitutional amendment or not by going hat in hand to the State legislatures and trying to figure out exactly how they are going to vote. I think we must pass the best amendment we can.

The Senator from Michigan has shown that certainly this is not an uphill battle. 339 Members of the House of Representatives voted in favor of it. I do not think that these people, who have to run every 2 years, can be too far out of touch with their constituencies. We are told that 81 percent of the people of this country are for direct popular vote. The League of Women Voters studied this matter for over a year and have received a favorable response of approximately 89 percent. Interestingly enough, favorable sentiment was equally dispersed throughout the country. The chamber of commerce polled its members and received a more favorable response for direct popular vote than for all the other plans put together. Add to this the support of the AFL–CIO and the UAW, and I will take my chances with that of State legislatures. I will take my chances, because I think most legislators want to do what is right for the country.

I think that the plan we are presenting comes closest to meeting the problems that exist. This plan also lets the President of the United States truly represent the whole country—the entire country—and lets each voter have the chance to cast his vote and be counted. Direct election does not allow this decision to be made in some smoke-filled room, where the power brokers parcel out the presidency, with the people not really knowing what is going on.

I think this is the true test, and I hope we do debate it fully and then let the Senate work its will. I am willing to abide by the Senate's decision, because the Senate has proved historically that it usually comes down on the right side when the hour is late.

Mr. HRUSKA. Mr. President, I shall not delay the Senate any longer. I ask unanimous consent to have printed at this point in the RECORD the last two full paragraphs on page 37 of the report on this bill, together with the first full paragraph on page 38.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

> The proponents of direct election may reply that they bear no animus against the federal system, that, on the contrary, they support it by recommending retention of State equality in the Senate. State equality in the Senate is certainly a strong underpinning of federalism, but with the great powers at the disposal of the President, would it not be foolish to rely upon the Senate alone as the bulwark of the federal system? Certainly, the Framers did think that equality of representation in the Senate would be sufficient—which is why they decided to give the States a role in the selection of Presidents, a role that has been reinforced by our federally structured political parties.
>
> If one day, someone comes forward to say that it is surely an absurdity to give New York and Hawaii equal representation in the Senate, that a recent computer study has conclusively demonstrated that a citizen of New York is disfranchised 33 times relative to a citizen of Hawaii; and that, in so important a matter as the passage of national legislation this is tantamount to a denial of equal protection of the laws—when that day comes, what argument can the proponents of direct election make to defend State equality in the Senate?
>
> The proponents of direct election must be asked how they proposed to defend the federal system in principle. It is one thing for them to say that they favor the retention of the federal system; it is quite another for them to make an argument for federalism on the basis of the logic which impelled them to propose direct election in the first place.
>
> The federal system is an explicit departure from the doctrine of mere numerical majorities, from the doctrine of "one-man, one-vote." If no departure from the doctrine is to be permitted in the Presidency, by what reasoning is it to be defended in the federal system? Conversely, if it is to be tolerated in the federal system, why should it not be tolerated in the Presidency?

Mr. HRUSKA. This bears upon the proposition of the federal system being eroded little by little to the point of final disappearance.

I am happy that this debate started before we consider the farm bill that we are going to have here soon. It is suggested that rural life is going down the drain with the electoral college, and I suggest that perhaps this amendment could be offered as a part of the farm bill so as to revive and make prosperous once

again the agriculture of this country. It would make just as much sense, Mr. President, to make that kind of amendment to the farm bill as it would to contend, as did the Senator from Indiana, that the farmer is not in good shape under the electoral system and therefore we ought to get rid of it.

Mr. BAYH. The Senator from Nebraska was the one who opened the argument about the farm problem. He said unless we were able to keep the electoral college, the poor farmer was going to get it in the neck.

I just suggested, as one farmer who has been getting it in the neck under the electoral college, that this kind of argument does not make much sense.

Mr. HRUSKA. With full due respect to the Senator from Indiana, he will see, upon reviewing the record, that I say that the adoption of the direct election will result in a loss of voting power for the President by the agricultural States, and I stand by that statement. If they do not have as much political clout as they had 25 years ago, it is going to be reduced by almost 30 percent, I think—that is subject to verification—under the transfer from the electoral system to the direct popular system. I do not see how that vast interest known as the agricultural economy of this country can profit from 30-percent loss in voting power for the President.

I recall with some pleasure that there was virtually unanimous decision in the electoral vote in the Mississippi Valley, in all the agricultural States, on behalf of the present incumbent in the White House. That means something, acting as a unit. But to cut that down by 30 percent, or whatever the figure is, would not serve their interest quite so well. I stand on that proposition, not that it is going to directly bring prosperity back to the farmer. But it gives him a little instrument with which to work.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article published in this afternoon's Washington Star, written by James J. Kilpatrick, entitled, significantly, "The Most Deeply Radical Amendment."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MOST DEEPLY RADICAL AMENDMENT

The United States Senate launches itself this week into one of the most fateful debates in American constitutional history. By the end of this month—by early October at the latest—the Senate will have voted up or down a resolution proposing the direct national election of Presidents.

"I think a case can be made," Yale's Prof. Charles Black has said, "for the proposition that direct election, if it passes, will be the most deeply radical amendment which has ever entered the Constitution of the United States."

That assessment is shared by many others, both lawyers and non-lawyers, who see in the direct election proposal a fundamental alteration in the structure of American federalism. Yet the resolution has passed the House already; it reportedly commands strong popular support; and the action to be taken by the Senate has this unrecognized meaning: If the Senate approves, and the resolution goes out to the States for ratification, any further effort at electoral reform would be effectively blocked for seven years. That is the period allowed by the resolution in which three-fourths of the states must ratify or fail to ratify.

Consider, for a moment, the changes that would occur in the whole business of nomination and qualification for the ballot. Under existing law, political parties hold national conventions and nominate their presidential and vice presidential candidates. Then state parties, acting under state law, undertake to get those tickets listed on state ballots.

It is at this point that the machinery of federalism begins its delicate braking action. Major parties ordinarily have no trouble in getting their candidates on the ballot in every state. The petition process makes it more difficult for third parties. George Wallace, it will be recalled, had a terrible time in 1968 before he could get his American Independent Party qualified. When Strom Thurmond ran in 1948, he made it to the ballot in 15 states only.

The machinery of state-by-state qualification, coupled with electoral voting by states, has worked to inhibit the power of third parties. Only four times in this century has a minority party won electoral votes. The Socialists, Progressives, Prohibitionists, Constitutionalists and others have sputtered ineffectively within their state compartments. And because each of the two major parties has been compelled to make a broad appeal, the United States has benefited from political stability and prudent compromise.

Under the pending resolution, this machinery would be junked. No matter what its sponsors say, the direct election amendment would require (and its language so permits) that ballots be uniform throughout the United States. Nothing else would make sense. An entire new system would have to be created by which any group calling itself a political party filed the names of its candidates with a Federal Board of Elections. We could reasonably expect a Black Peoples party, a Peace party, a Revolutionary party, a Young Americans party. I am myself a Whig, and might run. In a nation so large and so passionately diverse, a dozen "parties" surely would bid for a footnote in history.

Then what? State lines no longer would matter. We are now thinking of cumulative votes, across the nation as a whole. It requires no great work of the imagination to conceive that such an aggregation of States Righters, New Leftists, Anti-Fluoridationists, and Ban-the-Bombers could drain enough votes to prevent either of the major parties from winning 40 percent of the total.

In 1968, even with the machinery of federalism working, it was Nixon 43.5 percent; Humphrey 42.8; and Wallace 13.5, with two-tenths split among Gene McCarthy, Eldridge Cleaver, a Communist named Mitchell, the Prohibitionist Munn, and others. Given a similar situation, under the pending amendment, a run-off would be held between the top two—probably the first week in December—amidst wild cries of "deal" and "sell-out."

Is this what we want? Is this prospect of chaos truly better than the "obsolete" but functioning system that now exists? The questions are squarely before the Senate now.

Mr. BAYH. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a statement by our illustrious majority leader, the Senator from Montana (Mr. MANSFIELD) on the federal system under direct election.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Federal System is not strengthened through an antiquated device which has not worked as it was intended to work when it was included in the Constitution and which, if anything, has become a divisive force in the Federal System by pitting groups of states against groups of states. As I see the Federal System in contemporary practice, the House of Representatives is the key to the protection of district interests just as the Senate is the key to the protection of State interests as State interests. These instrumentalities, and particularly the Senate, are the principal constitutional safeguards of the Federal System, but the Presidency has evolved, out of necessity, into the principal political office . . . for safeguarding the interests of all the people in all the states. and since such is the case . . . the Presidency should be subject to the direct and equal control of all the people.

Mr. BAYH. I think it is important for us to put this matter in proper perspective. None of us wants to destroy the federal system, but I think that if we look at what was said by Madison and Hamilton and some of the other illustrious gentlemen of a bygone age, we really see that the Senate, not the electoral college, is the key to the federal system. We are on a very weak reed if we think the electoral college was any part of it.

Mr. President, I have not had a chance to read the article by Mr. Kilpatrick which the Senator from Nebraska put in the RECORD, but I wonder whether the Senator will let me know whether Mr. Kilpatrick referred to Professor Black in that article.

Mr. HRUSKA. Yes. And I have read similar articles on the same subject by that very fine columnist—and a wise and levelheaded man he is, very intelligent. I bank on his general philosophy, and when he deals with "the most deeply radical amendment," he deals with it successfully and well.

Mr. BAYH. In order to be consistent, I ask unanimous consent to have printed in the RECORD an article published in this morning's Washington Post, written by columnist David S. Broder, which I think deals with this matter rather lightly, yet accurately, if one reads about the strange bedfellows who exist in this particular debate. I say "bedfellows" in the finest sense of the word.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLASS IN POLITICAL ADVICE

Following are taperecorded excerpts from this morning's seminar in contemporary issues as Professor John Henry Galbissinger's Academy of Political Understanding:

Professor: All right, class, settle down. It's been a nice holiday, but now we must commence again the thinking. I have for you, a little riddle.

Johnny: OK, pops but not too tough. We've been away all summer.

Prof: What do the following men have in common: Nicholas deB. Katzenbach, Congressman William L. Clay of Missouri, Richard Goodwin, Theodore H. White and Professors Alexander Bickel, Harry V. Jaffa, Ernest Brown and Charles Black?

Mary: What a question! I never even heard of half of those cats.

Prof: All right, I'll help you. Nicholas Katzenbach was Robert Kennedy's successor as attorney general.

Class: Cool!

Prof: Mr. Clay is a black Congressman from St. Louis, a liberal Democrat. Richard Goodwin, you all know?

Johnny: Oh, yes. He's cool. He was for Kennedy and McCarthy and peace and everything.

Prof: Theodore White—the "Making of the President" author?

Mary: Oh, he's a dreamy writer. And how about those others, the professors?

Prof: Distinguished lawyers and political scientists from Yale and Harvard and so on. Now, think. What do they have in common?

Butch: Spiro Agnew has attacked them?

Prof: A good guess, but not quite right, I'll give you a hint. They have something to do with a current question before Congress.

Mary: They're a committee to outlaw the ABM.

Johnny: They're trying to repeal the no-knock law.

Butch: They've all opposed the Vietnam war.

Prof: Good guesses, but you're still not on target. I'll ask it this way. There are six senators who use these men as their intellectual advisers. I'll give you an A if you can name one of the senators.

Mary: George McGovern.

Butch: Charley Goodell.

Mary: Mark Hatfield.

Others: Harold Hughes, Charles Percy.

Prof: No, no. I can see you are very out-of-touch. Nicholas Katzenbach, Congressman Clay, Richard Goodwin, Theodore White and the four professors are the intellectual heroes of—are you ready?

Prof: James Eastland, John McClellan, Sam Ervin, Roman Hruska, Hiram Fong and Strom Thurmond.

Class: You're kidding! What've you been smoking, pops?

Prof: I am not kidding. Those six senators are the members of the Judiciary Committee who oppose the constitutional amendment for direct election of the President, which we will discuss these next few weeks, while it's under debate in the Senate. I want you to read the minority report they filed, and you will see that their authorities—the only contemporaries they quote to back up their own arguments—are the men I mentioned.

Johnny: Well, what's their beef with direct election?

Prof: As you will see if you do your homework, they say it is a "truly radical" proposal, and they cite Katzenbach and Goodwin and Theodore White to prove it.

Mary: But to guys like Eastland and Thurmond and Hruska, those cats must seem pretty radical themselves. And you say this congressman they're quoting all over the place is a black? McClellan and Eastland and Thurmond are quoting him? Why don't they quote any conservatives?

Prof: Perhaps they think it takes a radical to spot a radical proposal. It's odd. The groups you would consider conservative—like the Chamber of Commerce and the American Bar Association—are the ones who are really pushing this amendment, so they can't quote them. They can't even quote President Nixon—he's for it.

Butch: But—isn't it kind of embarrassing to those senators to have to quote Dick Goodwin and Teddy White and all those Ivy League professors?

Prof: Well, how do you think Goodwin and Katzenbach and White and the professors feel about being quoted by those senators? It balances out, I'd guess.

Johnny: Hoo-boy, that would be some caucus if all those cats got together to make plans. Wouldn't you love to have that picture? Ole Strom and Dick Goodwin! Man, I'm dreamin'.

Prof: Settle down, class. I can see you've forgotten what Washington is like. . . .

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. GRAVEL). Without objection, it is so ordered.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. GRIFFIN. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 10 a.m. tomorrow.

The motion was agreed to; and (at 5 p.m.) the Senate adjourned until tomorrow, Wednesday, September 9, 1970, at 10 a.m.

NOMINATION

Executive nomination received by the Senate September 8, 1970:

NATIONAL CREDIT UNION ADMINISTRATION

Herman Nickerson, Jr., of Maine, to be Administrator of the National Credit Union Administration; new position.

EXTENSIONS OF REMARKS

FORMER TEXAS GOV. COKE STEVENSON RECEIVES FRED EARWOOD MEMORIAL AWARD

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FISHER. Mr. Speaker, at the recent annual convention of the Texas Sheep & Goat Raisers' Association in San Antonio, Tex., the coveted Fred Earwood Memorial Award was given to former Gov. Coke Stevenson. It was a highly deserved recognition not only for the contribution Governor Stevenson has made to the sheep and goat industry but also for the distinguished record he has made as a statesman in the constant battle for good government.

The Fred Earwood Memorial Award was created last year by the growers in memory of the late and lamented Fred Earwood who resided at Sonora, Tex. Following Mr. Earwood's death more than 2 years ago the Texas Sheep & Goat Raisers' Association created a special fund "to memorialize one of the outstanding leaders of our industry, and to annually recognize some deserving person whose contributions exemplify Fred Earwood's dedication and efforts for the welfare of all sheep and goat producers."

Hundreds of Mr. Earwood's admirers made voluntary contributions, and I understand the fund now totals more than $10,000. Income from this fund is used annually for some appropriate way to recognize the recipient. Last year it was my honor to have been the first to receive the award, which to me was a source of much pride.

Mr. Speaker, under leave to extend my remarks I include an article about the award to Governor Stevenson, which appeared in the August edition of the Texas Sheep and Goat Raiser magazine. The article follows:

EARWOOD AWARD GIVEN EX-GOVERNOR OF TEXAS

The Texas Sheep and Goat Raisers' Association honored its only living charter member here today at the 55th convention by presenting former Texas Governor Coke R. Stevenson with the Fred Earwood Memorial Award.

Created some two years ago by TS&GRA directors, the Earwood Award is the highest award of distinction given by the association. Following the death of Fred Earwood, friends and associates brought about the formation of a special fund to memorialize him. Each year some deserving person whose contributions exemplify Earwood's dedication and efforts for the welfare of all sheep and goat producers is recognized.

Coke Stevenson of Junction was singled out for his continued support and aid to the sheep and goat organization for over 55 years. Since the first meeting in Del Rio in 1916, his services and advice have aided in the building of the association.

"I doubt if any of us realized how important that meeting was, or what a great organization it would lead to," said Governor Stevenson recently as he recalled the Del Rio meeting. "At the time, there wasn't much about it that would make us think we ought to try to remember it in later years."

He said the purpose of the meeting was to stop large-scale stealing of sheep and goats.

"The talk in Kimble County was that somebody was doing a lot of stealing, but nobody was able to catch them. We set some traps, and pretty soon we caught a man. We found out he would go out into a pasture, stretch a wagonsheet in the gate and drive the sheep across. The wagonsheet kept them from leaving tracks. We sent him to the penitentiary."

"Agitation had grown to form a statewide organization of sheep and goat raisers to stamp out the stealing. The charter was established that day in Del Rio," he added.

Governor Stevenson bought his first ranch land in 1913 and at all times when not engaged in public service, operated the ranch at Telegraph and practiced law.

He was elected to the state legislature in 1929. He later was elected Speaker of the House. He was re-elected Speaker in 1935. For the first time in the history of the Texas Legislature a Speaker succeeded himself!

He is the first Texan to hold the three highest executive posts: Speaker of the House (1933–37), Lieutenant Governor (1939–41), Governor (1941–47). He still holds that record. He was also the first man to have more than two terms as governor.

As Governor of Texas, Coke Stevenson and his administration became known for putting the state on a sound financial basis directing a deficit of 34 million dollars from a column of red figures to a column of black ones. There was no curtailment of services. On the day Stevenson became Governor, the

state's leading newspapers noted that he was "as Texan as a Steer Brand."

Following his retirement from public service at the state level, Mr. Stevenson's life has been a time of enrichment for him as a human being. He has developed in Kimble County one of the finest ranch properties in the hill country. Stevenson and his son's (Coke, Jr.) holdings total more than 14,000 acres and in some seasons as many as 7,000 wild deer roam over their grazing lands with the sheep and goats.

Mr. Speaker, while I am on the subject I believe it appropriate to include an article about the late Fred Earwood, which appeared in the April 1969 issue of the Sheep and Goat Raiser. Following that I will include a tribute I wrote about Mr. Earwood, which appeared in the same issue.

The two articles follow:

FRED EARWOOD: "MR. SHEEP AND GOAT RAISER"
1893–1968

It has been said that a leader accomplishes the most when those around him consider him just another busy worker; a person who leads by example rather than by dictating to others. The late Fred T. Earwood of Sonora was such a leader.

The sheep and goat industry—from Texas to international levels—benefited from Earwood's efforts to improve his goats and sheep by continuous culling and breeding. In speaking of his philosophy for the industry Mr. Earwood stated, "I've always felt that we *can* and *must* produce what the buyers want." He worked his entire lifetime ceaselessly toward this goal. The influence of his tried and true methods continues as a living monument to a man who did not seek leadership but was so often drafted for front line duty.

Improved wool and mohair, improved breeding practices, greater market demand, soil and range conservation, producer graded products, improved grading and judging standards, wider youth education and participation, world-wide market reports, better organization for governmental purposes, and public education on the livestock industry were only a few of the many facets of this man—a heritage that cannot and should not be forgotten or unremarked.

Born in Kimble County in 1893 he learned ranching from his father. He started ranching for himself in 1917, locating in Edwards and Sutton counties. He soon realized that ranchers would have to improve their products if they were to be able to exist in the midst of myriad combined problems that harassed and often broke the producers.

The struggle he experienced in those early days to obtain quality products from inferior livestock spurred his actions throughout his career.

Through the years both his pleasure and his increasing workload came from culling out low quality sheep and goats from his own flocks and teaching other ranchmen how to cull. Many years of experience gave him the ability to demonstrate culling as an art of mind, eye and hand. His simple rule of "cull out the bad so that the good will automatically improve" was far more difficult to do than mere words indicate. He believed in bloodlines, registration and pedigrees.

In 1929, a railroad line was laid through Sonora. Earwood was among a group of ranchmen with the foresight to see this opened up the area as a market center. A stock company was formed to build the Sonora Wool and Mohair Company. Earwood was made a director and a member of the wool marketing committee. He later was manager and president of the company.

The largest warehouse in Texas, Senora Wool and Mohair Company, is today the fourth largest in the nation. Earwood maintained an extensive and unique source of national and international market information. He obtained current reports from South Africa, England, Australia and other foreign markets on an unwritten exchange system operated for mutual benefit to producers everywhere. Many market center managers, brokers and buyers who had never met Earwood personally—knowing him only by his reputation in the industry—kept him abreast of market action and fluctuations by telegrams, as a matter of mutual respect and regard for his desire for the best for all concerned. He reciprocated by a constant stream of telegrams from Sonora.

His search for ideas and methods for industry improvements and problem solving extended far beyond market reports. He spent many of the night hours reading newspapers and magazine articles covering subjects ranging from scientific research on natural fibers to local coverage of his neighboring ranchmen's activities and problems.

Each day as he covered many hours driving his pickup over long Texas-size miles, he would mull over in his mind all the information gathered in his reading and try to apply answers to questions and solutions to problems. Over a period of years the distillation of this knowledge, combined with his own experience and his natural tendency to be a good listener, made him a foremost authority in his field.

It was a natural process of cause and effect based on respect for this quiet, hardworking, judicious man that caused him to be chosen time and again as a spokesman in the state and national capitals and in industry organizations. Texans like for their leaders to "practice what they preach" and Earwood did.

A past president and long active in the Texas Sheep and Goat Raisers' Association, he was also elected president of the board of trustees of the National Wool Growers Association. He was an avid water and soil conservationist. In 1965 he received one of the Texas Agriculture Agents Association's "Man of the Year in Texas Agriculture," awards.

Instrumental in organizing the warehousemen, he served two terms as president of the Texas Wool and Mohair Warehousemen's Association. The American Angora Goat Raisers Association chose him as an officer in their organizations. He was a member of the American Sheep Producers Council, the Mohair Council of America and other industry groups.

A vigorous "youth" backer too, he believed in the future and importance of 4–H and FFA club work for the nation's young people. Annually he turned over the giant warehouse at Sonora to the young people for the Sonora Wool and Mohair Show, and the annual wool judging contest.

"Young people must learn how to produce a better product," he said, adding "that a better product is the only way sheep and goat producers can stay in business." Recently he added another division to the annual event covering range grass identification. The show now offers an opportunity to learn about production from the range to the warehouse. Mr. Earwood believed, "that knowing about grass is important to youngsters for they cannot produce top quality wool and mohair unless they know what their animals are eating."

"He was a man who always had time to listen to my problems or anyone else's," recalled one ranchman. Another said, "The harshest criticism I ever heard Fred Earwood give, even under great pressure, was that he was 'a little disappointed' in someone or something. He was slow to criticize and quick to praise." "He was always working on some civic improvement for Sonora and I don't know how he kept so many irons in the fire at one time," commented a citizen of Earwood's hometown.

It is amazing that Fred Earwood in his busy active far-reaching crusades is remembered best as a person who had time to care about others and their welfare.

Texans are an independent, cautiously conservative people of whom it is said that "you can lead them over a cliff but you can't push them an inch." This, however, does not mean that they are easily lead or persuaded toward changes and innovation. Through the years Mr. Earwood met opposition to some of his ideas and methods without discouragement or loss of purpose.

A TRIBUTE
(By O. C. Fisher)

Of all the people with whom I have dealt, the late Fred Earwood was the most unforgettable and irreplaceable one person I have ever known. There's an old saying that "no one is indispensable." And it is true. But there is a difference between being indispensable and being irreplaceable.

Fred Earwood could be called "Mr. Wool," "Mr. Mohair," or "Mr. Ranchman," and each appellation would be remarkably appropriate. That was his life—breeding, sorting, buying and selling sheep, goats, wool and mohair. In each respect he was pre-eminent. The quality of the sheep and goats he raised and improved long ago became legend. Even Earwood cut-backs were sought by those with a flare for excellence.

While amazingly successful in his own business, Fred was essentially a servant of others—a form of service for which he was rarely ever paid. That was the way he wanted it. That was the only way he would have it. Seeing others benefit from the application of his expertise was compensation enough.

How many ranchmen can testify about hours spent by Earwood at their cutting chutes, dividing their sheep and goats for disposal of cut-backs, and then advice about replacements?

To be sure, the tens of millions of pounds of mohair and wool he sold on assignment meant normal income for the warehouse he managed. I have in mind that extra service, those extra hours he gave—whether at a ranchman's corral or while bantering buyers to pay an extra cent or two per pound for that man's clips.

In the latter respect his talents were exceptional. He knew market trends and watched them with the eye of an eagle. He read the trade journals each day. When it came to making a sale, the buyers knew that Fred knew what he was doing. They trusted his word about what he had to offer and they respected his knowledge.

More than once Fred has telephoned me in Washington to find out what the Turkish and South African mohair stockpile amounted to at a given time. He, like all alert mohair salesmen, had an eye on the export market.

The day following Earwood's death, Hugh Munro, dean of the Boston buyers, came into my Washington office to express his sorrow. "Fred Earwood knew wool and mohair like few other men in his time," he commented.

After the war ended, it was feared the imported supply would be dumped on the market. Fred kept the telephones to Washington and Boston busy as he pleaded for restraint in plans for disposal.

Disposal as related to quantities and qualities could make a major difference. There was no inventory or breakdown with respect to kid hair, grown hair, and othr assortments.

It was agreed that an inspection was necessary. Who was to do it? Growers were wary of bureaucratic findings. It was finally agreed by growers, the trade, and the government—that Fred Earwood was the one man in America who could be trusted by all of them to do that job. He did it, carefully

and laboriously sorting fleece after fleece, sack after sack of sampling—with the eye of a true expert.

His findings were readily accepted, and his recommendations for painless disposal were agreed to. The mohair was sold in limited amounts so as to do the least harm to the market. The mounting concern was eased, and the effect of the sales on the market was hardly noticeable.

I have seen Fred Earwood match wits with government wool and mohair experts on more than one occasion. They could never cope with his cold logic, that vast storehouse of useful experience and knowledge which he would draw upon. As a general rule they would come around to his way of thinking.

A book could be written (as indeed one should be!) about Fred Earwood's varied contributions to the industry and to individual growers. The night was never too dark, the hour was never too early, the distance was never too far, for Fred to go that extra mile in behalf of an industry he loved and the growers to whose interest he was devoted. Who ever heard of Fred Earwood taking a vacation?

He was in the true sense a square shooter. His word was his bond. The smallest producer got the same treatment as the biggest one. His judgment was rarely ever questioned.

Fred honored every man for his face value, and he was instinctively a good judge of men. He placed implicit trust in every man whom he knew deserved to be trusted. He maintained a proper aloofness from the others, always polite and discreet. He helped untangle many a problem for a distressed ranchman, covering nearly anything from a domestic quarrel to a financial jam.

Speaking of Earwood's mannerisms, an intimate recalled: "If someone would say something slightly derogatory about one of Fred's friends, Fred wouldn't argue. More often he'd just stare at the man in cold silence."

During his lifetime Earwood probably sold more breeding stock sight-unseen than anyone. I recall buying a bunch of young ewes from him one time. I never saw them until after they were trucked to my ranch 75 miles away and unloaded. Two or three years later range got short and I sold some ewes to a neighbor.

"Where did you get 'em?" he asked." They're mostly Fred Earwood sheep," I replied. 'I'll take 'em! he snapped—and he did so, sight-unseen.

For years to come, ranchmen and cowboys, as they meet in shearing sheds, in warehouses, and over coffee cups, will talk about Fred Earwood.

"Fred would love this rain!" an old-timer would say: "I'll never forget one time when my best buck came up with a limp. We tried everything, and I thought sure we'd lose him. Then I got on the telephone and called Fred an' . . ." Still another would add, "There'll never be another like him."

And so in nostalgia the talk will go on and on, year after year, about the truly unforgettable and irreplaceable—the one and only—Fred Earwood.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

HOUSE OF REPRESENTATIVES—*Wednesday, September 9, 1970*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

The Lord is good, a great help in the day of trouble: And He knows those who trust in Him.—Nahum 1: 7.

Renewed in spirit and restored in mind, our Father, we return from our recess ready for the responsibilities we face in these troubled and trying times. Give us strength to do our work well this day and all days. Let us not turn from its difficulties, nor evade its challenges, nor seek to escape its duties.

Help us to keep our minds clear, our hearts clean, and to live so faithfully that no failure can dishearten us, no frustration can discourage us, and no fear can take away from us the joy of an inner integrity.

God bless America, we pray Thee, and lead her and all nations in the paths of peace. By Thy grace alive within us may we remove all bitterness, reduce all misunderstanding, and learn to live together in the spirit of a genuine good will: through Jesus Christ our Lord. Amen.

THE JOURNAL

The Journal of the proceedings of Friday, August 14, 1970, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Arrington, one of its clerks, announced that the Senate had passed with amendments in which the concurrence of the House is requested, bills and a concurrent resolution of the House of the following titles:

H.R. 2043. An act for the relief of Keum Ja Franks;

H.R. 14213. An act to amend sections 5580 and 5581 of the Revised Statutes to provide for additional members of the Board of Regents of the Smithsonian Institution;

H.R. 16900. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1971, and for other purposes;

H.R. 17123. An act to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes;

H.R. 17575. An act making appropriations for the Departments of State, Justice, and Commerce, the judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes;

H.R. 18127. An act making appropriations for public works for water, pollution control, and power development, including the Corps of Engineers—Civil, the Panama Canal, the Federal Water Quality Administration, the Bureau of Reclamation, power agencies of the Department of the Interior, the Tennessee Valley Authority, the Atomic Energy Commission, and related independent agencies and commissions for the fiscal year ending June 30, 1971, and for other purposes; and

H. Con. Res. 675. Concurrent resolution expressing the sense of the Congress with respect to the conquest of cancer as a national crusade.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 16900) entitled "An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1971, and for other purposes," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. YARBOROUGH, Mr. BYRD of West Virginia, Mr. MCGEE, Mr. MONTOYA, Mr. BOGGS, Mr. ALLOTT, and Mr. FONG to be the conferees on the part of the Senate.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 17575) entitled "An act making appropriations for the Departments of State, Justice, and Commerce, the judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MCCLELLAN, Mr. ELLENDER, Mr. PASTORE, Mr. FULBRIGHT, Mrs. SMITH of Maine, Mr. HRUSKA, and Mr. CASE to be the conferees on the part of the Senate.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 18127) entitled "An act making appropriations for public works for water, pollution control, and power development, including the Corps of Engineers—Civil, the Panama Canal, the Federal Water Quality Administration, the Bureau of Reclamation, power agencies of the Department of the Interior, the Tennessee Valley Authority, the Atomic Energy Commission, and related independent agencies and commissions for the fiscal year ending June 30, 1971, and for other purposes," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. ELLENDER, Mr. RUSSELL, Mr. MCCLELLAN, Mr. MAGNUSON, Mr. HOLLAND, Mr. STENNIS, Mr. PASTORE, Mr. RANDOLPH, Mr. YOUNG of North Dakota, Mr. HRUSKA, Mrs. SMITH of Maine, and Mr. ALLOTT to be the conferees on the part of the Senate.

The message also announced that the Senate disagrees to the amendment of the House to the bill (S. 1933) entitled "An act to provide for Federal railroad safety, hazardous materials control and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. MAGNUSON, Mr. HARTKE, Mr. CANNON, Mr. SCOTT, and Mr. PROUTY to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills, joint resolutions, and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 578. An act to include firefighters within the provisions of section 8336(c) of title 5, United States Code, relating to the retirement of Government employees engaged in certain hazardous occupations;

S. 1196. An act for the relief of the Casa Angelia mental retardation facility of Albuquerque, N. Mex.;

S. 1785. An act for the relief of Irene Sadowska Sullivan;

S. 1943. An act for the relief of Arie Abramovich;

S. 2735. An act to provide for the conveyance of certain public lands in Wyoming to the occupants of the land;

S. 3032. An act for the relief of Mrs. Leonarda Buenavendura Ocariza and daughter, Lucila B. Ocariza;

S. 3129. An act for the relief of Dr. Pio Albert Pol y Zapata;

S. 3196. An act to declare that certain federally owned lands in the State of Nevada are held by the United States in trust for Reno-Sparks Indian Colony, and for other purposes;

S. 3225. An act to provide that the U.S. District Court for the Western Division of the Southern District of Mississippi shall be held at Natchez;

S. 3330. An act to authorize rural housing loans to lessees of nonfarm rural land, and for other purposes;

S. 3431. An act to amend sections 13(d), 13(e), 14(d), and 14(e) of the Securities Exchange Act of 1934 in order to provide additional protection for investors;

S. 3487. An act to authorize the sale and exchange of certain lands on the Coeur d'Alene Indian Reservation, and for other purposes;

S. 3529. An act for the relief of Johnny Mason, Jr. (Johnny Trinidad Mason, Jr.);

S. 3553. An act to amend the Water Resources Research Act of 1964 to increase the authorization for water resources research and institutes, and for other purposes;

S. 3702. An act for the relief of Dr. Nahid Mansoori Diaz;

S. 3775. An act to amend section 1811 of title 38, United States Code, to authorize the Veterans' Administration to make direct loans to any veteran who is determined to be eligible for assistance in acquiring specially adapted housing under chapter 21 of title 38, United States Code;

S. 3796. An act for the relief of Reynaldo Canlas Baecher;

S. 3822. An act to provide insurance for member accounts in State and federally chartered credit unions and for other purposes;

S. 3853. An act for the relief of Mrs. Pang Tai Tai;

S. 3997. An act to provide for the disposition of funds appropriated to pay a judgment in favor of the Confederated Bands of Ute Indians in Court of Claims case 47567, and a judgment in favor of the Ute Tribe of the Uintah and Ouray Reservation for and on behalf of the Uncompahgre Band of Ute Indians in Indian Claims Commission docket numbered 349, and for other purposes;

S. 4033. An act to provide for the disposition of funds appropriated to pay a judgment in favor of the Chemehuevi Tribe of Indians;

S. 4078. An act to provide for the disposition of funds appropriated to pay judgments in favor of the Snohomish Tribe in Indian Claims Commission docket numbered 125, the Upper Skagit Tribe in Indian Claims Commission docket numbered 92, and the Snoqualmie and Skykomish Tribes in Indian Claims Commission docket numbered 93, and for other purposes;

S. 4148. An act to amend title 10, United States Code, to provide special health care benefits for certain surviving dependents;

S. 4319. An act to extend the Clean Air Act, as amended, and the Solid Waste Disposal Act, as amended, for a period of 90 days;

S.J. Res. 67. Joint resolution granting the consent of Congress to the States of Maryland and West Virginia and the Commonwealths of Virginia and Pennsylvania and the District of Columbia, as signatory bodies, for certain amendments to the compact creating the Potomac Valley Conservancy District and establishing the Interstate Commission on the Potomac River Basin;

S.J. Res. 230. Joint resolution extending the duration of copyright protection in certain cases; and

S. Con. Res. 79. Concurrent resolution favoring the suspension of deportation of certain aliens.

The message also announced that the Senate requests the House of Representatives to return the bill (H.R. 16968) entitled "An act to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes."

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 17, 1970.

The Honorable the SPEAKER,
U.S. House of Representatives.

DEAR SIR: Pursuant to authority granted on August 14, 1970, the Clerk received from the Secretary of the Senate today the following messages:

That the Senate passed without amendment the following:

An act for the relief of Low Yin (H.R. 5655);

An act for the relief of Tae Pung Hills (H.R. 12400);

An act to confer United States citizenship posthumously upon Jose Guadalupe Esparza-Montoya (H.R. 12446);

An act to confer United States citizenship posthumously upon Lance Corporal Frank J. Krec (H.R. 13265);

An act for the relief of Mrs. Maria Eloisa Pardo Hall (H.R. 13895);

An act granting the consent of Congress to the Falls of the Ohio Interstate Park Compact (H.R. 13971); and

An act to confer United States citizenship posthumously upon Staff Sergeant Ryuzo Somma (H.R. 13997).

That the Senate agree to the Report of the Committee of Conference on the disagreeing votes of the two Houses on the amendment of the House of Representatives to the bill (S. 3547) entitled "An act to authorize the Secretary of the Interior to construct, operate, and maintain the Narrows unit, Missouri River Basin project, Colorado, and for other purposes."

Respectfully,

W. PAT JENNINGS,
Clerk, U.S. House of Representatives.
By W. RAYMOND COLLEY.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 19, 1970.

The Honorable the SPEAKER,
U.S. House of Representatives.

DEAR SIR: Pursuant to authority granted on August 14, 1970, the Clerk received from the Secretary of the Senate today the following messages:

That the Senate passed without amendment the following:

An Act for the relief of Eagle Lake Timber Company, a partnership, of Susanville, California (H.R. 1749);

An Act for the relief of Anan Eldredge (H.R. 2849);

An Act to provide that a headstone or marker be furnished at Government expense for the unmarked grave of any Medal of Honor recipient (H.R. 6265);

An Act to authorize command of the United States ship *Constitution* (IX-21) by retired officers of the United States Navy (H.R. 8662);

An Act to amend section 716 of title 10, United States Code, to authorize the interservice transfers of officers of the Coast Guard (H.R. 9052);

An Act for the relief of Gloria Jara Haase (H.R. 12959);

An Act to amend title 10 of the United States Code to provide that United States flags may be presented to parents of deceased servicemen (H.R. 13195);

An Act for the relief of Mrs. Marcella Coslovich Fabretto (H.R. 13383);

An Act for the relief of Vincenzo Pellicano (H.R. 13712);

An Act to amend section 355 of the Revised Statutes, as amended, concerning approval by the Attorney General of the title to lands acquired for or on behalf of the United States, and for other purposes (H.R. 15374).

In addition, the Senate having proceeded to reconsider the bill (H.R. 16916) entitled "An Act making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes", returned by the President of the United States with his objections to the House of Representatives, in which it originated, it was

Resolved, that the said bill pass, two-thirds of the Senators present having voted in the affirmative.

Respectfully,

W. PAT JENNINGS,
U.S. House of Representatives.
By W. RAYMOND COLLEY.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C., *August 21, 1970.*

The Honorable The SPEAKER,
U.S. House of Representatives.

DEAR SIR: Pursuant to authority granted on August 14, 1970, the Clerk received from the Secretary of the Senate today the following message:

That the Senate passed without amendment the following:

An Act to repeal the Act of August 25, 1959, with respect to the final disposition of the affairs of the Choctaw Tribe. (H.R. 15866),

Joint Resolution to authorize the President to designate the period beginning September 20, 1970, and ending September 26, 1970, as "National Machine Tool Week". (H.J Res. 1194).

Respectfully,

W. PAT JENNINGS, *Clerk,*
U.S. House of Representatives.
By W. RAYMOND COLLEY,

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C., *August 25, 1970.*

The Honorable The SPEAKER,
U.S. House of Representatives.

DEAR SIR: Pursuant to authority granted on August 14, 1970, the Clerk received from the Secretary of the Senate today the fol lowing message:

That the Senate passed without amendment the following:

An Act to authorize additional funds for the operation of the Franklin Delano Roosevelt Memorial Commission. (H.R. 15351);

A Concurrent Resolution authorizing the reprinting of additional copies of the report of the Select Subcommittee on Education entitled "Education in Israel" for the use of the Select Subcommittee on Education. (H. Con. Res. 679).

Respectfully,
W. PAT JENNINGS, *Clerk,*
U.S. House of Representatives.
By W. RAYMOND COLLEY.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
August 31, 1970.

The Honorable the SPEAKER,
U.S. House of Representatives.

DEAR SIR: Pursuant to authority granted on August 14, 1970, the Clerk received from the Secretary of the Senate today the following message:

That the Senate passed without amendment the following:

An Act to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance (H.R. 17133).

Respectfully,
W. PAT JENNINGS,
Clerk, U.S. House of Representatives.
By W. RAYMOND COLLEY.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
September 1, 1970.

The Honorable the SPEAKER,
U.S. House of Representatives.

DEAR SIR: Pursuant to authority granted on August 14, 1970, the Clerk received from the Secretary of the Senate today the following message:

That the Senate passed without amendment the following:

An Act to provide for the disposition of judgment funds on deposit to the credit of the Hualapai Tribe of the Hualapai Reservation, Arizona, in Indian Claims Commission dockets numbered 90 and 122 and for other purposes (H.R. 13434);

An Act to improve and clarify certain laws affecting the Coast Guard Reserve (H.R. 13716);

An Act to authorize the use of funds arising from a judgment in favor of the Citizen Band of Potawatomi Indians of Oklahoma in Indian Claims Commission docket numbered 96, and for other purposes (H.R. 14097);

An Act to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indian Claims Commission docket numbered 220, and for other purposes (H.R. 14827);

An Act to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes (H.R. 16416);

An Act to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes (H.R. 16968).

Respectfully,
W. PAT JENNINGS,
Clerk, U.S. House of Representatives.
By W. RAYMOND COLLEY.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to announce that pursuant to the authority granted him on Friday, August 14, 1970, he did, on Tuesday, August 18, 1970, sign enrolled bills of the House, and an enrolled bill of the Senate, as follows:

H.R. 5655. An act for the relief of Low Yin, also known as Low Ying;

H.R. 12400. An act for the relief of Tae Pung Hills;

H.R. 12446. An act to confer U.S. citizenship posthumuously upon Jose Gauldalupe Esparaza-Montoya.

H.R. 13265. An act to confer U.S. citizenship posthumously upon Frank J. Krec;

H.R. 13895. An act for the relief of Mrs. Maria Elosia Pardo Hall;

H.R. 13971. An act granting the consent of Congress to the Falls of the Ohio Interstate Park Compact;

H.R. 13997. An act to confer U.S. citizenship posthumously upon S. Sgt. Ryuzo Somma; and

S. 3547. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Narrows unit, Missouri River Basin project, Colorado, and for other purposes.

And on Wednesday, August 19, 1970, signed enrolled bills of the House, as follows:

H.R. 2849. An act for the relief of Anan Eldredge;

H.R. 6265. An act to provide that a headstone or marker be furnished at Government expense for the unmarked grave of any Medal of Honor recipient;

H.R. 8662. An act to authorize command of the U.S. ship *Constitution*—IX–21—by retired officers of the U.S. Navy.

H.R. 9052. An act to amend section 716 of title 10, United States Code, to authorize the interservice transfers of officers of the Coast Guard;

H.R. 12959. An act for the relief of Gloria Jara Haase;

H.R. 13195. An act to amend title 10 of the United States Code to provide that U.S. flags may be presented to parents of deceased servicemen.

H.R. 13383. An act for the relief of Mrs. Marcella Coslovich Fabretto;

H.R. 13712. An act for the relief of Vincenzo Pellicano;

H.R. 15374. An act to amend section 355 of the Revised Statutes, as amended, concerning approval by the Attorney General of the title to lands acquired for or on behalf of the United States, and for other purposes.

And on Thursday, August 20, 1970, signed an enrolled bill of the House, as follows:

H.R. 1749. An act for the relief of Eagle Lake Timber Co., a partnership, of Susanville, Calif.

And on Friday, August 21, 1970, signed an enrolled bill and joint resolution of the House, as follows:

H.R. 15866. An act to repeal the act of August 25, 1959, with respect to the final disposition of the affairs of the Choctaw Tribe; and

H.J. Res. 1194. Joint resolution to authorize the President to designate the period beginning September 20, 1970, and ending September 26, 1970, as "National Machine Tool Week."

And on Tuesday, August 25, 1970, signed an enrolled bill of the House, as follows:

H.R. 15351. An act to authorize additional funds for the operation of the Franklin Delano Roosevelt Memorial Commission.

And on Monday, August 31, 1970, signed an enrolled bill of the House, as follows:

H.R. 17133. An act to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance.

And on Wednesday, September 2, 1970, signed enrolled bills of the House, as follows:

H.R. 13434. An act to provide for the disposition of judgment funds on deposit to the credit of the Hualapai Tribe of the Hualapai Reservation, Ariz., in Indian Claims Commission Dockets numbered 90 and 122, and for other purposes;

H.R. 13716. An act to improve and clarify certain laws affecting the Coast Guard Reserve;

H.R. 14097. An act to authorize the use of funds arising from a judgment in favor of the Citizen Band of Potawatomi Indians of Oklahoma in Indian Claims Commission Docket No. 96, and for other purposes;

H.R. 14827. An act to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indian Claims Commission Docket numbered 220, and for other purposes; and

H.R. 16416. An act to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes.

APPOINTMENT AS MEMBER OF JOINT COMMITTEE ON REDUCTION OF FEDERAL EXPENDITURES

The SPEAKER. Pursuant to the provisions of section 601, title 6, Public Law 250, 77th Congress, the Chair appoints as a member of the Joint Committee To Investigate Nonessential Federal Expenditures the following member of the Committee on Appropriations to fill an existing vacancy thereon: Mr. WHITTEN, of Mississippi.

APPOINTMENT AS MEMBER OF BOARD OF REGENTS, THE SMITHSONIAN INSTITUTION

The SPEAKER. Pursuant to the provisions of 20 United States Code 42 and 43, the Chair appoints as a member of the Board of Regents of the Smithsonian Institution the gentleman from New York, Mr. ROONEY, to fill the existing vacancy thereon.

THE LATE HONORABLE JAMES SECCOMBE

The SPEAKER. The gentleman from Ohio (Mr. Bow) is recognized.

Mr. BOW. Mr. Speaker, I have the sad duty of announcing to the House the death of the Honorable James Seccombe, a Member of the House of Representatives for the 16th District of Ohio in the Seventy-sixth Congress.

Mr. Seccombe passed away Sunday, August 23, in Canton, Ohio, at the age of 77, after a lifetime of dedicated service in the public interest.

He was my dear friend and I mourn his passing.

Jim Seccombe began working after he finished the eighth grade in Canton. He never stopped. During his long career, he served as a member of the Canton City Council, as mayor of Canton, as a Member of Congress and as a director of the Stark County Board of Elections for many years. Under his direction, the board of elections undertook registration and voting campaigns which won attention and honors throughout the Nation.

Mr. and Mrs. Seccombe celebrated their 50th wedding anniversary in November. In February of this year he was honored by the members of the First United Church of Christ and tributes to him came from across the Nation, including a message from President Nixon.

In addition to Mrs. Seccombe, survivors include his son, James Seccombe, Jr., of Birmingham, Mich., and daughter, Mrs. Dorothy E. Shriver of Canton.

To include with my remarks at this point the Canton Repository article on Mr. Seccombe and editorials from the Repository and the Evening Independent of Massillon, Ohio, as follows:

STARK'S "MR. REPUBLICAN": DEATH COMES AT 77 FOR JIM SECCOMBE

James "Jim" Seccombe—Mr. Republican of Stark County—is dead.

The former U.S. representative, mayor of Canton, city councilman and longtime director of Stark County Board of Elections died Sunday after a long battle with heart trouble. He was 77 years old.

"Jim," as everyone knew him, resigned early this year as a member of the board of elections.

He was still active and still felt pretty well but he knew he was not as strong as he should be.

And he wanted to be on hand to help break in his successor, Jim Williams of Alliance.

Born in Mineral City Feb. 12, 1893, the seventh of 10 children, Jim completed the sixth grade in Tuscarawas County before the family moved to Canton.

He finished the eighth grade here and then went to work to help support the family, selling newspapers and clerking in stores before becoming a machinist's apprentice with Wheeling & Lake Erie Railroad in Canton and Brewster.

He was a machinist for Arctic Ice when World War I broke out. He enlisted in the Army and served with the 134th Field Artillery, 37th Division in the front lines of the Meuse-Argonne offensive and took part in the battles of Verdun and Apremont.

After the war he returned to Arctic Ice and then moved to Timken Roller Bearing Co., first as a machinist and later as foreman in the tool room.

He started his political career by being elected a Republican precinct committeeman.

His first major victory was in 1927 when he was elected Ward 5 councilman. He was re-elected in 1929 and was elected president of council in 1931. He became mayor on June 30, 1932 when C. C. Curtis died.

Jim lost his bid to remain mayor in 1933 but was elected in 1935. He was re-elected in 1937.

In 1938, he was elected U.S. representative and served in 1939 and 1940.

While in Congress Jim served on the District of Columbia Committee and chairman of subcommittees on government buildings, traffic, police, fire and parks.

He was dubbed the "Mayor of Washington." Because of his work with the parks, the Botanical Gardens daily sent flowers to his office.

That was when he started wearing a carnation in his lapel, a practice which became his trademark for the rest of his life.

Jim also had two other trademarks—a cheery smile and his devotion to the Republican Party.

Jim was honored and eulogized by the great and the small last March 31 when 400 of his friends attended a testimonial in his honor at Onesto Hotel.

At this meeting, Gov. James A. Rhodes told the group, "We are here to give flowers to the living and to eulogize a living legend in Stark County."

Jim responded, characteristically, "This is the day I hoped would never come but it is a day I will always remember. I'm going to dedicate the rest of my days to service to the people of Canton."

After quitting his post as a member of the board of elections, Jim had several sick spells and finally ended up in Aultman Hospital.

He recovered enough to act as grand marshal of the Memorial Day parade but later was in and out of the hospital several times.

When Jim resigned last year, he had completed 27 years of service to the Board of Elections.

He also served as member and chairman of the Stark Metropolitan Housing Authority, member and chairman of the Canton Park Commission and as chairman of the Ohio High School All-Star Football Game Directors Association.

He was a member and former deacon of First United Church of Christ. He formerly was assistant superintendent of the Sunday school and taught the Neher class for many years.

A member of Fidelity Lodge F&AM, he was past monarch of Nazir Grotto, a member of Stark Consistory 32nd Degree Masons, Al Koran Shrine, Canton Shrine Luncheon Club, Canton Commandery 38, Knights Templar, American Legion Post 44, Floyd Hughes Post Veterans of Foreign Wars, Cootie Club and Canton Ex-Newsboys Association.

Jim and his wife, Hazel R., celebrated their 50th wedding anniversary in November. They lived at 1439 Fulton Road NW.

Other survivors include a son, James Seccombe Jr. of Birmingham, Mich.; daughter, Mrs. Dorothy E. Shriver of Canton; sisters Mrs. Anna Umbenhour, Mrs. Dora Howe and Mrs. Minnie Coble, all of Canton; brothers, William Seccombe of Canton and Samuel Seccombe of Uniontown; eight grandchildren and one greatgrandchild.

Services will be at 2:30 p.m. Wednesday in First United Church of Christ with the Rev. Karl Koepke officiating. Burial will be in North Lawn Cemetery.

Friends may call from 2 to 4 and 7 to 9 p.m. Tuesday at the Arnold funeral home. The body will lie in state at the church from noon until the services Wednesday. Fidelity Lodge will conduct Masonic services at 6:45 p.m. Tuesday in the funeral home.

JAMES SECCOMBE: CANTON'S FRIEND

The little man with the big heart and the white carnation is gone.

Jim Seccombe has passed from the Canton scene he graced so proudly and loved so dearly. There is not likely soon to be another like him.

The range of his activities and interests was so wide and so varied that no man could claim to being his equal in involvement in politics, sports and community service.

A former mayor and congressman, an election specialist, a recreation enthusiast and a champion of public housing as a member of the commission devoted to that purpose, he gave liberally of his time and energies to every cause he undertook.

In a sense, he might be described as Canton's "toastmaster general" in the tradition of Georgie Jessel. When he was called upon to serve as a master of ceremonies, no meeting was too large or too small for his special touch of good humor or serious comment.

And no contribution to civic betterment was to obscure to win his acclaim because his generous recognition of the good deeds of others far exceeded any credit he took for himself.

While he proudly bore the gratuitous label of Mr. Republican he had a host of friends in both parties. One need only recall the luncheon tribute on the occasion of his retirement as director of the Stark County Board of Elections to confirm the respect and admiration he held among his Democratic contemporaries.

It would be less than honest to say that everyone was Jim's friend. No one who accepted the challenge of controversy as he did on so many occasions could escape some ill feelings. But his sincerity was seldom questioned and he was respected for never running from a confrontation if he felt he was right.

The old town won't seem the same without the presence of the dramatic little figure who seemed to be everywhere with a ready greeting and a warm handshake.

He was not afraid of death. He knew his time was running out, but even to the end his interest never diminished and his dedication to the things that were good for Canton were vibrantly alive.

Jim Seccombe will be missed.

A CAPABLE AND DEVOTED LEADER

The little fellow with the ready smile and fresh boutonniere is dead. James E. Seccombe of Canton died Sunday morning in Aultman hospital, Canton, where he had been a patient since April 14. He had had a long battle with heart trouble.

Mr. Seccombe was perhaps Stark county's best known resident. A superb greeter, he headed the welcoming line at so many functions that thousands came to know him by his affectionate name of "Jim" or "Jimmy."

He was also "Mr. Republican" to many, for he had been active in the party for over 40 years. He started as a precinct committeeman in 1927 and worked his way up through the Canton city council to mayor of Canton and congressman from the 16th congressional district.

Jim served his city, county and nation well. He concluded 27 years on the Stark county board of elections when he resigned last year, and at his death was still a member of the Canton-Massillon Metropolitan Housing authority, the Canton Planning commission, Canton park commission and a member of the executive committee of the Stark County Republican Central committee.

Mr. Seccombe was well known in Massillon, particularly by older residents of the city and for many years was always present to help honor Tiger football teams at their annual banquets.

He was a self-made man, having quit

school after the eighth grade to help support a family of 10 children by selling newspapers and clerking in stores, until he got a job as an apprentice machinist with the Wheeling & Lake Erie railroad in Brewster.

Anyone who knew the man can understand how it was possible for him to rise from such a small beginning to represent his district in the United States congress. He was ambitious, forceful and determined, but with it all had the ready smile that won so many friends; it will be remembered long after this has been written.

Canton and Stark county have lost a capable and devoted leader who will be missed by the public and in the many halls in which he has served. And we in Massillon, too, have lost a friend and good neighbor.

The Evening Independent sympathizes with his wife, Hazel, and other surviving members of his family.

APPOINTMENT OF CONFEREES ON TREASURY AND POST OFFICE DEPARTMENTS, EXECUTIVE OFFICE OF THE PRESIDENT, AND INDEPENDENT AGENCIES APPROPRIATION BILL, 1971

Mr. STEED. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 16900) making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1971, and for other purposes with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma? The Chair hears none and appoints the following conferees: Messrs. STEED, PASSMAN, ADDABBO, COHELAN, MAHON, ROBISON, CONTE, EDWARDS of Alabama and BOW.

USE OF RESERVISTS AND GUARDSMEN

(Mr. SIKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SIKES. Mr. Speaker, Secretary of Defense Laird has taken a realistic course in his plans to use reservists and guardsmen to bolster U.S. military forces where additional personnel are needed. For some unaccountable reason, very little use has been made of the Reserve components, other than Air Force, for a number of years. Apparently this has been a carryover from the efforts of Secretary McNamara to downgrade the reserves and to reduce reliance upon these forces in times of national emergency. Substantial sums are required for the training and equipping of the Reserve components and it makes sense to utilize their services where and when they are needed. The Reserve components are the least costly of all our military forces, they maintain a constant state of readiness, and they are composed of dedicated individuals. I am confident the units will welcome an opportunity to serve and that the Secretary's action in reducing dependence upon the draft will evoke a good response throughout the country.

URGES ACTION ON HOUSE CONCURRENT RESOLUTION 340 WHICH CALLS FOR MANDATORY EXTRADITION AND TRIAL OF AIRPLANE HIJACKERS

(Mr. PUCINSKI asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. PUCINSKI. Mr. Speaker, 69 Members of this House from both sides of the aisle are now cosponsoring House Concurrent Resolution 340 which I introduced a year ago calling for the State Department to negotiate bilateral treaties with as many countries as possible for mandatory extradition of hijackers and requiring that such hijackers be tried for the crime of hijacking.

I hope that the House will pass this resolution without any delay for, indeed, the wave of terrorism that is now sweeping the world can no longer be ignored by anybody.

We have had 79 hijackings so far this year, and 250 altogether.

Mr. Speaker, the thing that disturbs me most is that in aviation circles today, among the foremost American jet pilots, there are reports that some of our own American revolutionaries are planning to hijack American jet airplanes and fly them to North Vietnam and China.

We can no longer tolerate this. The American Pilots Association and the International Federation of Pilots are both supporting House Concurrent Resolution 340, and both have indicated that if such treaties are negotiated, they will boycott those countries which refuse to sign such treaties for mandatory extradition of hijackers by refusing to fly into or out of such countries.

So, Mr. Speaker, it is my hope that this resolution will be adopted forthwith.

As I said, Mr. Speaker, 69 Members are cosponsoring the resolution, and it would be my hope that we have no delay in either hearings or adoption of this resolution as a significant contribution toward dealing with this international piracy and wave of terrorism now sweeping the world.

POSTPONEMENT OF HEARINGS BY COMMITTEE ON STANDARDS OF OFFICIAL CONDUCT

(Mr. PRICE of Illinois asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PRICE of Illinois. Mr. Speaker, I regret to announce postponement of the hearings previously scheduled by the Committee on Standards of Official Conduct for September 10, 15, 16, and 17 on operation of the present laws on lobbying practices.

Prospective witnesses have advised the committee that they cannot arrange to appear on those dates, principally because they say they cannot prepare the type of presentations they want to submit in this short length of time.

We hope to reschedule the hearings as soon as dates satisfactory to all parties can be arranged, hopefully early in October.

The hearings had been scheduled in response to a resolution, which the House adopted last month, directing the committee, which I have the honor to chair, to conduct investigations and studies looking to possible remedial legislation in the areas of lobbying and campaign finances. The committee decided to treat the two subjects separately and announced the first series of hearings would deal with lobbying.

The decision to postpone these hearings temporarily came about in response to requests from several interested organizations whose spokesmen asked for more time in which to prepare their testimony.

We want to accommodate everyone we possibly can, not only those private groups most concerned with operation of the present lobbying statutes but Members of the House as well, many of whom have just returned to Washington following the recess.

DIFFERENCES IN DESEGREGATION BETWEEN THE NORTH AND SOUTH

(Mr. NICHOLS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NICHOLS. Mr. Speaker, elementary and secondary schools across Alabama are opening their doors for the new school year amid statements by the Nixon administration that almost all schools are being completely desegregated. There are, however, vast differences between the methods used in the North and South.

Recently, two articles relating to schools appeared in an Alabama newspaper on the same day. One told of a Federal court judge in Mobile ordering two county school systems to implement an amended desegregation plan after the freedom of choice method was ruled out. The other article quoted the Honorable George Romney, Secretary of the Department of Housing and Urban Development, telling 40 suburban mayors at a meeting in Warren, Mich., that his Department has no plans to force racial desegregation on their cities. Mr. Romney said and I quote:

> Nobody should be pressured to go anywhere—it is the essence of a free society that every family should have a choice.

Mr. Speaker, I respectfully ask why that choice should be in effect for residents of Michigan but not for Alabamians.

FILLING THE GAPS IN FEDERAL CIVIL RIGHTS LAWS

(Mr. MIKVA asked and was given permission to address the House for 1 minute.)

Mr. MIKVA. Mr. Speaker, on August 13, just prior to the recent recess, I introduced two bills, H.R. 18976 and H.R. 18977, to amend the Civil Rights Act of 1964.

The introductory statement relating to these bills, along with supporting correspondence with the U.S. Civil Rights Commission, appears on pages 29059–29067 of the CONGRESSIONAL RECORD. In the introductory statement, I name seven of our colleagues who had agreed to cosponsor with me the two bills

described above. These Members are Mr. BROWN of California, Mr. BURTON of California, Mrs. CHISHOLM, Mr. CONYERS, Mr. FRASER, Mr. ROSENTHAL, and Mr. RYAN. Although these Members had agreed to cosponsor the bills and although their names were mentioned in my introductory remarks, they were inadvertently, through a clerical error, omitted as cosponsors when the bills themselves were introduced.

Because of the omission of the names of the seven cosponsors on H.R. 18976 and H.R. 18977, I am today reintroducing those two bills, with no changes except the addition of the seven cosponsors.

INTERNATIONAL AIRPLANES' HIJACKINGS MUST BE STOPPED

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GERALD R. FORD. Mr. Speaker, the airplane hijacking situation has reached international crisis proportions. The world community must act—and act quickly—not only to obtain the release of the hijack victims now being held hostage by Arab commandoes in Jordan but to prevent or at least deter future hijackings.

It would seem that agreement could be reached by the nations involved, not only on the matter of punishment for hijackers taken into custody but also on security measures which could be adopted to nip incipient hijackings in the bud.

To that end I urge that the countries which figure in airplane hijackings—actual or attempted—agree on a number of preventive measures which some have already adopted at least in part.

I suggest the placing of armed plain clothes security guards on all international commercial flights, searching baggage and the persons of passengers in some cases, and instituting an airlines personnel security program.

It is my information that U.S. airlines are employing a passenger profile or screening system which eliminates hijacking suspects among airline passengers down to approximately one-half of 1 percent. The rest of the passengers then go through a magnetometer check to see if they are carrying any weapons or bombs.

Now the Federal Aviation Administration and the airlines are talking about an actual physical search of suspected hijackers on certain risk flights. I urge that such action be taken.

Another proposal with considerable merit is a boycott by the International Pilots Association of any country harboring hijackers. A boycott of this kind could not very well be instituted by a government without offending the other government involved, but it might well be carried out by an organization like the IPA.

Mr. Speaker, there is no question that action must be taken to put a stop to international airplane hijackings. This is a matter of the greatest urgency and one that calls for the highest degree of international cooperation.

ADMINISTRATION IS ACUTELY AWARE OF CRITICAL HIJACKING SITUATION

(Mr. DEVINE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DEVINE. Mr. Speaker, as a follow-up to the remarks of the gentleman from Michigan, Mr. GERALD R. FORD, I think that the public should know that this administration is acutely aware of the critical hijacking situation across this Nation and the world.

I attended a meeting at the Federal Aviation Administration this morning which was attended by more than 25 representatives, including the Airlines Pilots Association, the Department of Transportation, the IATA organization, and some of the major airlines, at which time this overall problem was discussed in depth.

At the same time there was another high-level meeting at the White House, where the President, of course, expressed his very deep concern, and I would expect momentarily that there will be a statement issued that would pretty well follow the suggestions made by the gentleman from Michigan having to do, perhaps, with the use of sky marshals, armed personnel from the Department of Transportation or from the FBI or from the FAA or from the Department of Defense, some in uniform, and some out of uniform, but some armed persons to fly aboard, not only the international but also the domestic carriers.

I attended this meeting as the ranking minority member of the Subcommittee on Transportation and Aeronautics of the Committee on Interstate and Foreign Commerce, which has jurisdiction in this overall area.

ADJUSTMENT OF GOVERNMENT CONTRIBUTION WITH RESPECT TO HEALTH BENEFITS COVERAGE OF FEDERAL EMPLOYEES AND ANNUITANTS—RETURN OF H.R. 16968 TO THE SENATE

The SPEAKER laid before the House the following communication from the Secretary of the Senate:

IN THE SENATE OF THE UNITED STATES,
September 1, 1970.

Ordered, That the Secretary be directed to request the House of Representatives to return to the Senate the bill (H.R. 16968) entitled "An act to provide for the adjustment of the Government contribution with respect to the health benefits coverage of Federal employees and annuitants, and for other purposes".

Attest:

FRANCIS R. VALEO,
Secretary.

Mr. DULSKI. Mr. Speaker, I move that the request of the Senate be agreed to.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. DULSKI. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, will the gentleman explain to the House briefly the nature of this legislation and the reason for the Senate asking the papers and this bill be sent back to that body?

Mr. DULSKI. Mr. Speaker, I will be happy to.

On September 1, the Senate, by unanimous consent, passed S. 1772, which would increase the Government's contribution toward the premium of Federal employee health insurance.

The two major differences between the Senate-passed bill and the House-passed bill—H.R. 16968—are: First, the Government contribution would be 40 percent of the premium whereas the House bill would be 50 percent; and second, the Senate bill would be effective on October 1, 1970, whereas the House bill would be effective on January 1, 1971.

It is our understanding that immediately upon passage of the Senate bill, it was intended that the Senate take up the House bill, strike out all after the enacting clause, and amend it to include the provisions of the Senate-passed bill, S. 1772.

However, the action on the floor of the Senate was to adopt the House bill without the amendment to include the Senate language.

Subsequently, when it was realized what had actually happened, a motion was approved in the Senate that the Secretary of the Senate be instructed to request the House to return the message on the House bill—H.R. 16968. The Secretary has made such a request that the House bill be returned to the Senate for consideration.

It also is our understanding that upon return of the House bill, a motion will be made in the Senate to amend the House bill by inserting the language of the Senate-passed bill. The House bill with the Senate amendment would then be returned to the House for further consideration.

This gives the details of what happened in the Senate.

Mr. GROSS. Mr. Speaker, will the gentleman yield further?

Mr. DULSKI. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, in other words, the other body took up the bill, apparently on the call of the calendar, and by unanimous consent, without debate, passed a bill that was faulty and now asks its return by the House.

Mr. DULSKI. That would be correct, in substance.

Mr. GROSS. I thank the gentleman for yielding.

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. DULSKI. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. I thank the distinguished chairman of the Committee on Post Office and Civil Service for yielding.

It seems to me that the other body demonstrated remarkable perspicuity in passing H.R. 16968, the House-approved health benefits bill, without amendment. I deeply regret that the other body now feels that its action was in error and has formally requested return of the bill for further consideration. However, I shall not oppose the extension of this courtesy to the other body.

The SPEAKER. The question is on

the motion offered by the gentleman from New York.

The motion was agreed to.

A motion to reconsider was laid on the table.

PREVAILING RATE PAY SYSTEMS FOR GOVERNMENT EMPLOYEES

Mr. DULSKI. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 17809) to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes.

CALL OF THE HOUSE

Mr. HALL. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 285]

Alexander	Fish	O'Neal, Ga.
Anderson, Calif.	Flynt	Ottinger
Ashley	Fountain	Pelly
Aspinall	Fraser	Pepper
Beall, Md.	Friedel	Powell
Belcher	Fulton, Tenn.	Price, Tex.

Evins, Tenn.	Miller, Calif.	Wilson, Charles H.
Fallon	Morton	Wold
Feighan	Murphy, N.Y.	
	Obey	

The SPEAKER. On this rollcall 303 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

APPOINTMENT OF CONFEREES ON H.R. 17575, DEPARTMENTS OF STATE, JUSTICE, AND COMMERCE, The JUDICIARY AND RELATED AGENCIES APPROPRIATIONS, 1971

Mr. ROONEY of New York. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 17575) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary and related agencies for the fiscal year ending June 30, 1971, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from New York? The Chair hears none, and appoints the following conferees: Messrs. ROONEY of New York, SIKES, SLACK, SMITH of Iowa, FLYNT, MAHON, BOW, CEDERBERG, and ANDREWS of North Dakota.

PREVAILING RATE PAY SYSTEMS FOR GOVERNMENT EMPLOYEES

The SPEAKER. The question is on the motion of the gentleman from New York (Mr. DULSKI).

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 17809, with Mr. BROOKS in the chair.

IN THE COMMITTEE OF THE WHOLE

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New York (Mr. DULSKI) will be recognized for 1 hour and the gentleman from Iowa (Mr. GROSS) will be recognized for 1 hour. The Chair recognizes the gentleman from New York (Mr. DULSKI).

Mr. DULSKI. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, H.R. 17809 is designed to provide an equitable and long-needed system in law for fixing and adjusting the pay scales for prevailing rate employees of the Federal Government.

Prevailing rate employees are more commonly identified as wage board or blue-collar workers.

There are more than 800,000 wage board employees on the Federal payroll, including workers in a wide range of crafts and trades.

The bill provides a limited expansion of the definition of prevailing rate employees so as to include two other small groups: First, employees of nonappropriated fund activities of the Armed Forces; and, second, employees of the Veterans' Canteen Service.

What we propose to do here is to write into law for the first time the long-established principles and policies for setting pay scales for these workers. About 80 percent of the wage board employees are employed by the Department of Defense. The others principally work for the Veterans' Administration, the General Services Administration, and the Department of the Interior.

There are laws on the books to cover other Government employees, but wage board employees lack this protection.

Why do we need these principles in law? Simply so that the employer and the employee know exactly the rules of the game.

There would be no conflict with the present rules as they apply to wage board employees. The problem is that present rules have no assurance of continuity. There is nothing to prevent them from being changed by administrative action tomorrow.

This uncertainty does not apply to other Government workers, and there is no justification for it applying to wage board workers.

To me, it is fundamental and only fair that we establish a Federal Prevailing Wage Advisory Committee with a full-time Chairman to replace the present advisory group.

We need five steps instead of the present three, plus a pattern of automatic step advancements.

There is clear need for a nationwide system of pay differentials for nonovertime work on second and third shifts. The present system is locally oriented.

Mr. Chairman, our Subcommittee on Manpower and Civil Service has investigated this matter very thoroughly as a result of public hearings and executive discussions. I commend the subcommittee chairman, the gentleman from North Carolina (Mr. HENDERSON) and his subcommittee for their excellent work.

I support the bill as reported from our committee and urge its passage.

For a more detailed explanation of the bill, I yield now to the gentleman from North Carolina (Mr. HENDERSON), the subcommittee chairman for such time as he may consume.

Mr. HENDERSON. Mr. Chairman, I thank the chairman of the full committee for yielding me this time.

Mr. Chairman, I rise to request favorable floor action on H.R. 17809, a bill to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes.

The purpose of this legislation is to establish statutory policy for setting the pay of the Federal Government's 800,000 prevailing rate employees. Prevailing rate employees are also commonly referred to as wage board or blue-collar workers. They are laborers, craftsmen, and tradesmen; as for example: truckdrivers, welders, aircraft mechanics, carpenters, and tool and diemakers.

The definition of "prevailing rate employee" is amplified by this bill to include employees of nonappropriated fund activities of the Armed Forces and employees of the Veterans' Canteen Service.

The bill has two major purposes:

First, it enacts into law the long-established principles and policies for setting the pay of prevailing rate employees.

Second, it makes the following changes in the current operating system and procedures:

Establishes a statutory Federal Prevailing Wage Advisory Committee to replace the current advisory committee created by administrative action to guide the coordinated Federal wage system. The committee currently has six representatives from management and five from employee groups. The proposed legislation requires one of the 11 members to be a full-time Chairman, who shall not hold any other office in the Federal service, and shall be appointed by the President for a 4-year term.

Provides that the new wage schedules have five pay steps instead of the present three steps. The present third step is 104 percent of the prevailing wage, the fifth step, as proposed, would be 112 percent.

Provides automatic step advancements after 26 weeks work in step 1; 78 weeks in step 2; and 104 weeks in each of steps 3 and 4.

Provides a 7½-percent pay differential, nationwide, for nonovertime work during the second shift—3 p.m. until midnight—and 10 percent for the third shift—11 p.m. until 8 a.m. Currently the premium pay depends on the prevailing custom of each labor market area.

Provides "saved pay" for 2 years for prevailing rate employees who are reduced in grade. General schedule employees now have this but prevailing rate employees who must take a general schedule position, due to a reduction in force, do not.

Brings the employees of nonappropriated fund activities of the Armed Forces and employees of the Veterans' Canteen Service, within the 50 States and the District of Columbia, under the provisions of the prevailing rate system.

BACKGROUND INFORMATION

About 80 percent of the Federal Government's 800,000 prevailing rate employees work for the Department of Defense. Other leading employers are the Veterans' Administration, General Services Administration and the Department of the Interior.

In 1862 Congress authorized the Secretary of the Navy to establish the rates of pay of blue collar employees. The only existing legislation relating to these employees is found in 5 United States Code, sections 5341, 5342, and 5343. These sections briefly relate to a policy for setting the pay of prevailing rate employees.

During all these years the pay for wage board workers has been based on a survey of a sample of private industry firms in the local labor market area, generally within a 50-mile radius of the Government activity.

Since July 1968, the Federal Government has had a coordinated wage system, purporting to insure like pay for like work in the same labor market area. This was not necessarily true prior to 1968. The coordinated Federal wage system was established by Civil Service Commission regulations as the result of Presidential memorandums of November 16, 1965; one to the Civil Service Commission and the other to the heads of agencies, requiring equitable coordination of wage board practice.

PUBLIC HEARINGS

The Manpower Subcommittee held extensive public hearings last year on wage board pay policies and problems. The chairman of the Civil Service Commission, the Assistant Secretary of Defense for Manpower, and personnel officials from the General Services Administration and Veterans' Administration appeared before the subcommittee. All of these officials testified there was no need for legislation at this time. They were specifically opposed to having five pay steps and also to bringing the nonappropriated fund employees under the provisions of the Coordinated Wage System.

The Members took testimony from the heads of five national Federal employee organizations. All strongly endorsed the need for legislation.

COST

Cost estimates of this bill, developed by officials of the executive branch, and provided the subcommittee, are $230 million annually. This includes $190 million annually due to the fourth and fifth pay steps, and $40 million due to increased premium pay for second and third shift work. The present wage board payroll is approximately $4 billion. The cost of this legislation is only 5.7 percent above the present wage board salary expenditure. This falls short of the 6-percent pay raise enjoyed by most Federal employees last January.

The implementation of Public Law 90–560, the Monroney amendment, is going to cost an additional $100 million annually. But that would be true regardless of this proposed legislation.

NEED FOR LEGISLATION

Mr. Chairman, until now, Congress has been content to leave it up to the executive branch to provide for an equitable pay scale for the wage board employees. This is the only area of the Federal service where we have not made statutory provision to establish a pay scale.

In the classified civil service, we have established the general schedule salaries and benefits by act of Congress. Under the old Post Office Department, we have long had a statutory PFS salary schedule. The same is true of the armed services.

The wage board employees have been redheaded stepchildren and we have left it up to the executive branch for all practical purposes to pay them whatever it chose under a system entirely of its making. I do not oppose the concept of area wages, but I do believe that an employee receiving compensation which supposedly reflects the prevailing wage in his area for comparable work is entitled to a statutory guarantee that his wage will, in fact, be comparable.

The postal employees have had sizable raises and increased benefits by act of Congress in recent years and in this Congress. The classified civil service employees have had sizable raises and increased benefits by act of Congress in recent years, and in this Congress. Our uniformed military personnel have had salary increases and increased benefits by our action in recent years and in this Congress. Surely our wage board employees are entitled to equal consideration.

Mr Chairman, the need for this legislation has existed for some time, and early enactment into law will certainly be in keeping with recent legislation for other Federal employees.

Mr. UDALL. Mr. Chairman, will the gentleman yield?

Mr. HENDERSON. I am delighted to yield to the distinguished gentleman from Arizona.

Mr. UDALL. I wish to commend my friend from North Carolina for the excellent statement he has made and for his work on this bill. The subcommittee which he heads in the full committee is one of the most valuable in the House, in my judgment. And, the gentleman in the well is undoubtedly one of the most valuable members of our committee and, for that matter, of the House of Representatives as a whole. I wish to associate myself with what he has said, to strongly register my support for this bill, and to express the hope it will pass the House and become law this year.

I do have one further comment, if the gentleman will yield further.

Mr. HENDERSON. I am glad to yield to the gentleman.

Mr. UDALL. The really forgotten people in the Federal service have been the people who work for the nonappropriated fund activities—the post exchanges, the barber shops, the beauty shops, the officers clubs, the noncommissioned veterans' canteens, and places of that kind. For too long now those people have been without any protection. For a number of years they were not even covered by the minimum wage laws.

One of the features of this bill, under the gentleman's guidance, is that we would bring those nonappropriated fund employees under the cover of the wage board system. On page 24 of the bill we provide that their rates of pay be not less than the Federal minimum wage. So this is a great step forward for some of the people really at the bottom of the totem pole, people who have been neglected and ignored by the Congress and mistreated in connection with their work. I merely wish to commmend the gentleman for that feature of his work on the bill in addition to what I have previously said.

Mr. HENDERSON. I thank the gentleman for his comments on those points. Certainly on the first point, as chairman of the House Subcommittee on Civil Service, I know of no one who can point out more clearly than the gentleman from Arizona can that the wage board employees covered by this bill have not faired as well as they should, and it is time that we give them the attention this bill would give them.

On the second point to which the gentleman referred, coverage of nonappropriated employees, I am delighted the gentleman has highlighted that matter this early in the general debate, because the gentleman in the well expects to do all that he can to defend any attempts to remove the coverage of this bill for nonappropriated employees, and certainly I wish to alert all our colleagues in the House that there is no feature in this bill that I am more convinced is an absolute necessity in order to bring about fairness to those affected to the greatest extent, the dependents of the military who are located on the bases where post exchanges and nonappropriated activities are conducted. I will do my best to spell this out in greater detail as amendments are offered.

Mr. UDALL. Mr. Chairman, will the gentleman yield further?

Mr. HENDERSON. I yield to the gentleman from Arizona.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania (Mr. CORBETT), the ranking member of the Post Office and Civil Service Committee.

Mr. CORBETT. Mr. Chairman, I rise in support of H.R. 17809. I will vote for the bill and hope a large majority of my colleagues will do the same.

H.R. 17809 establishes statutory policy for setting the pay of the Federal Government's 800,000 prevailing rate employees.

Basically, this bill follows the procedures incorporated in the coordinated Federal wage system, which was authorized by Presidential memorandums dated November 16, 1965, and developed under the leadership of the chairman of the Civil Service Commission. The policy framework for the coordinated Federal wage system was established in December 1967, and the first wage surveys were started in July 1968, with complete conversion to this system on an area by area basis expected to be completed in October of this year.

The structure of the coordinated Federal wage system and that provided for in H.R. 17809 is very similar, except for the following major differences:

Under H.R. 17809 the chairman of the Federal Prevailing Rate Advisory Committee will be appointed by the President of the United States for a 4-year term at a rate of pay equivalent to the maximum rate for the general schedule, whereas under the coordinated Federal wage system, the chairman of the National Wage Policy Committee corresponding to the Federal Prevailing Wage Advisory Committee is a Civil Service Commission official.

The membership of these committees is the same—five agency members and five labor organization members.

H.R. 17809 provides for inclusion of nonappropriated fund employees—these are not included in the coordinated Federal wage system.

H.R. 17809 provides for five steps in each grade, whereas only three steps per grade are in the coordinated Federal wage system.

H.R. 17809 provides for 7½ percent and 10 percent differential for night shift work, whereas local wage area practices are used under the coordinated Federal wage system.

Both systems are affected by the Monroney amendment, which provides that where there is not a sufficient number of matching jobs in private industry in an area on which to base comparable wage schedules for Federal employees concerned, the wage area will be expanded beyond the normal geographical limits to obtain appropriate industry wage data.

In effect, H.R. 17809, in addition to including a number of provisions that are not in the present coordinated Federal wage system, will set in concrete the existing procedures, and will negate the present system of administratively making changes as new and unexpected situations arise.

And while we are sympathetic to the idea of setting wage schedules for nonappropriated fund employees in line with those paid for similar occupations in the private sector, we feel very strongly that this should be accomplished in a separate piece of legislation which would cover all aspects of the nonappropriated fund work force.

The Department of Defense estimates that their annual cost of certain provisions in H.R. 17809 would be:

Increase from three steps to five steps per grade, $190 million.

The 7½ percent and 10 percent night differentials, $40 million.

Monroney amendment—first year cost—$300 million, plus, of which $200 million will be required for retroactive payments, in some cases up to 18 months.

Annual cost $120 million after the first year.

Mr. GROSS. Mr. Chairman, I yield such time as he may require to the gentleman from Virginia (Mr. SCOTT).

Mr. SCOTT. Mr. Chairman, I appreciate the gentleman yielding and rise in support of this bill. It will provide that the prevailing rate employees, also referred to as wage board or blue collar workers, have their compensation based on the principles of equal pay for equal work. There will be pay differences based on substantial or recognizable differences in work, and the rates of pay will be maintained with prevailing rates of comparable work so that the rates will attract and retain qualified employees.

To accomplish this, a new Federal Wage Advisory Committee will be established with, for the first time, a full-time Chairman appointed by the President for a 4-year term. Instead of the present three-step wage scale, five steps will be provided at 96, 100, 104, 108, and 112 percent, respectively, of the prevailing rate. Employees with satisfactory work performance will be automatically advanced to the next higher step within a grade following 26 weeks of continuous service in step 1, 78 weeks in step 2, and 104 weeks each in steps 3 and 4. Differentials will be provided for severe working conditions when they are not otherwise taken care of by the grade or basic pay rate. In addition, 7½ and 10 percent differentials for regular schedule of nonovertime work for the 3:30 to midnight and 11 p.m. to 8 a.m. shift are provided. "Saved" pay similar to that now provided for employees of the general schedule who are reduced in grade is provided for a period of 2 years.

I do have reservations, however, concerning the inclusion of the employees of the nonappropriated fund activities who have previously not been covered by the prevailing rate system, being included at this time. These employees work for the Armed Forces, and the Canteen Service of the Veterans' Administration in occupations such as bartenders, waiters, kitchen help, and clerks in nonappropriated fund stores and post exchanges. To include these people in this partial law affecting only wages will further cloud the uncertainty of their possible status as Federal Government employees.

In addition, since many of their normal hours are during the second and third shifts previously mentioned, this will of necessity result in an increase in costs to personnel using these facilities.

I urge that the measure be adopted in fairness to our blue collar worker.

Mr. GROSS. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, I oppose the enactment of this bill because it is inequitable, dangerously inflationary, completely unnecessary, and because it threatens to destroy the area wage system that has operated successfully for many years.

I would like to emphasize that H.R. 17809 is not a direct pay bill as such for the so-called wage board Federal employees. The intent of the bill is to write into law a rigid and inflexible set of national procedures for setting the pay of these employees according to prevailing wage rates. It also contains four additional provisions which are absolutely contrary to all principles of prevailing wage practices and which are costly and will create serious inequities throughout the country and untold administrative problems.

Mr. Chairman, for many, many years we in the Congress who have had the responsibility of considering legislation involving pay of Federal employees have always pointed with considerable pride to the operation of the so-called area wage board system.

While each year we have had to labor with statutory pay adjustments for employees covered under the Classification Act, the postal field service, Foreign Service, and the medicine and surgery employees of the Veterans' Administration, the pay of Federal blue-collar workers—the craftsmen and tradesmen—has been adjusted automatically through the operation of the wage board system in accordance with local prevailing wage rates.

This system has been operating since 1862 under a rather simple policy enactment by Congress that the pay of these employees should be set regularly on the basis of pay rates paid by private industry in the local areas.

This system has operated with a very minimum of Congressional involvement under a mandate to the agencies that they must pay their employees the same rates as private industry pays in the same wage area.

There is no better evidence as to the effectiveness of the present wage board system than the fact that in fiscal year 1969 these employees received pay raises averaging 9.5 percent while the nationwide Consumer Price Index rose only 4.8 percent, and in fiscal year 1970 they received pay raises averaging 8.9 percent while the nationwide Consumer Price Index rose 6 percent.

It is abundantly obvious that the present system works; that pay raises are more than keeping pace with increases in the cost of living, and that no further legislation in this field is necessary.

The existing law provides the entire basis for establishing and operating the system. Over the years it has permitted the agencies to be responsive to any need for change, and when it became evident that certain inequities and complaints were arising, the existing authority was

broad enough to permit the Civil Service Commission to establish its coordinated Federal wage system which will be fully operative nationwide by October of this year.

It is also quite interesting to note that the philosophy involved in this piece of legislation runs counter to what we have done and are doing with respect to the pay of all other Federal employees. Just a few short weeks ago, we took Congress completely out of the picture in setting the pay of postal employees, and our subcommittee on compensation is right now considering the administration's proposal which will permit the President to set pay scales for the three other statutory salary systems with a very minimum of congressional involvement. But here for some reason with our wage board employees, and with a system that has operated well and efficiently for many years, we now seem to want a maximum of congressional involvement, and we want written into law a rigid, cumbersome system that should be as flexible as possible to change as new and unforeseen situations arise.

I indicated earlier that this bill also contains at least four extraneous provisions that violate accepted personnel and pay policies, and which in themselves are sufficient reasons for rejecting this bill.

The first provision is the so-called Monroney amendment requiring wage surveys outside the local wage area. Instead of being reeancted by this legislation, the Monroney amendment is so bad that it should be repealed entirely. Its additional cost to the Government is $103 million per year, but just as important, it destroys the entire concept of paying Federal wages on a local prevailing rate basis.

By requiring wage surveys for certain occupations to be made outside the local wage area, the Monroney amendment acts to inflate the entire Federal wage schedule in that area. The Defense Department and the Civil Service Commission expect that between 40 and 60 major labor markets throughout the country will eventually be affected by the operation of the Monroney amendment, and I would very seriously advise my colleagues to consider very carefully the effect this provision will have upon pay policies—both Federal and private industry—in their own districts. The only logical result of the operation of the Monroney amendment in most labor markets is the creation of untold problems for local merchants and local industries who will be forced to raise wages and pay rates in order to keep pace with inflated local Federal wage scales.

A second specific objectionable provision of this bill is the creation of a pay schedule containing five pay steps. The present system has three steps and most private industries have three steps.

The two additional pay steps contained in this bill are added at the top with the pay line—100 percent—at the second step. But the fifth step, where most of the employees will be placed, is set at 112 percent of local pay rates. In other words, this provision works almost automatically to insure that most Federal blue-collar workers in any given local wage area will be paid 12 percent more than local private industry rates. The cost to the Government of this provision will be an additional $190 million per year.

The third inequity in this bill is the provision which writes into rigid law national percentage differentials of 7½ percent for swing shift work and 10 percent for nightwork.

Differentials in local private industries vary throughout the country according to local pay practices. They are seldom, if ever, paid in percentage amounts. Instead they are paid in a fixed sum of money of so many additional cents per hour. It is extremely unwise personnel practice to write into fixed law a percentage differential that applies nationwide. In fact, some wage board employees currently are being paid a higher differential than that called for in the bill, and enactment of this provision could actually reduce their total pay.

Finally, Mr. Chairman, there is no conceivable reason why non-Federal employees—the so-called nonappropriated fund employees—should be blanketed in as they are under this bill in a pay system designed solely for Federal employees. These employees are not Federal employees. They have none of the obligations, responsibilities, or commitments of Federal employees.

If there are legitimate complaints about the pay and employee policies for these employees, the answer certainly is not to blanket them in under legislation that applies strictly to Federal employees. We are informed that the Department of Defense, which employs most of these people, will very soon be implementing a total personnel management system that will cover all aspects of the nonappropriated fund work force. It will be designed to suit their special circumstances and special needs.

Mr. Chairman, the total cost of this bill, including reenactment of the Monroney amendment, is $340 million per year. The bill should be rejected not only because of its cost and its inflationary impact on our economy, but primarily because it is bad legislation, it is not needed, and because it will create many more problems than it is intended to solve.

Mr. HENDERSON. Mr. Chairman, I am delighted to yield now to the distinguished gentleman from Hawaii (Mr. MATSUNAGA) 5 minutes.

Mr. MATSUNAGA. Mr. Chairman, there should be no real difficulty for any Member of this body to support H.R. 17809, for it would merely enact into law the long-established principles and policies for setting the wages of prevailing-rate employees of the Federal Government.

For over a century, Congress has recognized that Federal blue-collar workers deserve to be paid wages comparable to those in private industry in any one particular area. During all of these years, wages for Federal blue-collar employees have been based on a survey of the private labor market. The survey would usually sample private industry within a 50-mile radius of the Government activity. The primary purpose of H.R. 17809 is simply to enact that practice into law.

Since 1968, the executive branch of our Federal Government has operated a system providing for similar pay for similar work. This was not so before 1968, and there is nothing to prevent the system from being changed or eliminated by Executive order. It is time Congress accepted the responsibility of insuring into the future, fair treatment for the 800,000 blue-collar workers employed by the Federal Government.

H.R. 17809 would also establish a five-step wage schedule, to replace the current three steps for nonsupervisory employees. The second step, as now, represents the prevailing rate, or 100 percent; the third step, 104 percent; the fourth, 108 percent; and the fifth, 112 percent. Also specified is the amount of time a worker must spend in each step before advancement to the next. This new procedure will allow more equitable differentiation among workers performing the same tasks, and will allow fairer rewards to those who have served faithfully and competently for a number of years.

The bill also provides for a uniform nationwide pay differential for work on the second and third shifts. Currently, whether such premium pay is awarded or not depends on the prevailing local custom. This provision of the bill recognizes the fact that second and third shift employees do endure a hardship which deserves compensation.

Another provision of the bill allows "saved pay" for the blue collar worker for 2 years if he is transferred to a general schedule position because of reductions in force. General schedule—white collar—employees already enjoy this protection; it is simple justice to extend it to our blue collar workers.

A very important provision of the bill, Mr. Chairman, is the expansion of the definition of the term "prevailing rate employee" to include approximately 143,000 employees of nonappropriated fund activities of the Armed Forces and Veterans' Canteen Service. The Federal Government has a major stake in the employment of these persons, and they naturally look to the Federal Government for a measure of protection in many matters. None of these matters is more vital than the wages they are paid, and this bill will stabilize and improve their wage structure.

Finally, H.R. 17809 sets up a Prevailing Wage Advisory Committee. This Committee will have 11 members: Five representing employee organizations, five representing Government agencies with large numbers of blue collar workers, and a Chairman appointed by the President. This Committee will make recommendations to the Civil Service Commission about prevailing wage structures, and will make an annual report to the Congress containing whatever legislative suggestions it deems appropriate. This Committee will insure the fairness of decisions involving Prevailing Wage Rate employees.

Mr. Chairman, H.R. 17809 is a sound bill. It is evident that the subcommittee

chaired by the competent and distinguished gentleman from North Carolina (Mr. HENDERSON), and the full committee under the able leadership of the distinguished gentleman from New York (Mr. DULSKI), have labored long and diligently to produce an equitable piece of legislation. It is deserving of the support of this body, and I urge its approval.

Mr. GROSS. Mr. Chairman, I yield such time as he may require to the distinguished gentleman from Illinois (Mr. DERWINSKI).

Mr. DERWINSKI. Mr. Chairman, I rise in opposition to H.R. 17809. I view with particular concern that feature of the bill that would add 8-percent greater costs, $330 million, to the $4 billion-plus payroll of the Department of Defense that employs most of the wage or blue-collar employees of the Government. This expenditure would come about by the addition of two more within-grade step rates for each grade in the proposed system and calculating the fifth step rate 112 percent of the base rate. Presently, wage employees have three step rates in each grade and step 3 is 104 percent of the base.

The fifth step rate would be reached after 6 years of continuous service. Most employees on the rolls would qualify for the top step immediately and thereby get the 8-percent increase in addition to the increases that accrue through regular annual surveys that have averaged near 9 percent during 1969 and 1970.

There is no support for the greater number of step rates based on general industry practice. Studies have consistently shown that most companies utilize single, or in some cases, two-step rate plans.

The costs represented in the expanded step-rate proposal could produce an inflationary impact in the local wage areas where DOD is a major employer. Other industries would feel the force of the higher rates imposed by the Government employer and would have to meet these increased rates.

The total cost impact of this and other features of the bill, and the lack of sound supporting industrial practice, urge me to recommend the defeat of the legislative proposal.

Mr. Chairman, I also draw attention to that particular provision that would fix a uniform nationwide 7½-percent pay differential for employees assigned to the first night shift and a 10-percent pay differential to those assigned to the second night shift.

The foundation of the Federal wage system is to relate its pay practices to those of industries in the local wage area with which the Government must compete to secure its work force. Just as basic pay rates vary from company to company, so do the differentials differ for payment of employees assigned to work on other than the day shift.

In the obtaining of wage data from private employers, the Government stresses its desire to minimize the possibility of unfair competition. It would be inappropriate to abandon the current practice of setting shift differentials based on the consideration of differentials of the companies that furnish basic wage data. An accurate tie-in of shift differential practices with basic pay rates is essential because of the other pay considerations that have been recognized by the various agencies and the Comptroller General. Overtime and other premium pays are built on the rates that include the shift differentials so it is extremely important that valid differentials be established.

For the most part, companies express their shift differentials in hourly amounts and provisions to follow this general practice have been incorporated into the coordinated Federal wage system.

Uniform shift differentials in the recommended amounts would add $40 million in payroll costs annually within the Department of Defense. This would contribute to the problems this agency is experiencing with significant budget cuts and the need to reduce expenditures.

Mr. Chairman, after hearing the eloquent remarks of the gentleman from Hawaii in support of this bill and after reading my remarks against it, I am wondering if we were speaking on the same subject matter. However, honest differences of opinion do exist, especially at this time of the year.

I wish to point out, Mr. Chairman, that this is a more complicated bill than its supporters have alluded to. If I may, I would run through what the Department of Defense refers to as the objectionable features of the bill and reemphasize some practical points that I believe should be made.

First, Mr. Chairman, the total cost of this bill runs in the neighborhood of $320 million.

Due to the mechanics of the Defense Department budget this figure is not covered in the appropriation bill and as a result the Department will probably have to have a reduction in force of 40,000 of the wage board employees so that the net result of this bill will be that across the country 40,000 wage board employees may find themselves laid off because of the adverse impact of this bill.

Mr. Chairman, I merely point that out because this would not be the pot of gold at the end of the rainbow for these 40,000 employees who would be adversely, directly, and personally affected.

As a matter of fact, the Department of Defense finds every portion of the bill objectionable.

I believe the bill could probably properly be classified as premature and unnecessary at this time, costly and subject, I would think, to a very hard look in the executive department before any final approval is given.

Mr. Chairman, I wish to remind those Members who may have perused our committee report that the Civil Service Commission provided an especially vehement statement in opposition, and knowing the Civil Service Commission as we do, and their bland approaches to legislation, the fact that they took it upon themselves to vehemently oppose this bill would be a practical warning to all of us.

Mr. Chairman, I would emphasize that this is a costly bill, and in my opinion it is an unnecessary bill, and its timing is especially bad. The gentleman from Iowa (Mr. GROSS) and I will offer constructive amendments, hoping to make this bill a little bit better, and we would solicit your objectivity, your understanding and your support in these amendments.

Mr. Chairman, I yield back the balance of my time.

Mr. HENDERSON. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Virginia (Mr. ABBITT).

Mr. ABBITT. Mr. Chairman, I desire first to express my deep appreciation to the gentleman from North Carolina (Mr. HENDERSON) and to all members of his committee, for the splendid work that they have done on this all-important bill. It covers a matter that has needed attention for quite some time. The bill affects the so-called blue collar workers, as they have referred to themselves, and as the people who deal with them refer to them, but I would say that they have actually become the forgotten employees because, during the last 5 or 6 years, the other Government employees have had congressional action in their behalf some six times, and that applies to the military and to the civil service employees, but during that same period of time these blue collar workers have had no congressional action on their behalf whatsoever.

Mr. Chairman, the main thrust of the bill is to establish by statute the policy of fixing the pay for the so-called prevailing wage employees.

Of course, the bill does several things, as has been previously described. It establishes a Federal Prevailing Wage Advisory Committee to replace the present committee.

Mr. Chairman, I am highly pleased that the committee saw fit to establish this committee by statute. Presently the committee is made up of six management members and five representatives of labor—and we have had a good demonstration in my area recently of just what such a committee can do to wages. We are down in the great tidewater area of Virginia, and the question came up on the subject of establishing wages for the blue collar workers there, and all along the line the vote of the wage board was 5 to 6—always 5 to 6.

Finally the distinguished Congressman from Norfolk (Mr. WHITEHURST) and the gentleman from Newport (Mr. DOWNING) together with what help I could give them, tried to prevail on this committee to insist on getting a fair wage survey.

We talked and talked but we were never heard.

We are convinced that this new committee which will be established by this bill will be a tremendous improvement.

It will keep the 11-member committee. But it provides, as I understand it—and I know that our chairman will correct me if I am wrong—it sets up one man as chairman, who will be a full-time employee and that is the only employment, thank goodness that he can have with the Federal Government.

So it is contemplated that if and when this legislation becomes law then we will have fair and equitable and just decisions on these all-important matters.

In addition, it keeps in the so-called

Monroney amendment which is vitally important.

It developed in our area that the big employer on the outside was the Newport News Shipbuilding & Drydock Co. They did not want to give the wage rates and I do not blame them. I can well understand that. But this committee went back five times to get additional information recognizing each time that they did not have the information and we have no way of knowing now whether or not all the information was turned over to the wage board. It is hard for me to believe that we did get all the information owing to the understandable reluctance of the Newport News Co. to make it available. In addition it is impossible to say in all fairness that the Department can have a fair rate based on the two vastly different systems of pay because of the incentives and things like that over on the Newport News side.

In addition to that I am informed that this bill brings into the system the so-called set-asides. That is a group of blue collar workers who have no particular place to go—and they are just on the outside of every group.

As I understand it this bill brings in all blue collar workers on an equal basis including the set-asides.

Thousands of our production workers are loyal, hardworking Government people but they have begun to wonder if the Congress appreciates fully their work. They look around and see the interest of Congress for the other Federal employees, but little outward effort for them.

Mr. Chairman, we have in the Henderson bill, H.R. 17809, a way to express our feeling for the Government's 850,000 blue collar workers. We have an opportunity to update the pay procedures for these employees. Here is a means for the Congress to state unequivocally its policies in the setting of pay for these prevailing rate workers who build the ships, overhaul the planes, load shells, maintain Government facilities, and perform hundreds of other functions necessary for our Government.

Mr. Chairman, I wholeheartedly support H.R. 17809.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HENDERSON. Mr. Chairman, I yield the gentleman 2 additional minutes and would ask the gentleman to yield to me briefly.

Mr. ABBITT. I yield to the gentleman.

Mr. HENDERSON. Mr. Chairman, I want to commend the gentleman on the very important statement that he has just made.

I know of no Member of the House who has had more recent experience with these problems than the gentleman from Virginia and his colleagues from that area of the great State of Virginia, whom he has mentioned. I thank the gentleman for the contribution he is making.

Mr. ABBITT. Thank you very much, Mr. Chairman.

I was just going to add that this will give us five steps instead of three. It is most important that we have that. We recognize these fine dedicated Government employees and we feel like they are part and parcel of America and should be so considered.

I want to again thank this committee for the splendid work that they have done on this important matter.

Mr. GROSS. Mr. Chairman, I yield 1 minute to the gentleman from Nebraska (Mr. CUNNINGHAM).

Mr. CUNNINGHAM. Mr. Chairman, I have heard some remarks about this being a bad bill. I do not want the Members to be misled. I am on the full Committee on Post Office and Civil Service but I am not on the subcommittee. However, I am very familiar with the bill.

This whole matter of handling the problems including wage requests, classifications, and so on, of blue-collared workers has troubled this committee for many years. This is a step in the right direction. If there is something very wrong with this bill that I learn during the debate, of course, it can be considered in the form of an amendment. I do not want the Members, particularly on this side of the aisle, to get the impression that this is a bad deal, because in my opinion it is not.

Mr. GROSS. Mr. Chairman, I yield to the gentleman from Virginia (Mr. WHITEHURST).

Mr. WHITEHURST. Mr. Chairman, I wish to join my colleagues from Virginia (Mr. ABBITT and Mr. DOWNING), in commending the gentleman from North Carolina (Mr. HENDERSON) for his efforts on behalf of the blue-collar employees.

The legislation we are considering today, H.R. 17809, will for the first time put into law basic policies for setting the pay of over 850,000 appropriated and heretofore nonappropriated Federal employees.

Over the past 5 years, these loyal and dedicated employees have watched while Congress has expressed its appreciation and understanding to all other Government employees by granting six separate pay increases to employees of the Post Office, class act, and military, which have averaged over 33 percent.

Mr. Chairman, this legislation gives us the opportunity to eliminate many of the doubts the blue-collar employees have built up over the years, and particularly to eliminate the confusion that has developed over the implementation of the new Federal coordinated wage system. But most of all, it will update their pay systems by providing a full five steps at each grade level; a save-pay provision for all Government employees; and the addition of the language in section 5342 guaranteeing the supervisors equally equitable treatment.

Mr. Chairman, I wholeheartedly support H.R. 17809, and I urge the House to accept this legislation. I urge the House to accept it, furthermore, without adding any crippling amendments.

Mr. HENDERSON. Mr. Chairman, I yield 3 minutes to the gentleman from Florida (Mr. BENNETT).

Mr. BENNETT. Mr. Chairman, I do not know of a bill that has recently come before the House which meets as great a longtime objective with respect to what the Congress ought to do as well as this bill does. I have represented Jacksonville, Fla., for 22 years, and many of the employees involved in the bill are employed in the city of Jacksonville. I have noted through the years that they have had great difficulty in having proper attention paid to their wage problems. Efforts have been made sporadically by the Department of Defense to make little adjustments here and there, but never has Congress recently come fully to grips with this problem as it has in the bill now before the committee. I congratulate the committee and its very able chairman, the gentleman from North Carolina.

With regard to the blue collar workers this bill certainly represents a very substantial thrust forward. I join with the gentleman who just spoke in saying that if there is something that needs to be corrected in the bill that has not been brought to my attention, I will be glad to join anyone in that sort of an operation.

There is one other thing I would like to mention before I am seated and that deals with the nonappropriated fund employees, employed indirectly by the Federal Government, were at below-minimum-wage standards. This is an excruciating thing for a Member of Congress who believes in a minimum wage law, as do I, to experience—people employed indirectly by the Federal Government not even getting a minimum wage. So, many years ago I introduced a bill requiring that these employees be given at least a minimum wage. This bill goes further than that and puts these employees on a strong basis where they will have the attention that should be given to them in their wage rates and I am happy the committee included that provision in the bill.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I am happy to yield to the gentleman from North Carolina.

Mr. HENDERSON. As a member of the Armed Services Committee, I want to especially commend the gentleman for his support of the provisions for the nonappropriated fund employees. I am sure he is deeply concerned about the total welfare of all military personnel and their dependents. I am most appreciative of the gentleman's support.

Mr. BENNETT. I would like to point out that there are other military wages that need to be given prompt attention. This is in the field of the compensation paid to the enlisted men and officers of our military forces today. I am told we now have somewhere between 15,000 and 20,000 people in the military who are below the poverty level. This is certainly something that should be corrected immediately. I have a bill to correct this and I hope that this problem can be solved promptly.

Mr. HENDERSON. Mr. Chairman, I yield such time as he may desire to the gentleman from Virginia (Mr. DOWNING).

Mr. DOWNING. Mr. Chairman, I am happy to rise in support of H.R. 17809, a bill to provide an equitable system for

fixing and adjusting the rates of pay for blue collar employees of the Federal Government; and I am especially honored to support my esteemed colleague from North Carolina, the most able chairman of the Manpower Subcommittee of the House Post Office and Civil Service Committee, DAVID N. HENDERSON. I commend him most highly for bringing this bill to the floor of the House.

Thousands—actually thousands of my constituents say that the time is long past due for this legislation. I am in complete agreement with them. During the past several years, thousands upon thousands of laborers, aircraft mechanics, carpenters, and the many other occupations in the wage board category have witnessed Congress improve the salary scale of other Government employees again and again. Rightfully they have asked the question: Why cannot Congress give us fair pay? If any of us had been in their place, we would have asked the same question and I doubt seriously if we would have been content to sit and wait as they have.

I have reviewed H.R. 17809 and this bill does give proper recognition to our productive employees. This will give them fair pay. Additional wage steps are provided and these in turn give added incentive to the employees. Likewise, there is a nationwide premium pay for overtime work.

I am happy to note that the Henderson bill provides assistance to our more than 100,000 nonappropriated fund employees. These are the employees of post exchanges, hobby shops, and so forth. They are the forgotten employees in the Federal service. This bill brings them under the wage board pay system and guarantees them step raises that previously had been denied to them.

Mr. Speaker, this is sound legislation. It deserves the support of all the Members. To do otherwise would deny the Federal blue collar worker the basic right of every American citizen—his and her right to equal pay for equal work.

Mr. GROSS. Mr. Chairman, I yield whatever time he may require to the gentleman from Maryland (Mr. HOGAN).

Mr. HOGAN. Mr. Chairman, I rise in support of H.R. 17809, better known as the wage board bill, which will enact into law and improve upon the long established principles and policies for setting the pay of wage board or blue collar workers.

Among the redeeming features of this bill are provisions which will——

Establish an 11-member Federal prevailing wage advisory committee with a full-time chairman to guide the coordinated Federal wage system;

Provide for a five-step wage schedule instead of the present three steps;

Provide automatic step advancements after 26 weeks work in step 1; 78 weeks in step 2; and 104 weeks in each of steps 3 and 4;

Provide a 7½ percent pay differential, nationwide, for scheduled nonovertime work during the second shift—3 p.m. until midnight—and 10 percent for the third shift—11 p.m. until 8 a.m.;

Provide wage board employees who are reduced in grade the same "saved pay" protection as is currently provided General Schedule employees; and

Bring under the pay system approximately 143,000 employees of nonappropriated fund activities of the Armed Forces and of the Veterans' Canteen Services.

Mr. Chairman, it is my opinion that this upgrading and revision of the prevailing pay system is long overdue and necessary if the Federal Government is to be in a position to compete with private industry for topflight laborers, draftsmen and tradesmen. Therefore, I urge the passage of this legislation.

Mr. HENDERSON. Mr. Chairman, I yield 5 minutes to the gentleman from Montana (Mr. OLSEN), a member of the full committee.

Mr. OLSEN. Mr. Chairman, after considerable foot dragging and delays which, as you know, resulted in disruption of the postal service, the Congress has finally lived up to its 1967 pledge of wage comparability and increased the pay of postal workers to a place where most of them feel they are making a living wage.

I hope that today we can adopt the sound proposals of the Manpower Subcommittee concerning the more than 800,000 wage board employees so that we do not next year find ourselves again facing a situation where dedicated Federal employees have fallen behind in their wages and benefits and have to precipitate chaos and strikes in order to gain nominal benefits.

The chairman of the Manpower Subcommittee, our distinguished colleague, DAVE HENDERSON, has always had a keen and active interest in the welfare of our loyal and hard working wage board employees. But he is a realist. I know that he and his subcommittee rejected numerous pie-in-the-sky proposals by different groups before his subcommittee. After much study and research he has reported to us a bill that is realistic, equitable and just. It is a bill backed by the biggest and one of the most responsible Federal unions, the American Federation of Government Employees.

Admittedly it does not give the Federal unions everything they asked for, but it is a measure that looks to the chronically troublesome matters of improved wage surveys, equitable step increases, uniform overtime, more definite job grading, protection for the nonappropriated fund employees, and the establishment of a rate advisory committee that will, I am positive, solve so many of the nagging and repetitious ailments of the wage board system. In short, Mr. Chairman, this bill formulates, on a statutory basis, many important reforms in procedures that will provide necessary guidelines for the wage board rates compensation system for many years to come.

Mr. Chairman, the overall cost of this bill amounts to less than 6 percent of the total wages for Federal blue collar workers. It is a small benefit in these times of rising prices and climbing cost of living, and in view of the 6-percent classified employee pay raise, effective last January 1.

I congratulate and wholeheartedly support the gentleman from North Carolina (Mr. HENDERSON) and his subcommittee and the gentleman from New York (Mr. DULSKI) and the full committee and urge the speedy adoption of this most needed legislation.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. OLSEN. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I thank the gentleman for yielding.

The gentleman spoke of the so-called comparability pay increase in the postal reform bill. Is it not true that the increase was a payoff for union leader support of the so-called postal reform?

Mr. OLSEN. I think the gentleman has a good argument there.

Mr. GROSS. Mr. Chairman, I thank the gentleman.

Mr. DERWINSKI. Mr. Chairman, will the gentleman yield?

Mr. OLSEN. I yield to the gentleman from Illinois.

Mr. DERWINSKI. Mr. Chairman, I cannot help but notice that of all people in the House, the two who are least apt to discuss postal reform in an agreed situation are the gentleman in the well and the gentleman from Iowa.

Mr. OLSEN. Mr. Chairman, I do not think we should relate the postal pay increase to this bill. This bill should be related to the increase of the other Federal employees last January 1.

That is why the gentleman from North Carolina (Mr. HENDERSON) brought this bill to the floor.

Mr. GROSS. Mr. Chairman, I yield such time as he may consume to the gentleman from Ohio (Mr. MILLER).

Mr. MILLER of Ohio. Mr. Speaker, we have been given indication that the increases contained in this bill will cause the further layoff of thousands of Federal employees thus adding to an already serious unemployment situation. We can ill afford this additional burden to our present economy nor should we impose the great hardships of disemployment to more Americans.

We have been further advised that the Bureau of the Budget, Civil Service Commission, Department of Defense, and General Services Administration consider the bill unjustified and unacceptable. The restrictive and inflexible nature of the proposed wage administration practices will cause serious problems in trying to manage the system as well as making it difficult for the system to react to problem situations. There is further concern for the implications this bill will have on the entire prevailing rate concept. The overall consequences of this bill should be given careful consideration by this body and weigh heavily in its decision.

Mr. GROSS. Mr. Chairman, I yield 5 minutes to the distinguished minority leader, the gentleman from Michigan (Mr. GERALD R. FORD).

Mr. GERALD R. FORD. Mr. Chairman, this legislation has proponents who I am sure are acting in the utmost good faith.

I am sure there are some extenuating circumstances which would justify legislation in this area to some extent. But I have consulted with the Secretary of Defense, who will have the responsibility of implementing this legislation if it should become law, and according to him this legislation could have some very serious ramifications for a great many employees who are now on the payroll of the Federal Government—such ramifications as a severe cutback in the number of employees currently on the payroll of the Federal Government or the Defense Department.

Let me read certain excerpts from a letter sent to me by Secretary Laird dated August 28, 1970. In this letter from the Secretary of Defense there is the following:

H.R. 17809 would—

Result in Federal agencies paying 12% above prevailing rates in localities throughout the U.S., with a resultant inflationary impact on the wages of other employers.

Make it necessary for the DoD (which employs 80% of all Federal wage employees) to lay off thousands of additional employees in order to absorb hundreds of millions of dollars in unwarranted wage increases. These would take effect at a time when the Defense budget is being sharply reduced.

The Secretary goes on to say:

H.R. 17809 would cause a further departure from the sound principle of fixing wages of employees in trade and craft positions in accordance with rates prevailing in the communities in which they work.

I do not believe anybody by action here today wants to vote for legislation which, according to the Secretary of Defense, will result in a layoff of thousands of additional employees of the Department of Defense. According to the Secretary of Defense, the enactment of this legislation would bring about that result.

The letter is as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C., August 28, 1970.

Hon. GERALD R. FORD,
House of Representatives,
Washington, D.C.

DEAR MR. FORD: I would like to call your attention to a number of problems that would be created for the Department of Defense and other Federal agencies if H.R. 17809, scheduled to be considered by the House on September 9, were to be enacted:

H.R. 17809 would—

Result in Federal agencies paying 12% above prevailing rates in localities throughout the U.S., with a resultant inflationary impact on the wages of other employers.

Make it necessary for the DOD (which employs 80% of all Federal wage employees) to lay off thousands of additional employees in order to absorb hundreds of millions of dollars in unwarranted wage increases. These would take effect at a time when the Defense budget is being sharply reduced.

Cause a further departure from the sound principle of fixing wages of employees in trade and craft positions in accordance with rates prevailing in the communities in which they work.

There are several high-cost features of H.R. 17809 that are contrary to the principle of fixing the rates of pay for these employees based on rates prevailing in their communities. These include the provision for five step rates (prevalent industry practice is to have not more than one or two step rates); fixed 7½% and 10% differentials for night work which exceed the prevailing practice in the vast majority of local wage areas; and continuing the unsound requirement of the so-called Monroney amendment that rates from other wage areas be imported and used in calculating the locality wage schedule.

Proponents of this legislation have contended that wage employees have not received adequate increases under the current Coordinated Federal Wage System, despite the fact that wages of employees are adjusted under this system at annual intervals based upon surveys of prevailing local rates. During FY 1969, employees under the system received wage increases averaging 9.5%, and in FY 1970 their increases averaged 8.1%. These increases have more than kept pace with national wage increase trends during this period.

H.R. 17809 should be opposed for the reasons set forth above. Its wage increases are unjustified, and its cost increases would impose great hardships in the form of disemployment for thousands of additional Federal employees. Moreover, in light of these factors there can be no justification for permitting its very substantial inflationary effect upon prices and the cost of living.

Sincerely,

MELVIN R. LAIRD.

Therefore, I strongly oppose the legislation. I will vote for some of the remedial amendments which will be offered during the reading of the bill. Unless it is cleaned up to a very substantial degree by the kinds of amendments I understand are in prospect, I intend to vote, first, to recommit the bill and, second, against it if we get to that stage in the parliamentary situation.

I wish that some reasonable compromise could be worked out. Apparently that is not feasible, so the net result is we have to meet the issue head on, which means if we are unsuccessful on amendments there will be a motion to recommit and a vote on final passage.

Mr. HENDERSON. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. BRASCO).

Mr. BRASCO. Mr. Chairman, I take this opportunity to commend the gentleman from North Carolina, the chairman of this distinguished subcommittee, for the fine job he has done in the preparation of this legislation.

I certainly support it and urge all Members of the House to support it.

The purpose of this legislation is to establish statutory policy for setting the pay of the Federal Government's 800,000 prevailing rate employees. Prevailing rate employees are also commonly referred to as wage board or blue-collar workers. They are laborers, craftsmen, and tradesmen; as for examples: Truck drivers, welders, aircraft mechanics, carpenters, tool and diemakers.

The definition of "prevailing rate employee" is amplified by this bill to include employees of nonappropriated fund activities of the Armed Forces and employees of the Veterans' Canteen Service.

The bill has two major purposes:

First, enacts into law the long-established principles and policies for setting the pay of prevailing rate employees.

Second, makes the following changes in the current operating system and procedures:

Establishes a Federal Prevailing Wage Advisory Committee to replace an advisory committee currently established by administrative action to guide the coordinated Federal wage system. The committee currently has six representatives from management and five from employee groups. The proposed legislation requires one of the 11 members to be a full-time chairman, who shall not hold any other office in the Federal service, and shall be appointed by the Chairman of the Civil Service Commission for a 4-year term.

Provides that the new wage schedules have five pay steps instead of the present three steps. The present third step is 104 percent of the prevailing wage. The fifth step, as proposed, would be 112 percent.

Provides automatic step advancements after 26 weeks work in step 1; 78 weeks in step 2; and 104 weeks in each of steps 3 and 4.

Provides a 7½-percent pay differential, nationwide, for nonovertime work during the second shift—3 p.m. until midnight—and 10 percent for the third shift—11 p.m. until 8 a.m. Currently the premium pay depends on the prevailing custom of each labor market area.

Provides "saved pay" for 2 years for prevailing rate employees who are reduced in grade. General schedule employees now have this but prevailing rate employees who must take a general schedule position, due to reduction-in-force, do not.

Brings the employees of nonappropriated fund activities of the Armed Forces and employees of the Veterans' Canteen Service, within the 50 States and the District of Columbia, under the provisions of the prevailing rate system.

Mr. Chairman, passage of this type of legislation is long overdue. I urge all Members to support it.

Mr. HENDERSON. Mr. Chairman, I yield 1 additional minute to the gentleman from Montana (Mr. OLSEN).

Mr. OLSEN. Mr. Chairman, I think it ought to be pointed out on page 27 of the bill that this fifth step increase of 112 percent would not occur until 10 years.

Mr. HENDERSON. Of service.

Mr. OLSEN. Ten years of service. So using that as a base I think an objection does not make a good representation on the floor of the House.

The other thing is I do not think Federal employees in the military should have to contribute any more than any other worker in the world. Other workers in the defense industry get the comparability and get the pay. What we are saying is people in the Federal service, including the military, should be paid comparably. That is all we are saying. They should not be paid more but certainly not less, and they should not be carrying the burden of the defense industry just in the Federal service.

Mr. BROYHILL of Virginia. Mr. Chairman, I rise in support of H.R. 17809, to provide an equitable system for fixing and adjusting the rates of pay for some 850,000 Federal employees in wage board or blue-collar jobs.

A review of the legislative activity or

lack of it in the Congress in this area leads me to ask why we have waited so long to establish statutory policy for setting the rates of pay for so many loyal Federal servants.

In many instances the system now in operation, that of determining the pay of wage board workers by attempting to set salaries comparable to those paid by private industry for similar work in a labor market area has proven inequitable. In some cases Federal employees have received lower pay in one agency for work identical to that paid at a higher rate in another agency nearby. While an effort has been underway since 1968 to create a coordinated wage system to insure like pay for like work in the same labor market areas, it is not fully operable and a large number of employees of support services for the Armed Forces are not included in the system.

I am in complete accord with our committee colleagues in feeling that the chairman of a committee charged with so important a matter as coordinating a wage system affecting several hundred thousand public servants should be a full-time officer who would be freed from other duties and obligations. I agree, too, that it is very important that capable employees be able to advance within grade in five steps to as much as 112 percent of the prevailing wage for comparable work rather than the three-step increase to 104 percent of prevailing wage. Promotions within the ranks of laborers, craftsmen, and tradesmen are too few to force loyal and capable employees to wait for grade promotions for any advancement. Under the proposed legislation capable employees will be eligible for automatic advancements after 26 weeks in step 1; 78 weeks in step 2; and 104 weeks in each of steps 3 and 4.

Another important feature is a 7½-percent pay differential for second shift—3 p.m. to midnight—and 10 percent for third shift—11 p.m. to 8 a.m.—employees. While recognition is given to those who work less desirable hours in some labor market areas, this is not true nationwide as I believe it should be at the present time. Even more important is the provision for "saved pay" for 2 years for employees reduced in grade. We have provided for "saved pay" for our classified employees for some time and it is high time we provided the same benefit for prevailing rate employees.

Finally, we are including within the provisions of this legislation and the system it creates, a large number of workers who, although they are employed by the Federal Government, are not covered at the present time under provisions of law relating to classified employees or to wage board employees. These are the so-called "nonappropriated fund employees" mostly working for the armed services in supply depots, post exchanges and clubs operated for service personnel. While the Civil Service Commission has long acknowledged concern about the manner in which pay is fixed and administered for these employees, and the extent of apparent differences between their pay and that of other Federal employees doing similar work, there has yet to be a recommendation from the Commission for guaranteeing them the employment rights of other employees of the Government. I believe they should be guaranteed these rights without delay.

Mr. Chairman, this is a good bill, and long overdue. I am proud to support it, and I urge favorable consideration by the Congress.

Mr. STEED. Mr. Chairman, I am glad to join in expressing support for this measure, H.R. 17809 by Congressman HENDERSON. It represents a substantial step forward for our 850,000 wage board employees, and I commend the Committee on the Post Office and Civil Service for its consideration of their problems.

The wage board employees make up more than one-fourth of the civilian total of the Federal Government. And they have been too long neglected.

My own district includes probably as many of them as any district in the country. They have been patient and understanding, but they deserve action. They need the protection of a sound statutory policy for the prevailing wage system.

I have sponsored a measure of my own in this field, H.R. 8424, one of those on which the committee conducted hearings. Several of its features have been included.

The bill will do these badly needed things:

First. Confirm as law the long-established principles and policies for setting the pay for prevailing rate employees.

Second. Establish a prevailing wage advisory committee in law to replace the one currently operating under administrative action in operating the coordinated Federal wage system. The bill provides that one of the 11 members will be a full-time chairman holding no other office under the Federal service, appointed by the President for a 4-year term. This step will give additional stability and objectivity.

Third. Provide a five-step wage schedule instead of the present three.

Fourth. Provides automatic step advancements after 26 weeks of work in step 1, 78 weeks in step 2, and 104 weeks in steps 3 and 4.

Fifth. Provides a 7½-percent pay differential, nationwide, for scheduled nonovertime work during the second shift and 10 percent for the third shift.

Sixth. Provides "saved pay" for 2 years for prevailing wage employees who are reduced in grade. This protection already is available by law, of course, to general schedule employees who must take a reduction in force.

Seventh. Includes the employees of nonappropriated fund activities of the Armed Forces and employees of the Veterans' Canteen Service within the prevailing wage system.

The last decade has seen substantial progress toward justice for prevailing wage employees. This bill can be the biggest step yet.

Mr. ADDABBO. Mr. Chairman, I rise in support of H.R. 17809, a bill to establish a prevailing rate pay system for Government employees. This legislation incorporates a number of provisions supported by Federal Government employee unions and represents an important though small step in bringing more practical and reasonable considerations to bear on the setting of wages for blue collar workers.

The legislation would create an 11-member Federal Prevailing Wage Advisory Committee, chaired by a full-time appointee outside the Federal service. This will replace the present administratively created advisory body with an objective, independent committee.

Another most significant provision of H.R. 17809 is the adoption of pay differential for second- and third-shift workers. The 7½-percent differential for nonovertime second shift and 10-percent differential for third-shift workers is a reasonable provision long overdue. The five step wage schedules, automatic step increase clause and "save pay" for prevailing rate employees who are reduced in grade are all needed improvements in the present system.

If Government is to attract and keep dedicated workers, the system must be updated and modernized to take into account the prevailing wage and benefit scales necessary to assure fair treatment for those who come within the system. This bill is an attempt to reach that objective and I urge my colleagues to join me in voting for passage of H.R. 17809.

Mr. LEGGETT. Mr. Chairman, I strongly support the bill now before the House and urge my colleagues to join in the passage of this long overdue legislation to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Federal Government.

It is time for Congress to establish a pay rate system for its blue collar employees that will bring Federal pay levels into balance with private industry.

It is time for Congress to admit that in order for the Federal Government to keep its highly qualified and dedicated employees and to attract such individuals in the future, it must be willing to compete with the private sector of the economy.

Lack of comparability in wages and benefits are inequities which lead to low morale and unrest; and ultimately results in costly inefficiency.

This bill will enact into law well-established principles for setting the pay of approximately a million Federal blue collar workers, mainly employees at the Departments of Defense and Interior and the General Services and Veterans' Administration.

The changes in the current operating procedures which this bill provides are few but their impact upon the present inequities are potentially great.

The bill may be summarized as follows:

First. Establishes an 11-member Federal Prevailing Wage Advisory Committee to replace the current administratively established committee and will replace the present chairman who is from the Civil Service Commission with a full-time chairman appointed by the President and who may hold no other office in the Federal service.

Second. Provides for a five-step wage schedule instead of the present three-step, with automatic step advances af-

ter 26 weeks' work in step 1; 78 weeks in step 2; and 104 weeks in each of steps 3 and 4. The present third step of 104 percent of the prevailing wage will be replaced by an upper level of 112 percent at step 5.

Third. Provides a 7½-percent pay differential, nationwide, for scheduled nonovertime work during the second shift—3 p.m. until midnight—and 10 percent for the third shift—11 p.m. until 8 a.m. Currently the premium pay depends on the prevailing custom of each market area.

Fourth. Provides "saved pay" for 2 years for prevailing rate employees who are reduced in grade. General schedule employees now have this protection. Prevailing rate employees who must take a general schedule position, due to reduction in force, do not.

Fifth. Brings employees of nonappropriated fund activities of the Armed Forces, the Veteran's Canteen Service, and the District of Columbia under the system.

The selection of a truly important Federal Prevailing Wage Advisory Committee chairman by the President will go a long way in restoring the confidence of wage board employees in fairness of the committee's rate recommendation.

The added grade steps will encourage more efficient performance over a longer period of time by allowing increased compensation for increased proficiency and capacity.

The inclusion of nonappropriated fund employees will establish comparable wages with private industry, establish an equitable promotion system, and provide a just grievance and appeals system; all of which have not been provided in the past.

Regretfully, the administration is opposed to this bill because of its estimated first year cost of $230 million which the administration feels is excessively inflationary.

I cannot accept this administration contention as valid, despite my deep concern for the state of the economy.

It is unrealistic to make Federal blue collar workers the sacrificial lambs in an ineffective and inconsistent attempt to control inflation.

It is strangely inconsistent for the administration to urge expenditure of $2.3 billion for ABM and $200 million for development of the SST and to then suddenly become alarmed at a $230 million expenditure to provide Federal employees an equitable rate of pay.

These changes are a long overdue step in eliminating the serious inequities which have existed for far too many years in the treatment of wage board employees.

The adage that "you get what you pay for" applies here in a way that a number of this legislation's opponents do not wish to recognize.

It is time that Congress admits that an effective, imaginative, and hard-working Federal employee is entitled to the benefits of his counterpart in private industry.

I urge immediate passage of this legislation.

Mr. MAHON. Mr. Chairman, I wish to express my opposition to H.R. 17809, and having received unanimous consent to do so, I am placing in the RECORD a letter addressed to me by the Secretary of Defense under date of August 28, 1970, as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C. August 28, 1970.

HON GEORGE H. MAHON,
Chairman, Committee on Appropriations, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I would like to call your attention to a number of problems that would be created for the Department of Defense and other Federal agencies if H.R. 17809, scheduled to be considered by the House on September 9, were to be enacted:

H.R. 17809 would:

Result in Federal agencies paying 12% above prevailing rates in localities throughout the U.S., with a resultant inflationary impact on the wages of other employers.

Make it necessary for the DOD (which employs 80% of all Federal wage employees) to lay off thousands of additional employees in order to absorb hundreds of millions of dollars in unwarranted wage increases. These would take effect at a time when the Defense budget is being sharply reduced.

Cause a further departure from the sound principle of fixing wages of employees in trade and craft positions in accordance with rates prevailing in the communities which they work.

There are several high-cost features of H.R. 17809 that are contrary to the principle of fixing the rates of pay for these employees based on rates prevailing in their communities. These include the provision for five step rates (prevalent industry practice is to have not more than one or two step rates); fixed 7½% and 10% differentials for night work which exceed the prevailing practice in the vast majority of local wage areas; and continuing the unsound requirement of the so-called Monroney amendment that rates from other wage areas be imported and used in calculating the locality wage schedule.

Proponents of this legislation have contended that wage employees have not received adequate increases under the current Coordinated Federal Wage System, despite the fact that wages of employees are adjusted under this system at annual intervals based upon surveys of prevailing local rates. During FY 1969, employees under the system received wage increases averaging 9.5%, and in FY 1970 their increases averaged 8.1%. These increases have more than kept pace with national wage increase trends during this period.

H.R. 17809 should be opposed for the reasons set forth above. Its wage increases are unjustified, and its cost increases would impose great hardships in the form of disemployment for thousands of additional Federal employees. Moreover, in light of these factors there can be no justification for permitting its very substantial inflationary effect upon prices and the cost of living.

Sincerely,

MEL LAIRD.

Mr. HENDERSON. Mr. Chairman, I have no further requests for time.

Mr. GROSS. I have no further requests for time.

The CHAIRMAN. Pursuant to the rule, the Clerk will now read the substitute committee amendment printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

H.R. 17809

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subchapter IV of chapter 53 of title 5, United States Code, is amended to read as follows:

"SUBCHAPTER IV.—PREVAILING RATE SYSTEMS

"§ 5341. Policy

"It is the policy of Congress that rates of pay of prevailing rate employees be uniformly fixed and adjusted and be based on principles that—

"(1) there will be equal pay for substantially equal work for all employees who are working under similar conditions of employment in all agencies within the same wage area;

"(2) there will be relative differences in pay within a wage area when there are substantial or recognizable differences in duties, responsibilities, and qualification requirements among positions;

"(3) the level of rates of pay will be maintained in line with prevailing levels of comparable work within a wage area; and

"(4) the level of rates of pay will be maintained so as to attract and retain qualified employees.

"§ 5342. Definitions; application

"(a) For the purpose of this subchapter—

"(1) 'agency' has the meaning given it by section 5102 of this title;

"(2) 'prevailing rate employee' means—

"(A) an individual employed in or under an agency in a recognized trade or craft, or other skilled mechanical craft, or in an unskilled, semiskilled, or skilled manual labor occupation, and any other individual including a foreman and a supervisor in a position having trade, craft, or laboring experience and knowledge as the paramount requirement;

"(B) an employee in the Bureau of Engraving and Printing whose duties are to perform or direct manual or machine operations requiring special skill or experience, or to perform or direct the counting, examining, sorting, or other verification of the product of manual or machine operations;

"(C) an employee of a nonappropriated fund instrumentality under the jurisdiction of the armed forces described by section 2105(c) of this title; and

"(D) an employee of the Canteen Service, Veterans' Administration, excepted from chapter 51 of this title by section 5102(c)(14) thereof; and

"(3) 'position' means the work, consisting of duties and responsibilities assignable to a prevailing rate employee.

"(b) This subchapter applies to all prevailing rate employees and positions in or under an agency. All such employees employed within the several States or the District of Columbia shall be bona fide residents of the United States, unless the Secretary of Labor certifies that no bona fide resident of the United States is available to fill the particular position. This subchapter does not apply to employees and positions described under section 5102(c) of this title other than under paragraphs (7), (8), and (14) thereof.

"§ 5343. Prevailing rate determinations; wage schedules

"(a) The pay of prevailing rate employees shall be fixed and adjusted from time to time as nearly as is consistent with the public interest in accordance with prevailing rates. The pay of a prevailing rate employee of a nonappropriated fund instrumentality under the jurisdiction of the armed forces described under section 2105(c) of this title, when the instrumentality is located within the several States or the District of Columbia, and the pay of a prevailing rate employee of the Canteen Service, Veterans' Administration, excepted from chapter 51 of this title by section 5102(c)(14) thereof, shall be fixed and adjusted from time to time as nearly as is consistent with the public interest in accordance with prevailing

rates determined by a survey of wages paid to employees in a representative number of retail, wholesale, service, and recreational establishments in the local area engaged in activities similar to those of the instrumentality or Canteen Service for which the survey is made. Subject to section 213(f) of title 29, the rates may not be less than the appropriate rates provided by section 206(a)(1) and title 29. To carry out this subsection—

"(1) the Civil Service Commission shall define the boundaries of individual local wage areas and designate a lead agency for each local wage area;

"(2) a lead agency, on order of the Commission, shall conduct a wage survey within the local wage area, collect and analyze wage survey data, and develop and establish wage schedules; and

"(3) the head of each agency having prevailing rate employees in a local wage area shall fix and adjust the rates of such employees in that area in accordance with the wage schedules established by the lead agency in that area.

"(b) The Commission shall order full-scale wage surveys every second year with interim surveys in alternating years. However, the Commission may order more frequent surveys when conditions so suggest.

"(c) The Commission, by regulation, shall prescribe practices and procedures for conducting wage surveys, analyzing wage survey data, and developing and establishing wage schedules. In addition, the regulations shall provide—

"(1) that wages surveyed be those paid by private employers in the local wage area for similar work performed by regular full-time employees;

"(2) for participation at all levels by representatives of employee organizations in every phase of providing an equitable system for fixing and adjusting the rates of pay for prevailing rate employees, including the planning of the surveys, the drafting of specifications, the selection of data collectors, the collection and the analysis of the data, and the submission of recommendations to the head of the lead agency for wage schedules and for special wage schedules where appropriate;

"(3) for requirements for the accomplishment of wage surveys and for the development of wage schedules;

"(4)(A) that a lead agency, in making a wage survey, shall determine whether there exists in the local wage area a sufficient number of comparable positions in private industry to establish wage schedules for the principal types of positions for which the survey is made, and that the determination shall be in writing and shall take into consideration all relevant evidence including evidence submitted by employee organizations recognized as representative of employees in the area; and

"(B) that when it is determined that there is an insufficient number of comparable positions in private industry to establish the wage schedules, the lead agency shall establish the wage schedules on the basis of local private industry rates and rates paid for comparable positions in private industry in the nearest wage area that it determines to be most similar in the nature of its population, employment, manpower, and industry to the wage area for which the wage survey is being made;

"(5)(A) that each grade of a wage schedule have five steps, the first step at 96 percent of the prevailing rate, the second step at 100 percent of the prevailing rate, the third step at 104 percent of the prevailing rate, the fourth step at 108 percent of the prevailing rate, and the fifth step at 112 percent of the prevailing rate;

"(B) that with satisfactory work performance of an acceptable level of competence as determined by the head of the agency, an employee advance automatically to the next higher step within the grade at the beginning of the next pay period following the completion of—

"(i) twenty-six calendar weeks of continuous service in step 1;

"(ii) seventy-eight calendar weeks of continuous service in step 2; and

"(iii) each one hundred and four calendar weeks of continuous service in steps 3 and 4; and

"(C) that the benefit of successive step increases is preserved for employees whose continuous service is interrupted in the public interest by service with the armed forces or by service in essential non-Government civilian employment during a period of war or national emergency;

"(6) for special rates and schedules as appropriate;

"(7) for equal rates of pay for the same work in the same local wage area;

"(8)(A) for pay distinctions in keeping with work distinctions, with proper differentials as determined by the Commission for duty involving unusually severe working conditions or unusually sever hazards;

"(B) for a 7½-percent differential for regularly scheduled nonovertime work a majority of the hours of which occur between 3 o'clock postmeridian, and midnight; and

"(C) for a 10-percent differential for regularly scheduled nonovertime work a majority of the hours of which occur between 11 o'clock postmeridian, and 8 o'clock antemeridian;

"(9) rules governing the administration of pay for individual employees on appointment, transfer, promotion, demotion (including retention of pay rates as appropriate), and other similar changes in employment status; and

"(10) for a continuing program of systems maintenance and improvement designed to keep the prevailing rate system fully abreast of changing conditions, practices, and techniques both in and out of the Government.

"§ 5344. Effective date of wage increase; retroactive pay

"(a) Each increase in rates of basic pay granted, pursuant to a wage survey, to prevailing rate employees is effective not later than the first day of the first pay period which begins on or after the forty-fifth day, excluding Saturdays and Sundays, following the date the wage survey is ordered to be made.

"(b) Retroactive pay under this section is payable only when—

"(1) the individual is in the service of the United States, including service in the armed forces, or the government of the District of Columbia on the date of the issuance of the order granting the increase; or

"(2) the individual retired or died during the period beginning on the effective date of the increase and ending on the date of issuance of the order granting the increase, and only for services performed during that period.

For the purpose of this subsection, service in the armed forces includes the period provided by statute for the mandatory restoration of the individual to a position in or under the Government of the United States or the government of the District of Columbia after he is relieved from training and service in the armed forces or discharged from hospitalization following that training and service.

"(c) Retroactive pay under this section is not basic pay for the purposes of subchapter III of chapter 83 of this title, relating to civil service retirement, in the case of any retired or deceased employee.

"(d) For purposes of determining the amount of insurance for which an individual is eligible under chapter 87 of this title, relating to group life insurance for Government employees, an increase in the rate of pay under this section is effective on the date of the issuance of the order granting the increase. However, for an employee who dies or retires during the period beginning on the effective date of the increase and ending on the date of the issuance of the order granting the increase, the amount of the insurance is determined as if the increase under this section were in effect for the employee during that period.

"§ 5345. Retained rate of pay on reduction in grade

"(a) Under regulations prescribed by the Civil Service Commission, and subject to the limitation in subsection (b) of this section, a prevailing rate employee—

"(1) who is reduced in grade from a grade of a wage schedule;

"(2) who holds a career or a career-conditional appointment in the competitive service, or an appointment or equivalent tenure in the excepted service or in the government of the District of Columbia;

"(3) whose reduction in grade is not (A) caused by a demotion for personal cause, (B) at his request, (C) effected in a reduction in force due to lack of funds or curtailment of work, or (D) with respect to a temporary promotion, a condition of the temporary promotion to a higher grade;

"(4) who, for two continuous years immediately before the reduction in grade, served (A) in the same agency, and (B) in a grade or grades higher than the grade to which demoted; and

"(5) whose work performance during the two-year period is satisfactory or better;

is entitled to basic pay at the rate to which he was entitled immediately before the reduction in grade (including each increase in rate of basic pay granted pursuant to a wage survey) for a period of two years from the effective date of the reduction in grade, so long as he—

"(A) continues in the same agency without a break in service of one workday or more;

"(B) is not entitled to a higher rate of basic pay by operation of this subchapter; and

"(C) is not demoted or reassigned (i) for personal cause, (ii) at his request, or (iii) in a reduction in force due to a lack of funds or curtailment of work.

"(b) The rate of basic pay to which a prevailing rate employee is entitled under subsection (a) of this section with respect to each reduction in grade to which that subsection applies may not exceed the sum of—

"(1) the minimum rate of the grade to which he is reduced under each reduction in grade to which that subsection applies (including each increase in rate of basic pay granted pursuant to a wage survey); and

"(2) the difference between his rate immediately before the first reduction in grade to which that subsection applies (including each increase in rate of basic pay granted pursuant to a wage survey) and the minimum rate of that grade which is three grades lower than the grade from which he was reduced under the first of the reductions in grade (including each increase in the rate of basic pay granted pursuant to a wage survey).

"(c) Under regulations prescribed by the Commission consistent with the provisions of subsections (a) and (b) of this section, an employee who is reduced to a grade of a wage schedule from a position not subject to this subchapter is entitled to a retained rate of basic pay.

"(d) The Commission may prescribe regulations governing the retention of the rate of basic pay of an employee who together with his position is brought under this subchapter. If an employee so entitled to a retained rate under these regulations is later demoted to a position under this subchap-

ter, his rate of basic pay is determined under subsections (a) and (b) of this section. For the purpose of those subsections, service in the position which was brought under this subchapter is deemed service under this subchapter.

"§ 5346. Job grading system

"(a) The Civil Service Commission, after consulting with the agencies and with employee organizations, shall establish and maintain a job grading system for positions to which this subchapter applies. For this purpose, the Commission shall—

"(1) establish and define individual occupations and the boundaries of each occupation;

"(2) establish job titles within occupations;

"(3) develop and publish job grading standards; and

"(4) provide a method to assure consistency in the application of job standards.

"(b) The Commission, from time to time, shall review such numbers of positions in each agency as will enable the Commission to determine whether the agency is placing positions in occupations and grades in conformance with or consistently with published job standards. When the Commission finds that a position is not placed in its proper occupation and grade in conformance with published standards or that a position for which there is no published standards is not placed in the occupation and grade consistently with published standards, it shall, after consultation with appropriate officials of the agency concerned, place the position in its appropriate occupation and grade and shall certify this action to the agency. The agency shall act in accordance with the certificate, and the certificate is binding on all administrative, certifying, payroll, disbursing, and accounting officials.

"(c) On application, made in accordance with regulations prescribed by the Commission, by a prevailing rate employee for the review of the action of an employing agency in placing his position in an occupation and grade for pay purposes, the Commission shall—

"(1) ascertain currently the facts as to the duties, responsibilities, and qualification requirements of the position;

"(2) decide whether the position has been placed in the proper occupation and grade; and

"(3) approve, disapprove, or modify, in accordance with its decision, the action of the employing agency in placing the position in an occupation and grade.

The Commission shall certify to the agency concerned its action under paragraph (3) of this subsection. The agency shall act in accordance with the certificate, and the certificate is binding on all administrative, certifying, payroll, disbursing, and accounting officials.

"§ 5347. Federal Prevailing Rate Advisory Committee

"(a) There is established a Federal Prevailing Rate Advisory Committee composed of—

"(1) the Chairman, who shall not hold any other office in the Federal service, and who shall be appointed by the President of the United States for a four-year term at a rate of pay equivalent to the maximum rate for the General Schedule;

"(2) the head, or his designee, of each of the four executive agencies (other than the Civil Service Commission), and military departments having the largest number of prevailing rates employees that the Chairman of the Civil Service Commission from time to time designates;

"(3) an employee of the Civil Service Commission, appointed by the Chairman of the Civil Service Commission; and

"(4) five representatives, appointed by the Chairman of the Civil Service Commission, from among the several labor organizations, representing under exclusive recognition of the Federal Government, the largest numbers of prevailing rate employees throughout the Federal service.

"(b) In making the appointments from among the labor organizations, the Chairman of the Civil Service Commission shall recognize appropriate proportional representation by labor organizations to total representation of Federal and District of Columbia prevailing rate employees. However, in any case there shall not be more than two representatives from any one labor organization nor more than four representatives from a single council, federation, alliance, association, or affiliation of labor organizations.

"(c) Every second year the Chairman of the Civil Service Commission shall review labor organization representation to determine adequate or proportional representation under the guidelines of subsection (b) of this section.

"(d) The representatives from the labor organizations shall serve at the pleasure of the Chairman of the Civil Service Commission.

"(e) The Committee shall study the prevailing rate system and other matters pertinent to the establishment of prevailing rates under this subchapter and, from time to time, advise the Civil Service Commission thereon. Conclusions and recommendations of the Committee shall be formulated by majority vote. The Committee shall make an annual report to the Commission and the President for transmittal to Congress, including recommendations and other matters considered appropriate. Any member of the Committee may include in the annual report recommendations and other matters he considers appropriate.

"(f) The Committee shall meet at the call of its Chairman. However, a special meeting shall be called by the Chairman if a majority of the members makes a written request to consider matters within the purview of the Committee.

"(g) Members of the Committee (other than employee organization representatives and the Chairman) shall serve without additional pay. Employee organization members shall not be paid by the Federal Government for services rendered to the Committee.

"(h) The Civil Service Commission shall provide such clerical and professional personnel as the Committee considers appropriate and necessary to carry out its functions under this subchapter. Such personnel shall be responsible solely to the Committee.

"§ 5348. Crews of vessels

"(a) Except as provided by subsection (b) of this section, the pay of officers and members of crews of vessels excepted from chapter 51 of this title by section 5102(c)(8) of this title shall be fixed and adjusted from time to time as nearly as is consistent with the public interest in accordance with prevailing rates and practices in the maritime industry.

"(b) Vessel employees of the Panama Canal Company may be paid in accordance with the wage practices of the maritime industry.".

(b) The analysis of subchapter IV of chapter 53 of title 5, United States Code, is amended to read:

"SUBCHAPTER IV.—PREVAILING RATE SYSTEMS

"5341. Policy.
"5342. Definitions; application.
"5343. Prevailing rate determinations; wage schedules.
"5344. Effective date of wage increase; retroactive pay.
"5345. Retained rate of pay on reduction in grade.
"5346. Job grading system.
"5347. Federal Prevailing Rate Advisory Committee.
"5348. Crews of vessels.".

SEC. 2. Section 2105(c)(1) of title 5, United States Code, is amended by inserting "(other than subchapter IV of chapter 53 and section 7154 of this title)" immediately following "laws".

SEC. 3. Section 5337 of title 5, United States Code, is amended—

(1) by striking out the words "to which this section applies" wherever they appear in subsection (b) and inserting "to which that subsection applies" in place thereof; and

(2) by adding at the end thereof:

"(c) Under regulations prescribed by the Civil Service Commission consistent with the provisions of subsections (a) and (b) of this section, an employee who is reduced to a grade of the General Schedule from a position to which this subchapter does not apply is entitled to a retained rate of basic pay.".

SEC. 4. Section 5541(2)(xi) of title 5, United States Code, is amended to read:

"(xi) an employee whose pay is fixed and adjusted from time to time in accordance with prevailing rates under subchapter IV of chapter 53 of this title, or by a wage board or similar administrative authority serving the same purpose, except as provided by section 5544 of this title;".

SEC. 5. The first sentence of section 5544 (a) of title 5, United States Code, is amended to read: "An employee whose pay is fixed and adjusted from time to time in accordance with prevailing rates under section 5343 of this title, or by a wage board or similar administrative authority serving the same purpose, is entitled to overtime pay for overtime work in excess of 8 hours a day or 40 hours a week.".

SEC. 6. Section 6101(a)(1) of title 5, United States Code, is amended by inserting "other than an employee whose pay is fixed and adjusted from time to time in accordance with prevailing rates under section 5343 of this title or by a wage board or similar administrative authority serving the same purpose" immediately preceding the period at the end thereof.

SEC. 7. (a) Section 6102 of title 5, United States Code, is repealed.

(b) The analysis of chapter 61 of title 5, United States Code, is amended by striking out—

"6102. Eight-hour day; 40-hour workweek; wage-board employees.".

SEC. 8. Section 7154(b) of title 5, United States Code, is amended by striking out "subchapter III of chapter 53" and inserting "subchapters III and IV of chapter 53" in place thereof.

SEC. 9. (a) An employee's initial rate of pay on conversion to a wage schedule established pursuant to the amendments made by this Act shall be determined under conversion rules prescribed by the Civil Service Commission. The amendments made by this Act shall not be construed to decrease the existing rate of basic pay of any present employee subject thereto.

(b) The amendments made by this Act shall not be construed to affect agreements presently in effect as a result of negotiations between Government departments and agencies or subdivisions thereof and organized employees. It is the intent of this Act that through negotiations between the Civil Service Commission, the heads of excepted agencies, and the organized employees, that, in due time, wherever feasible, all prevailing rate employees be covered by the amendments made by this Act.

(c) The provisions of this Act shall become effective on the first day of the first pay period which begins on or after the one hundred and eightieth day after the date of enactment, or on any earlier date that the Civil Service Commission may prescribe, which is at least ninety days after the date of enactment.

Mr. HENDERSON (interrupting the reading). Mr. Chairman, I ask unani-

mous consent that the further reading of this section be dispensed with and that the entire bill be considered as read, printed at this point in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

AMENDMENT OFFERED BY MR. HENDERSON

Mr. HENDERSON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HENDERSON: On page 23, line 18, strike out the word "fied" and insert the word "fide".

Mr. HENDERSON. Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and it may be printed at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. DERWINSKI. Mr. Chairman, reserving the right to object, I hope the gentleman will explain his amendment.

Mr. HENDERSON. Yes. The amendment now being presented is technical in nature. It has been furnished to the minority and their counsel. It corrects spelling and technical errors in the bill and makes no substantive change.

Mr. DERWINSKI. Reserving the right to further object, Mr. Chairman, I merely inquire of the distinguished gentleman from North Carolina are there any other amendments of this kind to correct items like misspellings?

Mr. HENDERSON. That is the only amendment.

Mr. DERWINSKI. How about an amendment to correct the excessive cost of the bill? Are any of those amendments pending?

Mr. HENDERSON. We will leave that laboring oar to the opposition to the bill.

Mr. GROSS. Mr. Chairman, further reserving the right to object, as I understand it, these are all technical amendments, designed to correct language in the bill.

Mr. HENDERSON. The spelling or the addition of words like "and" and so on. They are merely technical in nature.

Mr. GROSS. May I suggest to the gentleman that he offer the amendments en bloc if that is the case.

Mr. HENDERSON. Mr. Chairman, I ask unanimous consent that the amendments at the desk be offered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. GROSS. Mr. Chairman, further reserving the right to object, may I ask the gentleman if these amendments are, the first dealing with language on page 23, the second on page 24, then page 31, page 32, page 34, and page 35?

Mr. HENDERSON. The gentleman is correct, and they total six in number.

Mr. GROSS. A total of five amendments, or six amendments?

Mr. HENDERSON. I believe the gentleman will find that there are six amendments.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina that the amendments be considered en bloc?

There was no objection.

The CHAIRMAN. The Clerk will read the remaining amendments.

The Clerk read as follows:

Amendments offered by Mr. HENDERSON: On page 24, line 18, strike out the word "and" and insert the word "of";

On page 31, line 17, strike out the word "curtialment" and insert the word "curtailment";

On page 32, line 13, strike out the word "entitlde" and insert the word "entitled";

On page 34, line 16, strike out the word "Commissioner" and insert in lieu thereof the word "Commission";

On page 35, line 7, strike out the word "rates" and insert the word "rate".

The CHAIRMAN. The question is on the amendments offered by the gentleman from North Carolina (Mr. HENDERSON).

The amendments were agreed to.

Mr. DERWINSKI. Mr. Chairman, recognizing the intense interest of many Members in this bill, and noting the obvious absence of a quorum, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 286]

Alexander	Fountain	Price, Tex.
Anderson, Calif.	Fraser	Pryor, Ark.
Ashley	Friedel	Quie
Aspinall	Fulton, Tenn.	Rees
Beall, Md.	Giaimo	Reuss
Belcher	Gilbert	Rivers
Biester	Goldwater	Rogers, Colo.

Evans, Colo.	Ottinger	Wilson, Charles H.
Evins, Tenn.	Pelly	Wold
Feighan	Pepper	Young
Flynt	Powell	

Accordingly the Committee rose; and the Speaker pro tempore (Mr. Moss) having assumed the chair, Mr. BROOKS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 17809 and finding itself without a quorum, he had directed the roll to be called when 307 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

AMENDMENT OFFERED BY MR. DERWINSKI

Mr. DERWINSKI. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DERWINSKI: On page 26, strike out all of clause (4), beginning in line 5 down through line 22, and renumber the succeeding clauses.

Mr. DERWINSKI. Mr. Chairman, this is what is called a perfecting amendment. It is intended to bring a degree of perfection to an otherwise very imperfect bit of legislation.

Specifically my amendment would strike from the bill, and then through it, from the law, the Monroney amendment which was enacted to section 5341 of title 5, United States Code on October 12, 1968.

Now, that was approximately 2 years ago. The theory behind the Monroney amendment was that it would help to solve the problems of differences in rates between certain areas. But rather than resolving those problems it actually has complicated them. And so much so, that in the 2 years that have elapsed since the enactment of the bill it was so difficult to interpret and implement that the Civil Service Commission has just now approved a requirement for settling pay rates for employees who are subject to the Monroney amendment.

The matter is a bit more complicated than it may seem.

Mr. Chairman, under the provisions that are pending there would be a retroactive feature back to October 12, 1968, and that alone will cost the Department of Defense $103 million in addition to the annual cost of this Monroney amendment of $106 million.

The concept involved here of using out of area wage rates is contrary to the basic prevailing rate premise on which wage systems are based and it would result in a distorted wage scale with rates out of line with prevailing levels for comparative work within the local wage area.

Unless my amendment is accepted, all private employees in an area affected by this amendment would be discriminated against. This is hardly consistent with proper wage practices. I would emphasize to the Members of the House that, despite the fact that this amendment has not been applied the Federal agencies employing Wage Board employees have experienced no difficulty whatsoever in recruiting and retaining qualified employees. The logical thing to do is to accept this amendment which would strike an unworkable provision from the law. May I mention—an item of proper interest to the Members—this is a $209 million item, at a time when the budget is hardly in proper shape. This is a practical amendment and prudent amendment. I believe it is in the interest of the Federal employees and in the interest of private employees, who far out-

number the Federal employees involved. I hope it will receive some objective support from the Members of the House.

The Monroney amendment, enacted as an amendment to section 5341 of title 5, United States Code, on October 12, 1968, was designed to help resolve problems of differences in rates between certain areas, but, rather than resolving problems, it has served to complicate the wage-determination and wage-fixing process. So much so that almost 2 years have elapsed since its enactment, but, because the bill was so difficult to interpret and implement, the Civil Service Commission has just now approved regulations for setting pay rates for employees who are subject to the Monroney amendment.

As rates are computed under these regulations, employees will receive pay adjustments retroactive to the date of the first wage schedule adjustment in each area after October 12, 1968. It is estimated that the retroactive feature alone will cost $103 million, with an annual cost thereafter of $106 million.

This concept of using out-of-area rates is contrary to the basic prevailing rate premise on which wage systems are based, and would result in a distorted wage schedule with rates out of line with prevailing levels for comparable work within the local wage area.

The fact that the various Federal agencies employing wage board employees have experienced no serious difficulty in recruiting and retaining qualified employees is evidence that inclusion of the Monroney amendment in H.R. 17809 represents an unwarranted and excessive expense, particularly at this time when the Federal budget is already bursting at the seams.

I urge, therefore, that my colleagues join me in approving this amendment to strike out the provisions of the Monroney amendment from this bill.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from Iowa.

Mr. GROSS. As I remember it, the so-called Monroney amendment was put into the law in 1968 as a measure designed to aid in the reelection of a Member of the other body by that name. It failed of this purpose of reelecting a Senator.

Moreover, it was also brought before the Congress as an ungermane amendment to a bill, if I remember correctly, dealing with the mailing of master keys to automobiles. This so-called Monroney amendment was spawned under devious political circumstances, and I commend the gentleman from Illinois for offering an amendment to this bill to get it out of the law. It should never have been there in the first place.

Mr. DERWINSKI. I thank the gentleman for his support. May I emphasize to the House that this is a practical amendment. The application of the Monroney amendment would create new inequities and complicate conditions relative to private enterprise employees, and the very fact that in the 2 years since the amendment was adopted implementation is about to begin is proof positive of the unworkability of the measure. I should emphasize that the Civil Service Commission strongly recommends adoption of this amendment. I hope, as I have said, we have some objective support in the House.

Mr. HENDERSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I would like the very close attention of my colleagues on this very complicated subject, because with a clear understanding of exactly what we are doing today, I feel confident that the outcome of our action will be fair and equitable.

The so-called Monroney amendment has been discussed. It is the Monroney law. It has been law for 2 years. It is simply a tool to do what we say we are doing in the area wage approach to employee compensation, and that is, to pay a wage which is truly comparable. We have not implemented that law for 2 years.

The Federal Government owes employees covered by this act and this law over $200 million. If you defeat this bill today, they are going to be paid that, and they will be paid approximately $105 million in the future. If you repeal it today in the enactment of this bill, you will still owe them the money that is being talked about for this 2-year period. The normal wage survey area is usually an area with about a 50-mile radius. The only aircraft mechanics working in such an area may be employed by the Federal Government at military installations. If you make a study and attempt to compare with local industry, and there are no aircraft industries or aircraft repair facilities in the area, what are you going to compare with? With aircraft mechanics, with automobile mechanics, with truck, tractor, or bus mechanics? The Monroney act says that you then go to the next nearest place where there are aircraft mechanics.

It was recognized that there would be difficulties in implementing the law. This bill solves the problems of implementing the Monroney Act, and provides that whatever difference you find you bring it back to the labor survey area and put it into the wage scale all the way up and down, not just to aircraft mechanics, which obviously could knock the whole pay scale into a cocked hat.

The scale required for aircraft employees working on a combat airplane, a combat engine, is obviously different than that for an employee who is required to repair an automobile, a truck, or a tractor. So if the comparability principle cannot be applied within the limits of the normal survey area, it seems to me the next logical step in determining a comparable job is to find the nearest area where that work is being done and to make your study there.

This is what the Monroney law was intended to do and this is what, with clarification of the present bill, will be done. It is true there will be retroactive pay for the employees which they are entitled to under the law of the land today. It is not a departure from the concept of area wages, but instead it is a reaffirmation of that concept. The concept tries to embrace both elements of normal criteria in determining fair compensation for our Federal employees, comparability and cost of living within the area. They are inescapably related, but they are separate and distinct. True comparability will always reflect the cost-of-living differential, but the cost-of-living differential does not necessarily always reflect comparability.

Maybe it is cheaper to live in Arizona than it is in San Diego, but that does not mean that an employee in Nebraska is receiving comparability pay if the job he is doing is unique in the wage survey area in which he happens to live and work. It is my belief that the Monroney law approach is a fair and equitable one. I think Members should be very cautious and should understand exactly what they are doing, because if we adopt the amendement offered by the gentleman from Illinois (Mr. DERWINSKI) which is now before us, we will be repealing law which has been on the books and has not been fully implemented. If that is the will and the wish of the Congress, it ought to know exactly what it is doing. The bill before the Congress ought not to have to carry the burden of nonimplementation of the law.

Mr. DULSKI. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to the amendment to strike out the Monroney amendment. Mr. Chairman, the Monroney amendment is the law of the land. Even though it was passed in 1968, the administration did not see fit to implement it until 2 months ago.

The Monroney amendment must be kept in law until the administration can show us a better way for compensating all Government employees who have special skills that cannot be matched in local private industry.

If through experience we find that the Monroney amendment is of questionable value, then I am quite willing to hold public hearings and review all aspects of this subject.

Mr. Chairman, I repeat: I oppose the motion to strike the Monroney amendment.

Mr. DERWINSKI. Mr. Chairman, will the gentleman yield?

Mr. DULSKI. I yield to the gentleman from Illinois.

Mr. DERWINSKI. Mr. Chairman, I am very pleased to have the Chairman of the full committee say he will hold hearings and I would suggest the most practical way would be to accept my amendment at this point and then hold hearings on the entire subject.

If the gentleman will permit me, I wish to correct two items. The gentleman referred to the fact that the amendment would not save anything. It would save approximately $100 million regardless of the retroactive factor. But also the gentleman referred to the amendment facetiously as a gutting amendment. I referred to it earlier as a perfecting amendment, and I remind the gentleman that my emphasis is on the perfecting nature of it.

Mr. DULSKI. Mr. Chairman, I appreciate the observation of the gentleman.

Mr. DICKINSON. Mr. Chairman, will the gentleman yield?

Mr. DULSKI. I yield to the gentleman from Alabama.

Mr. DICKINSON. Mr. Chairman, I rise in support of H.R. 17809, a bill to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes. The bill is important for several reasons, but I wish to make two main points that alone justify the necessity for the passage of this legislation.

First, the wage board employee, often referred to as a blue-collar worker, is the only federally classified worker who did not receive the retroactive pay increase earlier this year. In fact, the wage board employee received no automatic pay increase at all, while other workers, including postal employees, members of the Armed Services, congressional staffs, committee staffs and others were receiving an automatic 6 percent cost-of-living increase in their salaries. Make no mistake, if the cost-of-living increases for one group, it is also increasing for others.

As yet, no wage board employee has resorted to strikes and the like to gain much-needed increases in pay. The wage board employee has remained patient in hopes of receiving fair and equitable treatment through an orderly process. We cannot sit here and allow their needs to go unanswered.

Mr. Chairman, the second point I would like to make in support of this bill is in regard to the present unfair system which is used to adjust salaries according to the prevailing wage in the area served by the wage board employee.

One hundred and nine years have passed since Congress passed the last Wage Board Act of 1861. Except for a few minor changes, the wage board compensation system, involving only a few tens of thousands of employees in 1861, has had no legislative or statutory growth up to the present. Therefore, today over 800,000 Federal employees, or more than 28 percent of all Federal employees, live in the space and rocket age under legislation enacted more than a hundred years ago. This is the only statutory basis today for the fixing of compensation for wage board employees.

By the beginning of the 1960's, it was common knowledge to everyone that the wage board compensation system was uncoordinated, inequitable and inefficient. Reform was urgently needed, yet reform did not come.

Just citing one example, Mr. Chairman, in Montgomery, Ala., a great disparity can be found in the pay one worker receives compared to what another worker receives for an identical job and in an identical status to a worker in Mobile, Ala.; Huntsville, Ala.; or Birmingham, Ala. It has been found that in some communities wage board employees performing the identical work were paid wages differing as much as 100 percent. In many areas, wage board employees even received less pay than minimal wage rates applying to private enterprise. There definitely is a significant difference in the prevailing wage paid with no measurable difference in the cost of living. This situation is not equitable. It is not fair. And the bill before us today will help to correct this situation. I support this legislation fully and without reservation.

Mr. Chairman, if I might inquire of the Chairman of the committee, my wage board employees feel very strongly they are being discriminated against. In Alabama we have four areas located in Mobile and Montgomery and Birmingham and Pensacola, and they are all paid at different levels. By removing this so-called Monroney amendment, will this overcome this problem, so they will all be paid approximately the same, or does this just complicate the matter?

Mr. DULSKI. No; it will not. They have to get the area wage.

Mr. DICKINSON. I know, but I have four area wages within 100 miles, and I want to know which way this amendment goes. Does it keep the law as it is? Will there be four different wage scales if the amendment is adopted?

Mr. DULSKI. I leave that to the chairman of the subcommittee.

Mr. HENDERSON. Mr. Chairman, if the gentleman will yield, as I said, the Monroney law has not been applied in any place the gentleman is speaking of except Mobile, Ala., and, therefore, the Derwinski amendment would leave the Monroney law as it is, but I think the gentleman is saying that in the four areas there is a differential.

That will continue to be true whether or not the amendment before the committee is adopted. It will continue to be true with the passage of the bill before the House.

It is still envisioned that within the labor market areas defined there will be pay differentials. They will not be uniform all over the country.

Mr. DICKINSON. I thank the gentleman.

Mr. GROSS. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I rise in support of the amendment. I should like to quote briefly from a letter by the Acting General Counsel for the Department of Defense as of July 1, 1970, to the chairman of the Senate Post Office and Civil Service Committee. He said in part:

> The bill would continue in law the present Monroney amendment which requires that a lead agency go outside a local wage area to collect wage data for principal types of Federal positions when comparable positions in private industry are not found in the local area. This provision is contrary to the whole principle of establishing wage rates for wage employees on the basis of rates prevailing in private industry in the area. Going outside the local area as provided by the Monroney amendment serves to distort pay in the local area. * * * It also will result in the Government paying wages substantially above those prevailing among private employers in the community, will create inflationary pressures as private employers are forced to compete, and will create unwarranted increases in the Federal Government's wage costs.

And so forth and so on.

Mr. Chairman, I submit that unless the Monroney amendment is eliminated, as the amendment provides, there will be this kind of distortion of pay in private enterprise as set forth by the Acting General Counsel for the Department of Defense, in North Carolina and in all other States where there is substantial wage board employment.

I urge adoption of the amendment.

Mr. BRASCO. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the Derwinski amendment. While I have great respect and admiration for the gentleman from Illinois, it seems to me that he applies his usual unique mode of reasoning with respect to his amendment.

The Monroney amendment is law today, and has been law for 2 years.

I have a letter in my hand from the Civil Service Commission, dated July 14, 1970, which puts into effect the Monroney amendment in terms of developing wage board employee salaries.

If we were to listen to and take the advice of the gentleman from Illinois, who is always so systematic and reasonable in his approach, we would be reversing what is already law today, and what has already been put into effect by the Civil Service Commission, which has the responsibility for coordinating all wages in this area, and then holding hearings to do it all over again.

I submit what we should do is defeat this amendment. Then, as the chairman of the Committee on Post Office and Civil Service indicated, he would be more than glad to continue personal and public inquiry into this area to ascertain whether or not there is a more desirable way to accomplish the desired result.

It seems to me, in conclusion, to be perfectly reasonable, when we set up a system of trying to pay comparable wages, to compare someone who is working for the Federal Government with someone doing a like job in private industry.

That is all the Monroney amendment says, that when one works in an area and one cannot compare the Federal employee job with the job of anyone doing similar work in private industry, then one goes to the next area which is similar economically and which has that same kind of job available for comparison. That is all that the Monroney amendment, which by the way is not an amendment but is law today, does. It certainly is a reasonable approach.

While I still have great respect for the gentleman from Illinois, his approach is most unreasonable.

Mr. Chairman, I yield to the gentleman from Illinois.

Mr. DERWINSKI. I appreciate the gentleman's affection.

Personally, would the gentleman give me his very serious attention, because it is Illinois and not Illinoise." I understand the Brooklyn accent, but it is not correct.

Mr. BRASCO. You are wrong on the amendment, but you are right on the accent.

Mr. DERWINSKI. If the gentleman will check his records, which I am sure he has very carefully, the reason for the 2-year delay by the Civil Service Commission is the basic unworkability of the Monroney amendment. So we really want to strike out bad law and then we will go back to the committee under Mr. DULSKI and try to produce good law.

Mr. BRASCO. But what the gentleman fails to recognize—and he does it more often than not—is that the Civil Service Commission as per memorandum dated

July 14, 1970, has already implemented this into law.

Mr. DERWINSKI. Out of necessity. Not through a great spirit or motivation but out of necessity they finally followed through.

Mr. BRASCO. Obviously they feel it is workable. Otherwise they would have persisted in not putting it into effect as they have in the last 2 years.

Mr. DERWINSKI. But they are on record as asking for repeal of the Monroney amendment.

Mr. HENDERSON. Will the gentleman yield to me?

Mr. BRASCO. I yield to the gentleman from North Carolina.

Mr. HENDERSON. Will the gentleman agree with me the way we got the implementation of the Monroney amendment was by hearings and action on this legislation working together with the Civil Service Commission. We came up with a way that they thought it could best be implemented, and it was implemented and we put it in this act, and now we get it to the floor and they want to repeal the act which we have worked out the proper implementation of.

Mr. BRASCO. The gentleman is certainly correct in his observation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. DERWINSKI).

The question was taken; and on a division—demanded by Mr. DERWINSKI—there were—ayes 48, noes 32.

Mr. HENDERSON. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. DERWINSKI and Mr. HENDERSON.

The Committee again divided, and the tellers reported that there were—ayes 73, noes 55.

So the amendment was agreed to.

AMENDMENT OFFERED BY MR. GROSS

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 22, line 20, insert the word "and" immediately following the semicolon.

On page 23, strike out subclauses (C) and (D), beginning in line 3 down through line 9.

On page 23, strike out line 22 and insert in lieu thereof "under paragraphs (7) and (8) thereof."

On page 24, strike out the second sentence of Section 5343(a), beginning in line 2 down through the period in line 15.

On page 38, strike out Sec. 2 beginning in line 1 through the period in line 4, renumber the succeeding sections accordingly, and make the necessary section reference changes.

Mr. GROSS. Mr. Chairman, the amendment I have offered will strike from the bill all the provisions which cover the so-called nonappropriated fund employees.

First of all I would like to emphasize that the employees involved are not Federal employees. There are presently 85,000 nonappropriated fund employees including 36,000 off-duty military personnel. These are the people who are employed in commissaries, post exchanges, officers' clubs, and in the Veterans' Administration canteen service.

These employees are currently being paid wages and fringe benefits that are based on practices in private industry having similar operations and comparable work. The firms with the most similar operations are those engaged in retail sales, and hotels, motels, restaurants, clubs, and recreational facilities.

There may be legitimate complaints concerning some of the pay and personnel practices for these employees, but action is being taken at the present time to correct any problems that may exist. The Department of Defense is presently getting ready to implement a total personnel-management system covering all phases of the nonappropriated fund work force.

Certainly, the answer to problem areas is not that proposed in H.R. 17809—to include them under a pay system designed exclusively for Federal employees. In fact, if this bill is not amended as I propose, any problems that now exist will appear rather minor compared to the untold problems that will arise by reason of the provisions contained in this bill.

It is quite obvious that if we are to inflate the wages and fringe benefits paid to these employees, all of whom work in programs involving the morale and welfare of military personnel, these programs will suffer with the increases made necessary in the price of goods and services made available to the servicemen. Consequently, the serviceman at a lower level with a limited income would be forced to pay prices as high or higher than those in the local economy. The entire concept of the commissary-post exchange system, whether right or wrong, would be destroyed.

A problem additionally arises with the supervisory or so-called white collar employee paid from nonappropriated funds. These supervisors, or executives, now are paid administratively at levels comparable to those contained in the GS schedule. Under the bill as written, these executive employees would be paid at prevailing wage rates for which there would be no source of local wage data for survey purposes—an impossible situation.

The bill would grant the so-called nonappropriated fund employees the 7½ and 10 percent differentials; would cover them under the so-called saved pay provisions applicable to wage board employees; and would cover them into the new five-step pay schedule, all of which will result in a complete administrative nightmare.

The inequities that result will apply not only to the Federal pay system, but will infest the local private industry pay system as well.

For example, under the provisions of this bill, the checkout clerk at a post exchange—a non-Federal employee—would be blanketed into the new five-step wage board pay system. If she had been employed for at least 5 years, she would go into step 5 that pays a rate 12 percent higher than that being paid by local merchants. Not only will prices charged at the PX have to be raised to cover her inflated salary, but local merchants will find themselves at a complete economic disadvantage in trying to compete with the Federal Government in that labor market.

Mr. Chairman, I urge the adoption of my amendment.

Mr. HENDERSON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman and members of the committee, in many ways, and with the deepest of personal feelings, this is the most important provision contained in this bill.

Who are we talking about? Before I get into my major argument I would like to answer that question.

We are talking about employees working for the Army, the Air Force exchange, the Navy exchange, the Marine Corps exchange and other nonappropriated activities.

I would like to read from the hearings very briefly and state what the Army-Air Force exchange system business was for the fiscal year ending January a year ago.

In the fiscal year ended last January 25, the service had net income of $112 million on sales of $2.1 billion, up from earnings of $66.3 million five years earlier, when sales were $941 million. For comparative purposes, during its most recent year, Penney earned $89.5 million on sales of $2.7 billion, and Montgomery Ward had net income of $17.4 million on a volume of $1.8 billion.

Mr. HALL. Mr. Chairman, will the gentleman yield at that point?

Mr. HENDERSON. I am delighted to yield to the distinguished gentleman from Missouri. I hope I shall have time to conclude my argument.

Mr. HALL. I will see that the gentleman has additional time, as the chairman of this subcommittee. I do appreciate his yielding. I would merely like additional information.

Is this net profit or gross profit the gentleman is referring to on the part of the post exchanges and commissaries?

Mr. HENDERSON. The quotation, as presented to our committee, was the net income.

Mr. HALL. Second, if I may ask one additional question, Is it not true that any net profit from these bodies which are considered a side effect or a fallout benefit to service personnel go back to their dayroom funds, recreational funds, or is spent on the maintenance of the company dayroom as controlled by the various departments, advisory councils or committees?

Mr. HENDERSON. The gentleman is absolutely correct. That leads me to make this point. About whom are we talking when we speak of the employees themselves? The full-time employees in the military service number 65,500; part-time 34,000. The part-time military—these are the lowest military grades, and there are 40,000 of them moonlighting—that is what they call it. We might as well put it in the record. They do not get enough from their military pay, so they have to go to work for the post exchange. There are 400,000 of them. What are they being paid? By action of the Congress, when we had the last Fair Labor Standards Act Amendments before the House, the minimum wage bill, the gentleman from Michigan (Mr. O'HARA) handled that bill and brought these employees under the coverage of that act, and that is the basis on which they are being paid. But the argument is being made today that they ought not to be

covered under this legislation because the post exchange is paying them the prevailing wage.

The bill, if it becomes law, would say that all you have got to do is to pay them the prevailing wages, so it is not going to cost them one cent, if the argument is made that the coverage ought not to be put into law is factually true. Now, if it does cost them anything, who is it going to cost? It will not cost the American taxpayers one penny. From the profits being made out of the military man, and, to a great extent, his dependents, will come the amount that is going to be paid.

Let me tell you the situation at Camp Lejeune at the main post exchange. There are 155 employees. Five of them are full-time, military-assigned to that exchange. That leaves 150 employees. Out of the 150, 115 of them are dependents of military from all over this Nation stationed on that base.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

(On request of Mr. HALL, and by unanimous consent, Mr. HENDERSON was allowed to proceed for 5 additional minutes.)

Mr. HENDERSON. Mr. Chairman, I thank the gentleman for making the unanimous consent request for time.

Mr. HALL. Mr. Chairman, I appreciate the gentleman's argument, and I wonder if the gentleman will yield once more?

Mr. HENDERSON. I yield to the gentleman from Missouri (Mr. HALL).

Mr. HALL. Mr. Chairman, first of all, in the gentleman's argument, I fail to see that a profit has been made. I fail to see the difference between net income, gross income, and nondelineated profit; but if there is a profit, that perforce must come from those who consume at the post exchanges and the commissaries, or it must come from those who are privileged by a service regulation to participate.

Believe me, my only interest is in the service personnel and their fringe benefits on this particular question, but I cannot help but wonder if we are not cutting off our nose to spite our face when we take away the privilege to hire out as a moonlighter, as the gentleman refers to it; the man who by working would like to increase his sphere of influence, and accumulate a little more. I believe we are eliminating the very job that he, himself, or his dependents have chosen to work at, in order to have a little additional income to do more with and to support the system that gives them the all-out benefits of the PX, the BX, the Navy ships stores, or the commissaries in the first place.

I am very interested that we do not do damage to this system.

Mr. HENDERSON. Mr. Chairman, I appreciate the gentleman's position. I do not believe we have great differences in our thinking about the profits. Of course, we want the profits to go for the benefit of all, but I do not want the profits of the post exchange or any other nonappropriated fund activity to be taken from the employees at a rate that is not fair or comparable in the civilian community.

That is all this bill does. It says they pay the employees there what is being paid in the local communities. If they make a profit on top of that, because we, for instance, furnish the site, or the building, or the heat, or the air conditioning, or all the other things that merchants downtown have to compete with—that argument is not in here. All we are trying to say to the military is that the record is clear that they have not done it, or if the record is not clear, if they are doing it today, then the law says they do it and it will not cost them anything.

Mr. HALL. Mr. Chairman, will the gentleman yield again at that point?

Mr. HENDERSON. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, again I appreciate the gentleman's yielding, and his cooperation, but I think what we are doing here is applying national legislation to a problem that should be handled by the law of supply and demand, the market place, and by local citizens.

What I am trying to say to the gentleman is, please do not insist on legislation that will throw out the baby with the wash water.

Mr. HENDERSON. Can the gentleman assure the House that the post exchanges all over the Nation pay the local prevailing wages?

Mr. HALL. No, I cannot do that, nor do I think it is necessary, but I can assure the gentleman the profits, if any, go back to embellish and increase the accoutrements of the serviceman and his family. And by eliminating this all-out benefit or right to work part-time at it, we will be doing exactly what we did to the schoolboy ambulance drivers. We eliminated the county ambulance services and those of funeral directors, when we passed the Fair Labor Standards Act, and there is not an ambulance in the country today, other than municipal or public, that is worth its salt, because they cannot meet the service which was provided by those part-time employees.

Mr. HENDERSON. Mr. Chairman, I appreciate the gentleman's remarks. I hope the gentleman does not fall into the trap of voting for the amendment offered by my friend, the gentleman from Iowa—and we have had our differences on this one. Here we are saying in the law they ought not be doing it today. I am saying the laws say they have to pay what they would get in the local community. If they are doing it today, it will be minimal.

If they are not doing it today, I say they should be doing it, and the profits we are all interested in for the servicemen ought to come after a fair and reasonable wage has been paid for those who work in the exchanges. If we do not do it, the exchange system will go down. Those of us who recognize the essentiality of this benefit and would still support this amendment would say to the military that we just cannot afford to pay fair wages.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

(On request of Mr. GROSS, and by unanimous consent, Mr. HENDERSON was allowed to proceed for 1 additional minute.)

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. HENDERSON. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, the gentleman seemed reluctant to use the word "moonlighting." It is my understanding that there are Members of Congress who moonlight, and it is my understanding that there are members of the U.S. Supreme Court who moonlight. Now what is so wrong about moonlighting?

Mr. HENDERSON. If the gentleman would like me to answer it, I would say this. I am reluctant to admit that there is a serviceman in the United States who finds it necessary to moonlight himself. I understand his dependents may have to work, and that is becoming a way of life in America, but I do say when they do have to work and they are stationed on a military base, we ought to pay the same wages as the prevailing wages in the area. That is all this bill provides. I think the gentleman would agree with me on that.

Mr. GROSS. I hate to think a member of the U.S. Supreme Court, who is paid $60,000 a year, is forced to moonlight, or that a Member of Congress, who is paid $42,500 with other emoluments, is also forced to moonlight.

Mr. HENDERSON. Let me reply to the gentleman.

Mr. GROSS. I am not about to join in closing the PX's, the officer's clubs, noncommissioned officer's clubs and in-other services operated by and for the benefit of the military. I am not to do that and, by the same token and indirectly increase the pay of those who are working in privately operated supermarkets and other retail outlets in wage board areas. It is a vicious cycle the gentleman proposes with this provision in the bill, which I seek to take out by my amendment.

The CHAIRMAN. The time of the gentleman from North Carolina has again expired.

(By unanimous consent, Mr. HENDERSON was allowed to proceed for 1 additional minute.)

Mr. HENDERSON. Mr. Chairman, I suggest that my prepared arguments will appear under an extension. I have never been more serious in the 10 years I have been here than on this issue before us.

Members of the full committee and of the subcommittee know that I have said year after year, in hearing after hearing, that the post commanders, the military commanders of our overseas bases, have not treated the post exchange and nonappropriated fund employees fairly, yet we have had very little relief. Only under the Fair Labor Standards Act were we able to write in minimum wage coverage. We were saying to American industry, "You have to pay $1.60," but they were not doing it in the post exchanges.

I went overseas and I found that the

American commanders were saying, "We do not have to pay the minimum wage, as we would have to back in the United States."

In my home district one will find Federal employees mowing grass on one side of the highway paid one rate and, because one works for a golf course mowing grass on the other side, that one paid a much lower rate. There is no fairness in today's system.

This provision will not cost one penny, if they are doing what they say they are doing.

SEPARATE ARGUMENT ON NONAPPROPRIATED FUND EMPLOYEES COMING UNDER WAGE BOARD

Mr. Chairman, prior to January of 1967, nonappropriated fund employees, principally the employees at military bases in such facilities as post exchange, laundry, guest houses, clubs, and the like, were, in many cases, not even receiving the minimum wage prescribed by law for private employees doing similar work.

At present, the pay and other benefits of exchange employees are pretty well set and established by individual services, and even in many instances by base commanders. Now, I do not mean to suggest or imply that these are not highly competent and capable individuals, or that they are insensitive to the needs, wishes, and condition of nonappropriated fund employees. But they are military men. To them the nonappropriated fund activities are of, by, and for military personnel, and civilian employees are almost a necessary evil to be tolerated.

In every instance that I am familiar with, the claim is made that nonappropriated fund employees are already being paid the prevailing rate in the community for the work they are doing.

Fine; if this is true, the military has nothing to fear from bringing them under the protection of the Civil Service Wage Board and insuring that they are, in fact, paid what an independent survey board finds to be the prevailing rate.

In this instance, it is important to point out that if increased pay and benefits to exchange employees would result from bringing them under this law, the increase will not be borne by the taxpayers, but will be borne out of the profits from PX's and other profitmaking activities of the nonappropriated funds. This might mean that instead of building six new bowling lanes on a base, they would have to limit it to three, but I do not believe anyone can seriously and conscientiously argue that it would really cut into the profits sharply enough to have an adverse effect on the activities of the bases.

Mr. UDALL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, we have reached the culmination of a long debate, as the gentleman from North Carolina has said, which has run for over 10 years on a very basic question involving simple justice.

The gentleman from North Carolina has led that fight. If this amendment is carried we will be doing a grave injustice to some people who are at the bottom of the economic totem pole. We have worked out provisions for the aircraft controllers, Supreme Court judges, Members of Congress, Federal doctors, and people who are highly paid and skilled. Here we are talking about the janitors, sales ladies, charwomen, waitresses, and similar unskilled people who work on miltary installations. If we pass this amendment, we will be saying to them, "We do not care about you. You are not going to get the prevailing wage. We will make a little bit of profit for the officers' club, but we will make it out of your hide, out of the sweat of your brow."

I believe this is unjust and unfair.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield for a comment?

Mr. UDALL. I yield to the gentleman from North Carolina.

Mr. HENDERSON. The real debate we have had is as to whether or not these employees ought to be civil service employees.

Mr. UDALL. That is right.

Mr. HENDERSON. If they were, then they would be under the jurisdiction of the gentleman's subcommittee, and I am sure that they would be paid, if perhaps not twice as much as they are now paid, certainly more than they will get out of the provisions in this bill, if they were regular Federal employees.

Perhaps the issue ought to be drawn just that clearly. I have been endeavoring to say that we should treat them fairly, and treat them as they would be treated in the local area.

This is a moderate provision. If this is not kept in the bill, I intend to sponsor and continue the fight for, as long as I stay here, a provision to make them civil service employees, like the rest of the employees of this country.

Mr. UDALL. I thank the gentleman. I am with him all the way. If this amendment carries in committee, I hope that we will have a rollcall vote on it, to see who is in favor of paying wages which are substandard to these people at the very bottom of the scale.

Mr. GONZALEZ. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Texas.

Mr. GONZALEZ. I rise in support of what the gentleman from Arizona as well as the gentleman from North Carolina has stated in regard to this very important issue. One can try to explain this away any way one wishes, but these people are working in the commissaries and in the nonappropriated fund activities and are considered Federal employees. They fail to understand why they should be exempt from the minimal provisions of the protective acts this Congress has passed for years.

We have had cases where these people have earned, as late as this year or last year, as little as 40 cents an hour. This is wrong.

I share the concern expressed by the distinguished gentleman from Arizona (Mr. UDALL), and the gentleman from North Carolina (Mr. HENDERSON), and I hope the House will back them up.

Mr. O'HARA. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I am glad to yield to the gentleman from Michigan, who played a key role not too long ago in making sure that we applied the Federal minimum wage provisions to these same employees. For years and years we did not even apply the Federal minimum wage. The gentleman from Michigan helped to lead the fight to make sure we did at least that.

Mr. O'HARA. That is right. And a few years ago, I would like to say to the gentleman from Arizona, we tried to establish that principle around this Congress, that the Federal Government was not going to try to come into a community and pay less than the minimum wage or permit its contractors or related services to pay less than the prevailing wage. It seems to me all that the gentleman from North Carolina is trying to do is to extend that concept on a rational basis. I cannot understand what all of the objection to it is.

Mr. HENDERSON. Will the gentleman yield?

Mr. UDALL. Yes. I yield to the gentleman.

Mr. HENDERSON. Mr. Chairman, I want to commend the gentleman from Michigan (Mr. O'HARA) because I remember so clearly that it was his bill and his leadership that required the minimum wage to be paid to these employees. What happened then? Immediately we got a depression. As soon as they had to go to $1.15, $1.25, or $1.60, employees who had been there 15 or 18 years were paid 5 or 10 cents more than they were required to pay as a result of the actual coverage under the legislation you sponsored.

When I went overseas last year and saw that the employees there were not covered by this interpretation, I knew it was not your intention or my intention that American dependents would be employed in exchanges overseas and not be paid the minimum wage that was paid back home when local nationals were not working in American commissaries and post exchanges because they could make more on the local economy.

Mr. UDALL. Mr. Chairman, this amendment is extremely unwise and unfair, and I believe it ought to be defeated.

Mr. DERWINSKI. Mr. Chairman, I rise in support of the amendment.

May I point out to the Members of the House that the gentleman from North Carolina is certainly excused for exaggerating in favor of a particular amendment or against it on the floor. This is the technique of debate. The gentleman from Arizona sailed off into the wild blue yonder in support of the gentleman from North Carolina, but that, too, is understandable. But let us get back to a few facts which I wish the Members to think of as they vote on this amendment.

First of all, we are not speaking of Federal employees and we are not speaking of people working under adverse conditions. You will find that the people holding these positions seek them in order to augment their incomes and the incomes of their families.

I respect the gentleman from North Carolina for his deep knowledge of labor economics and the intricate factors in-

volved, but when the gentleman argues that the profits of post exchanges are excessive and attacks them, what he is not saying is, if this amendment is not adopted that an adverse impact because on the profits of post exchanges and other facilities, will drive up the prices to the military people and their dependents. That is where it will be felt. It will be felt in higher prices and in the cost of services rendered through these installations.

However, the real argument that is made for the Gross amendment—and may I say that the gentleman from Iowa is a very positive and progressive thinker in this regard and the objections do not reflect positive thinking—may I emphasize that the Department of Defense is undertaking a major study of this very subject and will come up with practical results on it.

The language in the bill, therefore, is premature. It has not been thought through to the end result that it will have on individuals as well as the cost in products and services at post exchanges and related facilities.

I think the gentleman from Iowa has a very practical and wise amendment, and I would urge support of the Gross amendment.

Mr. HENDERSON. Will the gentleman yield?

Mr. DERWINSKI. Yes; I yield to the gentleman from North Carolina.

Mr. HENDERSON. The gentleman mentions the study being conducted. If that study concludes that the post exchanges are paying the prevailing wages in the local areas, does the gentleman agree with me that the effect of the provisions of this bill would be null and void and mean nothing?

Mr. DERWINSKI. No, I do not. I cannot conceive of a bill being null and void, that is the point I make. If the gentleman will hold this portion in abeyance——

Mr. HENDERSON. If the study shows that they are paying local prevailing wages, then the provision of the bill would not be affected; would it?

Mr. DERWINSKI. But the impact of the study goes far beyond that. The impact of the study goes into such things as fringe benefits and the coordinated compensation, and it is a far more expansive study, and with far more corrections intended than just the emphasis the gentleman from North Carolina has placed upon it.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield to me for one more brief question?

Mr. DERWINSKI. I yield to the gentleman from North Carolina.

Mr. HENDERSON. Mr. Chairman, we have heard it said today that if this bill passes that—and I think the figure used was something like 40,000 will have to be reduced or fired out of the Defense Department. I wonder if the gentleman can give us any assurances that if the bill is not passed that there will not be any employees fired or reduced?

Mr. DERWINSKI. The gentleman from North Carolina is setting up a strawman. It has nothing to do with the present amendment being considered. I will yield for any question as long as it pertains to the amendment offered by the gentleman from Iowa (Mr. GROSS).

The gentleman from North Carolina is raising points that are not allied to the amendment offered by the gentleman from Iowa (Mr. GROSS). The amendment offered by the gentleman from Iowa (Mr. GROSS), remember, intends to preserve the effective service to our servicemen and their families that they are now receiving from the post exchanges and other base facilities.

May I point out to the gentleman that in his exuberance to oppose this positive-thinking Gross amendment that the gentleman has referred to Americans who are employed overseas. This amendment applies to facilities in the 50 States and the District of Columbia so that even geographically the arguments presented against the Gross amendment have gone a bit astray. The positive, progressive vote is to support the Gross amendment.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. GROSS, and by unanimous consent, Mr. DERWINSKI was allowed to proceed for 1 additional minute.)

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from Iowa with pleasure.

Mr. GROSS. What the gentleman from North Carolina seeks to do by opposing this amendment is to put waitresses and others, such as clerks in the PX's, under the same pay scales as carpenters, electricians, airplane mechanics—and you name it—under the same pay scale as all other Wage Board employees.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I will yield to the gentleman if he tries to answer the gentleman from Iowa (Mr. GROSS).

Mr. HENDERSON. I certainly want to do exactly that.

What I am trying to say is that the clerks, stockroom employees, and waitresses, are paid the same as waitresses, stockroom clerks and other employees in the local community under the same system that carpenters and electricians are under, not the same amount, but just what they get in that local area. And the argument is made that it ought not to be in the bill because we are already doing it.

Mr. DERWINSKI. That was not the argument at all. The argument was that there is a study being made which is designed to go much broader than the language of the bill, such as the adverse impact of the cost and other factors that would affect the servicemen in these installations.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

(On request of Mr. HENDERSON, and by unanimous consent, Mr. DERWINSKI was allowed to proceed for 1 additional minute.)

Mr. HENDERSON. If the gentleman will yield further, these people who would be covered, if they are going to get anything out of the action of this coverage, will get something out of the coverage, and they are more likely to receive something out of that than they are out of a study.

Mr. DERWINSKI. Knowing full well the seriousness of the gentleman, to which I certainly can give testimony, may I say that we do not know what the end results of the proposals of the gentleman from North Carolina may be insofar as adversely affecting the service men and their families, and the people who have access to these facilities. What will happen to certain products, and certain costs of the goods that are available through the post exchanges? I do not think that there have been any facts presented to our committee that would show the possible adverse effects upon the services and the costs of goods, and therefore the impact on the pocketbooks of the service men.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. GROSS).

The question was taken and on a division (demanded by Mr. GROSS) there were—ayes 29, noes 49.

Mr. GROSS. Mr. Chairman, I demand tellers.

Tellers were refused.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. DERWINSKI

Mr. DERWINSKI. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DERWINSKI: On page 27, strike out "(A)", in line 24.

On page 28, strike out subclauses (B) and (C) of clause 8, beginning in line 3 through line 10.

Mr. DERWINSKI. Mr. Chairman, I take the liberty of describing this amendment as another perfecting amendment to the bill.

What it would do would be to strike from the bill the provision for a 7.5-percent differential for scheduled nonovertime work from 3 o'clock to midnight and 10-percent differential for scheduled nonovertime work between 11 o'clock p.m. and 8 o'clock in the morning.

Now, let me point out a few facts to the Members. The bill as drawn would fix a uniform nationwide 7.5-percent pay differential for the first night shift and a 10-percent pay differential for the second night shift.

Industry practices vary widely within and between wage areas. But basically they are established not on a percentage basis but on a basic pay system related to the dollars and cents rather than percentages.

The fact that this would cost the Department of Defense $40 million, if my amendment is not adopted, I would just leave to anyone to ponder.

Earlier in discussing the basic bill we referred to the objections of the U.S. Civil Service Commission and the Civil Service Commission in a letter to Chairman DULSKI in March of 1970 outlined the objections to the bill including an objection to this wage differential.

I quote from this letter which is part of our committee records. They said:

This represents a complete departure from pay practices prevailing in industry for trades, crafts, and laboring occupations. The predominant practice is to pay a flat cents-an-hour amount to all employees on a shift rather than a percentage differential basis.

And continuing quoting from that letter, they said:

It would be highly undesirable to set part of a Wage Board employee's rate of basic pay on the basis of rates prevailing in an area and part of the basis of a nationwide differential bearing no relationship to the prevailing practice in the area.

Then it goes on to point out the complications to employees who are not on regularly scheduled, nonovertime hours.

As a matter of fact under the provisions of this bill, and if there are any Members from California present I direct this to your special attention. There are employees who are covered by this bill who now receive in California nighttime differentials above the limits that would be set by the bill. Therefore, under the provisions of this bill they would have a pay cut, not a pay raise.

Furthermore, the employees of the Bureau of Engraving and Printing are now covered by a 15-percent night differential, from 6 p.m. to 6 a.m., and they would be adversely affected by this bill unless my amendment is adopted.

This amendment, I believe, as I have emphasized, is practical. It would remove language in the bill which would be inconsistent with practices prevailing in private industry. It would also, I might add, save $40 million to the Defense Department. I think it is a practical, progressive, necessary perfecting amendment, and I naturally urge support of this amendment.

Mr. HENDERSON. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. The gentleman from North Carolina is recognized.

Mr. HENDERSON. Mr. Chairman, what the bill attempts to do is to grant uniformity for the second- and third-shift workers. Under section 5545, covering the Class Act employees for night, Sunday, standby, irregular, hazardous duty differential, the law provides—except as otherwise provided, under subsection (c) of this section, an employee is entitled to pay for night work at basic plus premium, amounting to 7½ percent for the first shift and 10 percent of the basic rate for the third shift.

We have a uniform 10-percent differential for Class Act employees who work at night. We know that among blue-collared employees it is not at all unusual that some of them will work on a second shift and others will work on a third shift. So our bill provides for a 7½-percent pay differential, nationwide, for scheduled nonovertime work during the second shift, that being during the hours 3 p.m. to midnight, and 10 percent for the third shift, 11 p.m. to 8 a.m.

The gentleman's amendment would remove this provision from the bill, and I presume would leave the practice that now is very confusing. It depends on where you are and for which Government agency you may be working as to what your second- and third-shift pay differential is. It seems to me that the blue-collar workers of America ought to be told that wherever they work, when they work on the second shift or the third shift, they will get a differential. If the percentage which the subcommittee and the full committee thought were the best percentages are not the best percentages, consideration might be given to amending it.

But here we are saying that we do not want continued chaos and confusion. It was the majority opinion of the committee, and the subcommittee chairman strongly feels that there should be a fair differential for second- and third-shift employees. I urge defeat of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The question was taken; and on a division (demanded by Mr. DERWINSKI) there were—ayes 27, noes 40.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. BRASCO

Mr. BRASCO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BRASCO: On page 40, line 20, add a new section at the end thereof to read as follows:

"SEC. 10(a). Subchapter V of chapter 55 of title 5, United States Code, relating to premium pay, is amended by adding at the end thereof the following new section:

"'§ 5550. Pay for Sunday and holiday work; employees of nonappropriated fund instrumentalities, Veterans' Canteen Service

"'An employee of the Veterans' Canteen Service, Veterans Administration, or an employee paid from nonappropriated funds of the Army and Air Force Exchange Service, Army and Air Force Motion Picture Service, Navy Ship's Stores Ashore, Navy exchanges, Marine Corps exchanges, Coast Guard exchanges, or other instrumentalities of the United States under the jurisdiction of the armed forces conducted for the comfort, pleasure, contentment, and mental and physical improvement of personnel of the armed forces—

"'(1) whose regular work schedule includes an 8-hour period of service, a part of which is on Sunday, is entitled to additional pay at the rate of 25 percent of his hourly rate of basic pay for each hour of work performed during that 8-hour period of service; or

"'(2) who performs work on a holiday designated by Federal statute or Executive Order, is entitled to pay at the rate of his basic pay, plus premium pay at a rate equal to the rate of his basic pay, for that holiday work which is not in excess of 8 hours or overtime work for such employee.'.

"(b) The table of sections of subchapter V of chapter 55 of title 5, United States Code, is amended by adding at the end thereof—

"'§ 5550. Pay for Sunday and holiday work; employees of nonappropriated fund instrumentalities, Veterans' Canteen Service.'."

Mr. BRASCO (during the reading). I ask unanimous consent that further reading of the amendment be dispensed with, that the amendment be considered as read and printed in the RECORD and open to amendment at any point, and I will, of course, explain the amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The CHAIRMAN. The gentleman from New York is recognized for 5 minutes in support of his amendment.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield?

Mr. BRASCO. I yield to the gentleman from North Carolina.

Mr. HENDERSON. Mr. Chairman, I understand that the gentleman's amendment, very simply, provides for Sunday and holiday work differential for the nonappropriated fund employees.

Mr. BRASCO. That is correct.

Mr. HENDERSON. And in keeping with the action of the Committee of the Whole in recent votes, this amendment certainly comes at a very timely and appropriate moment. I commend the gentleman, and, speaking for myself, the amendment will be very acceptable to me. I thank the gentleman for yielding.

Mr. BRASCO. Mr. Chairman, I thank the gentleman from North Carolina for his very kind words.

Mr. Chairman, this body chose to treat the employees who are being paid out of nonappropriated funds the same as employees who are being paid out of appropriated funds for the purpose of determining the salaries they ought to receive. I believe, certainly, that was a most equitable way of treating those who are in the employ of the Federal Government. I know there are some who question that premise, but in my opinion that is exactly what these employees are—Federal employees.

This amendment would do no more than go down that road a little further by providing truly equal treatment between those who are being paid out of appropriated funds and those who are being paid out of nonappropriated funds. What this amendment does is to establish a 25-percent increase to a worker's hourly rate for each hour of work performed on Sundays and double pay for employees working on holidays.

Very simply, what this does is to treat both categories of employees in exactly the same manner.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield?

Mr. BRASCO. Certainly I yield to the gentleman from North Carolina.

Mr. HENDERSON. Mr. Chairman, I wish all of the argument could be made at one time. This is not a remote situation nor an amendment that is not meaningful. Just recently we had a post exchange open on Sunday. Do Members know what kind of pay the military and post exchange offices were going to give the employees for working from 1 o'clock until 6 o'clock on Sunday afternoon? They were going to give them time off, equal time off.

Mr. BRASCO. That is exactly what this amendment seeks to correct. Let me say this in all sincerity. The strength and foundation of our Government has been in the way that it treats those who consent, to be governed by it. Particular emphasis has been placed on the matter of treating those people fairly and squarely in the area of protecting them

on something that is most vital and important to their welfare, that is the amount of money they earn for a just day's work. I can only say that during the course of the years it has been very evident that the Congress has promulgated law after law with respect to protecting this most precious thing, the money earned with which the people support themselves and their families. However, we have been less than fair in our treatment of those who are in the employ of the Federal Government. What we did here today in this bill goes a long way toward correcting some inequities. The previous amendment would subject nonappropriated fund employees to the prevailing wages that are paid people locally, which was a step in the right direction. I submit by giving them the same treatment for work they perform on Sundays and holidays as those who are being paid out of appropriated funds will certainly correct an existing problem, and it will allow all inequities to be corrected at one time. I urge all Members of this body to support this amendment.

Mr. DERWINSKI. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I am a bit amazed that the chairman of the subcommittee would so quickly jump to accept this amendment. If it was so obviously correct and needed, it should have been discussed in the subcommittee and should have been contained in the bill as it stands.

Actually, this amendment is merely compounding the complication which the bill is causing for the post exchanges, for the servicemen and their families who use those facilities.

I do believe that when we do not have a fair record of the facts and we do not understand the total impact of the language in the bill affecting these nonappropriated fund employees. If we add to it this extra feature which the committee did not consider, I believe we will be compounding the complication. I would think the prudent thing to do would be to reject this amendment. Prudence would dictate that the amendment be rejected, and if the House will accept the language in the bill, certainly that would be a far enough step to take this afternoon. This new language, completely without support by facts and figures in its impact, I believe, is hasty legislation.

Mr. BRASCO. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the distinguished gentleman from New York.

Mr. BRASCO. It is obvious that the gentleman's motto is, "Always put over until tomorrow what we can do today."

Mr. DERWINSKI. Especially when I fear damage.

Mr. BRASCO. The gentleman mentioned on two occasions during the course of this debate that if we pass the amendment which I propose—that we in some way were doing harm to the dependents of those in the military and in fact those in the military themselves.

Is the gentleman suggesting that whatever benefit the military and their dependents get out of the profits from these exchanges should be kept at the expense of denying to other Americans a living wage?

Mr. DERWINSKI. Not at all.

Mr. BRASCO. It seems to me that is what the gentleman is saying.

Mr. DERWINSKI. I am pleased the gentleman gives me the opportunity to make a rebuttal.

Nobody is being denied a living wage. The people who are the employees discussed here are the servicemen and their families, who are augmenting their basic wage. Nobody is denied a living wage under the existing system.

I am pointing out, as the gentleman well knows, that especially the noncommissioned officers, the rank and file military people, have taken for granted as a part of their fringe compensation, certain services at reduced costs which are available in the PX's, the noncommissioned officers clubs, the officers clubs, and so forth. This is accepted, standard procedure. Provisions in the bill itself raises a question as to just what will happen to these benefits in the future. The gentleman's amendment, coming like a bolt out of the blue, may completely complicate the factors as they apply to the benefits and to the acceptable procedures which the servicemen expect.

I say that there is no foundation in testimony or in figures before our committee to support this amendment. I believe if it has the overpowering value suggested, the chairman of our subcommittee should hold immediate hearings and move it along. I do not believe we should accept it at this point.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the distinguished gentleman from North Carolina.

Mr. HENDERSON. I should like to answer the inquiry which the gentleman has raised. I can tell the gentleman very simply why it was not in the bill.

I could not imagine a Federal employee being worked on a Sunday and not being given anything but equal time off. I did not know it until after this bill was reported and the rule was adopted and the House went into recess.

Mr. DERWINSKI. In other words, our staff had not done its homework?

Mr. HENDERSON. No. The military just began this operation that was brought to my attention during the period of recess. To be exact, it was on September 6, last Sunday.

Now will the gentleman answer a question for me, as to whether he would adopt the previous amendment and say that they ought to be paid the local prevailing minimum wage? Surely the gentleman would not say that we ought to work Federal employees on Sunday and not give them anything but compensatory time off.

Does the gentleman know of any American industry or any good retailer anywhere in America who says to his people, "You work on Sunday, or you get fired if you don't work on Sunday, and we will give you some time off."

Mr. DERWINSKI. May I compliment the gentleman for finally sharing with the rest of us some information he has just acquired. I do wish the gentleman would establish proper lines of communication with subcommittee members and I do wish the gentleman had made that a positive argument, quoting his information. I wish that the staff would share its information and figures with all of us.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I simply want to ask one question. What is the price tag on this amendment?

Mr. HENDERSON. Will the gentleman yield?

Mr. GROSS. Yes. I yield to the gentleman.

Mr. HENDERSON. I will tell you what my price tag is on it.

Mr. GROSS. I would like to know, and I do not want to take any further time of the House. I am sure the gentleman can give us the cost of this proposal.

Mr. HENDERSON. I can answer that by saying if they will prevent the post exchange employees from working on Sundays, then it will not cost anything.

Mr. GROSS. Of course, that is not much of an answer. Cannot the gentleman put any kind of a figure on this? Any kind of a figure.

Mr. HENDERSON. The best information I have is there are now eight or nine. This is a growing practice. Just recently one in the Washington area, I understand, opened. Two in North Carolina opened since I have been here.

Mr. DERWINSKI. Will the gentleman yield?

Mr. GROSS. Yes. I am glad to yield to the gentleman.

Mr. DERWINSKI. It seems to me that this amendment has opened up a Pandora's box of subject matter. I understand that our distinguished chairman now wishes to legislate blue laws. I am perfectly agreeable to debating the pros and cons of blue laws with him at some time, but that is not the argument here.

Mr. HENDERSON. Will the gentleman yield?

Mr. GROSS. Yes. I yield.

Mr. HENDERSON. Let me make my position clear—this bill does not say that you do not work them on Sundays, but it says that if you do, you provide what they should be paid.

Mr. GROSS. The gentleman from North Carolina is well aware that officers clubs and noncommissioned officers clubs have been operated for years and years. This is not something new.

Did the gentleman make an effort to find out what it would cost?

Mr. HENDERSON. If the gentleman will yield further, that is a service to the employees. This amendment would extend itself to the employees that are required to work in the major exchanges for these profitmaking organizations.

Again I remind the gentleman it does not come out of the taxpayers' pockets but only out of the profits of the post exchanges.

Mr. DERWINSKI. Will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman.

Mr. DERWINSKI. I merely wish to observe that the gentleman is such a perceptive student of this entire program. I know he realizes when these profits that are being so vigorously attacked disappear, the servicemen and their dependents will have to dig into their pockets to make up the difference. So we will have to be careful that this does not become a two-edged sword.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York.

The question was taken; and on a division (demanded by Mr. BRASCO) there were—ayes 51, noes 32.

So the amendment was agreed to.

Mr. LENNON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to highly commend my friend and colleague, the gentleman from North Carolina (Mr. HENDERSON), for his leadership in bringing this bill to the floor. I believe all of the North Carolina delegation well realizes the impact this legislation will have on my congressional district. I was impressed by the comments that were made concerning the PX's and base exchanges because, as the gentleman knows, I have in my congressional district Fort Bragg, Pope Air Force Base, and the Sunny Point Ocean Terminal Ammunition Depot.

Incidentally, the largest PX in the continental United States, on the basis of annual dollar volume, is at Fort Bragg, N.C.

Mr. Chairman, my purpose in taking this time is to direct the attention of the distinguished chairman of the subcommittee to a situation that is now taking place at the ammunition uploading depot. As the gentleman from North Carolina, I am sure, knows the problem involves the men who are assigned to the firefighting ship crews on a full-time basis so as to provide fire protection to this terminal facility as well as to the hundreds of millions of dollars worth of explosives that move out of that ocean terminal, and are truly identified as Government employees. The chairman will recall that in June of this year in an exchange of correspondence with the gentleman I received his assurances that his subcommittee would go into the questions raised by the employees who operate these firefighting boats under these very hazardous conditions. And I would like to have the gentleman's comments on that.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield?

Mr. LENNON. I yield to the gentleman.

Mr. HENDERSON. Mr. Chairman, I am very aware of the gentleman's intense interest in the legislation before us, and especially with respect to the hazardous duty of the firemen serving in the ammunition loading depot, as well as elsewhere in the Nation, as the gentleman revealed in an exchange of correspondence earlier this year, and I am very happy at this time to reaffirm to the gentleman that just as soon as our subcommittee concludes this legislation that we will give very serious attention both by way of study and certainly hopeful early hearings on the legislation that the gentleman from North Carolina has introduced covering this very subject.

Mr. LENNON. I thank the gentleman from North Carolina, because on March 19, of this year I introduced H.R. 16584 in the House that would give these employees this much deserved equity. Also a bill was introduced in early April in the Senate to do the same thing. The question was raised earlier as to whether or not this bill which was introduced in the House and the companion bill in the Senate would be germane if offered as an amendment to H.R. 17809.

And after consultation with the gentleman from North Carolina and other members of the subcommittee, and recognizing that this matter had not been considered, and that there had been no hearings, I refrained from taking that action.

Mr. HENDERSON. Mr. Chairman, will the gentleman yield further for one more comment?

Mr. LENNON. I yield further to the gentleman from North Carolina.

Mr. HENDERSON. I certainly thought at the time that the bill the gentleman introduced here in the House, and the one in the Senate, had great merit to them, and that the executive department and the Department of Defense would pay a lot of attention to them and determine whether or not this was hazardous duty, and it is my opinion that they could take such action and give proper pay for such duty.

And further, after the movement of the nerve gas, the entire membership of this body, after studying the matter, ought to appreciate that this is hazardous duty, and is a day-by-day function in that location.

Mr. LENNON. Mr. Chairman, if I might ask the gentleman from North Carolina (Mr. HENDERSON) one other question:

Has your subcommittee asked the DOD and other affected agencies of the Federal Government, including the Civil Service Commission, to take any position with respect to the legislation that I introduced?

Mr. HENDERSON. I can assure the gentleman that we have asked for reports. I regret that I cannot give you the result of them from memory but I certainly will provide that information.

The CHAIRMAN. The question is on the committee amendment as amended.

The committee amendment as amended was agreed to.

The CHAIRMAN. Under the rule the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BROOKS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 17809) to provide an equitable system for fixing and adjusting the rates of pay for prevailing rate employees of the Government, and for other purposes, pursuant to House Resolution 1182, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment?

Mr. HENDERSON. Mr. Speaker, I demand a separate vote on the Derwinski amendment that would have repealed the Monroney Act.

The SPEAKER. Is a separate vote demanded on any other amendment to the Committee amendment?

If not, the Chair will put them en gros.

The question is on the amendments.

The amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

On page 26, strike out all of clause (4), beginning in line 5 down through line 22, and renumber the succeeding clauses.

The question was taken and on a division (demanded by Mr. DERWINSKI) there were—ayes 40, noes 61.

So the amendment was rejected.

The SPEAKER. The question is on the committee amendment as amended.

The committee amendment as amended was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT

Mr. GROSS. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. GROSS. I am, Mr. Speaker.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. GROSS moves to recommit the bill H.R. 17809 to the Committee on Post Office and Civil Service.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on passage of the bill.

Mr. GERALD R. FORD. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 231, nays 90, not voting 109, as follows:

[Roll No. 287]

Mr. Sisk with Mr. Goldwater.
Mr. Stephens with Mr. Collier.
Mr. O'Neal of Georgia with Mr. Bush.
Mr. Macdonald of Massachusetts with Mr. Weicker.
Mr. Blatnik with Mr. Pollock.
Mr. Jones of Alabama with Mr. Scherle.
Mr. Pepper with Mr. Sebelius.
Mr. Van Deerlin with Mrs. Chisholm.
Mr. Young with Mr. Price of Texas.
Mr. Melcher with Mr. Quie.
Mr. Alexander with Mr. Rousselot.
Mr. Baring with Mr. Schneebeli.
Mr. Ashley with Mr. Schwengel.
Mr. Feighan with Mr. Stubblefield.
Mr. Flynt with Mr. Roudebush.
Mr. St Germain with Mr. Tunney.
Mr. Satterfield with Mr. Symington.
Mr. Long of Louisiana with Mr. Hungate.
Mrs. Hansen of Washington with Mr. Fraser.

Mr. SCHADEBERG changed his vote from "yea" to "nay."

Mr. COUGHLIN changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. HENDERSON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed, H.R. 17809, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

REGULATION OF CREDIT CARD MAILINGS

Mr. MATSUNAGA. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1046 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1046

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 16542) to amend title 39, United States Code, to regulate the mailing of unsolicited credit cards, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Post Office and Civil Service, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 16542, it shall then be in order in the House to take from the Speaker's table the bill S. 721 and to move to strike all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 16542 as passed by the House.

The SPEAKER. The gentleman from Hawaii is recognized for 1 hour.

AMENDMENT OFFERED BY MR. MATSUNAGA

Mr. MATSUNAGA. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MATSUNAGA: On page 2, strike out all of the last sentence, beginning with "After the passage of" in line 6 and ending with the period in line 11.

The SPEAKER. The question is on the amendment offered by the gentleman from Hawaii.

The amendment was agreed to.

Mr. MATSUNAGA. Mr. Speaker, I yield 30 minutes to the gentleman from California (Mr. SMITH) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1046 provides an open rule with 2 hours of general debate for consideration of H.R. 16542 to amend the United States Code to regulate the mailing of unsolicited credit cards, and for other purposes.

The purpose of H.R. 16542 is to minimize the possibility of theft from the mails of unsolicited credit cards by requiring that such mailings be by registered mail.

The legislation amends the United States Code to provide that a credit card is nonmailable unless it has been solicited, is a replacement for one previously issued or lost, mislaid, or stolen, and is being returned to the addressee. Any unsolicited card must be sent by registered mail, with return receipt requested, with delivery restricted to the addressee, and the envelope must show the name and address of the sender and such notice as may be prescribed by the Postmaster General.

A penalty is prescribed for each violation in the amount of $1,000 maximum.

Mr. Speaker, I urge the adoption of House Resolution 1046 in order that H.R. 16542 may be considered.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, in the interest of saving time I will say that the gentleman from Hawaii (Mr. MATSUNGA) has adequately explained this bill and I will extend my remarks on the rule.

Mr. Speaker, I commend the gentleman from Illinois (Mr. ERLENBORN) for bringing to our attention a matter which I have been more or less fussing about for the last year; that is, the language which we have agreed to strike from the rule, which says that after the passage of the bill, "it shall then be in order in the House to take from the Speaker's table the bill S. 721 and to move to strike all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 16542 as passed by the House."

If Members will read the second paragraph under clause 3, rule XXVIII, the second paragraph has to do with precedents and they will find that once this happens then the conferees can put most anything in the bill they wish to, whether it is germane to anything passed by the House or by the Senate, and it will come back to us, and it is made in order.

The gentleman from California (Mr. SISK) has sent to me a suggested change in that rule which we are going to bring to the attention of the House next week in connection with the reorganization bill, which we hope will confine the activities of the conferees to what has been passed by the House and by the Senate, within those two outside and inside limits, so the two bodies will not be able to bring in any legislation in the bill which was not considered by either the House or the Senate.

Mr. Speaker, I do urge the adoption of the rule.

The purpose of the bill is to minimize the likelihood of theft from the mails of unsolicited credit cards.

The bill seeks to achieve this by providing a new category of nonmailable items. A credit card of any kind is declared to be nonmailable unless the card—

First, is requested by the addressee; or

Second, is a replacement card for one previously issued to the addressee; or

Third, if the card was lost or stolen previously, it is being returned to the addressee by mail; or

Fourth, if the card is unsolicited, it is sent by registered mail with delivery restricted to the named addressee and a return receipt is requested showing to whom, when, and where delivered, and is sent in an envelope bearing on its face the name and address of the sender, along with such notice as the Postmaster General may prescribe.

For each violation of these provisions, a sender is liable for a fine of $1,000.

As our society comes more and more to rely on credit cards, the mailing of unsolicited cards has become normal business procedure for many business firms and banks. Losses inevitably result from such indiscriminate mailing policies, and the cost of these losses are just as inevitably passed on to the ultimate consumer in the form of higher prices. Estimates of such losses annually range from $50 to $150 million.

Additionally, persons receiving unsolicited credit cards are often those persons who are not wise and prudent purchasers. Such a temptation should not be indiscriminately placed in their hands.

The bill seeks to reduce these problems significantly by requiring that credit cards be sent by registered mail. This will reduce the possibility of theft because such mail is sent in locked mailbags. By requiring a named addressee and a return receipt, the chances of theft will be likewise reduced. The cost of this type of procedure will help insure that only credit-worthy persons will receive such cards through the mails.

Finally, the bill authorizes the Postmaster General to require a notice on the envelope of such mailings to show that an unsolicited credit card is contained therein.

The Post Office Department supports the legislation, pointing out that the cost of mailing by registered mail—$1.36—may very well stop such mailings completely.

The Board of Governors of the Federal Reserve System opposes the bill. It does not believe the current situation requires such strict limitations on the mailing of unsolicited credit cards. It points out that many banks would be seriously handicapped in expanding their credit card programs, thus giving banks already in the field protected advantage.

There are no minority views.

Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. Mr. Speaker, I thank the gentleman for yielding.

I want to commend the gentleman from Hawaii for offering the amendment which I intended to offer if the members of the Rules Committee themselves did not.

The gentleman from California (Mr. SMITH) I believe has quite thoroughly described the effect of the language which has been stricken from the rule. If this language had been left in the rule and the Senate bill were then amended by substituting the language of the House bill and sent to conference, under the rules and under the precedents, the conference committee would have been free to put in this bill almost anything that would have been germane and that could have been offered in either the House or the Senate. It would not have been at all limited to the bill passed by the House or passed by the Senate.

I believe most of us have felt that the conference committee had these restraints, that the conference committee could not write new legislation in the conference. But in the past several years there have been too many instances in which altogether new legislation was written by the conference committee, and the House and the Senate have had only two alternatives—to accept the new legislation as written by the conference committee or to reject the conference report and send the whole matter back to conference.

I hope this will be a precedent of the House now, so that we will not include this sort of language in the rules sent by the Rules Committee to the House for the consideration of bills in the future. Or, as suggested by the gentleman from California, that the rules of the House themselves may be amended in the reorganization bill to see that the kinds of restraints we all understand to be imposed upon the conference committee will be imposed in the future to protect us in our legislative function.

Mr. MATSUNAGA. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. DULSKI. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 16542) to amend title 39, United States Code, to regulate the mailing of unsolicited credit cards, and for other purposes.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 16542 with Mr. STEED in the chair.

IN THE COMMITTEE OF THE WHOLE

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New York (Mr. DULSKI), will be recognized for 1 hour, and the gentleman from Idaho (Mr. MCCLURE), will be recognized for 1 hour. The Chair now recognizes the gentleman from New York.

Mr. DULSKI. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of H.R. 16542, a bill to restrict the mailing of unsolicited credit cards.

I believe that a vote in support of this bill is a vote in support of the American consumer.

The security requirements in this bill

will protect the American public from large scale theft of unsolicited credit card mailings.

Further, these security requirements will, in turn, reduce the number of such mailings. At the same time, this bill will not interfere in any way with normal provision, renewal, and replacement of credit cards requested by individuals or companies.

This legislation from my committee received unanimous support both in the full committee and in the Postal Operations Subcommittee. It is indeed bipartisan legislation.

Unsolicited and unwanted credit cards have been sent through the mails to millions of Americans.

In the too many cases where these unsolicited credit cards have been stolen, the mail patron did not learn of his loss until he received a bill from the credit card company perhaps a month to 6 weeks later.

One victim from my State was a 96-year-old widow, living on social security, who received a bill from a credit card company for several thousand dollars. She had asked for no account with the company—it was established by an unsolicited credit card in her name which had been stolen from the mails.

The pending bill will protect the public from such thefts by providing: First, credit cards are classed as unmailable matter unless they are requested specifically by the receiving party or involve renewals or proper replacements; second, unsolicited credit card mailings can be sent only by restricted delivery to the addressee. The Postal Service will prescribe regulations to insure personal delivery, plus proof of when, where, and to whom the card-carrying envelope is delivered; and, third, any additional costs resulting from the nondelivery of the unsolicited mailing and its return to the mailer must be borne by the mailer.

There is one additional requirement: This directs that a notice be printed on the face of the envelope explaining that the mailing contains an unsolicited credit card and that the addressee may refuse to accept the mailing.

Under present conditions, unsolicited credit card mailings can be—and often are—disguished in order to gain acceptance into the home. While the proposed careful security delivery system will give maximum protection to these mailings, we still need to guard against disguised envelopes.

The total cost of each mailing of unsolicited credit cards under present rates and procedures would be at least $1.71. It is not possible at this time to forecast the cost to be set by the new Postal Service.

As for violations, the bill provides criminal penalties of up to $1,000 for each instance.

As will be apparent to the Members in referring to the bill and report, this bill was reported from our committee before enactment of the Postal Reorganization Act which the President signed into law on August 12.

Thus the bill, as reported, applies to the current version of title 39 of the United States Code, which will be replaced by the Postal Reorganization Act.

Therefore, we have redrafted the pending bill on a technical basis to conform to the new title 39 which will come into effect next year, at least by August 12.

There are no changes in substance, only the technical changes needed to conform to the new law.

When the general debate is concluded and we proceed under the 5-minute rule, the gentleman from Pennsylvania (Mr. NIX) will propose an amendment in the nature of a substitute. I urge support of the amendment which conforms fully with the original intent of our committee, as well as the subcommittee.

I want to congratulate the chairman of the Subcommittee on Postal Operations, the gentleman from Pennsylvania (Mr. NIX), for sponsoring this legislation and the members of our committee for their support. I particularly commend the gentleman from New York (Mr. HANLEY), a member of our full committee, for his special concern and leadership in this matter.

I urge the House to support this needed legislation.

Mr. Chairman, I yield such time as he may consume to the gentleman from Texas (Mr. PATMAN).

Mr. PATMAN. Mr. Chairman, I am in wholehearted support of H.R. 16542, and I commend the chairman of the full committee, the gentleman from New York (Mr. DULSKI) and the chairman of the subcommittee, the gentleman from Pennsylvania (Mr. NIX), for bringing this legislation to the floor. I also salute the author of the bill, my colleague (Mr. HANLEY), who also serves as a very able member of the Banking and Currency Committee.

There are a number of problem areas that arise in connection with the use and distribution of credit cards. But perhaps the most important question that needs to be explored is the reliance upon unsolicited credit card mailings, a tactic which is increasing at an alarming rate.

In 1967, I introduced legislation to curb the unsolicited distribution of bank credit cards. Hearings were held on this legislation before the Banking and Currency Committee in November of that year. Unfortunately, we were unable to take action on the legislation because the three bank regulatory agencies—the Federal Reserve System, the Comptroller of the Currency, and the Federal Deposit Insurance Corporation—all opposed the legislation, even though Miss Betty Furness, Special Assistant to the President for Consumer Affairs, strongly supported the legislation and said the bill "would make a major contribution to a secure consumer marketplace."

The bank regulatory agencies, although admitting that there were problems with bank credit cards, did not feel that the problems were significant enough to call for legislation. More than 2 years have passed since that initial hearing on credit cards, and the problems and abuses of credit cards have continued to mount. Recently, the Federal Trade Commission held hearings on credit cards because it too was concerned about the problems that have arisen with the plastic debt package. However, the Federal Trade Commission does not have jurisdiction over the banking industry and several other industries such as the airlines. Since that hearing, a representative of President Nixon's administration has suggested that all credit cards should be regulated and I strongly endorse such a proposal. No sooner had the Nixon administration proposal been made than the Federal Reserve System made it clear that it would not go along with any proposals that in any way would regulate bank credit cards. In a speech before the Seattle Clearinghouse Association on September 23 of last year, Federal Reserve System Governor Andrew Brimmer said:

> Furthermore there appears to be no reason to change the Board's position that the System has adequate supervisory power governing the development of bank credit card programs and does not see any necessity for special legislation to limit or control bank credit cards.

Of course, it is not unusual for the Federal Reserve System to operate on a course different from that of the administration in power and, once again, we are seeing why the independence of the Federal Reserve System is a major deterrent to an effective government.

CONSUMERS WANT REGULATION—BANKS DO NOT

We know that the Federal Reserve System wants no change in the present handling of credit cards. But the Federal Reserve System, it must be remembered, speaks only for the bankers, mostly big bankers. Since I introduced legislation to regulate bank credit cards, I have received numerous letters from consumers supporting the legislation. I have not received a single letter from a consumer group or an individual consumer opposing the legislation. In fact, virtually every consumer group that I can think of favors Federal credit card legislation.

The Federal Reserve System also does not believe that credit cards are responsible for financial difficulties such as the marked increase in personal bankruptcies. The Federal Reserve System is thus in sharp disagreement with Royal Jackson, Chief of the Bankruptcy Division, Administration Office of the U.S. Courts. Testifying before a credit card hearing in the other body, Mr. Jackson said that a prohibition against sending unsolicited credit cards would reduce the rate of consumer bankruptcies.

Mr. Jackson still believes that there is a direct correlation between heavy credit card use and personal bankruptcies. He added that bankruptcy referees around the country are more concerned about the problem now because of the continued increase in personal bankruptcies. He added that the problem will not be solved until legislation or regulation controlling the distribution of credit cards is enacted.

REGISTERED MAIL COSTS WOULD NOT BE PROHIBITIVE

I am impressed by Mr. Jackson's statement and I feel that the first step toward correcting the problem would be the en-

actment of Congressman HANLEY's bill. According to the Federal Reserve, some banks have adopted the policy of sending credit cards via registered mail—a procedure which would be required under the Hanley bill. The main objection to the use of registered mail appears to be the cost. According to Governor Brimmer, one bank is reported to have spent an average of 80 cents per mailing to distribute its cards by registered mail. Perhaps the Federal Reserve System feels that an expenditure of 80 cents per card is prohibitive but actually it is a very small expenditure when compared against the profit potential of the card.

For example, at the end of July 1969, there was $1.7 billion outstanding in bank credit card plans. And during the period from January to July of 1969, there was an average of $1.4 billion outstanding during any given 30-day period. The banks charge the credit card holder 1½ percent a month on the unpaid balance or a total of 18 percent a year annual interest charge. Not only do the banks collect from the purchaser but the bank acts as a double tollgate operator and also collects from the merchant in the form of a discount which ranges as high as 7 percent of the purchase price. Thus, if a merchant sells a $100 item to a customer who uses a bank credit card to pay for the item, the bank will reimburse the merchant for only $93, keeping the $7 as its discount fee.

The bank is collecting 18 percent from the consumer and 7 percent from the merchant or a total of 25 percent in the form of interest or discounts. The 25 percent collected on $1.4 billion, the average monthly balance during 1969, comes to $350 million. It would appear to me that with this kind of profit picture, the banks, or for that matter any credit card distributor, could easily absorb the cost of processing credit card distribution through registered mail.

FEDERAL RESERVE CRITICISM IS SO MUCH BLUESKYING

The other objection that the Federal Reserve has against using registered mail for distribution purposes is one of the most ludicrous that can be imagined. This is what Governor Brimmer had to say about the distribution of credit cards through registered mail:

> Since registered mail must be accepted by a responsible person at the address indicated, in many cases this means that the potential card holder must make a special effort to pick up the letter at his post office. Not infrequently this means taking time off from work (many times without pay), incurring transportation costs and other inconveniences. Consequently, the actual cost to potential card holders may be substantially greater than that borne by the sending bank.

If this body accepts Governor Brimmer's premise, it should immediately take action to do away with all registered mail since it is Governor Brimmer's contention that registered mail works a great hardship on the recipient and may be even a major factor in lost man-hours in the work force.

Mr. Chairman, we must work our way through the smokescreen being laid down by the Federal Reserve System and take action on the credit card problem. Day by day, the use and abuse of credit cards increases.

On September 30, 1967, there were only 197 banks with credit card plans and the total outstanding in this area amounted to only $633 million. But on June 30 of last year, 699 banks had established plans and the amount of credit outstanding has more than doubled to $1.7 billion. We cannot hope to control spending as long as credit card regulation is lacking. Nor can we have an effective bank supervision and regulation without adequate safeguards. We are in one of the most inflationary periods in our history and spending at all levels must be reduced if we are to find an end to inflation. But we will never solve that problem if credit card operations, particularly banks, encourage widespread, unlimited credit card expenditures.

Congressman HANLEY has said that "credit card convenience has become a credit card menace." And he has aptly described the situation. The banks are not offering a convenience—they are selling debt and they are packaging debt in a highly attractive form that not only has helped the banking industry to collect record profits but to drive personal bankruptcies to an all-time high.

Virtually every letter that I have received from consumers complaining about unsolicited credit cards wanted to know why there was no legislation to curb this invasion of privacy. Today, Mr. Chairman, this body has an opportunity to answer those letters, and I hope very shortly that I will be able to tell the people who have written me that the House of Representatives has taken action to help those people who have come to Congress seeking our assistance.

Mr. DULSKI. Mr. Chairman, I yield such time as he may consume to the chairman of the subcommittee, the gentleman from Pennsylvania (Mr. NIX).

Mr. NIX. Mr. Chairman, H.R. 16542, a bill to restrict the mailing of unsolicited credit cards by requiring that such mailings be by secured mail to the addressee only, return receipt requested, was supported unanimously in the Subcommittee on Postal Operations and in the full Committee on Post Office and Civil Service.

At the conclusion of general debate, I will offer a perfecting substitute amendment which will conform this bill to Public Law 91-375, which was approved by the Congress in mid-August 1970. H.R. 16542 was ordered reported to the House on March 26, 1970. The postal reorganization bill was enacted in mid-August and it is necessary to redesignate the paragraph and section of this bill, and to fit H.R. 16542 into the new title 39, U.S. Code which will result from the enactment of postal reform.

The Subcommittee on Postal Operations held 4 days of hearings, heard 23 witnesses, including 12 Members of Congress. We also received 17 communications from prominent State officials as well as seven statements which were entered in the record. One of our witnesses, Attorney General Louis Lefkowitz, of New York, successfully sponsored in the New York State Legislature a bill signed in May by Governor Rockefeller which makes the distribution of unsolicited credit cards a crime.

At least 13 States have statutes regulating or eliminating the use of unsolicited credit cards. These States are California, Connecticut, Illinois, Maryland, Massachusetts, Minnesota, Wisconsin, Ohio, North Dakota, South Dakota, Alaska, and New Mexico. Basically the States approach the problem by limiting the liability of credit card holders.

During November of 1969 the New England Bankcard Association mailed 2 million unsolicited credit cards. This type of mailing has resulted in children, bankrupts, and other irresponsibles receiving credit cards. Indeed, it has done more than that, it has resulted in creating an entire new industry for organized crime.

Stolen credit cards can be sold by thieves on the black market for $50 to $500. These cards are then used to run up huge bills and a stolen unsolicited credit card gives comparative safety to the thief because the mail patron in whose name the card is drawn does not know what has been done until a month to 6 weeks later when the credit card issuer sends him his first bill.

Every year $150 to $200 million in fraud losses are accumulated through the use of stolen credit cards. The greatest source of stolen credit cards is the mass mailing of unsolicited credit cards and the theft of such credit cards directly from the Postal Service or from home mailboxes.

The yearly loss of $150 to $200 million through the fraudulent use of stolen credit cards is the fault of the companies involved because it is impossible to protect the public and the mailer from theft when mailings are made by the millions.

As stated above, a great source of theft is that from individual mailboxes and since entire areas are blanketed with these unsolicited credit cards mailings a thief merely has to go from mailbox to mailbox in order to accumulate a large supply of these unsolicited credit cards which can be sold for the first time at $50 to $100 each. In Brooklyn, N.Y., a mere 26 stolen unsolicited credit cards were used to run up $200,000 in fraudulent sales. Two brothers in Chicago used stolen credit cards to build up a $500,000 profit.

Credit card companies are not particularly concerned about these losses because they charge cardholders 18 percent interest a year on the unpaid balance. In order to delay payment they send out confusing bills which list the true total in one corner of the bill and then list a comparatively small amount as the amount due.

Merchants are pressured into joining credit card plans because they know that mass mailings have gone to practically every household in their neighborhood.

This 18-percent interest charge to the cardholder and the 7-percent discount charge to the merchant results in a 25-percent increase in prices. This is true because credit card plans are not exclusive, they are sold to every merchant in

an area so that no one merchant can gain any advantage by a higher volume of business. He can only raise his prices to gain his discount back, and the great mass of people who fall into the credit card habit must rely on credit cards in order to make purchases, because their extra income has been siphoned off into interest charges. The average American family according to the Wall Street Journal, pays 23 percent of its income after taxes in interest charges which is equal to the tax payments to all governments by the average American family.

One of the greatest causes of inflation today is the credit card industry. Their greed is such that almost every bankruptcy referee in the country reported in a recent survey that bankrupts going through bankruptcy and almost every bankrupt had gotten into trouble with credit cards.

A 5-year-old boy in Tampa, Fla., received two credit cards, either one of which entitled him to travel around the world. A 9-year-old boy in Massachusetts received a credit card which entitled him to open credit of $300. Strikers in a New York State city received two credit cards in their homes around Christmas time, after they had been out on strike for 2 months. Among the many tragic examples encountered was the theft of an unsolicited credit card by an alcoholic whose name was the same as his son. He bankrupted his son's family and went to an insane asylum as the result of the use of the unsolicited credit card and his son had no idea what had happened until he was faced with huge bills a month or more later.

ANALYSIS OF H.R. 16542

H.R. 16542 amends section 4001 of title 39, U.S. Code, by adding a new subsection (d) at the end of that section, which makes all credit cards nonmailable unless they have been applied for or are replacement credit cards. A committee amendment will broaden this exception to include renewal or substitute credit cards which are issued when a company merges.

This leaves, then, unsolicited credit cards as being nonmailable unless they are:

First, forwarded by registered mail;

Second, with delivery restricted to addressee only;

Third, with return receipt requested.

Fourth, showing to whom, when, and where delivered;

Fifth, only upon agreement by the issuer of the card or other sender to pay to the Post Office Department an additional charge fixed by the Postmaster General to cover the cost of return to the issuer or other sender if not delivered.

According to Post Office Department Notice 59, issued July 14, 1969, registered mail service cost 80 cents, restricted delivery costs an additional 50 cents and the return receipt showing to whom, when, and addressee where delivered costs 35 cents for a total additional cost per mailing of $1.65.

In addition, the mailer must indicate on the envelope or cover subject to the Postmaster General's order, notice that the mailing contains an unsolicited credit card, which may be refused by the addressee. This notice is necessary so that the mail patron will not unwittingly accept the mailing and the notice does not detract from the safety of the mailing because the unsolicited credit card mailing will be signed for upon entry into the postal system, proceed through the system in locked mail bags, and be personally delivered to the addressee in order to avoid theft from the mailbox.

A penalty is provided for by amending chapter 83 of title 18, United States Code, by adding immediately after section 1734 a new section 1734(a). This section provides for a criminal sanction which consists of criminal fines of up to $1,000 for each mailing in violation of the legislation. Criminal fines are provided for since it is very difficult to prove personal responsibility in a corporate structure and jail sentences become very difficult to impose.

The effective date of this legislation is set out in section 3, page 3, line 22, the effective date of the legislation is 6 months after enactment.

NECESSITY

This legislation is necessary because the key to the unsolicited credit card business is the mass mailing of the cards.

It is necessary to protect the efficacy of State statutes by controlling the mailing of the cards which are in violation of State statutes.

It is necessary to protect mail patrons against the theft of unsolicited credit cards from the patron's own mailbox or the postal system, since the credit rating of the individual is more important to him than paying a bill which he does not in fact owe. If an individual refuses to pay even an unjust debt, a negative entry in credit bureau files may destroy his credit rating, prevent the purchase of housing or transportation, and may even lead to the loss of an individual's job.

Finally, it is necessary to protect the integrity of the mail service. I urge the passage of H.R. 16542.

Mrs. SULLIVAN. Mr. Chairman, will the gentleman yield for a question?

Mr. NIX. I am very happy to yield to the distinguished gentlewoman from Missouri.

Mrs. SULLIVAN. Mr. Chairman, there is no question in my mind—and I am sure there is none in the minds of other Members of the House—that the American people are deeply concerned over what they regard as threats to their individual economic well-being by the mailing of unsolicited credit cards. Our mail attests to that fear. Enough individual consumers have been billed for merchandise they did not buy, on credit card accounts they did not use, to convince them that the practice of mailing unsolicited credit cards is wrong and should be stopped. The theft rate is high. Even more worrisome is the fact that once a card is mailed out—whether or not it is ever used by the recipient or by anyone else, and even if the card itself is destroyed—an account has been opened in the name of the person to whom the card was sent. This account bears a computerized number. And computers make mistakes. And consumers are experiencing many hardships by erroneous information in credit bureau files about debts they did not contract for and do not owe.

So an unsolicited credit card which has been received in the mail, cut into pieces and made useless and never used, can nevertheless become the vehicle for a subsequent billing from the credit card company for merchandise bought by someone else under a completely different account number. Evidence of this type of billing error involving credit card account numbers which were never used by anyone is documented in the hearings conducted by the Federal Trade Commission at 12 different parts of the hearing record, according to the FTC's report of its study which led to the issuance of a trade regulation order prohibiting the mailing of unsolicited credit cards. Furthermore, the theft of unsolicited cards has made thousands of consumers the object of abusive collection efforts they bitterly resent.

As chairman of the Subcommittee on Consumer Affairs which would customarily have jurisdiction in the House Committee on Banking and Currency over legislation dealing with credit cards, I am, of course, intensely interested in this whole issue.

Mr. Chairman, I would like to ask the chairman of the Subcommittee on Postal Operations whether he feels that H.R. 16542, if enacted in this form, would supersede and, in effect, repeal the trade regulation rule of the Federal Trade Commission which went into effect May 18 prohibiting the mailing of unsolicited credit cards? H.R. 16542 permits such mailings if sent by registered mail with a notification on the envelope that it contains a credit card which can be refused by the person to whom it is addressed. The FTC trade regulation rule does not permit that. I have obtained from the FTC a letter which indicates that H.R. 16542, by permitting the mailing of unsolicited credit cards by registered mail, would have a "preemptive effect" on the FTC rule, and, in effect, repeal it.

My letter to Commission Chairman Miles W. Kirkpatrick and Acting Commission Chairman Everette MacIntyre's reply read as follows:

HOUSE OF REPRESENTATIVES, SUBCOMMITTEE ON CONSUMER AFFAIRS OF THE COMMITTEE ON BANKING AND CURRENCY,
Washington, D.C., August 25, 1970.

Hon. MILES W. KIRKPATRICK,
Chairman, Federal Trade Commission,
Washington, D.C.

DEAR CHAIRMAN KIRKPATRICK: It seems only yesterday that I was writing to Mr. Caspar W. Weinberger congratulating him on his assumption of the chairmanship of the Commission and offering to cooperate in every way possible in the work of the Commission, particularly on consumer issues and specifically on the FTC's activities in connection with enforcement of the Federal Truth in Lending Act. Mr. Weinberger impressed all of us on this Subcommittee when he testified before us in behalf of H.R. 16340, the Fair Credit Reporting bill on which we are now working, and we were sorry to see him leave the FTC after such a promising start. I now want to take this opportunity to extend my best wishes to you in undertaking what you

certainly have had full opportunity to discover is a most difficult assignment in government, and also a most vital one.

I hope you will feel free to contact me at any time on problems you encounter within the jurisdiction of this Subcommittee, such as on Truth in Lending, or on any other matter you feel I would be interested as a consumer-oriented Member of Congress.

In addition to expressing my congratulations on your confirmation by the Senate yesterday, I would like to use this means to ask for some guidance on some questions which would have occurred to me concerning a bill scheduled for House consideration after the present recess. It is H.R. 16542, authorizing the distribution by registered mail only of unsolicited cards.

I am interested in knowing whether this bill, as reported by the House Committee on Post Office and Civil Service, last March prior to the order of the Federal Trade Commission prohibiting the distribution of unsolicited credit cards, in effect repeals the FTC rule. It is my feeling that it would do so, but I would like the judgment of the FTC on this matter. Unlike the Senate-passed S. 721, which I believe writes into law what the Commission has proposed—with additional consumer safeguards—am I correct that H.R. 16542 would go in the other direction by permitting what the FTC order now prohibits?

Sincerely yours,

LEONOR K. SULLIVAN,
Member of Congress, Third District, Mo.

FEDERAL TRADE COMMISSION,
Washington, D.C., September 2, 1970.

Hon. LEONOR K. SULLIVAN,
Chairman, Subcommittee on Consumer Affairs, Committee on Banking and Currency, House of Representatives, Washington, D.C.

DEAR MADAM CHAIRMAN: Mr. Kirkpatrick has asked me to reply to the portion of your letter of August 25, 1970, in which you pose questions concerning the relationship between H.R. 16542, a bill to regulate the mailing of unsolicited credit cards and our Trade Regulation Rule for unsolicited credit cards.

You ask specifically if H.R. 16542 would permit what the Commission's unsolicited credit card rule now prohibits and if the bill would, in effect, repeal our rule. Our rule, in brief, prohibits the mailing of unsolicited credit cards, and defines "unsolicited credit card" as a credit card which is mailed to a party without prior expressed request or expressed consent to the mailing of the card by the recipient. An exception to the rule is made for the mailing of credit cards which are renewals, substitutions, or replacements of cards expressly requested, expressly consented to, or accepted prior to the effective date of the rule through use by the holder.

H.R. 16542, as reported out of the House Committee on Post Office and Civil Service last March, is, with one important exception, quite similar to our rule in that it also would prohibit the mailing of credit cards unless the card is mailed in response to a request or application, or is mailed as a replacement card, or as a return of a lost, mislaid or stolen card. The bill goes on, however, to permit the mailing of credit cards which are mailed by registered mail with delivery restricted to the addressee only, return receipt requested, and which are mailed in an envelope bearing the name and address of the issuer and which indicates on its face that it contains a credit card which is not solicited or requested, and which may be refused by the addressee.

In thus permitting the mailing of unsolicited credit cards by registered mail, H.R. 16542 would clearly permit the mailing of such cards in a manner now prohibited by our rule. And, to answer your second question, it is my view that, if enacted, H.R. 16542, as an act of Congress, would have a preemptive effect on our rule.

I hope that the above information answers your questions, and if I may be of further assistance, please do not hesitate to let me know. I wish to express my sincere appreciation for your interest in the work of the Commission and your efforts to solve consumer problems.

With kind personal regards,

Sincerely,

EVERETTE MACINTYRE,
Acting Chairman.

Mr. NIX. First of all, I have not read the ruling, but obviously if H.R. 16542 as amended—which I stated before, are necessary to have the provisions of the bill conform with the provisions of the postal reform bill which is passed—I think to answer your question specifically, the bill is passed as amended, will be the law of the land. I do not think the regulation that you referred to could be classed as law, and I certainly do not think it could perform the function that this bill will perform if it is passed.

Mrs. SULLIVAN. I thank the gentleman.

Mr. OLSEN. Mr. Chairman, will the gentleman yield?

Mr. NIX. I yield to the gentleman from Montana.

Mr. OLSEN. I wish to commend the gentleman for his sponsorship of this legislation and his subcommittee. I join with him in supporting the legislation. I think that this is a real strong step forward in regulating the mailing of credit cards, and I think it is very highly necessary.

H.R. 16542 is a bill that will help minimize the loss of unsolicited credit cards by requiring maximum security mailings in the form of high security mail, delivery which is restricted to the addressee, which bears a notice to the addressee that the mailing contains an unsolicited credit card and if the mailing is returned guarantees that the credit card issuer will pay for any additional cost.

The bill is made enforcible through criminal fines of up to $1,000 per mailing of an unsolicited credit card in violation.

Mass mailing of credit cards has led to mass theft in the Post Office Department and from mailboxes by street thieves.

Mass mailing of credit cards, which Life magazine compares to the mass mailing of $100 bills is massive negligence.

It is a practice indulged in by credit card companies because they recover the $200,000,000 in fraudulent credit card loss from the general public in higher prices and from some consumers who will pay for almost anything in order to protect their credit rating.

How is this cost passed on to the public?

The annual interest on credit card debt is 18 percent. Discounts charged merchants who are forced to join credit card plans because of the fear of competition amount to as high as 7 percent. It may be lower where there is competition but the banks are driving all other types of credit card operations out of the business with the "everything" credit card by which you can make loans of hundreds and even thousands of dollars, by which you can indulge yourself in extensive world travel, and clothe and feed yourself as well.

Merchants can only be forced to join credit card plans if they are afraid that all of their customers have the cards. They know this has happened when there is a mass mailing of credit cards to every person in a geographical area. The merchant knows he will lose some of his customers if they start using the cards because the high rate of interest on the card will make the customer rely on the card as he exhausts savings and cannot use the normal channels of credit.

The worst of it for the merchant is that he must pay higher interest rates at the bank for his own loans because bank money has been drawn into the credit card operations of the bank.

Credit cards are a monopoly device that makes credit card companies the partner of the businesses that are unfortunate enough to become involved. With this type of practice going on at the same time that the banks are raising interest rates with the connivance of the Federal Reserve Board under the banner of fighting inflation, the raising of interest rates has of course made business very profitable for the banks at a time when the stock market has lost over $200 billion in values or 60 times the total real property value of the city of Philadelphia. There seems to be a direct correlation between high interest rates and a plunging stock market.

There is a direct correlation as well between the high interest rates and discount charges of the credit card issuers and increasing interest rates for consumer and business loans.

A speech by Mr. Edward E. Bontema, president of the Eastern States Bankcard Association, is quoted in the article "The Plastic Jungle," published in the Montana Law Review which stated in part:

> By 1975 almost every bank depositor in the U.S. will be a bankcharge card holder. This will result in a decline in the volume of checks handled by banks.

The banks then plan to get rid of checking accounts which does not draw interest, but only bring in service fees. If credit cards largely replace checking accounts, the resulting profits to the banks would be a great boom to the banks and a great loss to bank depositors.

If this is the aim of the banking community, I think they should take their time and not depend on the mass mailing of unsolicited credit cards to bring that day closer because these mass mailings have become a subsidy to thieves.

On May 20, Gov. Nelson Rockefeller signed a bill that would make the issuance of unsolicited credit cards in New York State a crime. At least 13 States have statutes restricting liability for unsolicited credit card spending.

These statutes are not sufficient. It is mass mailing that fuels the excesses of the credit card system.

We need legislation that involves the postal system in restricting credit card operations or at least protecting the public from the cost of mass theft of mass mailings of unwanted credit cards.

The Wall Street Journal pointed out

in January that 23 percent of the average American's income after taxes is eaten up in interest charges. The average American then pays as much in interest as he pays in taxes.

If an American citizen wishes to pay 18 percent a year in interest payments for the sake of convenience or as a badge of status that is his business. But the mass mailing of credit cards to children, to the unemployed, to the bankrupt, in an effort to force merchants to join credit card plans is wrong. The carelessness of such mailings is wrong as well in that they have created a new industry for organized crime. I believe that the very least that we can do is to protect the general public from paying the bill for credit card crime in hidden costs. H.R. 16542 does this.

Registered mail with its protection of the mailing of unsolicited credit cards is necessary. The stolen individual credit card brings $50 to $500 on the black market and results in thousands of dollars of fraudulent spending. We can no longer afford to allow credit card issuers to mail a device similar to a $100 bill through the mail at 6 cents in an unprotected envelope.

Mr. Chairman, there is no argument against this legislation except by extremely selfish interests. I congratulate our distinguished colleague, ROBERT NIX, on bringing us such an excellent bill and I strongly urge its passage today.

Mr. Chairman, I also include the article, giving a history on this bill and entitled "The Plastic Jungle," immediately below:

THE PLASTIC JUNGLE

(By Thomas R. Kennedy*)

INTRODUCTION

Tony Benitez of Tampa, Florida, was never able to use either of his unsolicited credit cards. One of his credit cards was a Master Charge card which he would have used to finance a trip to Europe or buy a new wardrobe. Tony is five years old and he can't sign his own name, although his credit rating is excellent according to the bank that mailed the credit cards to him.[1]

Roger Gelpey of Marblehead Massachusetts, was able to use his unsolicited credit card. He bought a dollar tie after he had been turned down for a three hundred dollar loan. He is nine years old.[2]

A Lima, New York, widow didn't buy anything with her unsolicited credit card. She had never received it. Someone else used it and she received a bill for $1,661. She is 96 years old and leaves her house once a month to cash her social security check of $114.[3]

The stealing as well as the mailing of unwanted and unsolicited credit cards is a big business. In Brooklyn, New York, according to testimony by District Attorney Eugene Gold before the Federal Trade Commission on September 9, 1969, twenty stolen credit cards were used to run up bills totaling $175,000. An unsolicited credit card is easily used by organized crime because the person in whose name it is issued is unaware of its existence. Credit cards obtained through assaults are sent across the country for immediate use because the victim will realize immediately that his card has been stolen. In the case of a stolen unsolicited credit card, thieves may use it at leisure as it will take up to six weeks for the bills to arrive in the victim's mailbox.[4]

The losses that occur as a result of the mailing of unsolicited credit cards to adolescents,[5], alcoholics,[6] bankrupts,[7] and financially overburdened families are paid for by the general public in the form of higher prices.[8]

Individuals cannot pass on the expense of resisting erroneous claims against them as a result of the fraudulent use of unsolicited credit cards.[9]

What can a lawyer in Billings, Butte, Missoula or Great Falls tell his client when he has been billed because of the fraudulent use of an unwanted and unsolicited credit card which he never received?

LEGAL LIABILITY AND THE LOST CREDIT CARD

A lawyer can advise his client that his legal position is strong. He can say that even if he requested the credit card and had been using it before it was lost he would be only liable for fraudulent use between the time of loss and the time of notification to the credit card company. Since he never received the unsolicited credit card and did not use it, he is not bound by the terms of any agreement which imposes any liability on him for fraudulent use. The credit card company will have to prove, if it brings suit, that the card had been used by the defendant in order to show that he is bound by any of the contract terms associated with the use of the card. These terms are for the most part printed on the card. A comparison of the signatures on the charge slips with the actual signature of the client should clear the matter up.[10]

In addition, the defendant may allege negligence on the part of the merchant for not obtaining proper identification.[11]

The client could be advised that regardless of the abusive credit collection letters he has been receiving, credit card companies almost never bring such suits on the basis of unsolicited mailings as a matter of public relations and their poor legal position.[12]

With this advice in mind, can the case file be closed with an exchange of correspondence between the lawyer and the credit card company? [13] The answer is no.

"AGREE, FOR THE LAW IS COSTLY" [14]

Estimates of collections on unpaid credit card debts without suit vary from 30% to 50%.[15]

Financially responsible families would rather pay an unjust debt than have a lawsuit filed against them with the possibility of garnishment and/or a ruined credit rating, as well as possible difficulties resulting from telephone calls to the breadwinner's employer.

An average American family cannot afford the payment of legal fees in defending a lawsuit over an amount of money which may very well be less than the cost of a defense. A good credit rating is a matter of necessity in obtaining decent housing and, in the land of the automobile, transportation. Certainly no wage earner can afford the damage resulting from a garnishment which brings about the failure to meet monthly payments. Garnishments are the number one cause of bankruptcies.[16]

We live in a cashless society in the midst of a credit explosion and we may even see the end of personal checks as a regular means of payment. The debtor, because he lives from check to check and from monthly payment to monthly payment, is not in fact able to refuse to pay even unjust bills. Thus the law has not been kept in balance between debtor and creditor rights.

WHAT'S THE PROBLEM?

American consumer debt stood at $5 billion dollars in 1945. Today consumer debt stands at $118 billion and it is growing.[17] The expansion of consumer debt has now reached some final stage with the mass mailings of millions of credit cards with no credit check of the addressees.

Credit card companies charge merchants from 4% to 7% in discounting credit card bills. The credit card customer pays a monthly interest rate of 1½% or 18% a year as a charge on the portion of his bill that is unpaid at the end of 30 days. Some credit card companies in addition charge their customers fees for membership and additional services. The merchant may raise his prices to compensate him for the 7% discount on his sales.[18]

Many people derive an emotional satisfaction from credit card ownership. According to motivational research expert Dr. Ernest Dichter, the credit card is a "symbol of inexhaustible potency. . . . It gives its owner the wonderful feeling that he has Aladdin's omnipotence in thousands of famous restaurants, hotels and shops throughout the world, even though the chances are that he will never see the inside of a hundred of them." [19]

According to the National Petroleum News of March 1967 (Page 92), "American business is creating credit faster than certain Roman emperors minted money." [20] It seems that the flood of credit has created a cashless society, and at the same time easy credit for some items has led to limited credit for major items such as housing, and harsh collection procedures have resulted in order for some creditors to be the first in line to be paid by the overcommitted debtor.[21]

THE CREDITOR'S WEAPONS

In the new cashless society creditors have protected themselves by the expansion of a computerized highly organized, and until now unregulated, credit bureau system.[22] With credit a necessity to consumers, and taking into account that one out of every five Americans moves each year, it is natural that this has come about.[23] There is a vast need for credit information and it is sold like any other commodity.[24]

Credit collection agencies have found a position of great power in the fact that almost every American is an employee in a highly industrialized society.[25] The loss of a job is far more devastating to Americans than the payment of a bill, just or unjust. The use of "garnishments" has become a perfected weapon, since almost no consumer can safely fail to meet his monthly payments without facing financial disaster.

In order to redress the balance to some extent it is vital that new regulatory legislation be passed by the Congress and State legislatures.

THE GARNISHMENT SANCTION

Since garnishment is one of the chief sanctions against debtors, and the threat of garnishment is a means of collection of disputed bills, it is important to note, in reference to claims resulting from the fraudulent use of unsolicited credit cards, Public Law 90-321, better known as the "Truth in Lending" law.[26]

Title III of the Act entitled "Restriction of Garnishment" applies federal regulations to all garnishment proceedings and sets up federal standards for future proceedings. This title will take effect on July 1, 1970 (Sec. 504).[27]

The findings in section 301 of the Act stated that the unrestricted garnishment of compensation due for personal services encourages the making of predatory extensions of credit and that such extensions of credit divert money into excessive credit payments and thereby hinder the production and flow of goods in interstate commerce; that the application of garnishment as a creditor's remedy frequently results in loss of employment by the debtor; and the resulting disruption of employment, production and consumption constitutes a substantial burden on interstate commerce. Further, "the great disparities among the laws of the several states relating to garnishment have in effect destroyed the uniformity of

Footnotes at end of article.

the bankruptcy laws and frustrated the purposes thereof in many areas of the country."

The Secretary of Labor, through the Wage and Hour Division of the United States Department of Labor, shall enforce the provisions of the Act (Sec. 306).[28]

Section 303 limits the amount of wages that can be garnished through a percentage figure and/or a mathematical formula based on the Federal Minimum Hourly Wage prescribed by the Fair Labor Standards Act of 1938.[29]

Only 25% of the weekly wages of an employee would be subject to garnishment or the amount of disposable earnings for that week which exceeded thirty times the federal minimum hourly wage prescribed by section 6(a)(1) of the Fair Labor Standards Act of 1938 in effect at the time the earnings are payable, whichever is less. If wages are other than weekly wages, the Secretary of Labor by regulation shall set up a formula that achieves the same result.[30]

These restrictions do not apply to court orders for support, an order of any court in bankruptcy under Chapter xiii or any debt due for any state or federal tax. No court of the United States or of any state may make or enforce any order or process in viclation of this section.[31]

Section 304 provides that no employer shall discharge an employe as the result of garnishment for one indebtedness, and willful violation of the section shall subject the employer to a fine of not more than $1,000 or imprisonment for not more than one year, or both.[32] State laws which are more restrictive shall not be annulled.[33]

THE CREDIT BUREAU SANCTION

A reporter for the Columbia Broadcasting System, claiming to represent a non-existent firm, obtained credit reports on 10 individuals out of a random list of twenty names. His investigation was the basis of a televised report on credit bureaus, which generally claim that their information is kept confidential.[34]

Credit bureaus have dossiers on 110 million Americans or almost the entire adult population of the United States. Most credit bureaus belong to the Associated Credit Bureaus of America, which has over 2,200 individual members serving 400,000 creditors in 36,000 communities. These credit bureaus issued 97 million credit reports in 1967. This information is freely transferable between the association's membership and the information is used for extensions of credit and employment purposes.[35] Massachusetts and New Mexico passed statutes regulating credit bureaus in 1969. Until this year, the only state statute regulating credit bureau activities was one passed in Oklahoma in 1916 and that was inadequate.[36]

Credit reports include such items as age, race, marital status, opinions of neighbors of personal habits as well as financial information. In addition information goes into credit reports and remains on file without being corrected or updated. Information is not evaluated and wholly false information has the same status as correct and relevant information.[37]

Senator Proxmire in his explanation of S. 823, an amendment to the Consumer Protection Act, outlined seven problems and then gave seven solutions his amendment would provide.[38] These are shown below by enumerated paragraphs with the proposed S. 823 solution in an indented letter paragraph.

1. Consumers do not know that they are being damaged by adverse credit reports.

(a) The bill provides that where a person is refused a loan, employment or insurance because of an adverse credit report, those who make the decision upon the written request of the disappointed applicant must disclose the name and address of the credit bureau from which they obtained the information. Present contracts between creditors and the bureaus forbid revealing the identity of the credit bureau. A person would then have the opportunity to correct misleading information in such credit files (Sec. 615).

2. A Consumer is rarely given access to his own file, even if he knows the name of the credit bureau which has it on record.

(a) Under the Proxmire bill, S. 823, credit bureau reporting agencies must interview complaining consumers during normal business hours and on reasonable notice disclose all information in the consumer's file. A complaining consumer may bring one other person with him when he asks to examine his file. This could be helpful generally but especially so in poorer areas (Secs. 609–610).

3. Consumers have great difficulty in correcting inaccurate information.

(a) Debtors would, under S. 823, have the right to file explanatory information or to have incorrect or unverifiable information deleted as the result of the right to demand reinvestigation of allegations. Frivolous consumer statements need not be included (Sec. 611).

4. Information in credit files is not kept confidential.

(a) Those who request credit reports must certify as to the purpose for which they are requested and agree not to use the information for any other purpose. A person who obtained a credit report under false pretenses would be subject to a fine of up to $5,000 or imprisonment up to one year, or both (Sec. 619).

5. Credit bureaus gather highly personal information based on the subjective opinions of others, whether or not such information is relevant to credit standing.

(a) Investigations of a personal nature must be revealed to the consumer as well as the nature and scope of such investigation, if he makes a written request. His right to make such a written request must also be disclosed to him (Sec. 615b).

6. Public record information such as arrests are not updated and do not show eventual disposal of cases.

(a) This problem will be solved upon passage of the Proxmire bill (S. 823) by the requirement that public record information be kept up to date. If this cannot be done, the consumer must be notified that an inquiry has been made and of the identity of the person to whom a report was sent. The consumer would then have the opportunity to have updated information forwarded to the inquirer and the file corrected (Sec. 613).

7. Old information on past credit deficiencies is not updated to show improved performance on any regular basis.

(a) Section 605 provides that obsolete information from official records such as suits and judgments, unpaid tax liens, records of arrest, indictment, conviction and matters such as accounts placed for collection or charged to profit and loss, shall not be made part of consumer reports beyond 7 years. In the case of bankruptcies the limit is 14 years (Sec. 605a). Section 605b provides that transactions involving more than a principal amount of $50,000 or more, the underwriting of life insurance policies involving a principal amount of $25,000 or more, or the employment of any individual whose yearly compensation amounts to more than $20,000, is exempt from these restrictions.

MASS MAILING KEYS CREDIT CARD OPERATIONS

There are 300 million credit cards in use in the United States. About 1.5 million of these credit cards are stolen each year and the annual loss from fraudulent use has reached a figure of $100 million.[39]

In an article in the Christian Science Monitor, entitled "Mass Mailing Keys Credit Card Operations," dated November 4, 1969, it was noted that "In the past month, member banks of the New England Bankcard Association, Inc., (NEBA), have mailed over two million unsolicited Master Charge Cards to customers. This practice has also been common in other areas." With large mailings of this kind, it is inevitable that unsolicited credit cards are stolen.[40]

The lead time given to thieves through the theft of unsolicited credit cards makes them valuable to them, not only in providing funds, but in providing identification.

As a direct result of hearings held in the Postal Operations Subcommittee of the U.S. House of Representatives, Congressman Arnold Olsen introduced H.R. 15103, which provides for restricted conditions for the mailing of credit cards.

H.R. 15103

Section 4001 of 39 U.S.C.A. would be amended upon passage of the Olsen bill by adding credit cards to the category of nonmailable matter under subsection (b). Subsection (c) contains the exceptions to the mandate of Subsection (b).

Subsection (c) provides that credit cards may be mailed:

(1) by registered mail, return receipt requested, with restricted delivery to the person in whose name the card is drawn;

(2) in response to a written application; and

(3) the credit card bears a term on its surface, in eight point type, that liability for fraudulent use is assumed by the sender, unless the credit card bears a photograph and signature of the person in whose name the credit card is issued. In that case liability to the cardholder will be limited to $50; and that

(4) the sender agrees to pay an additional charge for any mailing returned to him covering the cost to the Department of such return as established by the Postmaster General.

A criminal fine of $1,000 per mailing of each nonmailable card is added as a sanction in Subsection (d). Subsection (e) provides that nonmailable matter under the bill may be seized and disposed of as the Postmaster General shall direct in postal regulations.

The Olsen bill is a combination of approaches that are now before the Congress.

For example, Senator Proxmire's bill, S. 721, introduced for himself and Senators Dodd, Eagleton, Inouye, McGee, McIntyre, Mondale, Moss, Nelson, Yarborough and Young of Ohio, would amend Section 103 of the Truth in Lending Act (82 Stat. 146).

It would limit the liability of the cardholder for unauthorized use of an unaccepted credit card (Sec. 132). An accepted credit card is defined, in what will be a new subsection (1) of Section 103 of the Truth in Lending Act (82 Stat. 146), as "any credit card which the cardholder has requested in writing or has signed or used, or authorized another to use." Also a "Renewal card shall be deemed to be accepted if it is issued within one year after a prior card has been paid for or used;" and "A new credit card issued in substitution for an accepted credit card as a result of a change in the corporate structure or ownership of a card issuer shall be deemed to be an accepted credit card."

Section 2(b) of S.721 would be added to Section 105 of the Truth in Lending Act, and it would require that the Board of Governors of the Federal Reserve System shall prescribe regulations under which card issuers may issue credit cards not requested in writing by a prospective cardholder, in the matter of minimum credit standards for such prospective cardholders. The purpose being to limit overextension of credit by consumers and protect the financial stability of banks insured by the Federal Deposit Insurance Corporation.

Footnotes at end of article.

H.R. 13244

This bill, introduced by Congressman James Hanley, Democrat of New York, provides that unsolicited credit cards must be sent by registered mail restricted to addressee only and that otherwise the mailings of unsolicited credit cards would be a criminal offense, subject to penalties of not more than two years imprisonment and/or a fine of not less than $1,000, or both.

H.R. 14346

This bill, introduced by Congressman William Scott of Virginia, would bar unsolicited credit cards from the mail as being nonmailable. The criminal sanction in the Scott bill is a misdemeanor, with a maximum imprisonment of one year and a fine of not less than $1,000, or both.

H.R. 14897

Congressman Glenn Cunningham, Republican of Nebraska, introduced H.R. 14897 which would require that all credit cards be forwarded by registered mail and bear the words on the envelope "credit card" or "unsolicited credit card—addressee may refuse" in the appropriate case.

OBJECTIONS

The Federal Reserve Board and the Credit Card industry object to all of these bills on the basis that there is no serious problem involved in the mailing of unsolicited credit cards that cannot be corrected by better screening of mailing lists.[41] They also maintain that the barring of unsolicited credit card mailings would prevent other credit card companies from entering the field because they cannot procure sufficient credit card holders to support a plan and solicit participation in a credit card plan by merchants unless large numbers of consumers have credit cards in their possession.[42] A bank that attempts to obtain cardholders by forwarding credit card applications received less than a 1% response. The same bank found that by mailing unsolicited credit cards a 19% use rate was established within a few months.[43]

The Olsen bill, H.R. 15103, and the Cunningham bill, H.R. 14897, are objected to because of the cost of sending all credit cards by registered mail. Registered mail in the case of credit cards would cost $.80 per piece, and a restricted delivery requirement would cost an additional $.50 a total of $1.30 per credit card mailing.[44]

THE OLSEN POSITION

Congressman Olsen and the authors of other bills are in agreement that unsolicited credit card mailings should in effect be barred from the mails because of the danger of theft. Credit cards are instant cash to persons who take them. They are sold, for instance, by criminals at rates from $25 to $500.[45] In our larger cities, apartment mail boxes are regularly rifled and some postal employees who have fallen into the hands of loan sharks are induced to pilfer mailed credit cards as repayment.[46] The passage of credit cards through the postal system in locked mail bags with a limited number of individuals responsible for the entire process would cut down on the opportunity for such theft. A restricted delivery insures proof of receipt in the form of the cardholder's signature.[47]

Cardholder liability for fraudulent use of credit cards should be restricted and in the case of unsolicited credit cards eliminated altogether. The main concern of credit card companies is that without some liability cardholders will be negligent about prompt notice to the issuer of the loss.[48] While this is a consideration, a credit card carrying the photograph and signature of the cardholder would prevent much of the fraudulent use of such cards.[49] Merchants would have to be grossly negligent to accept credit cards when they are being used by a third person. If a credit card company did perfect its credit cards so that the card itself identified the person seeking to make a purchase, it would seem reasonable that limited liability on the part of the cardholder be provided for in order to assure prompt notification of loss.

SUMMING UP

The ending of unsolicited mailings is the issue on which the Members of Congress who have introduced bills and the Federal Reserve Board, the banks and the credit card companies cannot agree.

Unsolicited credit card mailings are under attack in the state legislatures, before the Federal Trade Commission, and before committees of the Congress. Thirteen states have already passed laws restricting unsolicited mailings and limiting liability for the fraudulent use of credit cards.[50] Most states have enacted criminal statutes for fraudulent use of credit cards.[51]

It is true that legislation banning unsolicited credit cards from the mail will stabilize the credit card industry insofar as new companies will find it difficult to enter the field. But the entry, beginning in 1966, of giant new bankcard operations has not resulted in competitive pricing or cost cutting on the part of credit card companies. Their charges for bills over 30 days are on the average 18% and that is attractive to those who enter the credit card business. The consumer has seen no benefit in lowered costs of this form of credit. In fact, there is every indication it has raised the cost of maintaining his family's budget. He continues to pay 1½% a month on his credit card purchases and most people seem to stretch out such purchases beyond the "thirty days to reality" period. In fact, this is the source of the great profitability of credit card operations. In addition, the discounts charged merchants for the sale of bills run up under the credit card plans are significant and are as high as 7%.[52] Moreover, the switching of funds from consumer loan, investment and small business loans has the tendency to raise interest rates on funds remaining and available for those purposes.[53]

The mailing of millions of unsolicited credit cards is a hard sell device that has been used to excess. The excesses of past operations do not justify continuing the same practices. What is more, building credit card operations on the basis of applications and the well thought out decisions of consumers to participate in one or two plans will cut down on ill-considered impulse spending, which is inflationary.

The main opposition to curbs on the mailing of unsolicited credit cards comes from the banking industry and the Board of Governors of the Federal Reserve System.[54] Bankcards are the latest arrivals in the credit card field. They are the "everything" cards and they have great competitive advantages over the more specialized credit card operations such as the airline companies and the oil companies who use credit cards as a selling device for their product; or the entertainment cards issued by the Diners Club and the American Express Company. Out of 300 million credit cards there are now 60 million bank credit cards in use.[55] The future belongs to the bank credit cards because they seem to be more convenient. Half of all the banks in the United States now offer a charge plan, either as part of a larger operation or individually.

Mr. Edward E. Bontema, president, Eastern States Bankcard Association, said in an Atlantic City Conference on Consumer Credit:

"By 1975 almost every bank depositor in the U.S. also will be a bankcharge card holder. . . .

"This will result in a decline in the volume of checks handled by banks and at the same time reduce the number of operations needed to process checks. . . .

"According to a Federal Reserve System survey nearly 20 billion checks were processed in 1967. It cost almost $4 billion to process those checks through some 20 operations."

It may be easy to understand why the banks of this country are in a hurry to establish credit card plans. But although a soft sell through applications may take longer, it will probably take place nonetheless. Legislation which protects the consumer from liability for fraudulent loss and which provides for credit cards which in fact do accurately identify people are worth the trouble and time to the public. If the Olsen bill and bills like it delay the switch from checks to credit cards by protecting the consumer, it may be worth doing.

CONCLUSION

Technology has changed forever the American's way of borrowing and spending by the mass issuance of the credit card.

The law develops much more slowly than technology. Legislation balancing the rights and duties of individuals and organizations, debtors and creditors, has developed very slowly. The time has come for the passage of such legislation.

The Truth in Lending Law, the Proxmire bill on arbitrary credit reporting, and the Olsen bill limiting liability resulting from lost credit cards and the mass mailing of unwanted credit, are all steps on a road toward protecting individual rights in a computer civilization.

This legislation and more like it must be enacted. The market place cannot become a lawless place where only the buyer has to beware. A computer civilization and the applied technology resulting therefrom will not reach its full promise if individuals do not share in that promise. A sense of fairness resulting from new rules in a new society is essential. A plastic jungle is not an alternative.

APPENDIX

State Statutes Limiting Liability in matters involving the fraudulent use of unsolicited credit cards. (Citations from Commerce Clearing House Service. Consumer Credit Guide.)

Alaska

Sec. 06.05.209. Issue of credit cards. A bank is not prohibited from issuing unsolicited credit cards or other similar credit granting devices but the bank may not hold the customer liable for changes made on a credit card or other device before its acceptance by the customer. Before an unsolicited card is considered accepted by the customer, the customer shall execute and furnish to the bank a written statement of acceptance. (Sec. 06.05.209, as added by Laws 1969, S.B. No. 173, approved May 5, 1969, effective August 3, 1969).

California

Sec. 1718. (Definitions—Cardholder's liability limited.)

(a) as used in this section: (1) "Credit Card" means any instrument or device, whether known as a credit card, credit plate, or by any other name, issued with or without fee by a card issuer for the use of the cardholder in obtaining money, goods, services, or anything else of value, either on credit or in consideration of an undertaking or guaranty by the issuer of the payment of a check drawn by the cardholder.

(2) "Accepted credit card" means any credit card which the cardholder requested in writing or has signed or has used, or authorized another to use, for the purpose of obtaining money, property, labor or services on credit. A renewal credit card shall be deemed to be accepted if it is issued within one year after a prior card has been paid for or used. A credit card issued in connection with a merger, acquisition, or the like of card issuers or credit card services in substi-

Footnotes at end of article.

tution for an accepted credit card shall be deemed to be an accepted credit card.

(3) "Card Issuer" means the business organization or financial institution which issues a credit card, or its duly authorized agent.

(4) "Cardholder" means the person or organization identified on the face of a credit card to whom or for whose benefit the credit card is issued by a card issuer.

(5) "Unauthorized use" means a use of a credit card by a person, other than the cardholder, who does not have actual, implied, or apparent authority for such use and from which the cardholder receives no benefit.

(b) The cardholder is not liable for any unauthorized use of a credit card which has not become an accepted credit card.

(c) If an accepted credit card is lost or stolen after the credit card has reached the cardholder, and the cardholder notifies the card issuer within a reasonable time by telephone, telegraph, letter, or any other reasonable means after discovery of the loss or theft or after the time in which a reasonable man in the exercise of ordinary care would have discovered the loss or theft, the cardholder is not liable for any unauthorized use of the credit card.

(d) This section applies only to credit cards originally issued or renewed on or after the effective date of this section.

(Sec. 1718, as added by Laws 1969, A.B. No. 1763, Ch. 904, approved August 23, 1969, effective November 10, 1969.)

Sec. 1719 (Disclosure of Charges). Whenever fees, charges, or penalties are assessed against a cardholder for the use of a credit card, the card issuer shall separately state and label all such fees, charges and penalties.

The terms "credit card," "card issuer," and "cardholder" in this section shall have the same meaning as prescribed in Section 1718. (Sec. 1719, as added by Laws 1969, A.B. No. 1764, Ch. 905, approved August 23, 1969, effective November 10, 1969.)

Connecticut

Sec. 1. (Acts 1969, P.A. No. 136) (Distribution of unsolicited credit cards.)

(a) No person, company, partnership or corporation shall engage in the practice of mailing or the distribution in any form of any credit card, charge plate or any like instrument or device to any other person, firm or corporation unless such other person, firm or corporation has previously made a request therefor in writing or verbally.

(b) Any person, company, partnership or corporation which violates the provisions of subsection (a) of this act shall be fined not more than one hundred dollars for each card, plate, instrument or device so mailed or distributed.

(c) The provisions of this act shall not apply to the renewal of any credit card, charge plate or like instrument or device unless the recipient has previously indicated in writing his intention that such renewal not be affected nor shall it apply to the replacement of any such instrument or device by the issuer thereof during the period such instrument or device is in effect. (Approved May 15, 1969, effective January 1, 1970.)

Illinois

Credit Cards—Act of July 27, 1967.

Sec. 1. (Rev. Stat. 121½ Sec. 381) Unsolicited credit cards—Liability to issuer—Burden of proof—Fees and costs.

(a) No person in whose name a credit card is issued without his having requested or applied for the card or for the extension of the credit or establishment of a charge account that card evidences is liable to the issuer of the card for any purchases made or other amounts owing by a use of that card from which he or a member of his family or household derive no benefit unless he has indicated his acceptance of the card by signing or using the card or by permitting or authorizing use of the card by another. A mere failure to destroy or return an unsolicited card is not such an indication. As used in this Act, "credit card" has the meaning ascribed to it in Section 17–1 of the Criminal Code of 1951 (6381), except that it does not include a card issued by any telephone company that is subject to supervision or regulation by the Illinois Commerce Commission or other public authority.

(b) When an action is brought by an issuer against the person named on the card, the burden of proving the request, application, authorization, permission to use or benefit as set forth in Section 1 hereof shall be upon plaintiff if put in issue by defendant. In the event of judgment for defendant, the court shall allow defendant a reasonable attorney's fee, to be taxed as costs.

Sec. 2. (Rev. Stat. 121½ Sec. 382) Requested or accepted credit cards—Liability to issuer—Burden of Proof—Fees and Costs.

(a) Notwithstanding that a person in whose name a credit card has been issued has requested or applied for such a card or has indicated his acceptance of an unsolicited credit card, as provided in Section 1 (6835) hereof, such person shall not be liable to the issuer of the card for any amount hereinafter set forth, resulting from a use of that card from which he or a member of his family or household derives no benefit or which he has not authorized or permitted:

Card without signature panel	$25.00
Card with signature panel	$75.00

(b) When an action is brought by an issuer against the person named on a card, issuance of which has been requested, applied for, solicited or accepted and defendant puts in issue any transaction arising from the use of such card, the burden of proving benefit, authorization, use or permission by defendant as to such transaction shall be upon plaintiff. In the event the defendant prevails with respect to any transaction so put in issue, the court may enter as a credit against any judgment for plaintiff, or as a judgment for defendant, a reasonable attorney's fee for services in connection with the transaction in respect of which the defendant prevails.

Maryland

Art. 83, Sec. 21B. (Unsolicited Credit Cards—Liability of Issue—Renewals.)

When a credit card or card of identification for credit is issued to a person in the absence of a prior request or application for such card by that person or an authorized agent of that person, such card shall not be deemed to have been accepted until such person signifies acceptance in writing or uses such card to obtain credit. Until such acceptance takes place, the person issuing the card shall be presumed to have assumed the risk of the loss, theft, or unauthorized use in any action against the person to whom the card is issued. The provisions of this section shall not be applicable to cards issued to renew or replace existing cards originally applied for or accepted by the cardholder.

(Sec. 21B, as added by Laws 1969, Ch. 252, approved April 23, 1969, effective July 1, 1969.)

Massachusetts

Chap. 255, Sec. 21E (Credit Cards—Cardholder Liability)

(Series of definitions. Relevant definitions)

"Accepted Credit Card", any credit card which the cardholder has requested in writing or has signed or has used, or authorized another to use, for the purpose of obtaining money, property, labor or services on credit. A renewal credit card shall be deemed to be accepted if it is issued within one year after a prior card has been paid for or used. A credit card issued in connection with a merger, acquisition or the like of card issuers or credit card services in substitution for an accepted credit card shall be deemed to be an accepted credit card.

"A provision imposing liability on a cardholder for the unauthorized use of a credit card shall be effective only if the card is an accepted credit card, the liability imposed is not in excess of one hundred dollars, the card issuer gives adequate notice to the cardholder of the potential liability, the unauthorized use occurs before the cardholder has notified the card issuer of the loss or theft of the card or of any unauthorized use, and the card issuer has provided a method whereby the user of the credit card can be identified as the person authorized to use it, including without limitation a place on the card for the photo or signature of the holder.

"Except as hereinbefore provided, a cardholder incurs no liability from the unauthorized use of either an accepted or an unaccepted credit card."

(Sec. 12E, as added by Laws 1968, Ch. 394, approved—June 11, 1968, effective January 1, 1969, and applicable only to credit cards issued after the effective date.)

Minnesota

(Credit Card Liability)—Laws 1969, Ch. 1004. Approved June 6, 1969, effective June 7, 1969.

Sec. 2. (Unsolicited credit cards.) No person in whose name a credit card is issued shall be liable for any amount resulting from use of that card from which he or a member of his family or household derives no benefit unless he accepted the card by (1) signing or using the card, or (2) authorizing the use of the card by another. A mere failure to destroy or return an unsolicited credit card is not such an acceptance.

New Mexico

(Credit Card Liability)—Laws 1969, Ch. 172.

Sec. 1. Unsolicited credit cards—Liability of issuer—Burden of proof—Attorney fee.

A. No person in whose name a credit card is issued is liable to the issuer of the credit card for any amount owing because of a use of the credit card if: (1) he did not apply for the credit card; or (2) he has not indicated his acceptance of the credit card; or (3) he or a member of his family or household derives no benefit from the use of the credit card. If the person named in the credit card has indicated his acceptance of the credit card by signing or using it or by permitting or authorizing another person to use it, he is liable to the issuer. The failure to destroy or return an unsolicited credit card is not an indication of acceptance.

B. In any action brought by the issuer against the person named in an unsolicited credit card, the burden of proving the application, authorization, permission to use or benefit is on the plaintiff if put in issue by the defendant. If the defendant prevails, the court shall award the defendant a reasonable attorney fee.

(Approved April 1, 1969, effective 12 o'clock noon, June 20, 1969.)

New York

General Business Law—Ch. 20, Art. 29-A. Credit Cards.

Sec. 512. Limitations on liability for use of lost or stolen credit cards. A provision to impose liability on an obligor for the purchase or lease of property or services by use of a credit card after its loss or theft is only if it is conspicuously written or printed in a size at least equal to eight point bold type either on the card, or on a writing accompanying such a card when issued, or on the obligor's application for the card, and then only until written notice of the loss or theft is given to the issuer. Such a provision either in a credit card issued prior to the effective date of this article, or in a writing accompanying such a card when is-

sued, or in the obligor's application for such a card is effective, on or after the effective date of this article, only if the issuer mails to the obligor, properly addressed, written notice of the provision conspicuously written or printed in a size at least equal to eight point bold type. Such a provision is effective only if the obligor has requested in writing the issuance of a credit card; the signature of the obligor or of a person authorized by him upon a sales slip or memorandum evidencing a purchase or lease of property or services by use of a credit card is the equivalent of the obligor's request in writing for the issuance of a new credit card and for the issuance of a new credit card to replace or renew a credit card previously issued to him.

North Dakota

Credit Cards. Enacted by Laws 1969, S.B. No. 345, approved March 17, 1969, effective July 1, 1969.

Sec. 1. Definition of credit cards and other terms and imposition of liability on cardholder.

4. "Accepted credit card" means any credit card which the cardholder has requested in writing or has signed or has used, or authorized another to use, for the purpose of obtaining money, property, labor or services on credit. A renewal credit card shall be deemed to be accepted if it is issued within one year after a prior card has been paid for or used. A credit card issued in connection with a merger, acquisition, or the like of card issuers or credit card services in substitution for an accepted credit card shall be deemed to be an accepted credit card."

7. "Unauthorized use" means a use of a credit card by a person other than the cardholder who does not have actual, implied, or apparent authority for such use and from which the cardholder receives no benefit.

A provision imposing liability on a cardholder for the unauthorized use of a credit card shall be effective only if the card is an accepted credit card, the liability imposed is not in excess of one hundred dollars, the card issuer gives adequate notice to the cardholder of the potential liability, and the unauthorized use occurs before the cardholder has notified the card issuer of the loss or theft of the card or of any unauthorized use.

Ohio

Sec. 1319.01. (Unsolicited credit cards—Liability)

A cardholder who receives a credit card from an issuer, which such cardholder has not requested nor used, shall not be liable for any use made of such credit card which has not been authorized by such cardholder, unless such credit card is in replacement or renewal of a credit card previously requested or used by the cardholder.

(Sec. 1319.01, as added by Laws 1969, S.B. No. 326, approved August 19, 1969, effective November 18, 1969.)

South Dakota

Laws 1968, H.B. No. 721, effective July 1, 1968.

Sec. 4. (Issuance—Unsolicited—Nonliability) No credit card shall be issued unless its issuance was requested nor shall any person who has not so solicited or has not accepted or utilized any unsolicited credit card be liable to the person who issued it or honored it for its misuse by others.

Wisconsin

Sec. 895.45. Exemption from civil liability for lost or stolen credit cards. Notwithstanding any provision contained on a credit card, no person shall incur civil liability for the fraudulent use of a credit card by another, as defined in Sec. 943.41 which was used without the former's knowledge or consent.

(Sec. 895.45, as enacted by Laws 1967, Ch. 155)

Attorney General's opinion

Washington. .02 Credit Cards. The regulatory provisions of the Credit Card Disclosure Act pertaining to maximum service charges, collection of delinquency charges, disclosure, etc., that apply to retail charge agreements as defined by the Act apply to situations where the holder of a bank card used the card to purchase goods or services from a participating vendor. Opinion of Attorney General of Washington. (February 8, 1968.)

FOOTNOTES

*Counsel, Postal Operations Subcommittee, Committee on Post Office and Civil Service, U.S. House of Representatives; B.A. Carroll College; LL.B., University of Montana; Member of the bar of Montana and U.S. Supreme Court.

[1] England, "Mass Mailing Keys Credit Card Operation," *Christian Science Monitor*, November 4, 1969.

[2] United Press Release, *Los Angeles Times*, October 22, 1969. See also England, *op. cit.*

"In the past month, member banks of the New England Bankcard Association, Inc. (NEBA) have mailed over two million unsolicited master charge cards to customers. This practice has been common in other areas."

"Robert C. Rier, President of NEBA, defends the practice. 'Each bank decided from their own accounts who would get cards,' he said of the operation here. 'We spent months and months to do the proper thing. In Chicago, they literally handed them out on the street.' "

Subcommittee staff study on Chicago incident. Testimony of Eric E. Bergsten, professor of law, University of Iowa, before Subcommittee on Financial Institutions of the Committee on Banking and Currency, U.S. Senate, 90th Congress, October 10, 1968, pp. 90–128. Mrs. Betty Furness, Special Assistant to the President for Consumer Affairs, p. 63, October 10, p. 64 same committee.

The reference to Chicago by Mr. Rier, referred to the first mass mailing engaged in by American Banks of unsolicited credit cards. They picked the Christmas rush of 1966 to begin this practice. In addition, the Chicago banks are quite competitive and they all sought to build up the most massive lists possible in order to convince merchants that the credit plan individuals were trying to sell individual merchants was the best. Large numbers of cards were stolen. Credit cards were sent to children and the deceased and entire neighborhoods were flooded with the new bankcards from rival Chicago banks. One man received 18 credit cards from the same bank addressed to himself and each of his sons, aged 9, 11 and 13. The Chicago banks had issued millions of credit cards during the height of the 1966 Christmas rush.

[3] *New York Times*, November 26, 1969, "State Attorney General Louis J. Lefkowitz, reported another incident yesterday, which he said should dispel any doubt that the legislature should pass a law to prohibit the forwarding of unsolicited credit cards."

[7] Jackson, Royal E., Chief of the Bankruptcy Division, Administrative Office U.S. Courts, at Hearings before Subcommittee on Financial Institutions, Committee on Banking and Currency, U.S. Senate, October 9, 1968, p. 31 *et seq.*

[8] *Ibid.*, p. 33.

[9] McDonald, *op. cit.*, In San Francisco, California, Mrs. Lucille Vitorelo received a bill for $368.78 from a department store. A credit card in her name, sent without her knowledge or request, was apparently stolen from the mails. The store threatened to sue her for the unpaid bill, her credit rating was damaged and she had to pay a lawyer $175 to prove she was not liable.

[10] If there is no contract placing liability for unauthorized purchases on one of the parties and if neither of the parties has been negligent or acted in bad faith, the credit card holder will not be liable even though he does not report the loss promptly. The only implied duty in the absence of a contract is to exercise due care in handling the card. *Thomas v. Central Charge Service Inc.*, 212 A.2d 533, (D.C. Municipal Court of Appeals 1965) 15 ALR 3rd 1983, in which a judgment for the plaintiff was reversed.

The holder may be liable for fraudulent use if he authorizes a third party to make purchases and such a state of facts raises a jury question as to liability. *Jones Store Co. v. Kelly*, 225 Mo. App. 833, 36 S.W. 2d 681 (1931).

Under a contract for complete liability on the part of a cardholder prior to giving the issuing company notice of loss such terms may be enforced according to a decision in New York in the case of *Texaco, Inc. v. Goldstein*, 34 Misc. 2d 751, 229 N.Y.S. 2d 51, aff'd 39 Misc. 2d 552, 241 N.Y.C.2d 495. The facts of this case involved not only the contract term which placed complete liability for fraudulent use on the cardholder but the credit card was an oil company credit card which had no identification but a card number and the court took the position that only the cardholder could save the company from loss by prompt notice.

In *Union Oil Company v. Lull*, 220 Ore. 412, 349 P.2d 243, (1960), the court relied on an analogy between a bank passbook where there is a duty by the issuer to ascertain the identity of the person presenting the passbook, even though a contract term existed which placed all liability for fraudulent use of the passbook on the holder, since the bank as an indemnitee has the duty of exercising reasonable care to protect the indemnitor.

On the other hand, a case involving a contract term placing all liability on the cardholder until surrender of the card was upheld in *Socony Mobil Oil Company v. Grief*, 10 App. Div. 2d 119, 197 N.Y.S. 2d 522 (1960).

The standard clause now used limits cardholder liability for fraudulent use until the card is surrendered or written notice is given the issuer that the card has been lost or stolen. Where a "hot list" of missing cards is issued by the credit card company and the merchant still accepts the card for credit, the contract between the merchant and the credit card company may require the merchant to assume liability. Bergsten, "Credit Cards: Distributing Fraud Loss," 77 *Yale Law Journal* 1418, 1420 (1968).

[11] *In Humble Oil and Refining Company v. Waters*, 159 S.2d 408 (1965), the one whose negligence occasioned the loss must bear the loss. In this case a card was mailed as the result of a telephone request from a person claiming to be a cardholder who had lost her credit card and was asking for a replacement. The replacement card was stolen from the cardholder's mailbox. The court held that it was negligent for the credit card company not to ascertain the identity of the caller and that the credit card had been obtained by fraudulent means.

committee Hearings, U.S. House of Representatives, November 19, 1969, p. 153 *et seq.* Transcript.

[13] The credit card transaction which we are discussing is new to the law and unique. It involves a credit card issuer, an honoring merchant who sells diverse products to cardholders. There is virtually no authority, judicial or statutory, that is controlling. The problems arising from the use of this device are discussed in Mafly & McDonald, 49 CALIF. L. REV. 459, 465 (1960). In addition, legislation has been enacted in each state but relating only to criminal penalties for fraudulent use. Montana's statute is R.C.M. 1947, § 94–1823–1830.

[14] Agree, for the law is costly (William Camden: *Remains*), Evans, *Dictionary of Quotations*, p. 378.

[47] Cotter, William J., Chief Postal Inspector, Credit Card Hearings, Postal Operations Subcommittee, U.S. House of Representatives, November 19, 1969, p. 113, 114. Transcript.

"From the enforcement standpoint, unsolicited credit cards present several problems to the Postal Inspection Service. As unsolicited mailings are promotional mailings, regardless of the extent of screening the mailing lists, address reliability is apt to be lower in comparison with credit cards mailed in response to an application. Wrong deliveries, forwarding and multiple handling increase the exposure of an unsolicited mailing to theft and loss."

"As unsolicited mailings are unwanted by some percentage of the addresses, perhaps as high as 75%, that percentage of a given mailing is needlessly exposed to loss or theft in postal transit and otherwise until the cards are either destroyed or returned to their issuer."

"The addressee of an unsolicited card, not anticipating it, usually finds out about its misuse when he receives an invoice, perhaps six weeks after the date of mailing. The delay in initiating the investigative process is an impediment to its success."

"Postal employees and others can usually spot unsolicited mailings and one inclined to theft will reckon an unsolicited mailing as a safer and more desirable target than regular customer mailings."

[55] Bontema, Edward E., President of Eastern States Bankcard Association, in *Philadelphia Evening Bulletin*, October 30, 1969, p. 10.

Mr. McCLURE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of H.R. 16542, a bill to restrict the mailing of unsolicited credit cards.

This legislation is designed to minimize the possibility of theft from the mails of unsolicited credit cards. I believe that this bill is an important and necessary consumer protection measure. Theft breeds the fraudulent use of credit cards. The burdens from the fraudulent use of credit cards fall ultimately upon the individual under whose name the credit card has been sent, whose credit rating is often endangered, and upon the millions of other consumers who bear the cost of losses incurred by merchants. Cardholders have turned to Congress, seeking help against losses which have been estimated to be anywhere from $50 to $150 million per year.

I personally foresee the banking industry issuing credit cards to replace checks, as checks have replaced cash in the marketplace, and for a myriad of other uses. This legislation will help to assure that a balance is struck between the interests of credit card-based companies and the protection of individual consumers.

Already, our semicashless society uses credit cards for groceries, weddings, church dues, trips around the world, and

in Phoenix, Ariz., even to arrange bail. In the States of California, North Carolina, Washington, Oregon, and Arkansas, I understand you can pay your State taxes by credit card. All this can be done with a payment to credit card companies of a service charge as high as 18 percent a year on the indebtedness. Gangsters have even been known to accept credit cards in lieu of payments of loan shark debts.

The latent dangers of unregulated, unsolicited credit cards are apparent. If an unsolicited credit card falls into the wrong hands, a mail patron may be surprised to find himself billed for purchases he never made. The victim of this fraud is then faced with lawsuits or other collection action that may ruin his credit standing. Only 2 years ago, banks had about $815 million invested in credit card plans. Today, through the use of mass mailings of unsolicited credit cards, that business has reached a $2 billion mark and is still climbing. There are estimates that the entire credit industry is a $13 billion dollar going concern.

This bill proposes to protect the public by requiring that the unsolicited credit card must be sent by registered mail. This will assure that the mailings will be signed for by a postal employee upon entry into the mail system, the mailings will proceed through the mail system in locked mail bags, and the unsolicited credit card mailing must be signed for by the addressee, and the addressee only, upon delivery. I understand that because of the recent postal reform and the broad authority it delegated to the Postmaster, the gentleman from Pennsylvania will offer a technical substitute. This substitution provides for the same protective steps I have delineated.

This type of mailing will almost certainly eliminate the theft of unsolicited credit cards from within the postal system. It will also end the theft of unsolicited credit cards from mail boxes, since it must be hand delivered to the addressee. A notice on the envelope is required to notify the addressee that an unsolicited credit card is contained within the envelope. The notice will not aid thieves, since the mailings will be protected within the system and the notice also will prevent the throwing away of the mailing by an innocent mail patron who believes he has received direct mail advertising. Failure to abide by this legislation can result in a $1,000 fine for each mailing violation. These new postal requirements, and the criminal sanctions for violations thereof, however, will in no way hamper or interfere with mailings of other than unsolicited cards.

The public needs protection from the mail advertising practice which forces credit on unwilling families. The credit card issuers believe that if they can get a credit card into the home, one of the members of the family will use the card within 9 months. They have run tests which show that less than 1 percent of the mail patrons who are asked to fill out a credit card application do so, but when unsolicited credit cards are forced into the home, 19 percent of the mail patrons will use the cards within 90 days.

Legislation which restricts the credit card menace has been enacted in States such as New York, California, Illinois, Connecticut, Maryland, Massachusetts, Minnesota, Ohio, Wisconsin, Alaska, New Mexico, North Dakota, and South Dakota. This legislation will aid these State programs. This bill received unanimous bipartisan support in committee and in subcommittee. I urge my Colleagues to support this bill today on the floor of the House.

Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. DERWINSKI).

Mr. DERWINSKI. Mr. Chairman, I rise in support of H.R. 16542, a bill to restrict the mailing of unsolicited credit cards.

In our age of almost "instant everything," we have all seen the proliferation of instant credit. This is usually done through the use of credit cards; some issued by local and national merchants, others by banks and national credit organizations. All these cards and the credit they provide are important for the growth and strength of our modern economy. But, as in virtually every act of commerce ever conceived, there are those individuals who refuse to obey the laws of our society and elect instead to acquire products and services through trickery and deceit. In this particular instance, through the use of stolen credit cards.

Another aspect of this overall problem is the issuance of credit cards to individuals who, in many cases, could not receive credit through ordinary channels.

The committee files are filled with sad cases involving either the illegal or indiscriminate use of credit cards.

H.R. 16542 is a good bill. It will, in the opinion of the committee and many in the law enforcement field, help to drastically reduce the theft and illegal use of credit cards.

It proposes to make a credit card nonmailable matter, unless such card:

First, is mailed in response to a request or application by the addressee for such card; or

Second, is mailed as a replacement, for the addressee; or

Third, in the case of a previously issued credit card which has been lost, mislaid, or stolen, is mailed as a return of that card to the issuer or to the addressee to whom that card was issued; or

Fourth, is sent under conditions prescribed by the new postal service to insure security in handling in the mails, the certainty of personal delivery of the card, and proof of when, where, and the person to whom it is delivered.

The conditions described in item four are the same as those which exist today under the registered mail procedure of the Post Office Department. The change in phraseology from the committee-reported bill is necessary to conform to the language of the new title 39 which will be implemented under the Postal Reorganization Act of 1970, which was signed into law August 12, 1970.

Mr. Chairman, the bulk of evidence demonstrating the undesirous effects of the mailings of unsolicited credit cards behooves us to support and approve this legislation.

Mr. McCLURE. Mr. Chairman, I yield 2 minutes to the gentleman from Nebraska (Mr. CUNNINGHAM).

Mr. CUNNINGHAM. Mr. Chairman, I rise in support of H.R. 16542, which I cosponsored, a bill to restrict the mailing of unsolicited credit cards, for it is long overdue consumer protection legislation.

I believe that this legislation is necessary because the credit card explosion is a permanent feature in our economy and the burdens from the fraudulent use of credit cards fall on the individual cardholder whose credit standing is endangered. The individual must turn to Congress and ask for its help against what is now a $13 billion industry. In addition, it seems to me that credit cards will be used by the banking industry to replace checks, as checks have replaced cash in the marketplace. If this is the case, it certainly seems reasonable to me that a balance be struck between the interests of these giant credit card companies and individual consumers.

Today in our cashless society we use credit cards for groceries, weddings, church dues, trips around the world, and in Phoenix, Ariz., even to arrange bail. I would also like to point out that you can pay your Federal income taxes by credit card in the States of California, North Carolina, Washington, Oregon, and Arkansas. All this can be done for the payment to credit card companies of 18 percent a year on the indebtedness.

There is great urgency upon the part of those banks who have not yet cut into this 18-percent loan business to engage in mass mailings of unsolicited credit cards. Mail patrons get credit whether they want it or not. Why? The credit card issuers evidently cannot convince merchants that they have to join credit card plans in order to protect themselves against competitors who do, unless the bank or other issuers can show that an overwhelming number of customers in the merchant's area have the cards. Banks apparently find it difficult to convince people to join the plan voluntarily. A survey by the Marine Midland Bank of New York showed that less than 1 percent of consumers responded to requests to join credit card plans, but where unsolicited credit cards are forced into the mail box, 19 percent of the mail patrons contacted used the card within 6 months. However, the merchant doesn't know how many cards are in use. He is told only about the thousands and in some cases millions of cards that have been sent through the mail and are in the possession of mail patrons. When the merchant joins the plan, he must pay the credit card people from 3 to 7 percent for discounting the debt run up in his store. He can only get this amount back by raising his prices. The merchant is not guaranteed any exclusive territory, so he finds himself raising prices without any competitive advantage. His only satisfaction is knowing that he has protected himself against a competitor, who is protecting himself against the first merchant. This situation wouldn't be possible in the ab-

sence of the mass mailing of unsolicited credit cards.

Individual consumers have to pay 18 percent on the unpaid portion of the debt they owe over 30 days. If the unsolicited credit card falls into the wrong hands, a mail patron may be surprised to find himself being billed for purchases he never made. The victim of this fraud is then faced with law suits or other collection action that may ruin the credit standing of an individual.

Only 2 years ago banks had about $815 million invested in credit card plans. Today, through the use of the mass mailings of unsolicited credit cards, that business has reached a $2 billion mark and is climbing. There are estimates that the entire credit card industry has a $13 billion business going for it.

The answer of the industry and the Federal Reserve Board to pleas for support of regulatory legislation is that $100 million a year loss in fraud does not hurt the industry. Credit cards are good for the money changing and bill collecting business. It may be good for their business but it is not good for the families of America and their budgets. It is not good for the merchants who have to turn over a large share of their profit on sales. Most important of all, it is not good for the county. A respected syndicated columnist, in an article last fall, had this to say on the subject of inflation:

> There is a considerable body of opinion which feels that while tight money cripples the housing industry, nothing is done to curb consumer credit aggravated by the proliferating credit cards.

I agree with that observation. The majority of the American people are concerned with the public debt but they give little, if any, attention to the spiraling private debt.

The private debt is the real demon and is due largely to buying on credit by the general public.

I asked the Library of Congress for figures on our total debt—both private and public. Their figures show that the estimated private debt for the year 1969 is $1¼ trillion, net. The Government debt, Federal, State, and local is estimated to be $1.7 trillion. The total, therefore of the public and private debt is estimated to be in the neighborhood of $3 trillion. This is a serious situation and a major cause of adding to the fires of inflation. The credit card user had better think that over, and the business community who are pushing the use of credit cards had better realize what they are doing to our economy and give less thought to the almighty dollar.

This is the people's business and the business of the Congress.

I strongly urge my colleagues to approve this much needed legislation.

Mr. NIX. Mr. Chairman, I yield 7 minutes to the distinguished gentleman from New York (Mr. HANLEY) a member of the committee who has contributed greatly to this effort.

Mr. HANLEY. Mr. Chairman, initially I want to commend the efforts of the chairman of the subcommittee (Mr. NIX) a gentleman who comes from Philadelphia, for his recognition of the problems associated with the mass distribution of unsolicited credit cards. His efforts have resulted in the legislation which we are presently considering.

This bill, which regulates the mailing of unsolicited credit cards, is an important piece of consumer legislation which this House should favorably consider.

This is not an antibusiness or even an anti-credit-card bill. The credit card business is an important factor in our economy. Judiciously used, credit cards tend to lubricate the wheels of industry and encourage sound financial management for many families.

We, in this bill, are trying to stop, or severely restrict, an unpleasant, unnecessary, and dangerous offshoot of our expanding credit card economy. The practice of issuing unsolicited credit cards has had an unsettling effect on our economy and on thousands of individuals and families to whom they have been sent.

Mr. Chairman, I was the sponsor of the original bill on which the Postal Operations Subcommittee held hearings last year. I was both proud and pleased at the strong support received by my bill. After the subcommittee concluded its hearings, the bill was tightened up and reintroduced as H.R. 16542.

Unsolicited credit cards commit three grave sins:

They tend to feed inflation, which has already reached an unacceptable level;

They have encouraged the criminal elements; and

They are an invasion of privacy.

It is an anomaly that in this day when we must pull out all of the stops in fighting inflation, banks, businesses, and other credit card issuers hold out the lure of instant money. The catch is that the typical credit card charges average an 18-percent annual rate on the unpaid balance. In addition, businesses honoring the cards are often required to pay a premium of up to 7 percent on purchases made with a credit card. Thus, we have a situation where the price of an item may be hiked as high as 25 percent through the use of credit cards.

It seems clear that the mailing of millions upon millions of credit cards can only add to the inflationary spiral by encouraging promiscuous use of credit cards and adding ultimately to the price of the purchased goods.

The increasing problem of mail theft is another major consideration in our desire to restrict the flow of unsolicited credit cards through the mail.

The chief postal inspector has told us that investigations of credit card thefts from the mail have increased by 700 percent over the past 4 years. In Chicago and New York, credit card theft rings were recently broken up and many indictments brought—several against postal employees. Authorities feel that the hundreds of thousands of dollars involved in these cases are only a small fragment of the total cost of credit card thefts from the mail.

These thefts are injurious to business as well as the consumer. As many of you know, Washington's Central Charge Service revealed early this year that some $200,000 in charges during January were made fraudulently with credit cards probably stolen from the mail. One store reported that 90 percent of its business during that month was thus charged.

While it is difficult to determine how many of these stolen cards were unsolicited, it is undeniable that a flood of millions of unsolicited cards can do nothing but multiply the problem many times over.

Finally, the mailing of unsolicited credit cards is a gross invasion of privacy. Credit ratings have been destroyed and people hauled into court because of fraudulent charges made by a card with their name on it—but which they did not know they were supposed to get and which they did not ask for. Individuals with financial problems have been enticed to go even more deeply into debt when an unsolicited card fell into their laps like manna from heaven.

The bill pending here today would go a long way toward alleviating these problems. By requiring that unsolicited cards be sent by registered mail, the flood would be cut to a trickle. The expense of this procedure would require that the businesses wishing to continue the practice meticulously cull their lists to weed out all those who might use the card unwisely. The requirement that the card be delivered only to the addressee—with his signature an absolute necessity—would provide clear proof as to whether an individual did or did not receive the card. And the provision for clear marking on the outside envelope that an unsolicited card is enclosed will enable the recipient to immediately reject or destroy it.

Mr. Chairman, a substitute motion will be made later which will make some technical changes in this bill and which rewrites its language to conform with the recently enacted postal reform bill. The substitute, however, accomplishes essentially the same purposes as does H.R. 16542 as reported by our committee.

This is a good bill—good for the consumer who has been victimized by unsolicited credit cards—and good for businesses which have seen a sharp upturn in fraudulent charges. I strongly urge that we approve H.R. 16542.

Mr. TIERNAN. Mr. Chairman, I rise today to express my strong support for the first major consumer bill which will come out of the Congress this year, H.R. 16542. This legislation is aimed at minimizing the possibility of theft from the mails of unsolicited credit cards.

As a member of the Post Office and Civil Service Committee, I am particularly pleased to see this bill come before us today. With our Nation rapidly becoming a credit card society, the mailing of unsolicited credit cards is becoming the norm, and the opportunity for theft has substantially increased. It is estimated that the theft and subsequent fraudulent use of credit cards involve losses of up to $150 million per year.

Needless to say, the credit card companies are losing money hand over fist. But the ultimate loser is the individual consumer. The cost of credit card insurance against fradulent use has risen dramatically. The discount rate charged to the merchant for the convenience of

charging sales to these credit cards has also risen, and these increased charges will certainly be passed on to the consumer.

A consumer who is the victim of the fraudulent use of a credit card is necessarily charged with purchases made in his name. These persons are often individuals with weak credit standings who normally would not be eligible for this mode of credit. There are reports of unsolicited cards being addressed or mailed to deceased persons, 5-year-old, bankrupts, convicts, and elderly pensioners.

H.R. 16542, in my opinion, will provide the corrective action that is needed. It provides that the same security procedures used for registered mail—including locked mailbags—be applied to credit card mailings. Under this bill, delivery is restricted to the named addressee only and the required receipt must show to whom, when and to what address the card was delivered.

Let me also point out that this legislation would permit the Post Office Department to require a notice to be placed on the envelope indicating the enclosed is an unsolicited credit card. This feature will facilitate a recipient's refusal of such mail.

Mr. Chairman, the consumers of America need this bill and I urge its immediate adoption.

Mr. KARTH. Mr. Chairman, there is little doubt in the minds of any of the Members present of the great value credit cards have served in an expanding economy. The wise consumer through credit card purchases has been able to take advantage of bargains even though cash may not be on hand at the moment. And the wise consumer can deter the cost of a vacation over a period of time, rather than stay at home. I could enumerate many of the contributions that credit card buying has brought to the American consumer.

Today we find ourselves with an opportunity to provide the credit card industry with much needed regulation and the consumer with much needed protection.

As the committee hearings show, we are fast becoming a credit card society—whether there is a wisdom in that trend in our present inflationary society is not the point of this legislation. While some consumers are trapped in their own problems of unwise use of credit cards, Congress cannot set itself up as the body that decides who does and does not receive credit, or credit cards. It is the responsibility of the media and each individual Congressman according to his own conscience to warn people of the great amounts of interest he must pay for the credit card privilege—but that is not the collective responsibility of this body.

It is our responsibility to insure that the consumer will not unknowingly be harmed by the mailing of unsolicited credit cards. The great fault in this expansion of credit is not that people who should not have credit, receive it unsolicited. That is not a fault, but a tragedy. The fault lies with the thief who takes a mailed unsolicited credit card and puts it to his own use.

The person hurt is the consumer—but supposedly we are told, he is not damaged that much. Within a short time the mixup is supposedly straightened out and the person who did not ask for the credit card in the first place has his name cleared. If that sounds like a person being cleared of a prison conviction, it should.

The person whose card falls into the wrong hands is dunned, called, threatened, and may have to pay attorney fees to remove charges he never made in the first place. And once it is all over his name is supposedly cleared.

Unfortunately, that often is not the case. The media has reported recently that so-called credit and personnel reference agencies make little effort to update or correct their files—and so a person whose unsolicited credit card is stolen and used, may not be able to obtain a credit card when he wants and deserves one.

Not only does this bill protect the consumer, but also the credit card firm that issues the card. No longer will he be forced into an unwanted credit card war or bliaz with the competition to see who can blanket a community first. The results we have found are stolen credit cards and not only does the consumer pay his price, but the issuing firm pays for services and goods sold, but never paid for. In the end the consumer must pay again for higher prices due to misused cards.

I was pleased when the Federal Trade Commission banned the issuance of unsolicited credit cards—but disappointed when unsolicited bank credit cards were not included in that ban. This is unfortunate—and the legislation we have before us corrects that gap in regulation.

The Federal Reserve System has argued that banks should continue to be exempt because those in the filed first were able to send out unsolicited cards, and the new ones won't be able to—the Board says this will discourage competition.

I tend to weigh this possible discouragement of competition with other possibilities. By passing this legislation we are recognizing the mistakes of the past—the mistake of letting any one send out unsolicited credit cards. Now to allow a late arrival the same abuses is not to discourage competition, but only to repeat the mistakes of the past.

That is not only not learning from past experience, but ignoring past experience.

Mr. CORMAN. Mr. Chairman, I rise in support of the bill before the House this afternoon—to restrict the unsolicited mailing of credit cards. I also want to commend the distinguished authors of the bill and the members and staff of the House Post Office and Civil Service Committee, whose efforts have made it possible for this very important piece of legislation to be brought to the floor for our attention. I strongly urge its favorable consideration.

I feel particularly close to this legislation because of my own bill, which was originally introduced early in the 90th Congress, when problems arising from the distribution of unsolicited credit cards became national concern. I then reintroduced the proposal in this Congress. While my bill was referred to another committee, the substance of its provisions parallels H.R. 16542.

Those of us who have become disturbed about the abuse of credit cards in general could spend hours here on the floor citing case after case describing how the unrestricted mailing of unsolicited cards has given credibility to the saying that the credit card "is both a blessing and a curse." Many cases have had catastrophic results for consumers who have had to assume payment of large debts that they could ill afford. Not every State has statutory provisions exempting an unwary intended recipient of a card from liability incurred by unauthorized use. In fact, only 13 States have some such legislation. Not every State has statutory provisions setting criminal penalties for theft and fraudulent use of stolen credit cards.

The situation for the consumer is difficult enough when a credit card he has requested is lost or stolen. To be liable for charges to a credit card he has not asked for and perhaps is stolen from the mails before he has had a chance either to destroy or return it to the issuer places an unconscionable and totally unfair burden on him. The time is long past due, Mr. Chairman, for the Congress to exercise its responsibility in seeing that the consumer is protected through Federal legislation. In doing so, I do not in any way want to handicap banks or businesses who wish to offer credit to the public. The issue at hand is that every safeguard must be afforded to the public whose business is wanted.

Short of a complete ban on the mailing of any unsolicited credit card, I believe that the bill before us assures this safeguard. It amends that title of the Code relating to the nonmailability of certain items by adding a new nonmailable category, and specifically declares that a credit card of any kind is nonmailable matter unless such a card is: solicited by the addressee; or is a replacement of one previously issued to the addressee; or in the case of a lost, mislaid or stolen credit card previously issued, is being returned to the addressee by mail; or is sent by registered mail, with delivery restricted to the addressee and return receipt requested showing to whom, when and where delivered, and is sent in an envelope bearing on its face the name and address of the sender and such notice as may be prescribed by the Postmaster General. Additionally, a fine of not more than $1,000 for each violation is set.

The Federal Trade Commission, after extensive public hearings and due consideration, issued a trade regulation rule effective this past May 18, banning the mailing of unsolicited credit cards as an unfair trade practice. I am not convinced that there needs to be a total ban on the mailing of unsolicited credit cards. It would seem to me that carefully planned regulations as to how such cards should be mailed would be sufficient protection for the consumer, who is my concern.

The provisions of the bill before us would permit such protection, and I strongly urge its passage.

Mr. DANIELS of New Jersey. Mr.

Chairman, the present practice of the unprotected mass mailing of unsolicited credit cards is nothing less than an indiscriminate invitation for larceny and fraud.

In the city of Washington, D.C., the Central Charge Co. incurred $300,000 in losses in January and February of 1970 alone, and nationally there were, in 1969, $200 million in fraud losses to thousands of innocent persons who never ordered a card and never knew it had been sent to them.

It is no answer that some of these losses were borne by the credit companies or their insurers. In too many cases intended recipients of the cards have been forced into court in order to prove, of all things, that they never received a card and were, therefore, not responsible for the charges. Even if the intended recipient was able to prove that he never received a card, he has had to bear the large cost of legal fees, the adverse effect upon his credit rating, as well as a great deal of aggravation.

An article entitled "How To Counterfeit Credit Cards and Get Away With It," by Elihu Blotnick, in Scanlon's magazine, presents a detailed description of the ease with which a stolen credit card can be obtained and used to obtain merchandise which is later sold for cash. Moreover it details the laxity on the part of many stores which know they will be reimbursed by insurers. The article also charges that credit companies actually favor the business promoted by these cards. The only person hurt is the consumer since increased insurance rates are passed on either directly or by way of increased service or interest charges.

I think you should be aware of the ease with which a credit card may be altered. According to the Scanlon's article, it is really quite simple. In the case of a stolen card, the ink on the raised letters is removed with 25 cents worth of polyester resin; the card is then heated with a warm iron to remove the raised plastic letters and restamped with an addressograph plate. If it has been signed, a strip of white paper is glued over the owner's signature and the card is signed with a phony name.

Most of the stolen credit cards are purchased from pickpockets and pursesnatchers. Even if they are caught, the sentence is often light, the bail low, and often, through plea bargaining because the district attorney feels he has more important cases, the criminal may get off with a suspended sentence. In many cases these stolen credit cards finance the drug habits of an increasing number of dope addicts.

Generally, the user of a fraudulant credit card will own a number of cards which he will either steal himself or purchase for about $10 apiece. After that, it is relatively easy to charge merchandise and dispose of it. According to Scanlon, most credit card thefts are not reported and even if they are, the credit card companies are lax in warning stores since many stores may be unwilling to carry the service of a credit company whose stolen credit card rate causes the store high losses, or inconvenience in checking for stolen cards.

Mr. Chairman, H.R. 16542 will minimize the loss resulting from the theft and fraudulent use of credit cards by requiring that unsolicited credit cards be mailed by secured or registered mail, with restricted delivery and a return receipt requested.

Under this bill, unsolicited credit cards will be signed for by each postal employee who handles the envelope. Cards will proceed through the system in locked mail bags and be delivered only to the addressee, who, if he wishes to receive the mailing, will sign for it.

The addressee will be put on notice that the envelope contains an unsolicited credit card and that he may refuse the mailing. The cost of return mailings will be paid for by the mailer. The cost for this protection is presently $1.71 per mailing.

Credit card operations are basically mass mailing operations, sometimes amounting to 2 million persons and blanketing whole communities with a flood of unwanted and unasked for credit cards.

The very integrity of our postal system is threatened. The mass mailing of unsolicited credit cards is little different than the mass mailing of $100 bills in transparent envelopes.

In order to protect the public, the bill simply would eliminate the now too easy opportunity to steal a card between the time that it is mailed and the time of its receipt.

If unsolicited credit card mailings were made unlawful by this legislation, the violator would be subject to criminal fines of up to $1,000 per individual credit card mailing. Penalties have been limited to criminal fines because of the lack of personal responsibility for decision in large corporate organizations. The boards of directors of credit card companies will understand that criminal fines for each violation could amount to a considerable sum.

At least 13 States have statutes which regulate and restrict unsolicited credit cards. Most of these States protect the consumer merely by limiting the liability for the use of credit cards which have not been accepted by the cardholder.

Governor Rockefeller signed a bill on May 20 which also makes the issuance of unsolicited credit cards a crime.

None of this legislation can be fully effective, however, unless the Post Office Department can act in the matter. It is mass mailing which is the heart of this operation. Mass mailing is the key to the offensiveness of the unsolicited credit card system.

The Federal Trade Commission, which has limited jurisdiction, has issued a rule defining the mailing of unsolicited credit cards as an unfair trade practice. However, it is very doubtful whether the jurisdiction of the Federal Trade Commission extends to the biggest offenders in the unsolicited credit card matter, the banks.

It is the banks that are mailing millions of unsolicited credit cards today. It is the banks who issue the "everything."

Mr. Chairman, the bill was supported unanimously in committee by members of both parties. The administration does not oppose this legislation.

Mr. ROSENTHAL. Mr. Chairman, Americans are subjected each year to a barrage of unsolicited credit cards that number in the millions. These cards are a flagrant abuse of the consumer's confidence, and an abuse of the Federal mail system. They constitute an additional, unneeded harassment of the consumer. These unsolicited cards must not be allowed to flow through our mails as easily as they presently do. Such cards almost invite mail theft and fraud, and, as a result, the unsuspecting consumer is exposed to the possibility of incurring a substantial economic loss.

H.R. 16542, which the House considers today, begins to place much needed checks on the flow of these credit cards through the mails. This bill requires that all unsolicited credit cards be sent by registered mail, and be clearly designated as unsolicited credit cards, with the name and address of the sender clearly visible on the envelope, as well. These precautions may help to eliminate some of the theft and resulting fraudulent use that is made of these unsolicited credit cards. It is for these reasons that I support this bill.

But this is only an interim measure. We must move toward a much more thorough regulation of these cards, either by amendment or passage of a stronger bill. I question whether these unsolicited cards should be allowed through the mails at all, no matter how they are marked. The FTC has proposed a rule which restricts the mailing of unsolicited credit cards, as an unfair trade practice, and permits only those credit cards that are expressly requested, or are replacements of credit cards already held, to be sent through the mail. This is what I believe should be the ultimate goal of any legislation regulating the use of credit cards.

Last October, I introduced a bill, H.R. 14527, which comes much closer to realizing this goal. It bans the mailing of all unsolicited credit cards, and requires certified mailings of all other credit cards that are expressly requested. This bill, if enacted, would go further than any previous proposal to protect the consumer from the hazards inherent in credit card mailings. The Senate has recently passed a similar bill. It bans the mailing of all unsolicited credit cards, and limits the consumer's liability in the case of a lost or stolen credit card. I hope the House will move toward a bill as strong as that of the Senate. And I hope the House will pass H.R. 16542, the very first step toward this goal.

Mr. WILLIAM D. FORD. Mr. Chairman, $200 million are lost each year through credit card fraud and 200,000 credit cards are stolen each year.

Most of this theft is facilitated by the mass mailing of unsolicited credit cards. The mail patron does not know that such a card has been forwarded to him. Yet it is similar to mailing a $100 bill through the mail because many of these cards are sold for that amount on the black market.

In Washington, D.C., one company lost approximately $300,000 through the theft of credit cards in January and February and every credit card company has suffered the same kind of losses. All of this

is passed back to the consumer in higher prices.

For example, new businesses have sprung up which for $5 a year will keep track of your credit card numbers and notify companies when your card has been stolen. Another company will insure you against loss for $9 a year.

The mail patron who loses an unsolicited credit card cannot insure himself against loss, because he does not know that he has been issued a card until the bills start coming in.

This bill will protect that consumer. It will protect mail patrons because it requires that all unsolicited credit cards be mailed by registered mail, restricted delivery, return-receipt requested. This means that credit card issuers will be forced to pay a maximum amount for maximum protection to mail patrons. If unsolicited credit cards are sent out in violation of the bill, criminal penalties of fines up to and including $1,000 per mailing will be imposed on violators.

It is only reasonable that the American public receive the maximum protection. Many of the credit card companies themselves must see the need for this kind of legislation. A large number of these companies will not mail credit cards through the Washington, D.C., post office. Up until now, credit card companies were not concerned with theft because they made huge profits from 18 percent interest and discount charges up to 7 percent. If it was necessary they merely pass the cost on to the public. They only became concerned when the losses in the millions became a matter of public record. It was too hard then to frighten timid consumers into paying bills they did not owe to save their credit ratings.

The public needs protection. It needs to regulate this mass-mailing gimmick and I think this legislation will help to do just that, and I ask for its passage.

Mr. HALPERN. Mr. Chairman, American consumers now possess over a quarter of a billion credit cards. There are retail store cards, travel and entertainment cards, oil company cards, bank cards, and air travel cards. There are in circulation over 50 million "universal" cards on which almost anything can be charged. These all-purpose credit cards, particularly, are growing in popularity. An estimated $50 billion worth of goods and services were purchased with credit cards last year. As of June 30, 1969, almost 13 percent of consumer credit outstanding was on card credit. The potential uses for credit cards are abundant. Some experts have been predicting that plastic credit will eventually replace cash and checks as a means of payment. The "credit card revolution" is no understatement. Credit cards are here to stay.

As we might expect with such a new phenomenon, serious problems are arising with the growth of credit card usage. One of the most serious problems is the theft and unauthorized use of the cards. It has been estimated that in 1969 more than $150 million worth of goods and services were charged on stolen or lost credit cards. Fraudulent use of these cards, including activities by organized crime, has increased 700 percent in the last 3 years.

It is most unfortunate but true that one of the primary causes of the unauthorized use of credit cards stems from thievery through the mailing system of mass-mailed cards. The cards are stolen and then sold through middlemen and distributors and may yield as much as $400 each on sale to the final user. At least 80 arrests of postal employees involved in credit card thievery have been reported. Many of these were linked to Mafia and other organized criminal groups. Theft through the mail system is particularly facilitated when the cards are mass mailed within short periods of time.

H.R. 16542 attacks this problem directly by requiring that unsolicited credit cards, be mailed by registered mail, under specified regulations. Unlike regular first-class mail, registered mail travels through the postal system in locked mailbags Thus the possibility of theft in the mail system will certainly be minimized under H.R. 16542. The bill also restricts delivery to the addressee only, providing further protection for the consumer against thefts.

While the bill does restrict and regulate the mailing of unsolicited credit cards, it does not prohibit that particular method of distribution. It is to be noted that the continued use by business of mass unsolicited distribution has stemmed from the past success of this method of distribution. Consumers on the whole have been receptive to unsolicited credit cards. Many faithful and satisfied users of credit cards originally received these cards without having requested them. Most people are quite capable of learning to use this method of payment, and find it a great convenience. True, there have been and continue to be complaints concerning the receipt of unwanted cards. Annoyance and inconvenience are caused to those who do not want the cards and who must either destroy or return them. But the rights of the uncomplaining and often too silent majority must, however, be counted as well. It is my feeling that the abuses caused by theft of the cards are more serious than the inconvenience caused by having to destroy those cards not wanted. Furthermore, the important abuses can be corrected without destroying the advantages both to receptive consumers and to business of unsolicited distribution.

It has been argued that in effect the mailing of unsolicited credit cards would be eliminated under the bill due to the high cost of registered mail. This is not necessarily true. The Post Office Department reported in a letter printed in House Report 91–974 that the provisions of H.R. 16542 would raise the postage charge for mailing these cards to $1.36, which includes an 80-cent registry fee and a restricted delivery fee of 50 cents. Now I wish to submit that $1.36 is not a prohibitive sum for a company to pay to obtain a good credit customer, one who will remain a customer for years and years. This is particularly true at present charges of 18 percent per year for this type of credit. What the bill will do is eliminate the irresponsible mass mailing of unsolicited credit cards.

One of the most regrettable effects of the mass distribution of credit cards to date is that they have been sent almost at random. One reported study of 84 representative credit card programs revealed that only a fifth of the banks checked the credit background and employment of people to whom they mailed cards. Mailing lists of people with whom the banks had not done business were used by 30 percent of the banks.[1] To quote House Report 91–974:

> Recipients of unsolicited credit cards are often individuals with weak credit standing who normally would not be eligible for this mode of credit. There have been many instances of unsolicited cards being addressed or mailed to deceased persons, 5-year-olds, bankrupts, convicts, and elderly pensioners.

It is not surprising that many people going through personal bankruptcy have stated that the use of unsolicited credit cards was a factor contributing to their financial problems. The cards would not have been sent to these people had the appropriate checks been made. By raising the costs of sending unsolicited cards, through the requirement of registered mail, companies will have the incentive to check the credit worthiness of a potential customer before extending him unasked for credit.

It may be argued that raising the costs of distribution gives an unfair advantage to those companies with established credit card programs which in the past made use of mass mailing, as against new entrants into the credit card business. That some inequities are unavoidable goes without saying. The object is to minimize these inequities. It should be clear that to absolutely prohibit the mailing of all unrequested credit cards gives a much greater advantage to established companies than does the regulation of such mailings as provided for under H.R. 16542.

A vital part of consumer protection involves the assurance that monopoly powers will not be established—that the consumer will always have a choice. Prohibiting the issuance of all unsolicited cards would, in my opinion, substantially enhance the market power of the companies which now have established programs. There are at present two giant bank card systems, each having about 450,000 merchant members and over 20 million cards in circulation apiece.[2] But the field is not closed. Other companies are reported to have plans of going nationwide. Competition in this business is essential if we are to hold down the price of credit, particularly in the future. To ban all unsolicited credit cards could greatly harm the consumer by enhancing the market power of existing companies.

On the other hand, not to enact legislation will mean the continuation of the serious inequities and injustices I already mentioned. In addition let me remind you of the fact that banks and

[1] Paul O'Neil. "A Little Gift from Your Friendly Banker", Life magazine. March 27, 1970, p. 55.

[2] Bank of America's Bank Americard and the Interbank card system commonly known as Master Charge, as referred to in "Those 'charge anything anywhere' credit cards," Changing Times, The Kiplinger Magazine, v. 24, March 1970, p. 7.

common carriers are excluded from the current Federal Trade Commission ban on the mailing of unsolicited credit cards, which applies to oil companies, independent card companies, and retail stores. Needless to say, banks and common carriers are enjoying a significant advantage over those companies covered by the FTC ban.

Our goal is not to prohibit a method of distribution which American industry has found effective, and which has been met favorably by many consumers. Our goal is to protect the American consumer from abuses arising from that method of distribution, as well as to insure him that the advantages of the system will be retained. A workable balance must be achieved, and, I believe, is achieved under H.R. 16542. I urge your support for this necessary piece of legislation.

Mr. BROCK. Mr. Chairman, during general debate on the regulation of credit, the card mailings bill (H.R. 16542), I was in the State of Tennessee and unable to personally represent my interest by voting.

I wish to take this opportunity to express my strong support of this very worthwhile legislation which does much to protect the citizen in his acquisition and use of credit cards. Had I been there I would have voted "yea."

Mr. BINGHAM. Mr. Chairman, this legislation, H.R. 16542, is intended mainly to remedy the alarming unsolicited credit card theft problem. For that purpose, it is a constructive bill, which I cosponsored and supported in testimony.

However, there are a number of other undesirable aspects of unsolicited credit cards beyond their susceptibility to theft. In fact, the Federal Trade Commission, as the committee report notes, recently issued a ruling banning unsolicited cards as an unfair trade practice and a form of unfair competition after an exhaustive investigation.

In view of this ruling by the FTC, as well as recent Senate passage of a complete ban on unsolicited credit cards, I suggest that the provision of H.R. 16542 permitting continued mailing of unsolicited cards if they are sent registered mail no longer makes sense. Sending unsolicited cards registered mail would help protect them from theft. But is an unsolicited card any less an unfair trade practice or unfair competition if it is sent registered rather than regular mail? I think not.

It is my understanding that if this legislation passes a request will be made to substitute the Senate bill number so that this legislation can be considered in conference with the Senate passed bill.

I intend to support this legislation, despite the loophole in it that I have pointed out, in the hope that in conference the House will accede and accept the Senate legislation on this matter providing for a complete ban on unsolicited credit cards as I and many other Members of the House have been urging for some time.

Mr. SCOTT. Mr. Chairman, I also rise in support of H.R. 16542, which I cosponsored, to restrict the mailing of unsolicited credit cards.

Today, we live in a society where credit is the economic password, and a credit card is its vehicle. They are important to our economy.

In testimony before our committee, it was estimated that consumer credit in the United States for 1968 totaled $110 billion. An estimated 200 million credit cards accounted for some $13 billion of this all time high figure. It is reasonable to expect these figures to be considerably higher for 1969 and 1970, and for all future years.

On the other hand, credit card losses are running from $50 to $100 million a year, and unsolicited credit cards are contributing to law enforcement problems. In the last 4 years ending July 1, 1969, mail fraud credit card cases have increased over 700 percent.

In addition to the legal aspects involved, unsolicited credit cards are an invasion of privacy and in too many cases are indiscriminately mailed to children and others who are either immature or financially unable to be extended credit of any magnitude.

To illustrate some of the adverse effects created by the unsolicitation of credit cards, I quote from some letters I have received from constituents:

DEAR MR. SCOTT: A few weeks ago we received a notice from —— (name of the credit card which I will not repeat here) that we had run up bills totaling $699 and they were reminding us that $600 was the limit.

Since we had never seen a—— credit card, we were profoundly shocked. Apparently, they took our name from the Richmond phone book, or some list but we had moved from Richmond.

Another constituent writes:

I received an unsolicited credit card from the —— organization last year. I was under the impression that they were a reputable firm and I was interested in using their services. However, as you can see from the attached copies of letters that I have been forced to exchange with them, they are totally unresponsive when it comes to answering simple questions concerning my account.

I seem to be getting nowhere with them. As I have stated to them repeatedly, I am most anxious to pay my just debts, but I just cannot determine from them what that amount should be.

The individual then attached seven letters written between March 24 and October 15, 1969, including one he sent by registered mail trying to correct erroneous charges signed by another person, and trying to get some explanation from the company other than the terse notice that his account was overdue. The material is not presented for the RECORD because I do not wish to single out one organization for criticism when mailing of unsolicited credit cards is so widespread.

It is evident that something must now be done by Congress to correct this very questionable and unhealthy practice of mailing unsolicited credit cards. This legislation, H.R. 16542, amends title 39, United States Code, as enacted by the Postal Reorganization Act, by adding a new nonmailable category.

The new section, 3012, declares credit cards as nonmailable items unless such card—

First, is solicited by the addressee; or

Second, is a replacement of one previously issued to the addressee; or

Third, in the case of a lost, mislaid, or stolen credit card previously issued, is being returned to the addressee by mail; or

Fourth, is sent under conditions prescribed by the new Postal Service to insure security in handling in the mails, the certainty of personal delivery of the card, and proof of when, where, and the person to whom it is delivered.

The conditions described in item 4 are the same as those which exist today under the registered mail procedure of the Post Office Department. The change in phraseology from the committee-reported bill is necessary to conform to the language of the new title 39 which will be implemented under the Postal Reorganization Act of 1970, which was signed into law August 12, 1970.

The bill will also amend chapter 83 of title 18, United States Code, by adding a new section 1738 which prescribes a fine of not more than $1,000 for each violation of section 3012 of title 39.

Mr. Chairman, the consumer, the merchant, the credit card issuers, and every other legitimate party need this legislation to provide basic consumer protection.

I ask your support of this measure.

Mr. VANIK. Mr. Chairman, I am in hearty support of H.R. 16542, relating to the regulation of credit card mailings. This legislation gives the force of law and penalty to a recent ruling started by the Federal Trade Commission limiting the abusive practice of unsolicited, mass mailings of credit cards.

The legislation before the House would provide that a credit card is nonmailable unless the card is:

First, solicited by the person to whom it is addressed;

Second, is a replacement for one previously issued to the addressee;

Third, in the case of a lost, mislaid, or stolen credit card previously issued, is being returned to the addressee by mail; or

Fourth, is sent by registered mail, with delivery restricted to the addressee and return receipt requested showing to whom, when, and where delivered, and is sent in an envelope bearing on its face the name and address of the sender and such notice as may be prescribed by the Postmaster General.

The bill imposes a $1,000 fine for each violation of the above conditions.

I have long been receiving mail from constituents of the 22d Congressional District complaining about the receipt in the mails of unwanted credit cards. In several cases, cards were addressed to the constituent's children. I have heard from other Members here that cards have been addressed to deceased persons as well as bankrupts and even convicts in prisons.

Not only does this practice raise serious questions about the extension of credit to persons who cannot competently manage it, but it also seems to encourage an inflationary psychology.

It addition, there has been an increasingly serious problem of theft of mail deliveries. In the case of credit

cards, this is particularly serious since those to whom the cards are being sent, not being aware of the unsolicited mailing, cannot notify the sender that they have not received the card.

Losses due to credit card theft are now estimated to run between $50 to $150 million per year. The final burden of these losses rests on the consumer. The lost of credit card insurance against fraudulent use has risen drastically. The discount rate charged to the storeowner for the convenience of charging sales to these credit cards is now about 7 percent. The merchant cannot absorb this burden and he passes it on to the consumer. In addition, the consumer who is the victim of fraudulent use of a credit card is necessarily charged with purchases made in his name. This can result in hundreds of dollars of expense to the consumer, needless aggravation, and impaired credit ratings.

This bill should go a long way toward ending the abuse of unsolicited credit cards. It will, through the process of requiring registered mailing, increase the cost of such mailings dramatically; it will place such mailings in the Post Office Department's locked registered-mail pouches rather than in the more loosely guarded general-mail sacks.

For the privacy and security of the consumer, this legislation is long overdue.

Mrs. MINK. Mr. Chairman, I rise in support of H.R. 16542, legislation to regulate the mailing of unsolicited credit cards.

This bill is similar in purpose to legislation I am cosponsoring, H.R. 17158, which would also proscribe the issuance of credit cards except in response to a request or application.

H.R. 16542, as approved by the Committee on Post Office and Civil Service, would prohibit the mailing of unsolicited credit cards except by registered mail which would provide the recipient with an opportunity to refuse the card. The bill would require a specific notice on the outside of the envelope that it contained an unsolicited credit card which may be refused by the addressee.

The objective of this bill, as is the purpose of my own bill before the House Committee on Banking and Currency, is to protect our consumers from the recent barrage of unsought credit cards that have been sent through the mails. In all too many instances, credit cards have been lost or stolen in the mails with the result that the intended user is jeopardized through no fault of his own and without his knowledge.

If they fall into unauthorized hands, such unsolicited credit cards may be used to make extensive credit purchases for which the person whose name is on the card is held liable. Our citizens have been hounded and badgered by credit companies and collection agencies for debts acquired in this manner, even though they had no way to protect themselves from the loss or theft of the card.

In addition, many people receiving unsought credit cards in the mail may not fully understand the dangers involved in overuse of the credit thereby conferred. Such use can lead to the loss of credit ratings, court actions, impoundment of property, and garnishment of wages—all brought about because some credit card issuers seek to exploit the economically naive through mass mailings of unsolicited credit cards.

Since the industry has not taken adequate steps to protect the consumers from this abuse of the mails, it is therefore necessary for Congress to act. I firmly support the protection for our consumers which is contained in this legislation, and urge its adoption by my colleagues.

Mrs. HECKLER of Massachusetts. Mr. Chairman, I consider H.R. 16542, the bill to regulate credit card mailings, to be vital consumer legislation.

This bill strengthens the consumer protection afforded by the 1967 Truth in Lending Act. Certainly each of us is aware of abuses which have occurred because the act is not strong enough in its provisions affecting the distribution of credit cards.

There are said to be 300 million credit cards in use by American consumers, representing some $15 billion in annual credit card sales. We buy-now, pay-later, with increasing frequency. We fly, take vacations, telephone long distance, or eat in the best restaurants on credit cards. Abuses result when there is accidental or uexpected loss or theft of credit cards, or careless disposal of an unwanted card. Although certainly the retailer is justified in believing that the distribution of credit cards stimulates consumer purchasing, the practice of mailing unsolicited credit cards often creates chaos. The unsolicited credit card may be discarded, or fall into the wrong hands. There have been too many tragic instances in which innocent persons or families incur large debts in accounts which they did not know they had.

We can all cite instances of what happens. I recall a case in my district which received widespread attention recently. A family in Natick—a couple with four children—had a credit card stolen. The family notified the company in the proper manner, but still the bills mounted. The family was sued for recovery of a debt exceeding $2,000, although the father had been ill for 9 years, undergone six operations, and was able to work only a few weeks at a time. In fact, the company threatened to put the family's house on the auction block to repay the debt.

This case had a bearable ending because the company agreed to a smaller settlement which the family could afford. But not every story does.

This bill would narrow the opportunities for theft from the mail of unsolicited credit cards through requirements for labeling and more effective mail security procedures. It requires that the cards be sent by registered mail, with return receipt requested, so that the recipient can refuse the mailing. Unsolicited credit cards are being mailed in substantial volume, and this does represent an invasion of the citizen's privacy. I do not believe the practice should be entirely eliminated. However, I feel, as this bill provides, that the mailing of unsolicited credit cards should be limited and carefully regulated.

This is an essential step forward in enhanced consumer protection. We are concerned not just with problems of embarrassment or nuisances, but with a very real potential for serious financial loss. The passage of this bill is in the interest of consumer protection and an important step in the effort to end fraudulent misuse of the credit card.

Mr. McCLURE. Mr. Chairman, I have no further requests for time.

Mr. NIX. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

H.R. 16542

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4001 of title 39, United States Code, is amended by adding at the end thereof the following new subsection:

"(d) Every credit card is deemed nonmailable matter, shall not be carried or delivered by mail, and shall be disposed of as the Postmaster General directs, unless such card—

"(1) is mailed in response to a request or application by the addressee for such card; or

"(2) is mailed as a replacement, for the addressee, of a credit card previously issued to the addressee; or

"(3) in the case of a previously issued credit card which has been lost, mislaid, or stolen, is mailed as a return of that card to the issuer or to the addressee to whom that card was issued; or

"(4) is mailed—

"(A) by registered mail, with delivery restricted to the addressee only and with return receipt requested showing to whom, when, and where delivered, upon the agreement of the issuer of the card or other sender to pay to the Department an additional charge which shall be fixed by the Postmaster General, to cover the cost to the Department of the return to the issuer or other sender, after such period of time as the Postmaster General shall prescribe, of the card if not delivered as prescribed by this subparagraph; and

"(B) in an envelope or other cover which bears the name and address of the issuer or other sender of the card and indicates on its face, by such notice as the Postmaster General shall prescribe, that such envelope or cover contains a credit card which is not solicited or requested, and which may be refused, by the addressee.

For the purposes of this subsection, 'credit card' and 'card' mean every card, paper, or other device, of whatever shape, design, and composition, intended or adapted for the purpose of establishing the identity and credit of any person in connection with the purchase or rental, on credit, of goods or services, or both, or in connection with the procurement of loans. The Postmaster General shall prescribe and issue special regulations for the administration of this subsection.".

SEC. 2. (a) Chapter 83 of title 18, United States Code, relating to offenses against the postal service, is amended by adding immediately after section 1734 thereof the following new section:

"§ 1734A. Unlawful mailing of credit cards.

"Whoever willfully uses the mails for the mailing, carriage in the mails, or delivery of any matter in violation of section 4001(d) of title 39, or willfully violates any regulation of the Postmaster General prescribed

and issued in such section 4001(d), shall be fined not more than $1,000 for each offense.".

(b) The table of sections of chapter 83 of title 18, United States Code, is amended by inserting—

"1734A. Unlawful mailing of credit cards."

immediately below—

"1734. Editorials and other matter as 'advertisements'.".

SEC. 3. The foregoing provisions of this Act shall become effective on the first day of the sixth month which begins after the date of enactment of this Act.

Mr. NIX (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. NIX

Mr. NIX. Mr. Chairman, I offer an amendment in the nature of a substitute

The Clerk read as follows:

Amendment offered in the nature of a substitute by Mr. NIX: Strike out all after the enacting clause and insert in lieu thereof the following:

"That (a) chapter 30 of title 39, United States Code, as enacted by the Postal Reorganization Act (84 Stat. 719; Public Law 91–375), is amended by adding at the end thereof the following new section:

"'§ 3012. Nonmailable credit cards

"'(a) Every credit card is deemed nonmailable matter, shall not be carried or delivered by mail, and shall be disposed of as the Postal Service directs, unless such card—

"'(1) is mailed in response to a request or application by the addressee for such card; or

"'(2) is mailed as a replacement or renewal of, or substitute for, a credit card previously issued to the addressee; or

"'(3) in the case of a previously issued credit card which has been lost, mislaid, or stolen, is mailed as a return of that card to the issuer or to the addressee to whom that card was issued; or

"'(4) is mailed—

"'(A) under such conditions as the Postal Service shall prescribe in order to provide—

"'(i) security in the handling of the card in the mails, and

"'(ii) certainty of personal delivery of the card to the addressee, and

"'(iii) proof of when, where, and the person to whom, the card was delivered;

and

"'(B) upon agreement by the issuer or other sender of the card to pay, if the card is not delivered after such period of time as the Postal Service shall prescribe, an additional postal fee to be fixed by the Postal Service to cover its cost of return of the card to the issuer or other sender;

and

"'(C) in an envelope, or under other cover, which bears the name and address of the issuer or other sender of the card and indicates on its face, by such notice as the Postal Service shall prescribe, that such envelope or cover contains a credit card which is not solicited or requested, and which may be refused, by the addressee.

"'(b) For the purposes of this section, "credit card" and "card" mean every card, paper, or other device, of whatever shape, design, and composition, intended or adapted for the purpose of establishing the identity and credit of any person in connection with the purchase or rental, on credit, of goods or services, or both, or in connection with the procurement of loans or cash advances. The Postal Service shall prescribe and issue special regulations for the administration of this section.'.

"(b) The table of sections of chapter 30 of title 39, United States Code, as enacted by the Postal Reorganization Act (84 Stat. 719; Public Law 91–375), is amended by adding at the end thereof—

"'3012. Nonmailable credit cards.'.

"SEC. 2. (a) Chapter 83 of title 18, United States Code, relating to offenses against the Postal Service, is amended by adding at the end thereof the following new section:

"'§ 1738. Unlawful mailing of credit cards

"'Whoever willfully uses the mails for the mailing, carriage in the mails, or delivery of any matter in violation of section 3012 of title 39, or willfully violates any regulation of the Postal Service prescribed and issued under such section 3012, shall be fined not more than $1,000 for each offense.'.

"(b) The table of sections of chapter 83 of title 18, United States Code, is amended by adding at the end thereof the following new item:

"'1738. Unlawful mailing of credit cards.'.

"SEC. 3. The amendments made by this Act shall become effective on—

"(1) August 12, 1971; or

"(2) such earlier date, published in the Federal Register by the Board of Governors of the Postal Service, as the Board may prescribe."

Mr. NIX (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the substitute amendment be dispensed with, and that it be considered as read, printed in the RECORD and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. NIX. Mr. Chairman, I offer this amendment to perfect the bill in that since the Postal Reorganization and Salary Adjustment Act of 1970, now Public Law 91–375, it is necessary to renumber the sections of the bill for the purpose of proper codification.

Under the Postal Reorganization and Salary Adjustment Act of 1970, the rates commission will set all postal rates.

Further, the words "registered mail" are not a part of the Postal Reorganization and Salary Adjustment Act of 1970 or Public Law 91–375.

This amendment deletes the term "registered mail" hereby conforming with the language of Public Law 91–375.

This amendment spells out the same security conditions adopted in committee and incorporated in H.R. 16542.

These security conditions are as follows:

Every credit card is deemed nonmailable matter, shall not be carried or delivered by mail, shall be disposed of as the Postal Service directs. Unless such card—

Is mailed in response to a request or application by the addressee for such card, or

Is mailed as a replacement or renewal or substitution for, a credit card previously issued to the addressee, or

In the case of a previously issued credit card which has been lost, mislaid, or stolen, is mailed as a return of that card to the issuer or to the addressee to whom that card was issued, or

If the card is mailed under such security conditions as the Postal Service shall prescribe and the unsolicited credit card cannot be delivered, an additional charge shall be fixed to cover the cost of returning the mailing to the sender and the envelope or other cover which bears the name and address of the issuer shall bear on its face such notice as the Postmaster General shall prescribe stating that the envelope contains a credit card that was not solicited and that the card may be refused by the addressee.

In section 3012, which sets out the exemptions to the nonmailable credit card ban, we have added the word "renewal" to the word "replacement" in 3012(a)(2) in order to make clear our intent that all replacement cards including renewal cards are exempted from the restrictions on unsolicited credit cards.

On page 3 of the substitute amendment, in section 3012(4)(c)(a), we have added the words "cash advances" to the definition of credit card transactions in order to make clear our intent to include those credit card transactions which guarantee credit card users the payment of overdrafts within certain limits. The phrase in "connection with the procurement of loans" does not sufficiently express our intent to regulate those transactions dealing in cash advances.

Section 2 of the substitute amendment, amends the bill to add a new section to chapter 83 of title 18, United States Code rather than a section 1734a, and such section shall include appropriate references to the new numbering conforming to the Postal Reorganization Act.

Section 3 of the substitute amendment, amends the bill so that the effective dates of the bill conform to the effective dates of the Postal Reorganization Act.

My amendment is a perfecting amendment. I urge the adoption of the amendment.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. NIX) has expired.

Mr. GROSS. Mr. Chairman, I ask unanimous consent that the gentleman from Pennsylvania may be permitted to proceed for 2 additional minutes.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. NIX. I yield to the gentleman from Iowa.

Mr. GROSS. As the gentleman well knows I supported the bill in committee and I now support the substitute language offered by the gentleman.

But I wonder how many more errors of omission and commission will be found as we proceed under the authority granted in the so-called postal reform bill? I wonder how many more errors of omission and commission we will find including the failure to specifically provide for registered mail?

I thank the gentleman for yielding.

Mr. NIX. I thank the gentleman.

Mr. Chairman, I urge the adoption of the amendment.

Mr. McCLURE. Mr. Chairman, I move

to strike out the last word and rise in support of the amendment.

I take this time only to state to the Members of this body that this amendment in the nature of a substitute has been cleared with the minority. It has our support. We think it is an advisable and worthwhile substitute for the committee language.

I did want to ask a question of the chairman of the subcommittee however in regard to the interpretation of language bearing on the renewal of a credit card.

A credit card under the bill would be nonmailable unless it were a routine renewal of a current credit card or unless that renewal were requested by the holder; is that not correct?

Mr. NIX. The gentleman is correct.

Mr. McCLURE. I thank the gentleman from Pennsylvania.

I did not want us to construct a loophole through which some credit card issuer could say, "Well, you once had one," and therefore 5 or 10 years later or in a matter of months later he could say, "I am mailing you a renewal." It is not the intent to exempt that kind of thing?

Mr. NIX. Not at all. The gentleman's statement is correct.

Mr. McCLURE. I thank the gentleman.

The CHAIRMAN. The question is on the amendment in the nature of a substitute offered by the gentleman from Pennsylvania (Mr. NIX).

The amendment was agreed to.

The CHAIRMAN. Under the rule the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. STEED, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 16542) to amend title 39, United States Code, to regulate the mailing of unsolicited credit cards, and for other purposes, pursuant to House Resolution 1046, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. McCLURE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 302, nays 0, not voting 127, as follows:

So the bill was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Bob Wilson.
Mr. Hays with Mr. Biester.
Mr. Garmatz with Mr. Beall of Maryland.
Mr. Fallon with Mr. Snyder.
Mr. Friedel with Mr. Morton.
Mr. Daddario with Mr. Meskill.
Mr. Delaney with Mr. Anderson of Illinois.
Mr. Burleson of Texas with Mr. Skubitz.
Mr. Anderson of California with Mr. Pelly.
Mr. Hull with Mr. Esch.
Mr. White with Mr. Belcher.
Mr. Charles H. Wilson with Mr. Wiggins.
Mr. Jones of Tennessee with Mr. Edwards of Alabama.
Mr. Aspinall with Mr. Harvey.
Mr. Corman with Mr. Taft.
Mr. Ottinger with Mr. McCulloch.
Mr. Miller of California with Mr. Gubser.
Mr. Hicks with Mr. Wold.
Mr. Davis of Georgia with Mr. Burke of Florida.
Mr. Evins of Tennessee with Mr. Landgrebe.
Mr. Rees with Mr. Diggs.
Mr. Lowenstein with Mr. Powell.
Mr. Landrum with Mr. Cramer.
Mr. Daniel of Virginia with Mr. Buchanan.
Mr. Evans of Colorado with Mr. Watson.
Mr. Fountain with Mr. Clancy.
Mr. Edwards of Louisiana with Mr. Brock.
Mr. Griffin with Mr. Thompson of Georgia.
Mr. Hagan with Mr. Blackburn.
Mr. Rivers with Mr. Cowger.
Mr. Rogers of Colorado with Mr. Lujan.
Mr. Sisk with Mr. Goldwater.
Mr. Stephens with Mr. Collier.
Mr. O'Neal of Georgia with Mr. Bush.
Mr. Macdonald of Massachusetts with Mr. Weicker.
Mr. Giaimo with Mr. Kuykendall.
Mr. Dowdy with Mrs. Reid of Illinois.
Mr. Blatnik with Mr. Rhodes.
Mr. Jones of Alabama with Mr. Scherle.
Mr. Pepper with Mr. Sebelius.
Mr. Van Deerlin with Mrs. Chisholm.
Mr. Young with Mr. Price of Texas.
Mr. Melcher with Mr. Quie.

Mr. Alexander with Mr. Rousselot.
Mr. Baring with Mr. Schneebeli.
Mr. Ashley with Mr. Schwengel.
Mr. Feighan with Mr. Stubblefield.
Mr. Flynt with Mr. Roudebush.
Mr. St Germain with Mr. Tunney.
Mr. Satterfield with Mr. Symington.
Mr. Long of Louisiana with Mr. Hungate.
Mrs. Hansen of Washington with Mr. Fraser.
Mr. Whitten with Mr. Hutchinson.
Mr. Cabell with Mr. King.
Mr. Anderson of Tennessee with Mr. Minshall.
Mr. Gallagher with Mr. Stanton.
Mr. Teague of Texas with Mr. Teague of California.
Mr. Gibbons with Mr. Hanna.
Mr. Pryor of Arkansas with Mr. Podell.
Mr. McMullan with Mr. Purcell.
Mr. Lennon with Mr. Cederberg.
Mr. Button with Mr. Burton of Utah.
Mr. Clay with Mr. Dawson.

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. NIX. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill, H.R. 16542, and to include therewith extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

FRANK M. WHISTON—LONGTIME PRESIDENT OF CHICAGO BOARD OF EDUCATION

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANNUNZIO. Mr. Speaker, it was with a feeling of great loss and sorrow that I learned of the untimely death of my good friend of over 25 years, Frank M. Whiston, who was the longtime president of the Chicago Board of Education.

Frank Whiston was a kind, considerate, and fair man who devoted many hours, days, weeks, months, and years to the improvement of the educational system in our city. He was sympathetic to the parents who sought better education for their children. He was sympathetic to the plight of the teachers who sought pay raises. He was a member of the Loyola University Citizens Board and the lay board of Barat College. Over the years, his wise counsel and astute guidance contributed much toward improving the quality of education in Chicago.

Despite his heavy burdens as president of the Frank M. Whiston Management Corp., he found time to devote himself to many civic activities in the city of Chicago. His firm is located in the Seventh Congressional District of Illinois, which I have the honor to represent, and I knew personally of his tireless work to improve the downtown area of Chicago through the Wabash Avenue Businessmen's Association.

Frank Whiston was a man of tremendous foresight, outstanding ability, and deep compassion. He gave of himself in order to bring fulfillment to the high ideals that motivated him, and his efforts to bring about meaningful and effective solutions to community problems, especially within our educational system, earned for him the respect and admiration of his fellow citizens.

His death is a tremendous loss to our community, and he will be missed by his friends, his associates, and indeed, by all those who had the privilege of knowing him. Mrs. Annunzio joins me in extending to Mrs. Whiston, and to his son, Jerome, our deepest sympathy on their bereavement.

HIS EXCELLENCY, HUGO B. MARGAIN, AMBASSADOR TO THE UNITED STATES FROM THE REPUBLIC OF MEXICO

(Mr. de la GARZA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. de la GARZA. Mr. Speaker, a strong friend of our country, His Excellency Hugo B. Margain, Ambassador to the United States from the Republic of Mexico for more than 5½ years, has been called home to assume the high post of Secretary of the Treasury.

His appointment to that position is without precedent in that it provides for the first time in Mexico a transitional link between the outgoing administration and the incoming one. He was named Secretary of the Treasury by President Gustavo Diaz Ordaz on the recommendation of President-elect Lic. Luis Echeverria. The confidence shown in Ambassador Margain by these two distinguished officials is truly a measure of the man.

I speak from a deep personal knowledge of the former Ambassador and new Secretary. He is my friend and a friend of the area I represent, which lies along the border between the United States and Mexico. He has been a welcome visitor in the 15th Congressional District of Texas. He is a man of many talents and an adherent of physical fitness; oh, how well I know. I hold in my heart a fond memory of jogging with him one midnight along a south Texas lane called Sugar Road after he had fulfilled all his social commitments for the day. My regret over his departure as Ambassador to our country is mitigated only by my pleasure that he should be called by his government to another notable position of trust.

In assuming the Office of Secretary of the Treasury, Ambassador Margain returns to the department where he began his career as a public servant in 1951 when he was named Director of the Office of Taxes on Commercial Imports. He went on to become Director of the Office of Income Taxes; Chief Officer in the Industry and Commerce Secretariat where he later became Assistant Secretary; and in January 1965 was named Ambassador to the United States.

During his service in our country, this illustrious author and able attorney and great public servant appeared before many distinguished audiences to speak about the past, present and future of Mexico. As he very humbly said, he found great satisfaction in witnessing the high respect in which Mexico is held in the financial, political, cultural and social circles of the United States. Let me assure you, my friends, that Ambassador Hugo Margain added greatly to that admiration and respect during his service as Ambassador.

Mr. Speaker, Mexico has always honored the United States by sending its very ablest to be Ambassadors to the White House—they followed faithfully this custom when they named Ambassador Margain to follow such names as Tello and Carrillo Flores.

Mr. Speaker, the progress and social justice found in our neighbor to the south are due to the unceasing efforts of such men as Ambassador Margain. He is a fine human being, a man I am proud to call friend. My warm good wishes, and I know the good wishes of my colleagues are with him as he directs his outstanding ability and competence to the important duties of his new assignment.

He will be missed here by his many friends, but we know he will continue to add greatly to the advancement of his beloved Mexico and will be once again with his people.

Mr. Speaker, I am sure that all of us will love, admire and respect Mexico more because once there was amongst us a great Mexican named Hugo Margain.

BEVILL OPPOSES COMPULSORY BUSING

(Mr. BEVILL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BEVILL. Mr. Speaker, with the opening of public schools this fall, we are once again getting a firsthand view of the unfair and unjust tactics being used against many school districts in the South by the Department of Health, Education, and Welfare and the Department of Justice. These two Federal agencies are expending a great deal of manpower and tax money pressing their directives and guidelines upon Southern school districts. They are working day and night to see that these school systems comply with orders for the compulsory busing of schoolchildren to achieve racial balance.

It is strange, Mr. Speaker, that no such action is being taken in the North. It is strange, indeed, when it has been documented time and again that there is more segregation in the public schools of the North than those of the South.

Mr. Speaker, I say the time has come for this administration to stop operating under a double standard of justice. If compulsory busing to attain racial balance is required in the South, then let the same requirement be applied equally throughout the land.

Could it be that compulsory busing and pupil assignment are so unpopular in all areas of our country and is so strongly opposed by both Negroes and whites that the Justice Department is reluctant to take action against school districts in the North? From my observations, this certainly appears to be the case.

In Detroit, Mich., voters recently removed from office four school board

members who had pushed through a plan to institute forced busing. The people in Detroit, like those in the South, obviously want to retain control over their community schools.

I am of the firm opinion that the people of this Nation—every section included—are more concerned with the quality of education their children are receiving than with some numerical quota system devised by a Government agency. Our public school system was built on the concept of local control. The forced busing of students is threatening to destroy this system.

I favor a freedom-of-choice plan and I am strongly opposed to zoning, busing, and pupil assignment by any Federal Government agency.

A KUDO TO THE CENSUS

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HECHLER of West Virginia. Mr. Speaker, there have been many anguished cries from cities and communities throughout the Nation objecting to the manner in which the 1970 census was conducted, and the results obtained.

Today, I rise to praise the Bureau of the Census and the multitude of enumerators who performed so conscientiously this year as in former years in performance of the duties required by article I, section 2, of the Constitution.

The preliminary results of the census of my hometown of Huntington, W. Va., showed that we had suffered a population loss from 83,627 in 1960 to 72,970 this year. Huntington authorities were understandably concerned and asked my assistance in a thorough recount by blocks, manned by volunteers. On June 4, 1970, I issued a public statement starting with these words:

> I am sure that Mrs. Maxine Booth, manager of the Huntington office of the Census Bureau, has done an excellent job with her enumerators.

On the other hand, I urged that every opportunity be afforded to insure a complete and accurate count. Joseph Norwood, Regional Director of the Census Bureau in Charlotte, N.C., authorized and assisted in making materials available for a massive volunteer bloc-count. Newspapers, radio and television stations, and civic organizations actively participated in this volunteer effort.

As a result of these efforts, approximately 1,300 additional forms were forwarded to the Census Bureau. All but 72 families constituting 183 persons proved to be duplicates of forms already submitted by the regular census enumerators. These 72 forms were then field checked, and all but 30 were found to live outside the city limits, to have nonexistent addresses, or to constitute persons who had moved into Huntington since April 1 and had been counted elsewhere. The rockbottom additional count of 30 families, or about 90 persons, were then added to the Huntington census count. Some of these had understandably not been counted because they were transients or floaters, lived above or in the back of business establishments, or were simply overlooked.

Mr. Speaker, when an all-out effort adds only one-tenth of 1 percent of valid names to the official census count, I believe the census enumerators deserve congratulations. I am therefore inviting all the census enumerators in Huntington, W. Va., to be my guests at a tribute dinner. We hear too much criticism of Federal workers, and when Federal workers do a thorough and conscientious job they deserve praise as in this instance.

TREATMENT OF AMERICAN PRISONERS OF WAR

(Mr. ZION asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include certain letters.)

Mr. ZION. Mr. Speaker, I want to express my profound and sincere appreciation to the 405 Members of this House who signed the letter of protest to the Communist Government of North Vietnam. Your interest in demanding the provisions of the Geneva Conference pertaining to POW's was forcefully presented during a 1 hour and 45 minute discussion with Mai Van Bo, the Delegate-General of North Vietnam to Paris.

Unfortunately he refused to accept the letter, saying that we, the duly elected Representatives of the overwhelming majority of the American people, did not in fact represent the true feelings of our people. He quoted a handful of our Nation's protesters whom he said supported the Communist invasion of the south. It is apparent that the freedom of speech in this country, which permits our people to take exception to the policies of our elected leaders, is not undertood in totalitarian societies. I submit at this point two letters which convey our contempt at their refusal:

HOTEL DE CRILLON,
Paris, August 26, 1970.

Mr. MAI VAN BO,
Delegate General of North Vietnam,
Paris.

DEAR MR. BO: This is to thank you for taking the time to meet with me today.

I deeply regret that you refused to accept the letter that was signed by virtually the entire membership of the United States House of Representatives. I am mailing it to you nevertheless with the expectation that you will bring it to the attention of your government in Hanoi.

Our discussion today indicates that your government is not yet prepared to comply with your commitments to the provisions of the Geneva Convention with respect to treatment of prisoners of war.

My colleagues in both Houses of the United States Congress and the overwhelming majority of the American people want to see this subject discussed and settled in the immediate future. It is hoped that your government will soon be ready to handle prisoners of war in accordance with internationally accepted standards of civilized behavior.

Sincerely,

ROGER H. ZION,
Member of Congress,
The United States.

CONGRESS OF THE UNITED STATES,
Washington, D.C., September 1, 1970.

Mr. MAI VAN BO,
Delegate General of North Vietnam,
Paris, France.

DEAR MR. BO: Again, this is in reference to the treatment of American prisoners of war held by your government—a subject discussed in my last visit in your office last week.

I would very much appreciate it if you would request some of your officials in North Vietnam to provide me with identification of the men shown in the film which you gave to me during my visit. The film is of uneven quality, and hence positive identification of many of the men is difficult or impossible. This has only served to heighten the anxieties of the wives and families of these men. In this connection, a more positive identification of the men shown would be most helpful.

As you can see, the identification of these men is most difficult through such an unwieldy process. This points up the importance of a humane system of approaching the problem, such as that prescribed in the Geneva Convention.

Hopeful that you will see fit to accede to this request, I remain

Sincerely,

ROGER H. ZION,
Member of Congress,
Indiana's Eighth District.

I would say that our letter did, however, accomplish two singularly significant objectives. It helped me gain access to the previously closed chambers of the Communist delegation to Paris, and thus receive a movie film which is helping to identify Americans who have been listed as missing in action.

Secondly, it is a clear, loud signal to the people of the world, that the North Vietnamese refuse to provide the humane treatment of POW's that civilized nations have a right to expect.

As a result of your interest and your support, the world can now heap justifiable scorn on these criminals and join us in bringing pressure on them to provide the care and treatment for our men who are missing in action that universally accepted standards of decency and humanity demand.

THE COTTON INTERESTS

(Mr. CONTE asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. CONTE. Mr. Speaker, as we in the House return from our recess, there is a natural curiosity about what has been going on in the other body. I would not presume to assess how hard they have been working. One committee, however, has been working so hard that its achievement simply must be recognized. The Agriculture Committee has managed to put out a farm bill that is so loaded with goodies for the special interests, especially for cotton, that, as the Journal of Commerce said recently, it "must be read right through to be believed."

Time does not permit me here to detail its accomplishments. I will include some relevant details from press accounts at the close of my remarks as well as Secretary Hardin's views. Suffice it to say that its net effect would be to add more than

$1,730,000,000 to Federal expenditure during fiscal 1971. It is not surprising that Secretary Hardin has labeled it unsatisfactory.

While it remains to be seen whether the other body will accept the handiwork of its committee, I think this development makes one fact crystal clear. The fact that the traditional opponents of all efforts to limit farm subsidies have now made a gesture in the direction of reform by supporting a $55,000 ceiling does not mean they have "gotten religion." The cotton interests and their legislative champions continue to feel they can do business as usual without regard to the interests of the consumer and the taxpayer.

I for one, Mr. Speaker, will rededicate myself to oppose them with all my energy.

The materials referred to follow:

[From the Journal of Commerce, Sept. 2, 1970]

FAILURE OF SENATORS TO CHALLENGE ELLENDER ON FARM BILL QUESTIONED

(By Muriel Allen)

WASHINGTON.—The failure of several key members of the Senate Agriculture Committee to challenge Chairman Sen. Allen Ellender's, D-La., position on new farm legislation has strong political overtones, some dating back to 1965 when current law was enacted. The result is one of the worst pieces of farm legislation ever considered by Congress, reliable observers said.

Even long-time farm bill observers on Capitol Hill were surprised at the way senators representing farm interests on the committee capitulated to Sen. Ellender's wishes. Chairman Ellender cut short a debate on substantive issues, regarding wheat, feed grains and cotton and refused to consult USDA officials on the possibility of conflicting language before he forced final approval of his preferred bill Friday afternoon.

The result is a bill that as one source put it "offends none of the individual producers and is no political liability for any committee members."

The Senate bill is not the market-oriented bill that the administration wanted and got for the most part in the House-approved version. Instead it is excessively producer-oriented despite the fact that many producers have expressed satisfaction with the Poage-Belcher-Hardin compromise bill worked out over 18 months on the House side.

The political implications of last week's events in the closed-door committee sessions go back to 1965 when Sen. Herman Talmadge, D-Ga., and other senators watching out for cotton interests, particularly Sen. James O. Eastland, D-Miss., and Sen. B. Everett Jordan, D-N.C., defeated Sen. Ellender's attempt to quash low-loan, direct payment cotton provisions.

UNUSUAL MOVE

In an unusual move, Sen. Talmadge introduced on the Senate floor a cotton amendment which was passed over the chairman's objections. The senators who opposed Mr. Ellender then were strangely quiet last Friday because times have changed.

Sen. Ellender is now in line to become the powerful chairman of the Senate Appropriations Committee for which he has been serving as acting chairman lately due to the illness of Sen. Richard Russell, D-Ga. Although Sen. Russell could retain that post until 1973, there is much Washington speculation that he will retire sooner due to poor health.

When Sen. Ellender moves up to that job, Sen. Talmadge is in line to become the next chairman of the Senate Agriculture Committee. In view of this, Sen. Talmadge was probably being especially careful last week not to cross the present chairman.

Undoubtedly, the Democratic senators also wanted to present a united partisan front to the administration in making an opposing stand.

The amendments offered in committee were not discussed sufficiently, committee sources said, and Sen. Ellender rejected some of them out of hand commenting that "I know about that, it's no good."

One disgruntled insider remarked about the chairman's single-minded insistence on his own undiluted cotton provisions that "he may have some loyalties but he's risen above them." This kind of feeling reflects the frustration over the nature of Senate bill which, because of its large-scale changes in House cotton provisions, will make a long conference between House and Senate inevitable to iron out the many differences.

In trying to satisfy all the warring agricultural factions—trade vs. growers, small vs. big growers, independent vs. cooperative growers, cooperative trade and independent trade, and exporters and domestic growers—the committee ultimately created a bill with no coherence according to committee sources.

The issue sure to be most debated when the bill returns to the House after Senate floor action and conference are the increased costs to the government it represents and the expanded benefits to the cotton industry where past government support has failed to stop declining markets.

[From the Journal of Commerce, Sept. 3, 1970]

THE FAILURE OF A COMMITTEE

The version of the farm bill approved last Friday by the Senate Agriculture Committee must be read right through to be believed. Perhaps because it adopts verbatim the $55,000 annual payment limitation voted by the House, Chairman Ellender didn't think anyone would bother to read it through. In that case it would not be discovered until too late how outrageously loaded it is in favor of cotton and against the taxpayer.

It might not be discovered, either, that what the committee proposed taking away from some cotton farmers by means of the annual payment limitation it also proposed giving back to them more or less surreptitiously via a series of changes in the Commodity Credit Corp.'s crop loan program. Just how much extra these changes would cost the taxpayer is problematical. The secretary of agriculture estimates $150 million. Some private estimates run higher.

On Monday Secretary Hardin wrote Senator Ellender that it was imperative to avoid loan levels that would entice farmers to produce for CCC instead of the market; that CCC loans should not be used as a device to hold cotton prices permanently well above the market and that U.S. cotton farmers generally should compete effectively in world markets. The committee's bill fails on all three of these counts.

It is, in fact, an open invitation to cotton farmers to forget competition, forget the market and produce primarily for CCC, which would be saddled with the responsibility for selling as best it could all the noncompetitive cotton it would be forced to accumulate under the nonrecourse loan program.

The committee bill also deals with the wheat program and feed grains, in which it departs somewhat from the House version and would extend the dairy, wool and Public Law 480 programs pretty much as they stand. Cotton is another matter.

In the case of this commodity the agriculture secretary would retain some discretionary powers in fixing the loan rate, allowing production increases and in other matters. Until it is known just how he is going to use this authority over the next three years, it is impossible to estimate just how much it all would cost. But within the trade itself there isn't much doubt of the bill's objectives. It is to force cotton prices up at the very time it is under heavy pressure from other fabrics.

One particular feature of this measure strikes us almost as ingenious. As matters stand now, the secretary can be expected to call in all CCC cotton loans on July 31, the end of the marketing year. Nothing in the House bill would change this. But something in the Senate bill would.

This is a stipulation that the secretary make nonrecourse loans to those covered by the program for a term of one year from the day of the month in which the loan is made. In other words, as interpreted by cotton experts, a farmer could harvest his crop in September, 1971, put the cotton in a warehouse in May or June of the following year and then leave it there until May or June of 1973 before CCC could acquire title to the cotton. And that isn't all. When CCC finally did take title it would owe the producer about 20 months storage and interest costs.

These costs are estimated at $20 to $25 per bale. But that isn't all either. Under this provision large numbers of cotton producers could elect to withhold their output from the market for the purpose of running up prices. If the stratagem worked, they could pay off their loans and reap whatever profit was available. If it failed they wouldn't even lose their storage and insurance costs. These would be met by the taxpayer.

Fortunately the issue is not yet settled. When a measure as important as the farm bill is as thoroughly bad as that approved by the Senate Agriculture Commission, there is always a fair chance that it will run into difficulty on the floor of the Senate itself. If this doesn't happen, it may be changed for the better in the Senate-House conference. And when two versions of the same bill differ as markedly as the cotton sections of the House and Senate committee bills, there is always a possibility of a further floor battle over the conference report.

Finally, if the final bill is as wretched a piece of legislation as that approved by Senator Ellender's committee, there is always the chance of a presidential veto. But we would consider it sad if this should become necessary, for that would mean a reversion to the pre-1965 program, also cotton-oriented. If it does, the administration must bear a fair amount of the blame. For the better part of two years it has seemed content to let congressional farm leaders "follow their own heads" in working out a comprehensive program, even though it did supply some guidelines.

Only within the past few months have President Nixon and Secretary Hardin shown much disposition to carry their battle for the relatively worthy features of the guidelines to Capitol Hill. Once in the fray, they have proved resolute and resourceful but whether they got into it too late remains to be seen. We hope not.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., August 31, 1970.

HON. ALLEN J. ELLENDER,
Chairman, Committee on Agriculture and Forestry, U.S. Senate.

DEAR MR. CHAIRMAN: The Agriculture Bill as reported by the Senate Committee is not satisfactory to the Administration. The Administration's position on farm legislation was related to the Senate Agriculture Committee in testimony before your committee on August 25, 1970. This testimony emphasized the need to move away from the present language which results in rigidity in pricing and acreage and to offer additional flexibility to producers in directing their individual farming operations. We feel it nec-

essary to deemphasize rigid base acreages and allotments.

If producers are to be given a wider choice of crops within their acreages, it remains imperative to avoid loan levels that may entice the farmers to produce for Commodity Credit Corporation instead of the market. It is vitally important that Commodity Credit Corporation surpluses not accumulate. This additional flexibility is also needed to allow the U.S. farmer to compete effectively in world markets. In general, the flexibility in determining loan levels is needed to encourage exports and bring the desirable mix of crops as directed by the forces of the market. It is in the best interest of producers that loans be a method of obtaining credit and for the promotion of orderly marketing and that they not be used as a means of holding prices permanently and substantially above where the market determines they should be.

The requirement that producer payments for feed grains and wheat be made within 60 days after sign-up, instead of after compliance is assured, has the effect of raising costs in the 1971 fiscal year by approximately $1,730 million. These advance payments would constitute essentially a doubling of payments in fiscal year 1971 with no offsetting reduction in fiscal year 1972. This is contrary to our fiscal objectives and therefore, we must oppose the Agriculture Bill as reported by the Senate Committee. In addition, we have the following reasons for opposing the bill:

(1) Wheat:

(a) The provision in the Wheat Section which would retain the 1965 Act would restrict the freedom and flexibility of farmers to adjust their production patterns. The tying of payments to loan and parity levels bring about built-in prejudices favoring high and escalating loan levels.

(b) The provision requiring a minimum loan is inconsistent with the wheat producers best interest to remain competitive in the domestic feed and international export markets (with minimum export subsidies).

(c) The provision requiring advance payments of sixty days following the sign-up period requires a doubling of payments in one fiscal year and results in an unacceptable budgetary impact. The advance payment requirement for wheat would increase fiscal year 1971 costs by approximately $634 million. These payments would have to be made before compliance could be checked.

(d) There is presently sufficient legislative authority to attain corrective action on the importation of second clears and other wheat products, In addition, all of the items covered by the proposal are bound under provisions of GATT. The proposed legislative change would be in violation of the United States commitment.

(2) Feed Grains:

(a) The provision for the minimum loan is inconsistent with the Administration's position of maintaining maximum flexibility and may unduly encourage increased production in competing exporting countries. It may also contribute to an unsatisfactory balance between corn and soybeans.

(b) The advance payment requirement for feed grains would increase fiscal year 1971 cost by approximately $1,097 million.

(3) Cotton—Under the cotton section, there are several serious problems. Some of these are:

(a) Government's costs would be increased to unacceptable levels (about $150 million per year above the House bill). (See attachment.)

(b) A national allotment of 14.5 million acres with a minimum paying base percentage of 87.5 percent will produce sufficient cotton to meet all needs. This means that the additional acres provided for in the 25% additional provision will not be used. Thus, high-cost producers (and there are many of them in all areas of the Belt) will be induced to increase their cotton production from their share of 11.1 million acres in 1970 to their share of 12.7 million acres in 1971; at the same time efficient producers (and there are a few of them in almost all areas of the Belt) would be required to reduce their non-subsidized production from their share of approximately 6 million acres in 1970 to their share of 1.8 million acres in 1971 (35 percent of 17.1 in 1970 versus 12.5 percent of 14.5 for 1971). This means that the cotton industry cannot make the adjustments necessary to move toward a more viable economy but would in fact move backwards toward an almost completely government supported economy. In this respect, the Senate bill compares most unfavorably even with the Act of 1965. In contrast, the House bill would allow maximum freedom to produce for the market without subsidy. The government cannot spend this much money to save an industry and at the same time preclude freedom of action by those who will try to save it without being subsidized.

(c) The Senate bill retains marketing quota penalties while seeming to remove the effect of them in one section but bringing them back into play in another section if the Secretary is to prevent the accumulation of surplus cotton. Marketing quota penalties will forestall much-needed adjustment and, of course, will be completely unfair to those growers who are not able to realize the full benefits of the program because of the payment limitation.

(d) The Senate bill in many instances reduces the Secretary's authority to deal effectively with changing conditions and to carry out basic program procedures. Specifically, restrictive provisions have been added or retained in connection with the loan rate, lease and sale of allotments, the loan maturity date, and CCC carrying charges. Some of these restrictions preclude actions on the part of the Government and the industry to adjust to the competition of synthetic fibers and foreign cotton production, to let the market determine what crops and qualities are to be grown, and to permit changes to occur in planting, marketing and use patterns that are inhibited by Government payments and controls.

(e) A maximum set-aside percentage of 12.5% for cotton is too low. When comparing payment rates per acre for land set-aside under the cotton, feed grain and wheat titles, it becomes clear that the 33⅓% set-aside provided in the House bill is highly favorable to cotton producers. A lower maximum set-aside for cotton would increase government costs under the feed grain program because an additional 2 million acres would need to be diverted.

(f) The 30% increase in the cotton payment rate for small, low income farmers has much appeal on its face. However, the increased benefits could not be more than about $250 per year regardless of income and family size. We think that poverty in agriculture should be dealt with through the President's Family Assistance Plan now pending in the U.S. Senate.

We are authorized to state that the Office of Management and Budget concurs in our opposition to this bill as stated in this letter.

We have attempted to deal in this letter with the major issues and we will be happy to discuss them with you. There are a number of additional items that are also objectionable which we will submit to you if you should desire.

Sincerely,

CLIFFORD M. HARDIN,
Secretary.

UPLAND COTTON—PRODUCER PAYMENTS AND MAJOR EXPENDITURES, 1966–70, AND HOUSE AND SENATE VERSIONS OF AGRICULTURAL ACT OF 1970 FOR 1971

[In millions of dollars]

	1966	1967	1968	1969	1970	1971 House	1971 Senate
Producer payments	774	934	784	824	907	860	1,040
Value of production	980	938	1,197	1,024	1,131	1,143	1,085
Major net expenditures by the U.S. Government	357	305	1,077	1,012	1,006	1,092	1,243

THE REVENUE-SHARING PLAN

(Mr. BUTTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BUTTON. Mr. Speaker, in recent months, a good deal of attention has been devoted to a phenomenon popularly known as the taxpayers' revolt.

It is most clearly recognized when evidenced by the periodic failure of some bond issues at the polls. School districts have found themselves the most frequent target, but they are by no means alone in the midst of a serious problem—a problem of how to provide the various services and programs needed by the people without escalating the already high tax burden on the average citizen.

A chief source of the problem, I am convinced, lies in the antiquated and generally unfair methods of tax collection that survive in our society. Through multiple levels of government various tax structures—and mechanisms for collection—prevail. Too much overlap exists—and too much waste. This revenue hodgepodge must be changed—it must be updated to meet the pressing needs of today's society.

The importance of this issue is best measured in terms of studies showing the high cost of living as one of the chief issues on the minds of the people of this country. Of course, a key part of the inflationary spiral is the high cost of government, especially of seemingly endless military spending.

In New York State, for example—and in this area in particular—city and county governments and school districts all find themselves approaching the constitutional taxing limit of their jurisdiction.

In my 29th District of New York, recent consideration of a 3-percent sales tax levy in Schenectady County focuses attention anew on this problem of dwindling tax resources.

This is not to say that taxing limits are not desirable. They are. But it does point to the pressing issue of how to maintain—and, in fact, to expand—municipal services to meet the increased needs of our growing population.

It is to this problem that I wish to direct attention now.

Over a year and a half ago, in a major address, President Nixon outlined his plans for "The New Federalism," a policymaking blueprint for the economy encompassing all levels of national life—Federal, State, and local. The key to that plan—as the President himself said—was a piece of legislation known as the Revenue Sharing Act of 1969, though, unfortunately, it was not enacted either that year or in 1970.

This legislation would shift part of the burden from the States and localities and redistribute tax levies more equitably. Under the plan, a certain percentage of Federal income tax collections would be transferred automatically each year to the States and on down to counties, towns, cities, villages, and special districts. One of my first legislative acts, when I arrived in Congress in 1967, was to join as a cosponsor of the first such legislative proposal.

As envisioned, virtually every unit of local government would be eligible to receive funds. The amount would be figured at one-sixth of 1 percent of the Federal tax base in fiscal 1971, rising to a full 1 percent in 1976. In 1975, for example, the total amount to New York State would be $543 million, with $32 million earmarked for local governments in this area. And at least one proposal heard in Congress would triple that amount in planned funding, with the additional possibility that even greater resources could be later transferred to the program if it proves successful.

This would represent a giant step toward solving the financial difficulties now faced by many local governmental bodies. At the same time, the pressure on the average taxpayer would be substantially relieved. Among the chief beneficiaries of such a move would be property owners, who have shouldered an inequitably high portion of the local tax burden for too long.

In many cases, property tax levels have already reached the limit. The problem, however, is that local units of government are best able to meet the specific needs of an area for streets, sewage treatment, water, police protection—all the myriad and welcome municipal services.

New York State has a revenue-sharing plan, enacted under the leadership of Governor Rockefeller, one of the initial authors of the revenue-sharing concept. Under this program, the State will share 21 percent of its personal income tax collections with local governments.

But the need is still great, even greater, for a companion Federal program to balance the fiscal responsibility among all levels of government. Governor Rockefeller has urged adoption of the Federal Revenue Sharing Act and has termed its passage of "critical importance to States and localities throughout the country."

It is time, then, to equalize the burden on a national level and give local governments greater responsibility for programing. The time is past when we can tolerate the counterproductive overlap inherent in the present system.

The revenue-sharing plan would effectively begin the process of eliminating unnecessary duplication. This would have the dual benefit of reducing bureaucratic inefficiencies, while returning to the local level a more effective control over programing to meet local needs.

We face a further complicating problem, however. The revenue-sharing program—the key to President Nixon's new federalism—has been stalled in Congress for almost 2 years.

Some 400 grant-in-aid programs are operated by the Federal Government for the presumed benefit of local government. Most are overregulated and underfunded, and the inexhaustible number of guidelines cause waste and frustration.

But instead of meeting the particular needs of each community or area, the regulations force local governments to engage professional programing and planning staffs to unravel the Federal bureaucracy and then make exhaustive cases for whatever Federal program comes closest to matching the need.

The inefficiency and waste inherent in such a system is evident. The solution would be enactment of a revenue-sharing program in which each local unit of government would be guaranteed an equitable share of the Federal tax dollar.

I have had drawn up a discharge petition which has been placed in the hands of the Clerk of the House, directing the Ways and Means Committee to report out the revenue-sharing bill for action by the full House of Representatives.

I am confident that the sentiment of the House favors positive action on this measure and I hope that without regard to partisanship my colleagues will sign the discharge petition forthwith so that there can be action on it in the remaining month of the 91st Congress.

I can only hope that the interests of the taxpayer will win out in this crucial battle. Victory will mean a major overhaul of our country's revenue system. To do less, I believe, would be the grossest irresponsibility, and a major threat to the economic well-being of the Nation.

ROGERS AND DINGELL INTRODUCE BILL TO AMEND ENVIRONMENTAL POLICY ACT

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ROGERS of Florida. Mr. Speaker, the Army's announcement in late July of plans to transport and dump 418 nerve gas coffins into the Atlantic Ocean brought on substantial national and international outcry. We still do not entirely know what the consequences of the dumping may be on our population and marine life. Nor will we ever fully understand the severity of the potential dangers to our people of transporting the gas by rail through communities along the proposed route, although the operation was completed without mishap. There were simply too many questions left unanswered, and it was apparent that the course recommended by the Army was too hastily announced and inadequately coordinated with other Federal agencies, and interested State and local officials.

During the recent hearings before the Subcommittee on Oceanography of the House Committee on Merchant Marine and Fisheries on the plans of the Department of the Army to dump these poisonous gases, we learned that the Department had been negligent in its consultations with the Department of Health, Education, and Welfare, other Federal agencies, and the States and communities involved. The Army seemed to have forgotten that these other bodies had a stake in the implications of ocean dumping because of its potential effect on the public health, the environment, fish and wildlife resources, and our Nation's foreign relations.

Testimony at the subcommittee hearing revealed that a memorandum from the Atomic Energy Commission, stating that the nerve gas could be vaporized safely by an underground nuclear explosion at a cost of $4 million, had been placed under wraps by the Department of the Army when other governmental agencies and the Council on Environmental Quality were making their deliberations and recommendations on the matter. We strongly believe that these recommendations might have been different had these agencies been fully apprised of this alternate means of disposal. It is our firm belief that the National Environmental Policy Act of 1969, which was enacted as a result of legislation we introduced in the House of Representatives last year, was violated by the failure of the Department of the Army to make a full and timely disclosure of the facts to the Council on Environmental Quality, as well as to other Federal agencies, and to give prior full consideration to the environmental impact of the planned action.

Mr. Speaker, Mr. DINGELL, of Michigan, and I, joined by four distinguished colleagues, Mr. DOWNING, Mr. HANNA, Mr. ANNUNZIO, and Mr. MCCLOSKEY, are today introducing two bills to strengthen the National Environmental Policy Act so that future actions by Federal agencies that significantly affect the environment will be more closely coordinated with other Federal agencies having jurisdiction by law or special expertise with respect to any environmental impact involved. Both bills will specify that the Departments of the Interior, Health, Education, and Welfare State, and the Council on Environmental Quality will all have an adequate opportunity to study an agency's proposed action and make comments and recommendations to be incorporated into the overall proposed operation.

As the Members will recall, the Army gave Congress, the State and local governments, and the rest of the Nation only a 10-day advance notice of their plans to dump nerve gas into the Atlantic Ocean. Ten days is simply not enough time to adequately study the potential impact of such an action on our environment and fish and wildlife resources. Our bills will require the responsible Federal official to give at least 120-days

advance notice to the appropriate Federal agencies, to Congress, and to interested State and local officials. At that same time, comments and recommendations would be requested from these officials. Their observations and recommendations would then be returned to the responsible Federal official who would incorporate such recommendations into the environmental impact statements. Then, at least 60 days prior to the planned action, the responsible Federal official would be required to forward the impact statement to the Council on Environmental Quality, the Congress, and other interested Federal, State, and local officials for their further review and analysis.

This provision of our bills would serve to prevent any hasty deliberations of important decisions in the future such as that which we have just recently experienced with the nerve gas dumping. Furthermore, we are delighted to report that any recommendations made by the State, local, and Federal officials which are intended to minimize the impact on or enhance the quality of the environment, or to protect the fish and wildlife of the United States, would be required to be adopted and implemented by the responsible Federal official.

One of the bills will require the Secretary of Defense to develop adequate plans for the eventual disposition of munitions, chemical, biological, and radiological warfare agents, through demilitarization, detoxification, and decontamination procedures.

Lastly, one of the bills would provide for a complete prohibition of any future dumping of these warfare agents into the oceans and other navigable waters of the United States that present a danger to man, the environment, or to fish and wildlife.

Mr. Speaker, we feel certain that the bills we are introducing today will insure to the public that such an event as the nerve gas dumping episode will never occur again.

NATIONAL FAMILY WEEK

(Mr. MYERS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MYERS. Mr. Speaker, I am today introducing a resolution designating the fourth week of November as "National Family Week." I am proud that a number of my colleagues have joined as cosponsors of this legislation. Hopefully, many more will in the days ahead.

The basic strength of our or any free and orderly society is the family. There could be no more appropriate week than that including Thanksgiving Day for us to honor our family loyalties and ties.

The legislation would authorize the President to designate the week beginning with the fourth Thursday in November of each year as "National Family Week." It also encourages the States and local communities to observe the week with appropriate ceremonies and activities.

The Family Week observance was inspired by a constituent, Mr. Sam Wiley, who formerly taught in the Shakamak school system and is now assistant principal at Whiteland High School. My research shows this is the first such resolution of its kind.

The current unrest and dissatisfaction among the younger generation and the so-called generation gap can be traced in most cases to a complete breakdown in communications between parents and children. While observance of Family Week does not promise to resolve all the unrest, I view it as a giant step toward the goal of restoring the traditional principles of respect and self-discipline which have made this a great nation.

National Family Week is designed to coincide with Thanksgiving Day, that traditional time in America when families are rejoined for the purpose of giving thanks to God for the blessings which have come to them.

National Family Week would serve as the focal point for the enlistment of millions of American parents in an effort to better understand the wants and needs of their children and to encourage the children to better understand the duties and obligations of their parents.

I am hopeful of speedy approval of this resolution and that various organizations in the local communities, such as service clubs, patriotic organizations, church groups, scouts, and 4–H, will join together to make this observance as meaningful as possible.

Primarily, the emphasis must come from within the family structure itself. It is this vital institution which has proven its capacity to provide adult and child alike with the needed affection, discipline and security which so many today complain are lacking in their lives.

APPEAL TO SOVIET TO CHECK PERSECUTION OF JEWS

(Mr. PHILBIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PHILBIN. Mr. Speaker, in December of last year, I strongly protested Soviet mistreatment of Jews in Russia. I addressed the House in a fervent plea to our State Department and the Secretary General of the United Nations to circulate among its members the request of the Israeli Government on a specific case of mistreatment it cited, and refer the matter for action to the Human Rights Commission.

In addition, I urged our Secretary of State to recommend to the Secretary General that this matter be officially referred to the Commission and placed on the agenda for consideration at the earliest possible time and to use the good office of our Government with the Soviet Union to prevent these abuses.

While some consideration has been given to mistreatment and persecution of Jews in Russia, there are continued complaints that these pernicious practices are still taking place. I renew my protest, and am again calling on the Secretary of State to give these matters his insistent attention, so that representations can be made to the Soviet Government in behalf of our own Government that we strongly oppose any manifestation of anti-Semitism, and particularly mistreatment and persecution, and denial of human rights of the Jews in Russia.

I am also joining with my friend and colleague, the distinguished Congressman from New York, Hon. RICHARD OTTINGER, in the concurrent resolution he is supporting in an effort to fix attention on this very regrettable situation in Russia and bring it to an end.

I am introducing this resolution in the House today. It reads as follows:

CONCURRENT RESOLUTION

Whereas the Congress deeply believes in freedom of religion for all people and is opposed to infringement of that freedom anywhere in the world; and

Whereas the Union of Soviet Socialist Republic continues to practice cultural and spiritual genocide against its three million Jews; and

Whereas the Soviet Union denies exit visas to its Jewish population, singling out those who wish emigrate to Israel for special persecution; and

Whereas the United States has not taken effective action to halt these repressive practices; now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), that it is the sense of the Congress that (1) persecution by any person because of his religion by the Soviet Union should be condemned, and (2) the President of the United States should take immediate action through diplomatic contacts, including the SALT talks and the Big-Four Mid-East talks to negotiate permission for Soviet Jews to emigrate to Israel and other countries willing to receive them.

I think we should continue to press the Soviet Government in conferences and in the United Nations to make every effort to end persecution and discrimination, and other manifestations of anti-Semitism, so that all men and women would be entitled to equal treatment under the law, regardless of race, class, creed, or status, and would be treated and be protected in their individual and human rights.

As I have noted before, anti-Semitism is a curse and a scourge to humanity, and it must be banished by all mankind, and this great Nation of ours must set the example, as we have done in the past. I repeat, and I urge, that the Jews must be free from the cruel bondage of discrimination, mistreatment, and persecution.

I also urge our Government to take a determined stand in striking down these gross violations of ordinary, human rights, and I plead with all my heart with the Soviet Government to end these deplorable practices that shock world conscience.

CONCURRENT RESOLUTION FOR EXTRADITION OF AIRLINE HIJACKERS

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I have tolay joined the distinguished gentleman from Illinois (Mr. PUCINSKI) and 70 other Members of the House in introducing Concurrent Resolution 340, calling on the administration to negotiate

extradition treaties covering aircraft hijackers. The Tokyo convention signed by the United States and nearly 40 other countries condemns hijacking but does not provide for the return of hijackers to the flag country of the aircraft involved to face prosecution. Yet aircraft hijacking is a dangerous crime threatening the lives of innocent people indiscriminately.

Aircraft hijacking will only cease when there is an effective body of international law which recognizes it as a vicious international crime and makes it possible for hijacking to be punished as such.

Mr. Speaker, at this moment 200 men, women, and children sit in their broiling airliners on the surface of the Jordanian desert, threatened with death at 10 o'clock tonight. The madmen who took them there—men who rob language of meaning by styling themselves liberators—hold them ransom and threaten a slaughter of innocents if criminals and prisoners of war are not set loose in several countries. They make this threat in the hope of reopening hostilities between Israel and the Arab States. Surely this is an excercise in foulness seldom matched in international power struggles.

We must pray for the success of the International Red Cross in its delicate negotiations to free the people caught in this terrible trap. And we must also move to free international air travel from the future threat of hijackers.

Mr. Speaker, I believe that a first step in that direction is the resolution many of us have introduced here today. Our resolution calls upon the administration to negotiate mutually binding treaties with all countries to force the return of aircraft hijackers to the flag country of the aircraft they have hijacked. There they could face prosecution for their crime.

In the case of hijackings motivated by the political aims of Middle Eastern outlaws, we recognize, tougher and more farreaching steps may be necessary. Governments, airlines, and pilots' associations are now considering whether this is the case.

Mr. Speaker, if President Nixon finds it necessary to cut off landing rights in the United States to airlines of nations which treat hijacking as a game, or if the President takes other strong steps against governments playing patsy with air pirates, I will support him fully. I am confident that other Members of Congress will, as well.

AIR POLLUTION AND THE ADMINISTRATION'S TAX PROPOSALS

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. VANIK. Mr. Speaker, today, the Committee on Ways and Means began important hearings on the administration's excise tax proposals including a tax on leaded gasoline. Congress must not overlook this opportunity to fight pollution by use of the power to tax pollution out of existence.

Therefore, I intend to offer an amendment to the administration's tax proposal which will strike at the heart of the motor vehicle pollution problem by imposing an increased excise tax on polluting automobiles which fail to conform to acceptable and feasible standards.

Under my proposal, polluting motor vehicles will be subject to a 10-percent excise tax in 1972, a 20-percent excise tax in 1974, and a 25-percent excise tax thereafter. Those vehicles, factory-equipped with adequate pollution control devices, will be exempt.

I am confident that the automobile industry is capable of developing feasible solutions within this timetable. This effort will be effectively stimulated by this tax proposal.

The tax table which I propose is based upon the California standards of emission control with which the industry must already comply in California. They are the strongest and most effective in the Nation. Since they are feasible, legal, and successful in California, they should be adopted as the national minimum standard. After 1975, the emission tables will have to be modified to insure the utilization of the latest technologies in pollution control.

I propose the following schedule of excise taxes on polluting vehicles:

	Grams per mile		
	1972	1974	1975
Reactive hydrocarbons (HC)	1.5	1.5	0.5
Carbon monoxide (CO)	23.0	23.0	11.0
Oxides of nitrogen (NO_x)	3.0	1.3	0.9
Excise tax on motor vehicles above these standards (percent)	10	20	25

I do not anticipate that my amendment will bring any substantial sums into the Treasury. Its purpose is not to gain money for the Treasury; its purpose is to provide an incentive—a very strong incentive—for the development of clean-powered cars. Its purpose is to cut down the level of air pollution; its purpose is to improve the health and quality of life of all Americans.

If the administration is really serious about stopping pollution, it will support my amendment. As President Nixon himself has said:

I have become further convinced that the 1970's absolutely must be the years when America pays its debts to the past by reclaiming the purity of its air, its waters, and our living environment. It is literally now or never.

It is literally now or never. The existing automobile engine is the most serious and dangerous source of air pollution in the United States—and the world—today. The U.S. Public Health Service estimates that the auto causes 60 percent of all air pollution in America today. In urban centers, like Cleveland, Los Angeles, New York, it can cause up to 85 percent of the pollution in the air. It is an unbelievable figure, it staggers the imagination but it is a fact that the auto causes 180 billion—billion—pounds of pollutants per year—many of these pollutants are poisonous, deadly compounds.

What does this pollution do to the health of each of us? In New York City, death rates from emphysema have increased by over 500 percent in the last decade. Death from chronic and acute bronchitis have increased by some 300 percent. Lung cancer and heart disease are at new highs. There is a reason for this, and the reason is increasingly dirty air—and the major reason for the dirty air is the present automobile engine. The September 1, 1970, issue of Conservation News carries an item about the findings of two Pittsburgh economists, Dr. Lester B. Lave and Eugene P. Seskin of the Carnegie-Mellon School of Industrial Administration who have compiled statistics proving that if air pollution were cut by 50 percent in major cities, they say:

A newborn baby would have an additional 3 to 5 years life expectancy.

Deaths from lung cancer and in fact all lung disease would be cut by 25 percent.

Death and disease from heart and blood vessel disorders might be cut by 10–15 percent.

All disease and death would be reduced by 4.5 percent yearly, and the annual saving to the Nation would be at least $2 billion.

We can put it more simply.

Said Lave in an interview with the Washington Post—

For the average middle-class American family living in an urban area, abating air pollution is the single most important thing we could do to improve health.

Not only does air pollution kill and disable, but it causes extensive corrosive damage to building, property, forests and crops. The total cost to the economy is estimated at $30 billion annually.

If we are to fight pollution, we must utilize every form of governmental persuasion. The pollution excise tax will bring about a more rapid program of control than any other device. The power to tax pollution is the power to stop it.

RESULTS OF 1970 OPINION POLL

The SPEAKER. Under a previous order of the House, the gentleman from Missouri (Mr. RANDALL) is recognized for 10 minutes.

Mr. RANDALL. Mr. Speaker, for several years I have benefited quite substantially from the annual opinion poll I conduct each year among the residents of Missouri's Fourth Congressional District. The results of these polls, plus the added comments that many participants send along, not only help keep me abreast of the thinking of the citizens I have the honor to represent, but happily in some instances confirm the judgments I have previously exercised in the performance of my duties as their Representative in Congress.

The returns from my 1970 opinion poll have now been finally tabulated. Once again I wish to share with my colleagues the concerns that have been expressed by what I like to believe are the straight-thinking people of America's heartland—west central Missouri. I admire their forthright expressions and respect the good judgment of their recommendations for coping with the problems of the day.

The totals in this poll have been arrived at by reading and then counting every single ballot as it was returned. I have noted in every case the added written comments. This tabulation is not a mere "sampling of opinion" or some kind of estimate of results. Instead, it is a precise or exact reflection of the expressions

of opinion of those who responded to our opinion poll.

At the conclusion of these remarks I intend to include the complete results of my poll. Before that, I would like now to direct attention to some of the interesting highlights of the responses as follows:

Sixty-nine percent of those who participated are willing to rely upon the President's careful use of his constitutional authority as Commander in Chief of the Armed Forces in committing U.S. troops to service in combat zones. Thirty percent felt that such actions should be taken only with congressional authority, even if the delays thereby encountered exposed our intentions to the enemy.

The President's policy of withdrawing our troops from Vietnam in stages, while strengthening the South Vietnamese to assume responsibility for their own security, was supported by 58 percent of the ballots. Twelve percent of those who responded urged immediate U.S. withdrawal, while only 6 percent favored an agreement upon some deadline date in the future for absolute withdrawal, without consideration for interim developments.

Fear of crime and the fervent desire for meaningful legislation to control crime remain high in the concerns of the residents of west central Missouri. Seventy-six percent of the respondents to our poll support tough mandatory court sentences on all offenders with the exception of those who may be convicted for the first time. Eleven percent of the respondents suggested that more money be spent for equipping and training local police, while 9 percent believe more money should be appropriated to relieve social tensions as the best means of reducing crime.

The effects in Missouri of runaway inflation have been so great as to lead 71 percent of the participants in my opinion poll to advocate mandatory use of price, wage, and consumer credit controls for protecting the economy. In a list of six Federal programs that might be reduced as a means of cutting Government spending and balancing the budget, 40 percent supported cuts in the foreign aid program, while over 27 percent asked for less money for space exploration.

On 41 percent of the ballots, the respondents appraised the job being done by President Nixon to be "good." However, an identically equal number, another 41 percent, believed his performance was only "fair." Seventeen percent adjudged the President's performance to be "poor."

Where subtotals on some questions do not add up to exactly 100 percent such means that a few respondents were uncommitted as to such questions.

The complete results of my 1970 opinion poll are as follows:

RESULTS OF 1970 OPINION POLL

[*In percentage*]

PRESIDENTIAL AUTHORITY

If long Congressional Debate would give advance notice of our intentions to the enemy, would you, nevertheless:

(1) Insist that the President obtain approval of the Congress before committing U.S. troops to cambat zones..... 30

(2) Rely upon the President's careful use of his Constitutional authority as Commander in Chief of the Armed Forces to take such actions when necessary without prior Congressional approval... 69

VIETNAM

With respect to "getting out of Vietnam", do you favor:

(1) The President's policy of withdrawing troops in stages while strengthening the South Vietnamese to assume responsibility for their own security.... 58

(2) Agreement upon some absolute future deadline for total troop withdrawal, regardless of interim developments..... 6

(3) Immediate U.S. withdrawal..... 12

(4) All-out effort for military victory..... 23

CRIME

In order to fight crime, do you favor:

(1) More federal aid to cities and states to train local police and buy equipment..... 11

(2) A Federal Police Force..... 3

(3) Tough mandatory sentences by courts upon conviction of all but first offenders..... 76

(4) Spending more money in cities on urban renewal, job training and additional welfare to relieve social tensions said by some to be the cause of crime.. 9

SOCIAL SECURITY

Which one amendment do you think is most necessary:

(1) Periodic benefit increases by Act of Congress..... 11

(2) A built-in system of automatic cost-of-living adjustments..... 40

(3) Liberalized ceilings on outside earnings without reducing benefits..... 24

(4) Eligibility at age 62 for full payment of benefits to men as well as for women?..... 24

Do you think the job President Nixon is doing is:

Good..... 41
Fair..... 41
Poor..... 17

INFLATION

In order to reduce inflationary pressures, would you favor use of mandatory controls over prices, wages and consumer credit?

Yes..... 71
No..... 28

Reductions in federal spending would also combat inflation while helping balance the budget. For accomplishing these purposes, please list (1, 2, 3, etc.) by number your preferences for the order in which the following programs should be reduced:

1. Foreign aid..... 40
2. Space exploration..... 27
3. Poverty, welfare programs..... 11
4. National defense..... 10
5. Urban aid, renewal..... 8
6. Educational assistance..... 3

AGRICULTURE

When the present farm program expires this year, should we:

(1) Renew the existing program, as is.. 18

(2) Abolish all federal farm programs.. 21

(3) Adopt an administration proposal to reduce price supports and loan levels and limit payments under the program... 26

(4) Substitute the program recommended by 21 major farm organizations for farm improvements..... 35

Do you live on a farm?

Yes..... 38
No..... 61

POLLUTION—WATER AND AIR

Because of long delays, the magnitude of the task to clean up our environment will require enormous expenditures. Are you willing to help pay for it with higher taxes, if necessary, and increased prices on some consumer goods?

Yes..... 61
No..... 38

In your opinion, What is our Nation's No. 1 need today?

Crime abatement..... 26
Peace in Vietnam..... 14

STATEMENT BY CONGRESSMAN SEYMOUR HALPERN—SUGGESTED MEASURES TO PREVENT ANOTHER WAVE OF HIJACKING

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. HALPERN), is recognized for 5 minutes.

Mr. HALPERN. Mr. Speaker, I rise today to show my deepest concern for the rash of criminal acts that have been perpetrated by criminals from Arab terrorist groups.

Today we learn that these senseless criminals have struck again and endangered more innocent lives by hijacking yet another airplane to their so-called revolutionary airport in the desert; but the world community has done nothing to prevent this kind of lunacy in the future. Indeed, it has demonstrated extreme impotence in dealing beforehand with the terror tactics of these vicious air pirates. The demonstrated helplessness of the world after innocent passengers are taken prisoner and held under threat of death is, of course, more understandable.

The time is ripe to renew the proposal which I put before this distinguished body some months ago; namely, that an international conference be convened for all countries serving the Middle East by air in order that they might adopt strong measures to stop this gangster-like terrorism. There are six measures which, at a very minimum, I would ask such a conference to consider.

First, the nations should boycott all airports of any nation that gives aid and comfort to these terrorists, including those which fail to prosecute captured air pirates.

Second, this boycott should also include a refusal by participating nations to permit the airlines of such countries to use the airports of other nations.

Third, these sanctions should extend to an embargo on the sale of all civilian and military aircraft to such countries.

Fourth, the resources of the member nations should be pooled to develop and install effective detection equipment in all of the major international air terminals in the world. When one compares the $23 million loss suffered by Pan American in the destruction of one airplane by terrorist bombs, this makes the cost involved in the development and installation of detection equipment seem like a pittance.

Fifth, all participants with major in-

ternational air carriers should consider the employment of armed personnel to discourage and prevent the lawless terrorists from usurping control of aircraft. I believe that the Israeli Airlines, El Al, should be commended for their comparable security measures and for their prompt action in preventing the recent attempt to hijack one of their airplanes over England.

Finally, the international convention should consider all necessary amendments to such international legal pacts as the Warsaw and Hague conventions so that acts of international terrorism, such as we have seen in recent days, are defined as violations of international law.

It is unfortunate that this terrorism should come at a time when the hoped-for peace talks between Israel and Egypt are at an impasse. At the same time, this senseless terrorism does demonstrate dramatically to the world exactly what the Israelis are up against. It is not a reasoning and rational enemy that they face; it is the unreasoning, criminal, overreacting terrorists like those involved in these hijackings.

I hope and pray that no innocent passenger will lose his life, but we must act immediately.

SST'S THREATEN WORLD OIL SUPPLY

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS), is recognized for 30 minutes.

Mr. REUSS. Mr. Speaker, a recent article in the London Observer concludes that the proposed fleet of American SST's and British-French Concordes will need so much oil for fuel that the world could face a critical oil shortage in 15 years if the planes go into production according to schedule.

The article, which appeared in the August 30, 1970, edition of the Observer, was written by Observer Reporters Gerald Leach and Andrew Wilson.

According to their calculations, the fleet of 300 British-French Concordes and 80 American SST's planned for 1980 will use up 320 million metric tons of crude oil each year—more than 8 percent of the estimated total world oil consumption for that year.

The supersonics, they point out consume up to 2½ times as much fuel per passenger-mile as subsonic aircraft. The Concorde will consume 272 metric tons of kerosene each day—three times its own weight—while the larger and faster American SST will burn more than twice as much fuel as the Concorde.

Even without the supersonics, the oil industry is going to have to double its production in the next decade. This means twice as many tankers to spill oil in the ocean, twice as many offshore wells to pollute beaches, twice as many pipelines and refineries to disturb the ecology, and twice as many depletion allowances to torment the average taxpayer.

When the demand for oil generated by the supersonics is added on, the problem becomes truly staggering. By 1985, with a combined fleet of 585 supersonics projected—300 Concordes and 285 American SSTs—609 million tons of crude oil per year will be needed just to keep these planes running—that figures out to around 11 percent of currently projected world oil demand for that year.

The National Environmental Policy Act of 1969—Public Law 91–190, January 1, 1970—requires every Government agency which proposes an action significantly affecting the quality of the human environment to submit to Congress a statement on the environmental impact of the proposed action. This statement is to include, among other things, an estimate of any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.

Transportation Under Secretary James M. Beggs told the Senate Transportation Appropriations Subcommittee nearly 2 weeks ago, on August 27, that the Transportation Department would submit the required statement on the SST within 2 weeks. Hopefully this statement will deal with the demands the SST will place on the world's oil resources in the next 15 years. If it does not, it will certainly make a mockery of the Department's claim that it "first asked some 5 years ago the questions certain ecologists are asking today relative to the possible environmental consequences of supersonic transport operations"—Secretary Beggs' August 27 testimony. If the Department has been seriously concerned about these matters for 5 years, surely the problem of depletion of the world's oil supply must have come to their attention. And since they have had 9 months to prepare the environmental impact report, surely there has been time to deal with this problem in the report.

I include the full text of the London Observer article in the RECORD at this point:

SST's THREATEN WORLD OIL SUPPLY

(By Gerald Leach and Andrew Wilson)

LONDON, ENGLAND.—If British and American planemakers sell their planned total of supersonic airliners, the world could face a critical oil shortage within 15 years.

This is the unmistakable conclusion to be drawn from an analysis of the planes' projected fuel consumption measured against the amount of oil that the petroleum industry expects to provide by 1985.

Calculations show that even by 1980 the planned fleet of supersonic transports—300 British-French Concordes and 80 American Boeings—will demand the production of about 320 million metric tons of crude oil each year.

THIRD OF PRODUCTION

This is nearly a third of the total planned oil consumption of Western Europe or the United States in the same year. It is more than one and a half times the forecast need of Southeast Asia, more than three times that of Africa. And it is some 8% of expected total world oil consumption—all for 380 aircraft.

In 1985 the Boeing fleet will have swollen to 285, making a total of nearly 600 supersonics, a far more serious drain on world oil. Beyond 1990, estimates become more difficult; American officials have spoken of an ultimate market for 1,200 planes, including Boeings, Concordes and Soviet TU–144s.

THE 100,000 TONS A YEAR

What mars the plane makers' dream is the voracious appetite of supersonic aircraft for kerosene. The British Aircraft Corp. says that one Concorde will consume 5,600 gallons an hour on a 3½ hour London-New York flight . . . or a total of 18,600 gallons.

A subsonic jet such as the Boeing 707 or the Douglas DC–8 burns about 1,700 gallons of fuel an hour at cruising speed and cruising altitude and much more at lower altitudes. But the flight is longer—6½ or 7 hours meaning consumption of at least 11,000 gallons.

To justify investment in the aircraft, airlines will have to operate four transatlantic flights by each plane each day—or an average of 14 hours revenue flying in every 24. This means that a single Concorde will consume 272 metric tons of kerosene each day, three times its own weight. Over a year the consumption amounts to 100,000 tons.

The first Concorde is due to enter service about January, 1974, and subsequent planes will come off the production line at the rate of one a week.

In 1980, these 300 aircraft will burn 20 million tons of kerosene.

But in 1978—two years before this happens—the much larger Boeing supersonic airliner, the 2707–300, will have entered airline service—if it passes Congress.

Boeing plans to produce one 2707 every nine days to meet a sales target of 500 by 1990, or 80 by 1980. The 1,800 m.p.h. Boeing is twice as heavy as Concorde, carries nearly twice as many passengers (234 against 125)—and will burn more than twice as much fuel.

On conservative assumptions, a fleet of 80 Boeings will burn 16 million tons of kerosene in a year. The ultimately planned fleet of 500 will burn 100 million tons.

SEVEN TONS OF OIL

In other words, the supersonic fleet of 1980 will consume a total of 46 million tons of fuel.

But this is merely the supersonics' requirement in kerosene. To produce one ton of kerosene means refining at least seven tons of crude oil.

In unrefined petroleum—the stuff that comes in tankers—the 1980 supersonic jet fleet will take up 322 million tons annually.

To appreciate what this means, one must look at the official projected 1980 figures for crude oil demand, published in the International Petroleum Encyclopedia: North America 1,120 million tons, Western Europe 1,100 million, Soviet bloc 710 million, Latin America 240 million, Southeast Asia 200 million and Africa 95 million.

BASED ON PROJECTIONS

These figures are based on projections of how oil requirements for industry, motor transport, domestic heating and the chemical industry are likely to grow.

They allow for the enormous expected growth of air traffic (now about 12% per year), but cannot take account of the further increase of a switch to supersonics.

The critical factor is that the supersonics consume up to 2½ times as much fuel per passenger mile as subsonic aircraft, and are ultimately expected to carry about 20% of all traffic.

To meet increased demand, the oil industry is planning to double its production in the next decade—from a world total of about 2,000 million tons this year to 4,100 million tons in 1980.

But can it do it? To double production means squeezing into the next 10 years as big an investment in money, skill and effort as has gone into the entire 110 year history of the industry; double the tanker tonnage, double the refinery capacity, double the well production, double the exploration to keep

up the oil reserve pool—assuming such oil can be found.

There are already some doubts in the industry as to whether this can be done—let alone meet the further tidal increase demanded by the supersonics.

By 1985 the increase demanded by the latter will be even more staggering. Even if the Concorde fleet is limited to 300 after 1980, the American Boeings will number 285 and the combined fleets will be burning 87 million tons of kerosene in the year.

The Boeing and Concorde fleets will then need the kerosene from an astronomical 609 million tons of crude oil—around 11% of currently projected world oil demand, and much more than the requirement of several underdeveloped continents.

All this suggests that the $4.8 billion that will ultimately be needed to launch the Concorde and the Boeing could be more rationally applied to the development to technologies that will ease, not aggravate, the transition to a world without oil.

ARTHUR GODFREY OFFERS "CONFESSIONS OF A POLLUTER"

The SPEAKER. Under a previous order of the House, the gentleman from Maryland (Mr. FALLON), is recognized for 30 minutes.

Mr. FALLON. Mr. Speaker, wanting to share with my colleagues an outstanding contribution to the fight against pollution by Arthur Godfrey I ask consent to include in the RECORD an article entitled "Confessions of a Polluter," which appears in the September issue of Reader's Digest.

Authored by the distinguished gentleman known to most Americans as one of the most talented members of the radio-TV fraternity, the reasoned and rational position set forth by Mr. Godfrey cannot but help us in our struggle against the various forms of pollution which threaten our very existence. All too often those who are deeply committed to, and are involved in the antipollution fight are scientists, engineers, and similar professionals who present their arguments in the technical terms of their professions.

Not so Arthur Godfrey. In the terms of current jargon he "tells it as it is," reaching the millions of readers of this popular publication. He reveals that for the past 25 years he has been acutely aware of the changes in our environment and has been actively involved in doing something about it. Many may be surprised to learn that he is a member of numerous conservation groups, among them the Izaak Walton League, the World Wildlife Fund, the Audubon Naturalist Service, Friend of the Earth, the National Parks Association, and Save-the-Redwoods League.

Many Members of this House are already aware of Mr. Godfrey's interest in these areas, since he has appeared before us on occasion to support antipollution legislation. He is to be commended for his deep concern and his personal involvement in the continuing battle to maintain the balances of nature, so that mankind can survive.

This article and the activities of all concerned citizens helps those of us who are involved in the effort to enact vital conservation and environmental legislation:

CONFESSIONS OF A POLLUTER

(By Arthur Godfrey)

The fact that something is wrong with the environment began to seep through my thick skull some 25 years ago—soon after World War II, when gas rationing ended and I resumed flying my own plane. I think I noticed the urban sprawl first and then the dirty air. Fliers used to say, "If you're ever lost, look for smoke. Where there's smoke, there's a city—and a field you can land on and ask where you are!" But by the middle 1950s this no longer held true. There was smoke—and something new called smog—*almost everywhere*, over country and city alike. Today it hangs like a pall most of the time over the entire nation, and even out over the sea.

There were other changes, too. I used to race an "S" class sloop on the sparkling waters of Long Island Sound every weekend. On fine days we'd get a good start in a brisk northwest breeze, but this would almost invariably poop out by midafternoon. Still, we could always count on the "evening southerly" to spring up about five o'clock and give us a thrilling beat back to the finish line off Larchmont, N.Y. This was due to the green earth's cooling off in the late afternoon and the consequent advection of the warmer air from the ocean, whose temperature remains comparatively constant. Over the years, however, the evening southerly became less and less reliable, and our boats were frequently becalmed.

Now I'm the kind of guy who always needs to know why and wherefore. So I went looking, and from a borrowed seaplane one dead-calm Sunday I discovered that the late-afternoon breeze still blows farther east, down the Sound—but not in the western waters, of Hempstead and Sands Point, where the land is covered with concrete and asphalt. These highways, airports, factories and houses, I figure, absorb the heat of the sun and retain it. Not until long after sunset does the concrete eventually cool, and *then* the southerly blows.

Meanwhile, the quality of the water had also changed. From those same factories and power plants and dwellings every day, millions of gallons of industrial and human wastes are poured out, eventually into the Sound. It's bad enough sailing briskly through this crud but, when you find yourself becalmed in it on a hot afternoon, that's all, folks! I resigned from the Larchmont Yacht Club and shipped my boat down to Florida in the early '60s, then gave her to the University of Miami a year later when I observed Biscayne Bay going the same polluted route.

FARMER'S FOLLIES

The rape of the good earth has struck me where I live, too. I bought a farm 25 years ago in the beautiful, unspoiled Blue Ridge Mountain country of Virginia. That is, I thought the land was unspoiled.

Disillusionment set in the first year. The grand old farm manager I inherited with the place worked it on shares as he had for previous owners. "Ever' sprang" he plowed those lovely, rolling hills and planted corn, in long straight rows so it would be easier to cultivate and to pick. Still, the harvest was always poor; we were lucky to get 25 bushels of corn to the acre.

Driving home one day during a heavy rain, I observed seas of mud being washed down off the plowed hillsides of other farms onto the highway. At home, I donned foulweather gear and rode a horse out across the fields. My worst fears were confirmed: the swollen creeks draining my own farm were torrents of reddish, soupy mud. No wonder little grew on the hillsides! The topsoil, with all the expensive chemical fertilizers we had put on it, was being flushed down those straight corn rows to the streams, the creeks, to the Potomac River. And this process had been going on for half a century or more!

I decided then that perhaps the greatest contribution a man can make is to leave the piece of ground which has nurtured him in better shape than it was when he took over. Since that day, I have not allowed a plow to touch my hillsides. The bald spots left by erosion we covered with hay and straw and spreader-loads of manure from the stables. Each year a first crop of hay is harvested; then later we clip the fields again and "let it lay." The result has been the greenest hillsides in the area even in times of late summer drought—and there are no more bald spots. The streams run clear and sparkling.

But one cannot fatten steers on grass, so about 15 years ago we went to a cow-calf operation—breeding purebred white-faced Herefords. And a new set of troubles began.

Every spring we lose apparently healthy cows. Suddenly, a week or two after calving, a cow begins to act strangely. She looks wildly around, weaves drunkenly, falls, and within seconds stiffens and expires. Sometimes, if one can get to her fast and inject a mixture of dextrose and minerals directly into the jugular vein, she'll stand up after a while and resume grazing as though nothing had happened.

Grass tetany, say the vets, caused by a mineral imbalance. But though we tried special feeding, and put mineral and salt blocks all over the place, the strange malady still strikes. In the spring of 1968, for example, we lost 27 cows.

Finally, on a hunch, we analyzed samples of water from a stream which drained a pasture. Sure enough—arsenic! It is probably the residue of small quantities spilled or left forgotten during spraying operations when the pasture was an orchard half a century ago! Every spring when the snow melts and the heavy rains come, traces of the arsenic—which is persistent, practically non-biodegradable—are washed into the stream. (We have found the arsenic in the grass, too, and in the livers of the dead cows.) Now, in addition to the intravenous dextrose and minerals, we give a stricken cow a shot of arsenic antidote as well. And last spring we lost only three cows.

How many more decades will have to pass before nature can rid our fields of that arsenic? And how about the DDT and other hydrocarbons used by people we hired to spray our garden fruit trees before I learned better only four years ago? We use no chemical fertilizers or persistent pesticides of any kind now. We use pyrethrins instead, and friendly insects and lots of birds. The fruit isn't as free of blemishes as it used to be when we sprayed with DDT, but I swear it's tastier, and we're no longer afraid to eat it without washing it. We poison nothing anymore.

WHAT MAKES EARTH DIFFERENT

In Genesis 1:28, God said: "Be fruitful and multiply and replenish the earth, and subdue it." The Judeo-Christian world heard every word except one. "Subdue it" came in loud and clear, and so did "multiply." But practically nobody heard the word "replenish."

When our forbears came to this land, massive trees marched from Maine to the Dakotas. There were fragrant cedar swamps, miles of fir, pine, oak, chestnut, elm and hickory. Lewis and Clark reportedly saw them rising "like masts along the shores of a thousand crystalline lakes." Now, most of those forests are gone and the crystalline lakes are open cesspools. Man subdued and took dominion all right.

In addition to being beautiful, trees are a vital part of the ecosphere—the very thin,

fragile interface of sea, land and atmosphere which is what makes earth differ from other planets. When the land is scalped at the headwaters of our rivers, the humus in the soil is eventually destroyed and water is no longer held in gradually seeping storage. Then flash flooding results in devastating soil erosion, as California learned in 1964. And thus do green forests become bleak deserts. Famed ecologist Paul Ehrlich stated recently that the deserts and wastelands of the world have increased from 10 percent of the total land area to 25 percent in the past century alone.

STUFF IN THE WATER

What about water pollution? Well, for starters we have killed Lake Erie. Lake Michigan is sick with a gray tide of pollution. All of America's 22 major rivers are running sewers carrying our wastes and poisons to the seas. Millions of fish have perished in the Mississippi (to name just one) because its tributaries drain 32 states that have been saturated with such persistent pesticides as DDT, endrin and dieldrin.

In addition, phosphates overfertilize these rivers, lakes and streams, causing excessive algal bloom and eutrophication, or aging. Ironically, household detergents have become the "whipping boys" for this. It's true that laundry products are responsible for about 60 percent of the phosphates in municipal sewage; human body wastes furnish the rest. But in non-urban, agricultural areas—a greater part of the country—more than 70 percent of the phosphates come from the farms, washed out by rains and irrigation. In either case, the pollution may be considerable. (You may have noticed that I don't sell a certain laundry product anymore. It's still a good detergent, but like its competitors it is in some degree a polluant. And I can't sell a product for which I have to spend time in a 30-second commercial apologizing for its shortcomings.)

Of course, we have long believed that the seas possess limitless capacity to cleanse themselves. Wrong! Dead wrong. In fact, the seas are fast approaching their limits of pollution. Because of winds, currents and tides, toxic pesticides are now found in penguins and seals in both the Arctic and Antarctic. No one ever did any spraying there!

QUALITY OF LIFE

All the pollution in our once-beautiful land has been produced by only 200 million Americans. At our persent rate of population increase, there will be 300 million Americans 30 years from now (with seven billion persons on the entire planet). And those 300 million Americans will be hungry, too. We have less than 450 million acres of arable, usable soil upon which to raise food, and we're losing about a million acres of that per year to highways, airports and urban sprawl. At this rate, we will be left by 1995 with just 1.4 acres per person upon which to raise a year's supply of food. And that will be a problem!

Since millions of people already are going hungry, it seems obvious to me that the world passed its optimum population figure—perhaps as early as 1830, when the first billion mark was reached. And yes, we've got an optimum population figure for America, too, if we're going to maintain any quality of life. I'm old enough to remember vividly when we had only 100 million: what a paradise this was!

What can be done? Well, first, we who vote must learn the facts. Some of our politicians and leaders of industry shrug off books like Paul Ehrlich's Population Bomb or Barry Commoner's Science & Survival as "just too far out." They fly across the country, see all that empty-looking land stretching below them, and they cannot believe there isn't enough room for ten times our present population and then some. They forget that less than 450 million of those acres can be used to raise food—and the "emptiness" only means that 85 percent of our people are living in the cities. As ingenious as our technologists have become, they cannot manufacture one grain of soil or one drop of water or one cubic inch of fresh air. Man—especially urban man—actually contributes nothing to the environment but pollution.

So, read the books I have mentioned, plus others like Robert and Leona Reinow's Moment in the Sun, Wesley Marx's The Frail Ocean and Aldo Leopold's A Sand County Almanac. Digest them. Encourage others to read them. Then when you vote, vote carefully—and make sure that your candidate knows at least as much as you do. Raise hell with him if he cops out.

Make every effort not to pollute or litter. Try to recycle resources that you use. Don't waste. And remember: Nothing will work unless we cut the population down.

If such restrictions are hard to understand, consider this: The population of the world is now 3.6 billion and doubling every 30 years or so. Forgetting other considerations, that means 7.2 billion by the year 2000; 14.4 billion by 2030; 28.8 billion by 2060; 57.6 billion by 2090. And that means no breathing room for anyone, even in America.

Man is now an endangered species. And nobody can save him but himself.

HIJACKING AND AIR PIRACY

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 15 minutes.

Mr. FARBSTEIN. Mr. Speaker, I am today introducing a resolution calling on the President to take positive and concerted action, both unilaterally and collectively through the United Nations, to protect civil aircraft from illegal seizure. My resolution urges the President to direct the Civil Aeronautics Board to revoke the permit of any foreign carrier to land in the United States that continues to serve any country which accepts a hijacker or which harbors, finances, or in any way sanctions acts of air piracy, and to suspend all flights of U.S.-registered aircraft to any such country pending successful action by that government to secure the release of the passengers, crew, and aircraft and the apprehension and punishment of those responsible for the illegal seizure of civil aircraft.

My resolution also urges the President to direct the permanent U.S. representative to the United Nations to request a special meeting of the General Assembly for the purpose of imposing a boycott on those countries who refuse to cooperate in efforts to stop air piracy.

Mr. Speaker, illegal terrorist organizations around the world are acting like barbarians. Diplomats are kidnapped and murdered, airplanes are hijacked, innocent citizens of the world are illegally detained, and the holding of hostages in return for the release of criminals has become a common practice. There has been a complete breakdown of law and order around the world, and air piracy is one of the more despicable examples of a world gone mad.

For when the law has been violated and those responsible are treated as heroes and are permitted to go free, it can only encourage others to break the law in the same way. When such violations by criminal elements are encouraged by sovereign governments there is little chance that law and order can prevail throughout the world.

The current wave of illegal seizures of civil aircraft by Arab terrorist organizations and the corresponding illegal detention of the passengers and crews is a violation of international law. The fact that the Arab terrorist organizations are financed, armed, and supported either overtly or covertly by other Arab States, are members of the United Nations, compounds this breach of international law. No law can be effective if there are two standards: One for those who obey the law and one for those who flout it.

Action, such as I have outlined, by the Civil Aeronautics Board can be an important first step in attempting to reach a solution of the problem of air piracy. But in the final analysis, final solution to the problem can only be found through international cooperation and law enforcement.

As President Nixon said at the United Nations on September 18, 1969:

Plane hijacking is a morally, politically and legally indefensible spreading practice and the United Nations ought to do something about it. Sky piracy cannot be ended as long as the pirates receive asylum. . . . The issue transcends politics. There is no need for it to become the subject of polemics or a focus of political differences. It involves the interests of every nation, the safety of every air traveller, and the integrity of that structure of order on which a world community depends.

But words are no longer enough. The world needs leadership. The United States must lead; not follow. Action such as I have suggested will help to provide that leadership.

Mr. Speaker, I urge adoption of my resolution.

The text of the resolution follows:

H. RES. 1202

Whereas the continued illegal seizure of civil aircraft and detention of passengers and crew is prejudicial to international peace, and

Whereas such acts of air piracy places in jeopardy the lives and safety of innocent citizens of the world, and

Whereas as long as those guilty of air piracy are permitted to escape unpunished, such acts are likely to continue, and

Whereas the recent seizure of a number of civil aircraft, their diversion to the Middle East and the illegal detention of the passengers and crew by Arab terrorist organizations constitute a violation of the principles of international law, and

Whereas said terrorist organizations are financed, armed and supported overtly or covertly by several member states of the United Nations, and

Whereas there is little likelihood of stoping the illegal seizure of civil aircraft without positive and concerted action both by the United States and collectively by the United Nations, now therefore be it

Resolved, That it is the sense of the House of Representatives that the President of the United States direct the Civil Aeronautics Board to revoke the permit of any foreign carrier to land in the United States that continues to serve any country which accepts an air pirate or which harbors, finances or in any way sanctions acts of air piracy or the illegal detention of passenger

and crew and to suspend all flights of United States-registered aircraft to any country in which an illegally seized aircraft has been diverted pending successful action by such country to obtain the release of the passengers, crew and aircraft. Such landing rights shall not be restored or flight suspensions lifted until those responsible for any illegal seizure of aircraft have been apprehended and punished in accordance with the applicable laws dealing with piracy.

Be it further resolved, That it is the sense of the House of Representatives that the President of the United States direct the Permanent United States Representative to the United Nations to request a special meeting of the General Assembly for the purpose of imposing economic sanctions on those nations that—

a. give sanctuary to and permit the landing of air pirates in their territories;

b. refuse to secure the aircraft and to arrest and surrender to lawful authorities the perpetrators of such hijackings or planes or people who are being held hostage.

THE NEW TERROR TACTICS

The SPEAKER. Under a previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 10 minutes.

Mr. RARICK. Mr. Speaker, we are now witnessing the tragic harvest from the new social order of ordered freedom and compensatory rights.

First to receive the treacherous assault of hate under this "new" system of so-called freedom are the true defenders of individual freedom—our police officers. The agitators, dupes, and cultivated liberal fascists have been educated by conditioning to accept the police officer as the symbol of law and order—the establishment—which stands in their way of an even greater license.

In the past few months, police officers and lawmen have been attacked, ambushed, sniped at, and assassinated in what has been recognized by many of our authorities as a programed revolution of violence. Yet, the police officers who are the front-line defenders of law and order and the protectors of individual liberty continue to be maligned by the mass media while the revolutionary crackpots are portrayed as youths, unfortunates, and a misinterpreted minority seeking a place in our society. The lack of expressed public indignation, shame, and revulsion toward these atrocities is notably lacking in much of our free press.

How far will this body allow the international criminal element to proceed before we demand and take action? Do we not understand that if today the police officer is under attack because he is a symbol of authority, then tomorrow Federal judges or Congressmen and Senators can also be zeroed in upon as symbols of the establishment?

Suppose 12 Federal judges were systematically kidnaped or executed in one weekend. What would be the reaction of Congress? How many Members of this body need be held hostage or shot before the rest of our colleagues become awakened and concerned at what is taking place in our land?

In the last few days a new assault on the sovereignty of our Nation has appeared in the hijacking our Nation's airlines—obviously, a new operation of international belittlement of our National Establishment. Yet, few of our interpretive news analysts or our national leaders have advised our people of the similarity of these acts of barbarianism and the interlocking international leadership and control. The news headlines are quick to give the glory to the Black Panthers and Palestinian guerrillas but are silent in identifying the tax-free foundations, leadership, and support emanating from within the United States.

Last week the newspapers gave full coverage to the Black Panther Convention in Philadelphia but suppressed the Congress of African People meeting in Atlanta, Ga. Both meetings differed little from the Third World meeting held at the same time at Lusaka, Zambia, in Africa.

It should be obvious to anyone following the tragedy of the comic opera taking place in our country and without, that the true identity of the establishment under attack is the Constitution of the United States; that those who shriek freedom and tolerance and equality are those who would deny these blessings.

The American people are engaged in the most serious international armed revolutionary conflict that they have ever faced and their leaders are not even telling them how late it is.

Mr. Speaker, I include a variety of news clippings, as follows:

[From U.S. News & World Report, Aug. 31, 1970]

KILLING COPS: THE NEW TERROR TACTICS

Killing police is the newest tactic in a spreading campaign of terrorism in this country.

In less than eight months of this year, at least a dozen policemen have been killed and more than 100 wounded in terrorist attacks.

Police officers are being ambushed, shot by snipers, blown up by bombs, lured to lethal booby traps and slain or wounded in "shoot-outs."

Many law-enforcement officers believe that the intensification of assaults against police is part of a guerrilla war being waged by organized revolutionaries. These officials predict that the onslaughts will increase in months ahead.

Warnings are being sounded in Congress. Senator John L. McClellan (Dem.), of Arkansas, chairman of an investigating committee which has developed evidence of the growing guerrilla warfare against police, told "U.S. News & World Report":

"The revolutionary is trying to destroy or demoralize the 'establishment' through chaos, fear and terror. And the police departments represent the first barrier against that revolutionary."

A former member of the militant Black Panther Party, Donald Berry, told the House Subcommittee on Internal Security early this summer that "killing cops" had become part of a Black Panther pattern.

Around the country, police officials make no secret of their apprehension.

"We fully expect further intensification of these guerrilla attacks," said Inspector Tom Janes of the Los Angeles police department. "The situation is getting worse."

PREDICTION: CIVIL WAR

From an official in Washington who is in a key position to assess ominous developments comes this assertion:

"Unless something is done to reverse the present trend, this country is going to be in a civil war within five to 10 years.

"People are getting fed up with this violence in the streets—black people as well as whites.

"If this thing continues, it is only a matter of time until some white man stands up and says, 'O.K., white men, it's one on one—let's go get them.'

"You will have fascist mentality created in this country. Because of their overwhelming numbers, the whites would win. But what they would have left would be a fascist state."

As terrorism spreads, police departments are improving the protection of their officers, police stations, court houses, city halls and other government buildings. Federal officials are doing likewise.

In Chicago, on August 18, U.S. Marshal John C. Meiszner revealed that authorities are taking "strenuous precautions" in guarding federal judges because of rumors of a kidnaping plot by Black Panthers.

Mr. Meiszner said that the rumors stemmed from the August 7 slayings of a superior-court judge and three other persons in a gun battle at San Rafael, Calif., after armed black desperadoes invaded a courtroom to free prisoners who were on trial.

A federal fugitive warrant charging unlawful flight to avoid prosecution for murder, was issued for Angela Davis, former college philosophy professor—a black militant and avowed Communist—who, State authorities said, purchased guns used by the attackers at San Rafael. Miss Davis was placed on the Federal Bureau of Investigation's list of "Ten Most-Wanted" fugitives.

NATIONAL PICTURE

Although such spectacular incidents as the invasion of the San Rafael courthouse capture headlines nationwide, a guerrilla war is taking an almost daily toll of police in city after city.

On August 20, for example, in Berkeley, Calif., a policeman was shot and killed by a gunman who approached as the officer was talking to a motorcyclist who had made an illegal turn. It was the third slaying of a policeman in the San Francisco area in the past two months. Berkeley Police Chief Bruce Baker called it a "political assassination."

In Chicago, seven policemen have been slain this year, 15 others wounded and at least 750 injured by assaults.

The fatal shooting of a Chicago policeman on August 13 was the city's third police death by sniper fire in less than a month—all in black "ghetto" areas. Two officers were gunned down on July 17 as they patrolled grounds of a housing project occupied by blacks.

In both the July and August murders, police say, they have evidence that members of Negro street gangs deliberately set out to kill policemen—any policemen, black or white—to show that black gangsters hold the real power in the ghetto and that police can be eliminated at will.

The police killings in Chicago prompted Adlai E. Stevenson III, Democratic candidate for U.S. Senator, to declare:

"There is more sniping and shooting in the streets of large American cities than in the streets of Saigon. This is intolerable."

SAIGON, CALIFORNIA

In the Los Angeles area, spokesmen for law-enforcement agencies say that their forces are, without question, engaged in open guerrilla warfare with well-organized and well-equipped revolutionaries.

Some police stations in Los Angeles have been turned into fortresses—resembling, Vietnam veterans say, barricaded buildings in Saigon at the height of Viet Cong terrorist attacks.

California lawmen fear that the courtroom raid which ended so bloodily in San Rafael was just the beginning of a wave of revolutionary violence.

Peter J. Pitchess, sheriff of Los Angeles County, told a staff member of "U.S. News & World Report" that "recent terrorist attacks against law officers—as primary symbols of our legal system—indicate the extent to which guerrilla tactics are being used."

Increasingly, Los Angeles police officials say, plots against police are being carried out by members of a revolutionary underground. A senior officer said:

"There is no question that there is communication between radical organizations around the country, co-ordinating plots.

"The targets of guerrillas can be any symbol of the American system—a police station, a school, a public building, or a private business. The aim of the attacks is to demoralize police and citizens. In the slums, violence is intended to intimidate Negroes into co-operating with guerrillas, or at least into remaining silent."

From Inspector Janes, in Los Angeles:

"A few years ago, a sniper attack against a police officer was almost unheard of. Now it is almost routine."

In the year ended June 30, Inspector Janes said, more than two dozen attacks on policemen were specifically classified as guerrilla assaults. These involved shootouts, ambushes, or sniping at officers while they were directing traffic or cruising in patrol cars.

The Los Angeles police department singles out the Black Panthers as the group allegedly most often involved in armed attacks on police and police installations. But the Black Panthers, officers say, get support from other radical organizations, including the Weatherman faction of the Students for a Democratic Society (SDS).

California's chief deputy attorney general, Charles O'Brien, said the pattern used in bombing attacks on police stations "fits into the tactics and methods of the Black Panthers and the Weathermen." Mr. O'Brien noted on August 18 that there had been 20 bombings a week in California for the last three months.

Mr. O'Brien also made this point:

"We are concerned because the radical groups are extremely imitative. The recent wave of kidnapings of diplomats in South America held as hostages by terrorists—is something the extreme left in this country may seek to emulate."

IMPORTANT UPRISING

On August 18, Tom Hayden, radical leader who is free on bail after conviction in the "Chicago Seven" conspiracy trial, told the annual congress of the National Student Association, in St. Paul, that the San Rafael courthouse invasion was "one of the most important uprisings or acts of rebellion in the past 20 years."

Hayden predicted that political kidnapings in the South American style would become more frequent in the U.S. He said that the California incident "has changed the entire relationship between the courts and political prisoners, between the oppressed and the oppressors." He added:

"We have to realize that we've had our first kidnap attempt. There will be a second, and a third."

The radical organizer also said that "Nixon and Vice President Spiro T. Agnew know it is going to happen to them unless something is done to calm down frustrations."

PROVOKING THE POLICE

Cities large and small are witnessing terrorist operations that grow increasingly bolder.

In New York City, attacks on policemen are running at a monthly rate of close to 300. So far this year, seven New York City policemen have been killed. Noting an increase in gunshot attacks on police under his command, an officer in charge of a New York City division in a largely black district observed:

"There is a theory that it is being done by people who hope to provoke the police into an overreaction that would lead to major trouble in the community."

New York City police headquarters was damaged by a time bomb earlier this year.

In Omaha, on August 17, one policeman was killed and seven others injured by a booby-trap bomb. A police sergeant was killed in the bombing of a San Francisco police station on February 16. Six officers were injured in a police-station bombing at Berkeley, on February 13. Police installations in Oakland, Des Moines, Kansas City, and other cities have been bombed.

RECIPE FOR "COCKTAILS"

In Washington, D.C., an "underground" newspaper called "The Quicksilver Times" reprinted an article from a Black Panther newspaper which gave specific instructions for making such deadly devices as Molotov cocktails and "people's hand grenades."

The article was followed by a map showing locations of police stations, other law-enforcement agencies, private detective agencies and National Guard headquarters.

LIBERATION VITAL, ENVOY TELLS BLACKS

(By Harmon Perry)

Guinea's ambassador to the United States assured delegates to the Congress of African Peoples that its program for the liberation of black people the world over is necessary.

"I assure you that Mother Africa is thinking about you and is in the struggle with you," Ambassador Dr. El Hajj Aboulaye Toure told a cheering crowd of congress delegates during a keynote address at Herndon Stadium on the campus of Morris Brown College.

The African diplomat, who is Guinea's permanent representative to the United Nations, was the surprise speaker and one of several international luminaries scheduled to address the five-day black power meeting in Atlanta.

Dr. Toure termed liberation of black people everywhere, as called for by the congress, "absolutely necessary and inseparable from the African continent, even though the meeting is taking place on the American continent."

An estimated 2,500 delegates, who have come to Atlanta for this first meeting of the congress since it was activated last year by merging the National Black Power Congress and the International Black Congress, represent blacks from several nations of the world.

Later, at a press conference he shared with Mayor Kenneth Gibson of Newark, N.J., Mayor William Hart of East Orange, N.J., and Percy Sutton, president of the Manhattan Borough in New York, Dr. Toure said it is time to close the ends of the ties that bind the blacks of America with the blacks of over 41 independent countries of Africa.

Gibson, one of three black mayors of U.S. cities scheduled to speak to the congress before it ends Labor Day, said it is important that black power, a term that often misleads people, be clearly defined.

He said the congress of black people is concerned with black unity around the world, with emphasis on power and economics, employment and the improvement of the quality of life.

Dr. Ralph Abernathy, president of the Southern Christian Leadership Conference, challenged the congress to search out new formulas against oppression of black people, and "let the forces of evil know you have been to town and have mapped out the program to sock it to America."

Whitney Young, executive director of the National Urban League, and Black Muslim minister Farrakhan are scheduled to address the congress Saturday night.

"THIRD WORLD" MEETING SET

LUSAKA, ZAMBIA.—Leaders of the so-called Third World meet here this week determined to reaffirm the aim of the 10-year-old movement—the creation of a buffer force of the world's nonaligned nations in the interests of peace between the two big power blocs.

The nations which disclaim military or political ties with the Western or Eastern blocs open preliminary discussions Sunday. Business sessions begin Tuesday.

Sources in this central African capital said Zambian President Kenneth Kaunda hopes the meeting will result in a permanent body to coordinate economic cooperation.

As delegates gathered for the conference of nonaligned nations, however, the obstacle to creation of an effective Third World force between the big power systems seemed as big as it was a decade ago. The difficulty is to find a common denominator broad enough so that the uncommitted nations can speak with a single, powerful voice.

Third World efforts have not lacked effective spokesmen: President Tito of Yugoslavia, the late Prime Minister Jawaharlal Nehru of India and Egyptian President Gamal Abdel Nasser were among its original sparkplugs. But disagreement regarding the movement's aims sapped its strength and blurred its purpose.

Tito, along with Kaunda, is expected to be one of the strongest personalities in Lusaka.

JOINT PROJECT

The third nonaligned summit meeting is virtually a joint Yugoslav-Zambian project. Belgrade supplied experts to build the elaborate conference hall and 62 villas for visiting heads of state. The Yugoslav delegation is likely to be among the largest and most active.

Tito visited Zambia earlier this year for advance talks with Kaunda. Analysts say Tito hopes to recharge the batteries of the Third Worlders and, at the same time, reaffirm his distinctive brand of communism as an independent force among nonaligned powers.

For his part, Kaunda plans to mount a fresh attempt to focus world public opinion on the problems of Africa, Zambia sits on the northern edge of Africa's black-white Mason-Dixon line and hopes to attract additional outside support for guerrilla efforts to undermine South Africa, Rhodesia and the Portuguese territories.

At the very least, Kaunda would like to force Britain to decide against its tentative plan to resume sales of defensive arms to South Africa.

The heads of state meet Sept. 8-10. Their foreign ministers will arrange a tentative agenda and tackle preliminary details Sept. 6-7.

Topics expected to be covered include tariff barriers imposed by developed nations, aid from major powers, and methods of obtaining more assistance funds channeled through the United Nations and other bodies.

The Times of Zambia, closely linked to the government, pronounced in an editorial Saturday what probably will be Kaunda's position:

"We are hopeful that efforts to begin meaningful economic cooperation between the participating nations are not submerged in the quagmire of discussions on Vietnam, Cambodia and the Middle East."

About 75 nations are considered in the nonaligned movement. More than 30 heads of state are expected with other countries represented by high-ranking officials.

Representatives of the North Vietnamese government, the Lon Nol military regime in Cambodia and the Cambodian government in exile of Prince Norodom Sihanouk are among the delegations.

The question of whether to seat the Si-

hanouk delegation could wreck the conference.

Malaysia's chief delegate, Deputy Prime Minister Tun Abdul Razak, said in Kuala Lumpur that the delegates should either shelve the issue or reach a consensus on it, avoiding a split "at all costs."

Two previous nonaligned conferences—at Belgrade, Yugoslavia, and Bandung, Indonesia—resulted in little more than ringing declarations in support of peace.

Lusaka is decked out with billboards with slogans in four languages. Sample: "Nonalignment for racial equality."

Flags and banners of the national delegations flutter from utility standards and aluminum poles especially imported from the United States.

BLACK PANTHERS SCHEDULE NOVEMBER CONVENTION IN THE DISTRICT OF COLUMBIA

(By Bernard D. Nossiter)

PHILADELPHIA, September 7.—The Black Panthers today concluded the first round of their "Revolutionary People's Constitutional Convention" and announced that Washington, D.C., has been "tentatively" chosen as the site for the next installment.

There, on Nov. 4 the day after Election Day, and one or two days thereafter, Panther leaders said they and their sympathizers hope to complete the task of writing a constitution that will end "oppression."

At a press conference this evening in a North Philadelphia church, Raymond Hewitt, who likes to be called "Masai" and is the Panthers' minister of education, predicted that there would be obstacles placed in the way of the Washington gathering because "Nixon is a big pig."

Hewitt cited the convention the Panthers have held here in the wake of police raids on their headquarters as evidence that resistance would be overcome.

No hall in the Capital has yet been selected, Hewitt said.

Another spokesman, the deputy minister of information, who goes by his street name of "Big Man" called the assembly here a "success despite all the problems and pig oppression."

The convention, he said, had produced "concrete proposals for change in the social contract . . . to create a document relevant to the lives of the people."

Hewitt said the convention has produced 100 pages of summaries from its Sunday seminars, and the "most concrete" was a proposal to "make it unconstitutional for one man to oppress another."

Some of the other proposals in the mimeographed summaries from the seminars are these:

MILITARY AND POLICE

National defense conducted by "people's militia, trained in guerrilla warfare, on a voluntary basis and consisting of both men and women."

"No genocidal weapons shall be manufactured or used."

No men, arms or money shall be sent abroad "for military or police purposes."

No citizen shall be denied the personal possession of "small arms without due process."

Police shall be a rotating force of volunteers from each community subject to a locally elected control board.

FAMILY AND CHILDREN

"Children are not possessions."

"Children have the right to be breast fed."

"Children must be loved in a true revolutionary manner."

REVOLUTIONARY ART

"All people are born with a creative potential and society must guarantee that every person has the opportunity to develop and express that potential."

"Art is a creative expression of a people's culture or way of life."

Other proposed amendments to the "peoples' constitution" include the rights of homosexuals, women, lesbians, control of the means of production and control of the use of land.

Hewitt said that drafting committees of "people" would work these up into several alternative documents to be offered at the November meeting.

Big Man abruptly cut off the press conference after 25 minutes because, he said, the questions were becoming "futuristic."

GROUP WORKS ON NEW U.S. CONSTITUTION

(By David S. Broder)

A draft of a proposed new Constitution for the "United Republics of America," with six branches of government and a President limited to a single nine-year term was published yesterday by Rexford Guy Tugwell, the former Roosevelt braintruster.

Tugwell's document, described as the 37th draft of a still unfinished project, appears in the latest issue of the Center magazine, published in Santa Barbara by the Center for the Study of Democratic Institutions.

Tugwell and officials of the Center said the draft Constitution was being made public to stimulate discussion, not with the idea that it would be adopted intact.

But Robert Maynard Hutchins, chairman of the Center, noted in an introductory statement that the existing Constitution "says nothing about the principal concerns of the present day . . . technology, ecology, bureaucracy, education, cities, planning, civil disobedience, political parties, corporations, labor unions or the organization of the world."

Tugwell, a 79-year-old retired professor who came to prominence almost 40 years ago as a New Deal planner, began working on the project six years ago.

By coincidence, the draft document appeared just as the Senate was preparing to open debate on the most sweeping constitutional amendment proposed in many years—one calling for direct election of the President and abolition of the electoral college.

The Tugwell draft would also provide for popular election of the President, but it goes far beyond that in its redesign of the American government.

Among the sweeping changes recommended for consideration, Tugwell would:

Abolish existing states and substitute no more than 20 "republics," each of which would have at least 5 per cent of the national population. The name of the country would then become "the United Republics of America."

Create three additional branches of the national government—an electoral branch to administer elections and set regulations for political parties, a planning branch to develop long-term budgets and goals, and a regulatory branch, to coordinate the work of the administrative agencies.

Finance all political activity from a 1 per cent income tax surcharge and forbid personal expenditures by any candidate.

Give the President a single nine-year term, but provide for a new election if 60 per cent of the voters rejected his leadership after three years in office.

Create jobs for two vice presidents, elected on the same slate as the President, one to handle foreign, financial and military affairs and the other internal affairs.

Make the Senate an appointive body, with lifetime tenure. Former Presidents and presidential candidates and certain other retired high officials would automatically be members, along with persons nominated by national non-political associations and some picked by the President and the House.

Elect members of the House for three-year terms, with 300 chosen from local election districts and 100 elected by the nation-at-large.

Establish a National Watchkeeper, elected by the Senate, to oversee the "adequacy, competence and integrity of government agencies."

Have the Chief Justice (renamed the Principal Justice) nominated by other sitting judges, not the President, and give him an appointment for 12 years, not life. During his term, he would appoint all lesser judges.

Require the high court, on a constitutional question, to "return to the House of Representatives statutes it cannot construe." Only if the House failed to resolve the question within 90 days could the court make its own judgment.

Create a series of citizen's duties, paralleling the guarantees of individual rights carried over from the present Constitution. For example, the article guaranteeing freedom of expression, movement and communication says "the exercise of the rights may not diminish the rights of others or of the republic."

In a preface to the document, Tugwell states his belief that "the time might come when the American people, exasperated by the obstructionism of their Congress, the unwarranted assumption of legislative powers by their Supreme Court, or the unbearable load of duties undertaken by their President, might decide that new institutions are necessary to fulfill their reasonable expectations of progress."

Under those circumstances, he says, the adoption of a new Constitution might become the central issue in a presidential election campaign. The election of a candidate pledged to a new Constitution he suggests, might constitute a mandate for so sweeping a reform.

Of his own draft document, he says: "We think we have been as American as apple pie, but made with the best apples and baked in an electric oven, not one attached to an old firewood stove."

ATLANTA CONGRESS ENDS: BLACK POLITICAL PARTY URGED

(By Ivan C. Brandon)

ATLANTA, September 7.—The Congress of African People closed today with a call for the formation of a black international political party.

Heyward Henry, chairman of the congress, said, "We are moving toward the creation of a black political institution that will express and move to fulfill the needs of black people wherever they are."

The resolution called for the party to represent black people on the international level as well as locally. The party will also operate to provide blacks with political aspirations with the support and expertise needed to handle their campaigns.

The five-day conference, which attracted 2,200 delegates of 35 countries, ended also with a plea for unity under the banner of Pan Africanism. Pan Africanism, a militant political ideology, calls upon all blacks to unite to change the plight of the black man and establish a black nation.

The goal of the congress, held on the Atlanta university complex, was to form institutions that would aid in the establishment of a black nation. "We are about building a nation," Henry said at the congress opening. "We are going to create concrete institutions for the formation of our nation."

A number of resolutions were presented at tonight's final sessions but no actual plans for their implementation were offered. The proposals included the creation of a black communications network to express the motives and fulfill the needs of the congress; the establishment of an African people's publishing house, the setting up of community security forces to protect the black commu-

nity and the decentralization of police departments in the black community.

The congress also called for black people to infiltrate all existing social institutions to gain power and to prepare for revolution.

Henry said that a number of committees would meet in New York in October to continue the work of the congress. The committees have been set up from workshops held during the five days of the congress.

BOND SEES KING AS MAN TO ELECT

(By Harmon Perry)

State Rep. Julian Bond said black gubernatorial candidate C. B. King is the only one of 12 candidates seeking the top executive office who could best serve black and white citizens.

"Look at the political situation here in Georgia," Bond told newsmen Monday attending the final press conference of the Congress of African People meeting in Atlanta.

"Which of the candidates would you want to serve?" he asked. "Anyone thinking it's any of the other candidates, that's his mistaken opinion, but the best candidate for black and white people is C. B. King, Bond declared.

Bond, along with Mayor Richard Hatcher of Gary, Ind., and poet Imamu Baraka, better known as LeRoi Jones, shared a press conference prior to addressing 3,000 delegates during a final rally in the Morehouse College gym.

Bond said it was significant the five-day congress chose to meet in Atlanta and predicted the outcome will have an effect on black people throughout the world. "It has been a spiritual coming home," he said.

In his address to the delegates, however, Bond urged blacks of African descent to reject patriotism "which has made us first in war, last in peace, and last in the hearts of our countrymen."

He said the congress, in its program to unite black people, has revealed there is a variety of ways to conquer enemies, but he warned this cannot be done if blacks are to discuss their liberation with whites, "using their pen and paper."

Whites did not participate in the congress, and white newsmen were permitted to attend only press conferences. The white news media was urged to send black representatives but all black newsmen were required to pay a $10 registration fee.

The congress, which grew out of the merger last year of the National Black Power Conference with the International Black Power Conference, attracted many national luminaries as speakers including Dr. El Hajj Aboulaye Toures, Guinea's ambassador to the United States, Whitney Young of the National Urban League, Mayor Kenneth Gibson of Newark, the Rev. Ralph Abernathy, president of the Southern Christian Leadership Conference, and the Rev. Jesse Jackson of Operation Breadbasket.

Mayor Hatcher predicted more oppression of black people, unless they redefine the political structure, develop their own political institutions and leaders for their own survival.

He denied that the Pan-African movement was nonexistent prior to the congress meeting here. "Black people here have always been concerned about what is happening to black people everywhere, and unless we take steps to unite we will see more oppression," warned Hatcher.

Jones said the fall and rise of black people is "an evolution process. The congress is saying African people are realizing they are one body and must function as one body to survive," asserted Jones.

The congress focused on 11 areas during workshop discussion, including political liberation, economic autonomy, law and justice, and community organization.

[From the Atlanta (Ga.) Journal, Sept. 8, 1970]

CAB DRIVER DEAD IN "EXECUTION" HERE

(By Orville Gaines)

A Marietta taxicab driver was found murdered early Tuesday under circumstances a police investigator described as an "execution-type" slaying.

"It was cold-blooded murder," said homicide investigator H. F. Pharr. He added: "Four bullets were fired into the back of his head at close range."

The victim, Bobby Jack McManus, 24, was found in a sitting position under the steering wheel of his cab in the 800 block of Ashby Place SW, at about 1 a.m. Tuesday.

Earlier he had radioed his dispatcher at the Victory Cab Co. from the bus station in Marietta that he was en route to Atlanta with two fares. He radioed the company about 11:25 p.m.

"There was no evidence of robbery. We found $65 in his shirt pocket and $7.63 in a coin changer which was hanging on the dash of the car," Detective L. F. New said.

The killing, which has all the earmarks of an execution-type slaying, Detective Pharr said, cut short the young man's hopes of purchasing a new home for his family of three—his wife and two boys, Bobby Jack Jr., 5, and Charles Allen, 3.

"He dropped by his home around 9:30 p.m. Monday to eat. At that time the family discussed plans of buying a new home. They now live in a duplex residence on Hedge Street in Marietta," Mrs. Glenn H. McCullough, the victim's mother-in-law, commented.

According to investigators Pharr and New, a resident alerted police after seeing the cab parked on Ashby Place with its headlights on.

"We found him under the steering wheel with his right foot on the brake pedal. The ignition switch was in an on position, the radio was playing and a rear door was open," detective New said.

It appeared, the officers theorized, that McManus, a driver for the Victory Cab Co. for three years, braked his car at the location and then was shot for no known reason.

Officers added that McManus supplied no additional information on his fares before leaving for the trip to Atlanta.

"He just told the dispatcher that he was en route to this city with two fares," one of the officers said.

The slaying is Atlanta's 159th homicide of the year, an increase of 35 over the similar period of 1969. Three of the victims have been cab drivers.

In addition to his wife and children, McManus is survived by his father, Nolan McManus of Marietta; a brother, Charles McManus of Marietta, and three sisters, Mrs. Virginia Nash of Athens; Mrs. Evelyn Webb of Cherokee County and Mrs. Jack Hornsby of Marietta.

ABANDONED ANTI-BALLISTIC-MISSILE SITE IN NORTH ANDOVER, MASS.

The SPEAKER. Under a previous order of the House, the gentleman from Massachusetts (Mr. HARRINGTON) is recognized for 20 minutes.

Mr. HARRINGTON. Mr. Speaker, I want to discuss a problem which has tried the patience of the residents of my District for more than 18 months. I am referring to the abandoned anti-ballistic-missile site in North Andover, Mass.

Initially the U.S. Government decided that major cities should be defended by the ABM. The Army decided that a perimeter acquisition radar site should be constructed north of Boston. North Andover was chosen. Work began on the site in late 1968. At that time an access road 9,200 feet in length was started. Thirty-two acres of land were torn up to build the road. Over 20 acres of forest land were also bulldozed in order to dig holes for the emplacement of the missiles.

Shortly after President Nixon's election, it was determined that the ABM would be used to protect other missile sites—not as a major defense of the cities. On February 6, 1969, the Army discontinued construction on the North Andover site. They abandoned the site leaving behind one partially completed road, two huge holes now filled with spring fed water and more than 50 acres of decimated land.

Mr. Speaker, the citizens of North Andover had vigorously protested the location of the missile site in their town. They are pleased that the Army has stopped construction of that site. But, even in their displeasure they were polite to and cooperated with their Government. The Army, however, has been both uncooperative and impolite since its departure.

The issue in this case is really quite simple. Does the Government of the United States have the right to destroy land, abandon it, and leave the State of Massachusetts and the town of North Andover with a useless and dangerous piece of property? I think not. North Andover thinks not.

We believe that it is the obligation of the Government and the Army which represents it to restore the land to the condition in which it was found, or turn it to some public use.

The Army spent somewhere between $2 and $8 million for the construction of this site. They are unwilling now to spend more than a fraction in reparations for the damage they have done.

North Andover and the State of Massachusetts are being used as political footballs by the Army. In a still-secret memorandum quoted in an article by George C. Wilson in the Washington Post of August 13, 1970, General Starbird, head of the ABM program, ties suspension of work on completion of the road directly to the voting in Congress on the Safeguard ABM. Starbird stated that it is:

> My intent to authorize its resumption after completion of the House action of the Defense authorization bill. . .

Starbird obviously did not want to stir up public opinion about the ABM by starting work on the site before he had his money authorized for this year.

Even if the road were finished, it still leads nowhere. Nowhere except to the two holes filled with water in which anyone could easily drown. I visited the site a few weeks ago and found that I could drive right to the edge of one of these pits. No fence kept me out because the fence is broken.

The State of Massachusetts has met repeatedly with representatives of the

Army in an attempt to come to an agreement on the disposition of the land. For 18 months the Army has rejected various State plans to make the land into a recreation area or to restore it to its former condition. The Army asked the State for its ideas. The Army now rejects those ideas as too costly. The Army now, in fact, has decided to apply only the strictest legal interpretation to the problem. The Army says it will pay the State the value of the land—an amount which they allege to be less than $30,000. The State, however, has estimated that it will cost $685,120 to turn the land into a recreation area and $505,000 to restore the land to its former condition. By asking the State for plans for the land the Army was saying in effect that it recognized the "equity" of the problem and would do something to help. Yet 18 months later, the Army claims they can act only according to the "legal" interpretation. If this is true, why did they request other plans from the State?

Mr. Speaker, I have introduced legislation to pay to the State of Massachusetts $685,120 in damages caused by the demolition of its land by the Army. This legislation needs to be passed.

North Andover's problem is not a regional one alone. As more and more military installations are abandoned, many more towns are going to be stuck with useless land unless a policy is established now to return the land to the people in some usable form. In days when we speak of ecology and conservation, the Government must not be permitted to destroy land belonging to the people with no obligation to return it to aesthetically pleasing and usable property.

Mr. Speaker, I have tried to be patient and to cooperate with the Army in finding a solution to the problem of the land. I have told the Army on countless occasions that I did not want to make a Federal case out of the problem. But, Mr. Speaker, the citizens of North Andover are fed up, and the time has come for action.

I do not think it possible to fully comprehend the frustrations and difficulties encountered in North Andover unless one sees the actual account of meetings held and promises broken over the months. I am, therefore, inserting a chronology of the events.

On April 3, 1969 representatives of the Army and the State of Massachusetts met to discuss the termination of real estate and construction operations at the North Andover site. At that time the Sate was asked for its views on the disposition of the property.

On May 8, 1969 the Department of Natural Resources of the State of Massachusetts submitted a proposal to turn the land into a recreational area. Estimated cost would be $685,120.

On June 19, 1969 the State was told that their plan was too costly and could not be implemented by the Army.

On August 7, 1969 a meeting was held between Army and State Representatives General Starbird said that the New England Division of the Corps of Engineers advised Representatives of the Division of Natural Resources "that the Army could not construct the recreational facilities; however, an offer of settlement based upon reasonable restoration of the PAR construction area would be given consideration."

On November 21, 1969, after I was elected to Congress, I visited the site of the abandoned project in North Andover, together with Colonel Frank P. Bane, Chief of the New England Division of the Army Corps of Engineers, and Commissioner Arthur Brownell of the Department of Natural Resources of the Commonwealth of Massachusetts.

On November 25, 1969, I held a meeting in my office in Washington, D.C., as a followup to the meeting in North Andover. At that meeting were General Graves, Deputy Director of Military Construction of the Corps of Engineers, Colonel Keezel, his assistant, and several others. At that time I was told that a decision would be forthcoming within a "few weeks."

During the month of December my office was in weekly contact with the Corps of Engineers to ascertain the progress of the negotiations.

On January 20, 1970, my office was told that the State's park proposal, then in Colonel Bene's hands, was due in Washington for review at any time. On January 22 we were told that the proposal had arrived and would be sent to General Graves very soon, probably that afternoon. On January 28 we asked for a progress report and were told that General Graves had received the proposal that afternoon and that he would "almost definitely" brief me the following week. At that point I felt that the Corps had had more than enough time to make a determination. I therefore sent a telegram to General Starbird and released the content of that telegram to the press on January 30. In part my telegram stated that I was "dismayed at the constant delay and postponement of decisions regarding ABM site restoration for North Andover."

On February 4, 1970, a second meeting was held in my Washington office with representatives of the Defense Department. Representatives from the offices of Senator BROOKE and Senator KENNEDY were also present at that meeting. We were told that the proposal of the State to turn the land into a recreational area was considered unfeasible and that the Army would be willing to pay the value of the land $37,500, and possibly include the road which is worth about $70,000.

On February 10, 1970, my office talked to the Corps of Engineers. The Corps stated they had met with representatives of the Department of Natural Resources, but that the Corps had not outlined any proposal to the State. The Corps stated they did tell the Department of Natural Resources that plans for a park were excessive and that the basic approach of the Army would be to pay the value of the land involved. I was informed that the State would consider this and make its own recommendation around March 1.

General Starbird, writing me about the February 10 meeting, said that the Army "requested as a basis for discussion the Commonwealth's itemized estimate of actual damages incurred as a result of Government construction, stating that upon receipt of these figures, the Government would then evaluate them and arrive at legally supportable settlement figures."

On February 27, 1970, the Commonwealth submitted a restoration proposal amounting to approximately $533,516. This proposal was simply to restore the land to its former condition.

On March 5, 1970, I talked to both Commissioner Brownell and General Starbird, head of the Safeguard system. General Starbird stated he was waiting to receive the State's proposal.

On March 11 Colonel Keezel called us and stated that a meeting had been held with Brownell's office and the Corps to discuss the State's most recent proposal. He said there were difficulties involving acreage and that the Corps and the State would go to the missile site the following week in order to work out the problem.

On April 21, 1970, representatives of the Army met with representatives of the Justice Department, according to Starbird, "to discuss the restoration plan for site disposition." Assistant Attorney General Kashiwa said that Justice did not concur, holding that since the restoration costs exceed the value of the land the matter should be brought to trial to determine if the disturbed land can be acquired. Justice advised that they would take over the negotiations relative to the Commonwealth land.

This meeting was held more than 1 year after the initial meeting between the State and the Army. In 1 full year, no progress had been made on the disposition of the land. The State spent time and money at the request of the Army in attempting to find a solution to the problem, and no solution was forthcoming. The Army handed the case over to the Justice Department for litigation.

During the entire month of April my staff was in contact with the Corps of Engineers.

On May 5, 1970, I was informed that the Justice Department had decided to take over the case based on the consideration that it was the Attorney General's responsibility to adjudicate the case.

I called the Chief Counsel of the Army, Mr. Jordan, and General Starbird on that date to determine the status of the proposal and found that the Army believed it could do nothing more until the Justice Department decided whether or not to settle the case without a court hearing.

I also talked with the corps on May 14 and May 26 and both days discovered that the situation was the same.

On July 9, 1970, a meeting was held in my office with Mr. Jordan. At that time Mr. Jordan informed me that the Army would pay between $12,000 and $20,000 for the land and would also finish the road and turn it over to the State. I informed Mr. Jordan that this was not a satisfactory solution to the problem and that I would work to see that the land was made useful and safe for the people of North Andover.

On July 20, 1970, the Army Corps of Engineers suddenly began work on completing the road to the site.

On July 23, 1970, agreement was reached between my office and the Army to halt work on the road—a road to nowhere—until the matter could be discussed with the citizens of North Andover.

On August 7, 1970, I met with the selectmen of North Andover to discuss with them what the town wanted done with the land and what action should be taken.

On August 10, 1970, I filed the bill, H.R. 18881, to pay the State of Massachusetts $685,120 for reparation of damages done to the land in North Andover.

On August 19, 1970, Senator KENNEDY introduced an identical bill in the Senate.

On August 20, 1970, a public meeting was held in North Andover with representatives of the State, the Army Corps of Engineers, and myself. Senator KENNEDY spoke to the gathering from Washington. The purpose of the meeting was to focus attention on the lack of action taken regarding the disposition of the abandoned missile site.

It is now September 9, 1970, and no agreement has yet been reached.

This matter has dragged on too long.

Mr. Speaker, I think you can understand the feeling of discouragement I have when you recognize the obvious time and effort which has been expended with so little result. I will continue in my efforts to see that the controversy over the abandoned ABM missile site in North Andover is resolved to the satisfaction of the people. A major step would be passage of H.R. 18881.

THERE IS NO END TO BLACKMAIL

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SIKES. Mr. Speaker, it is going to be hard for world governments to stand up to the demands of hijackers but there is no end to blackmail. It should be obvious that hijackings and other terrorist activities will continue as long as world governments yield to their demands. It is possible to foresee that in time the jails will be emptied and criminals will be in control everywhere. It is time for positive and responsible action, time to insist that world governments including our own accept their responsibility to protect the public against such occurrences.

What has happened to law enforcement? Some nations appear unable to cope with terrorist activities. Possibly they have not really tried. Particularly does this appear true in the Arab nations of the Middle East. This situation cannot be tolerated indefinitely. There should be a coordinated effort to deal with the problem.

There are alternatives to a clampdown on terrorist activities by law enforcement agencies. They may be required in addition to strong legal action. Such alternatives include an end to commercial aircraft flights to certain areas or refusal of visas to travellers to those countries until a stronger effort is made to control terrorist activities. At the least, there should be armed guards on commercial air flights, particularly those within reach in the Middle East. As harsh as it may seem at the moment, there must be an end to capitulation to terrorist demands. Acts of terrorism are not going to stop as long as the perpetrators get what they want. The United States has not faced up to the problem. Here it has been looked upon more as a joke than a deadly serious business which flaunts national and international law. Surrender to blackmail cannot become an accepted way of life.

VILLA SCALABRINI—ITALIAN OLD PEOPLES HOME

(Mr. ANNUNZIO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, today I would like to call to the attention of my colleagues the Night of Stars benefit show held by the Scalabrini Fathers on Saturday, August 15, on behalf of Villa Scalabrini, the Italian Home for the Aged in Melrose Park, Ill.

These benefit shows have been held annually for the last several years in order to raise funds for building the old peoples home, and this year's show culminated in that long-anticipated wonderful event—burning the mortgage for the home.

Villa Scalabrini stands today as an outstanding example of a modern facility which provides compassionate care for its residents. During the more than 19 years of its existence, the Villa has provided not only physical care, but spiritual comfort and a refuge of peace and happiness for elderly persons.

The home is a $5 million institution with an up-to-date geriatrics department and a full-time doctor on the staff as well as specially trained nurses who are available around the clock. With this kind of complete medical service available at the home, none of the old people have to be moved to other institutions or hospitals when they become seriously ill, but instead receive complete medical care right at the home.

I am calling the Villa Scalabrini Italian Old Peoples Home to the attention of my colleagues because right here in the Congress we recently have been concerned over conditions surrounding the nursing home industry in the United States. Only a few months ago several Members took the floor to discuss fires and other calamities that have occurred in old peoples homes across the Nation because even minimum standards of safety were not maintained.

The Villa in Melrose Park, by contrast, maintains the highest of standards. It is operated by the Scalabrini Fathers and the Missionary Sisters of St. Charles under the jurisdiction of the Catholic Archdiocese of Chicago.

I want to emphasize that the entire amount of money used for constructing, modernizing, maintaining, and expanding Villa Scalabrini was raised through contributions, through private foundations, and through benefit shows, and no Government funds are involved. By far the great bulk of these funds was raised through the annual Night of Stars benefit shows to which great artists of the entertainment world have contributed their talents, without charge for their services, to the board of directors of Villa Scalabrini. They have paid for their own transportation, and in many instances, for their own hotel rooms, and other expenses, in order that the net proceeds of the shows could be as large as possible. Very few administrative expenses are involved in arranging these shows.

We have had such famous stars as Jimmy Durante, Tony Bennett, Frank Sinatra, Joni James, Connie Francis, Enzo Stuarti, Steve Lawrence, Pat Cooper, Frankie Ford, and Gary Reynolds, George Kirby, Lida Da Valle, Vic Damone, and many others. Because of the dedication of these stars of the entertainment world, our home today is a living reality.

But I would like especially to call to the attention of my colleagues the show of August 15. Over 3,500 people assembled this year on August 15 at the Civic Opera House in Chicago in order to view the 1970 Night of Stars benefit show. The world's No. 1 entertainer, Frank Sinatra, flew from California in his own plane bringing with him four of the most outstanding musicians in the world to assist him, and he performed before this vast audience at no cost, contributing of his time and of his talents for the pleasure and entertainment of the people of Chicago. Through his performance, he gave of himself as only one human being can give to another in order to better the lot of his fellow man and to promote a worthy cause. To Frank Sinatra, who has participated in many charitable events throughout his long and distinguished career as an entertainer, goes the profound appreciation of all of the people that I am privileged to represent and all of the people of my great city and my great State.

The 1970 Night of Stars benefit show was billed as the "Tony Bennett Show," and Tony Bennett introduced Frank Sinatra as his guest. Following Frank Sinatra's appearance, Tony Bennett performed for over 1 hour, singing to the audience with every ounce of strength and feeling he possesses, and pouring his heart out in a myriad of songs. When Tony first walked on stage, he was greeted with cheers and a wildly enthusiastic standing ovation. Time and again he was interrupted by applause as he sang first one, then another, and then many more of the audience's favorite songs. When he concluded his brilliant performance, Tony was ushered off the stage with yet another standing ovation. The enthusiastic audience just did not want Tony to leave, and, by their applause, let him know how much they appreciated his truly memorable performance.

Frequently the press treats all too lightly the enormous contributions that men like Tony Bennett and Frank Sinatra are making to America and to the people of the world. These men are outstanding entertainers. These men make life a little more worth while for millions and millions of people throughout the

world by bringing them joy and happiness through their songs and music, and also by their charitable contributions to so many worthwhile causes.

As I speak on the floor of the House of Representatives today, I want to pay tribute to Tony Bennett and Frank Sinatra, for they are two great, wonderful men who have contributed so much of themselves in order to make life a little bit easier for so many others.

In honor of the day that Villa Scalabrini burned its mortgage, Hon. Richard J. Daley, the distinguished mayor of Chicago, approved and issued a proclamation designating August 15, 1970, as Villa Scalabrini Home for the Italian Aged Day in Chicago. Hon. Vito Marzullo, alderman for the 25th ward, originally introduced the proclamation in the city council.

Additionally, the Sixth Illinois Constitutional Convention adopted by acclamation a resolution recognizing the valuable service the Villa Scalabrini Home has provided and honoring the entertainers who over the years have contributed so much toward making the dream of the villa a reality.

I want to commend Rev. Armando Pierini, C.S., director of Villa Scalabrini, for his many years of dedicated service, and also Father Paul Asciolla, assistant director, the Missionary Sisters of St. Charles, the other staff members at the Villa, and the members of the lay advisory board, as well as the many generous contributors to the home, whose combined efforts have made our Italian old peoples home one that the entire community, and indeed, all of the citizens of Illinois point to with great pride and admiration.

At this point in the CONGRESSIONAL RECORD, I would like to include an article that appeared in the August 20 edition of the Chicago Tribune about the 1970 Villa Scalabrini benefit show as well as the program for the benefit, the text of the constitutional convention's resolution and Mayor Daley's proclamation, which follow:

[From the Chicago Tribune, Aug. 17, 1970]

"THE KING" COMES TO OUR TOWN

The King in a sling came to "his kind of town" Saturday night and made the Villa Scalabrini "mortgage burning" benefit at the Civic Opera House an even more successful event than it already was for the Italian-American community of Chicago.

Frank Sinatra himself, with his right arm in a black sling because of hand operation, was Tony Bennett's surprise guest in a show that raised more than $220,000 to retire the mortgage on the Italian old folks home in Melrose Park. Sinatra sang half an hour of songs, including, of course, "My Kind of Town, Chicago Is . . . ," backed by four musicians he'd brought with him from Los Angeles in his private plane. [The Dick Sarlo Orchestra, who played the music for all the other entertainers, sat mute because they didn't have Frank's arrangements.]

Then Tony Bennett, "Mr. Perfection," took over and delivered his full Las Vegas show of a month ago, direct from Ceasar's Palace, as they say. The color film accompaniment to his all-time favorite, "I Left My Heart in San Francisco," was projected on a huge screen behind him as he sang.

Master of ceremonies Sig Sakowicz had earlier introduced comedian George Kirby and songstresses Christine Corelli and Lida Da Valle. The three-hour benefit was the best entertainment Chicago has seen for many a moon.

And it was all for a good cause.

VILLA SCALABRINI PROUDLY PRESENTS "A NIGHT OF STARS," CIVIC OPERA HOUSE, AUGUST 15, 1970

Starring Tony Bennett.

Featuring Christine Corelli, Lida Da Valle and Special Guests.

Music by The Dick Sarlo Orchestra.

Sig Sakowicz, Master of Ceremonies.

Hon. Frank Annunzio, General Chairman, Development Fund.

Rev. Armando Pierini, C.S., Director, Villa Scalabrini.

Jimmy Durante, Honorary Chairman, Development Fund.

PROCLAMATION

Whereas, Villa Scalabrini Home for the Italian Aged at Melrose Park, provides care and spiritual comfort for the elderly persons in need; and

Whereas, This Home for the Italian Aged has proved an invaluable refuge of peace and happiness for innumerable senior citizens during the last twenty years, and is ranked among the finest facilities of its kind in the United States; and

Whereas, To raise funds for the payment of indebtedness connected with the completion of a new nursing care wing at the Home, a "Night of Stars" benefit performance will be staged at the Civic Opera House on the evening of Saturday, August 15, and

Whereas, Outstanding entertainers, headed by the great Chicago favorite, Tony Bennett, will contribute his appearance on this occasion for the benefit of the Villa;

Now, therefore, I, Richard J. Daley, Mayor of the City of Chicago, do hereby proclaim Saturday, August 15, 1970 A.D., to be Villa Scalabrini Home for the Italian Aged Day in Chicago and urge all citizens to take cognizance of the special events arranged for this time.

Dated this 1st day of July, A.D. 1970.

RICHARD J. DALEY, *Mayor.*

Introduced by Alderman Vito Marzullo, 25th Ward.

PROGRAM

Sig Sakowicz, Master of Ceremonies.

"A Night of Stars"

Posting of the Colors: Filippo Mazzei, Post No. 1 (Illinois); Italian American War Veterans.

The National Anthem: Lida Da Valle.

The Dick Sarlo Orchestra, Lida Da Valle, Christine Corelli.

Intermission.

Tony Bennett and special guest.

Burning of the mortgage.

Tony Bennett, Congressman Frank Annunzio, and the Lay Advisory Board welcoming Frank Sinatra, the world's Number One entertainer, to Chicago, his kind of town!

Villa Scalabrini Mortgage Burning Ceremony, August 15, 1970—Civic Opera House.

LAY ADVISORY BOARD OF VILLA SCALABRINI

Dominick Di Matteo, President.

Matthew Alagna, Hon. Frank Annunzio, Edward Armanetti, Frank Armanetti, Rev. Paul J. Asciolla, C.S., Salvatore Battaglia, Leo Bianchi, William Boschelli, Martin R. Buccieri, Louis Buffardi, Frank N. Catrambone.

Sam Cerniglia, Frank W. Chesrow, James Coli, Dr. August R. Daro, Joseph De Letto, Pasquale De Marco, Pat De Moon, William V. De Nicolo, Joseph De Serto, Marco De Stefano, Domenick Di Frisco.

Gabriel Ditore, Victory Failla, Nello V. Ferrara, Mrs. Serafina Ferrara, Anthony Fornelli, Joseph C. Fusco, James Galante, Frank Gerapolo, Louis Garippo, Sr., Peter D. Giachini, Hon. Anthony Girolami.

Emil Greco, James Guido, Joseph La Calamita, Peter Lavorata, Joseph Lizzadro, Mrs. Stefano Luotto, August J. Maggio, Henry Maiucci, Joseph Marchetti, George Marcucci, Lawrence Marcucci, Hon. Vito Marzullo.

Hon. Robert Massey, Gil Mazzolin, Anthony Montellione, Carmen Nunziato, Anthony J. Paterno, Rev. Armando Pierini, C.S., Francis Ponticelli, Mrs. Grace Ponticelli, Eugene C. Pullano, Nunzio Raimondi, Joseph Rizzo.

John G. Rovetto, Dr. Mario O. Rubinelli, Victor P. Salce, Mrs. Helen Salvatore, Alfred T. Savino, John G. Spatuzza, Anthony Terlato, Joseph Tolitano, Frank Tomaso, John Trotta, George Trucco.

A NIGHT OF STARS, THE TONY BENNETT SHOW

Joseph C. Fusco, Ticket Chairman.

Co-Chairmen: Hon. Frank Annunzio, Dominick Di Matteo, Joseph Lizzadro, Frank Armanetti, Nello V. Ferrara, Anthony J. Paterno.

Special arrangements

Rev. Paul J. Asciolla, S.C., Frank Tomaso, Domenick Di Frisco, Julian Portman, Paul Gallis.

Villa Scalabrini and the Lay Advisory Board say "Thanks" to all their friends in the entertainment industry who have given so much through the years so that our Home for the Italian Aging could be realized. Special thanks go to our friends in the media who have helped us in bringing the message of the Villa Scalabrini concept to the great Chicagoland audience: Jack Eigen, Irv Kupcinet, Maggie Daly, Robert Wiedrich, Sig Sakowicz, Wally Phillips.

SIXTH ILLINOIS CONSTITUTIONAL CONVENTION

RESOLUTION NO. 67

(Proposed by Delegates Arrigo and Orlando)

Whereas, Villa Scalabrini Home for the Italian Aged at Melrose Park provides physical care and spiritual comfort for elderly persons in need; and

Whereas, This Home for the Italian Aged has proved an invaluable refuge of peace and happiness for innumerable senior citizens during the last twenty years, and is ranked among the finest facilities of its kind in the United States; and

Whereas, To raise funds for the payment of indebtedness connected with the completion of a new nursing care wing at the Home, a "Night of Stars" benefit performance will be staged at the Civic Opera House on the evening of Saturday, August 15; and

Whereas, Outstanding entertainers, headed by the great Chicago favorite Tony Bennett, will contribute their appearances on this occasion for the benefit of the Villa; and

Whereas, Richard J. Daley, Mayor of the City of Chicago, has proclaimed Saturday, August 15, 1970 A.D., to be Villa Scalabrini Home for the Italian Aged Day in Chicago and urges all citizens to take cognizance of the special events for this time.

Now, therefore, be it resolved, that the Sixth Illinois Constitutional Convention join in the recognition of the valuable service that the Villa Scalabrini Home has provided, commend the entertainers for their unselfish contributions to the benefit of the Villa and express its wishes for a successful result of the endeavors planned for August 15, 1970, and that a suitably engrossed copy of this resolution be forwarded to Tony Bennett and the Villa Scalabrini Italian Old Peoples Home.

Adopted by acclamation.

SAMUEL W. WITWER,
President.

GERALD SBARBORO,
Clerk of the Convention.

SWISS-UNITED STATES TREATY NO ANSWER TO SECRECY LAWS

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, it is gratifying to learn that the Senate Banking and Currency Committee has acted expeditiously in conducting hearings and reporting out a bill designed to curb the illegal use of secret foreign banking facilities. The Senate legislation is almost identical to H.R. 15073, which passed the House May 25, 1970.

I am somewhat disturbed at recent press reports indicating that tremendous progress has been made in the Swiss-United States treaty negotiations and a tentative agreement has been made. One would suspect that the publicity attending this development is designed to curtail our legislative effort. No one has seen a copy of this treaty nor have its details been fully explained. More importantly, we have pointed out that a treaty between the United States and Swiss Governments is a meaningless answer to the problem of foreign bank secrecy. We need treaties with all bank secrecy jurisdictions before we can close the secret foreign financial institution as a device for American criminals.

There recently appeared in the Washington Sunday Star an article by John A. Grimes entitled "Funny Business Thrives on Foreign Bank Accounts." Mr. Grimes has done an excellent job of reviewing the foreign bank secrecy problem and analyzing the proposed legislation.

I highly recommend the article to all Members of Congress and the public:

[From the Washington Star, Aug. 9, 1970]

FUNNY BUSINESS THRIVES ON FOREIGN BANK ACCOUNTS

(By John A. Grimes)

The average American taxpayer is being victimized by the tax immunity of the secret foreign bank account.

The use of this device to hide taxable funds is costing the U.S. government hundreds of millions of dollars in the estimation of some federal officials—and the average American taxpayer is helping to foot the bill.

How much American money is making its way to hideaways in the secret foreign bank accounts is not precisely known. But through constant delving into the traffic and a small number of successful prosecutions, U.S. officials know enough to be sure the amount is huge. "If I had a budget of $1 million a year to prosecute Swiss bank cases," says one Assistant U.S. Attorney familiar with the problem, "I could easily make much more than that back for the government."

By many accounts, an increasing number of Americans are using these accounts to hide their true income. Not only can money extracted from illegal operations be hidden from the tax collector, but it can also be used to finance illegal operations in this country.

The situation is causing increasing concern among officials of the U.S. Treasury Department, Internal Revenue Service and the Securities and Exchange Commission, all of whom are affected. It is also causing concern among members of Congress, who are seeking some way to close the door to the now-easy outflow of this money. Measures to accomplish this are pending in both houses of Congress.

The manipulations connected with American money secreted in foreign bank accounts border on the fantastic:

Through a deposit in a foreign bank account of little more than $20, one American citizen was able, by manipulating a stock through a foreign account, to realize a gain of $4 million.

A father-son team of specialists on the American Stock Exchange managed to avoid payment of federal taxes on nearly $900,000 by trading stock through a foreign bank account.

Although it is illegal for U.S. citizens to trade in gold, officials have evidence that a foreign corporation controlled by an American citizen and operating through foreign bank accounts made a profit of nearly $9 million by buying and selling gold in a one-week period in 1969, when the price of gold was fluctuating wildly on the open market.

A scheme to funnel more than $1 million in government money assigned to an anti-poverty agency in New York City to a secret foreign bank account was spotted by federal officials before it could be accomplished.

—Money from the narcotics racket, loan-sharking and other illegal practices has been sent abroad into the sanctuary of foreign bank accounts—only to return as "loans" from the bank taking the deposit, thereby hiding the source of the money and making it "clean."

FOREIGN WARS

But by most accounts, the far wider use of the secret foreign bank account is by businessmen, financiers, banks, stockbrokers, doctors, dentists and other affluent Americans who cover up their actual incomes and dodge the taxes due on them. These are dealings which, if carried on in this country, would clearly be illegal.

So far, U.S. government officials most concerned with combating the problem have found themselves almost helpless. The main reason for this is the foreign laws dealing with the secrecy of bank accounts. Under many of these laws, revelation of any sort about a depositor is a crime. And many foreign bankers don't define tax evasion or illegal operations the same as U.S. officials do.

"Once that money gets into a foreign account, it is almost impossible to trace," asserts a government official. "The foreign bankers say they will cooperate if we are trying to run down illegal funds, but in practice they seldom do."

The most noted haven for the deposits of this potentially "hot" money is the tiny, landlocked nation of Switzerland, long known for its extensive knowledge and sophistication in banking procedures. Indeed, the handling of other nations' and other persons' money is Switzerland's biggest national business. Foreign depositors are not only welcome, they are actively sought by some Swiss banks.

Other outlets for American money include Hong Kong, Panama, Curacao and others, but the Swiss bank account has become the prime hiding place, and not only among Americans. Swiss banks can provide absolute secrecy—such as the numbered account, which lets only a few of the bank's officers know who the depositor really is.

The numbered Swiss bank account has become an international badge of prestige. King Farouk of Egypt, among other world leaders who were forced into exile, found the Swiss banks a convenient resting spot for large amounts of his nation's cash just before he was deposed, allowing him to live out his life on the French Riviera in considerable luxury.

The Swiss banking laws are strict in favor of secrecy. Both the Swiss banking code and penal code enforce this, applying severe penalties to those bank officials who violate them. These laws have been in existence a long time and for many reasons. For example, many will argue that Swiss banks provided a valuable service for German Jews who were trying to get out of Germany in Hitler's time, when secrecy was essential to prevent the Nazis from discovering and identifying the funds. But now many U.S. officials declare that these same provisions, even though used for humanitarian reasons during World War II, have become distorted and are being used to cover illicit actions by American citizens.

When U.S. investigators seek to uncover illegal operations being conducted through Swiss bank accounts, the Swiss claim their hands are tied by their laws, preventing disclosure of information about the source of the funds and their owners. And again, the Swiss interpretation of what is legal or illegal doesn't square with the U.S. interpretation.

ICEBERG'S TIP

As a result, very few cases have been uncovered and prosecuted and these few have revealed only the tip of the iceberg. Robert Morgenthau, former U.S. Attorney for the southern district of New York and perhaps one of those with the most knowledge of the dealings of Americans in foreign bank accounts, puts it this way:

"We have just begun to scratch the surface. For every case we have prosecuted, there are roughly six where we have specific information that a crime has been committed, but we are unable to prosecute. . . . And we have reason to believe that there are thousands of other cases of criminal conduct cloaked by secret foreign accounts which have not even been touched by our investigations."

How did all of this come about and how does it operate? Testimony by Morgenthau and officials of various federal agencies helps unravel the story.

As mentioned, Swiss banks have long dealt in the accounts of foreigners and foreign countries for various purposes. They have been an element of stability on the world banking scene for decades, a time when stability was difficult and vital. They finance a goodly portion of world trade. They have aided the American government in crises relating to the U.S. balance of payments. They have helped in concert with other governments in the stabilization of currencies, the "cooling" of "hot" trading in the gold market and helped American corporations expand their overseas operations. The Swiss government has been of considerable assistance to the United States as a go-between and intelligence aid in its contacts with nations this country considers hostile.

So American officials are reluctant to get tough with a government it considers, on balance, friendly and helpful.

But the Swiss banks have, in recent years, become an enigma and a problem to American authorities, all because of the secret bank account.

Until the 1960s, the advantages of Swiss bank accounts were known, or usable, to few. Time and distance were important factors. But with the advent of jet travel, Switzerland suddenly became close. In repeated testimony before congressional committees, the factor of jet travel figures highly in the use of foreign bank accounts.

According to this testimony, the U.S. criminal element first discovered the advantages of foreign bank accounts. "Dirty" money—collected from narcotics, numbers, gambling, prostitution—could be "laundered" through foreign bank accounts.

The example of how this money is "laundered" is not confined to underworld operations; it is a technique used to "clean" much of the money gained from other illegal operations. Here is how it works:

Money in cash is sent by special courier (either one working for a fee or supplied by a Swiss bank), to a secret bank account. This can be done by sending the money directly to Switzerland or to some convenient location where Swiss banks have branches, such as Nassau.

Plenty of avenues are open for getting

money to secret bank accounts. While all Swiss banks are not willing to receive such accounts, representatives of others even make regular trips to the United States to solicit and pick up deposits. Indeed, the competition for depositors has increased over the years so that, if anything, the task of lodging money in Swiss bank accounts is getting easier. A recent story in a New York newspaper recounts an incident of a representative of a Swiss bank stuffing several hundreds of thousands of dollars, supplied by an American citizen, into a satchel for return to Switzerland. Some contacts have outlets which can carry money through "diplomatic immunity."

Once the money has been placed in the secret account, it's easy to "launder" it and hide it from U.S. investigators and tax authorities. Buried in anonymity under Swiss secrecy law, the deposit is "lost." The beauty of this arrangement is that the depositor can recover the money without detection through several devices—or make use of it to his profit with American tax authorities none the wiser.

One vehicle is the "loan." Having his money secreted in an Swiss bank account, the American citizen can then arrange a "loan" from the bank in which it is deposited. Actually, he is borrowing against his own money, a convenient device which not only allows him to hide the money, but to get a tax advantage by deducting the "interest paid on the loan" from his gross earnings.

It's easy. He makes the "loan" from the Swiss bank against his own account. The Swiss banker knows it is a secured loan. The U.S. citizen has the use of money without anyone being able to trace it. He has already escaped federal taxes on that money, but now he can add to his advantage while using the money freely for investment in this country. When the tax collector comes around, he can show him evidence of the "loan" and deduct the interest he is paying on the "loan" on his federal tax return.

So he has the use of illegal money in several ways: He can use the "loan" for his own personal expenses. He can invest it in a legitimate business—without ever having paid taxes on it in the first place. And, whatever use he makes of it, the interest on the "loan" is a federal tax deduction against his declared income.

The investment of racketeer money in legitimate U.S. businesses also is disturbing U.S. officials. Before a congressional committee, Eugene T. Rossides, Assistant Secretary of the Treasury for Enforcement and Operations, testified on the strong evidence of a substantial flow of funds from U.S. racketeers into foreign banks. "Some of the funds appear to have been brought back into the United States under the guise of loans from foreign sources," he said. "This may be providing a substantial source of funds for investment by the criminal element in legitimate businesses in the United States."

Morgenthau is even more positive about this development. "Our investigations into the importation and sale of heroin have revealed that accounts in foreign banks are frequently depositories for the proceeds of heroin transactions," he told the committee. Because those accounts are secret, attempts to uncover persons directing the international dope traffic frequently end up in complete frustration. Generally money received from the sale of heroin in the United States is either carried to Europe by courier or handcarried to a local money exchange or bank where it is forwarded to an accountant in a European country under the direct control of the initial supplier of the heroin.

"Alternately, the money may be given directly to the supplier from the Swiss account. . . . In numerous instances, reputable Swiss banks have loaned their depositor his own money so as to provide him with an explanation of his spending money," Morgenthau said.

LOANS AND TRANSFERS

But the racketeer trade is only a part of it. U.S. officials, from their studies and investigations, are certain that operations by other American citizens are a far larger part of the traffic in secret Swiss bank accounts. Not only do these other depositors use the "loan" route to cover their money, but they can use their own money—again through "loans"—to repurchase from themselves their own assets, thereby getting a tax advantage. A "transfer" of assets is arranged with the foreign bank so the bank appears to hold these assets through a "loan."

Since all transactions involving the property are in the name of the bank, by prearrangment, it results in tax protection for the American citizen. "In this fashion," declares Morgenthau, "depositors have recaptured the use of their foreign secret cash and have sheltered from U.S. taxation the annual income as well as any eventual gain on its sale." Again, money hidden free from taxation is regained, either through a "loan" or by having the bank hold the assets purchased with the depositor's own money—a transaction which would be subject to scrutiny in an American bank. And all dealings are conducted in the bank's name, so no tax man knows what's going on.

One U.S. tax agent explained how it's done: "Let's say you took $500,000 that you obtained by padding your firm's payroll and put it in a Swiss bank. You decide to buy, say, a motel for $1 million. You put up $100,000 in cash. You take out a $400,000 first mortgage. Then you 'borrow' the other $500,000 from the Swiss bank. Let's say you sell the motel for a $200,000 profit. That's a $200,000 profit on an ostensible cash investment of $100,000. You're making the $500,000 of illegal money work for you." Again, the depositor is avoiding taxes on the money in his bank account.

Another avenue for tax evasion through deposits of money in foreign bank accounts is by securities trading through these accounts. Practically every Swiss bank, in addition to its deposit and credit banking activities, will act as broker and dealer in securities for its customers. To deal in American securities, these banks maintain accounts in the Swiss bank's name at American brokerage houses. Through these, the bank can trade the securities of all of its customers with the records revealing only the bank's name. No names of the individuals for whom the trades are conducted appear on the record; all the activity is lumped together under the name of the foreign bank. Result: Hidden income, through gains on stock sales, and a tax loss for Uncle Sam and the American taxpayer.

In one case uncovered through painstaking investigation by American authorities—and only because insiders to the scheme divulged its workings—four "Liechtenstein trusts" (set up in the tiny principality of Liechtenstein, adjacent to Switzerland) holding Swiss bank accounts were instrumental in a scheme by American promoters to sell 750,000 shares of unregistered, over-the-counter stock to the American public at prices manipulated to more than $16 a share. Once the promoters had taken their profits, the stock dropped to less than a $1 a share. Although in each of the cases the titular head of the trusts was a Swiss lawyer, each of the trusts was in fact American-owned. Some Swiss lawyers do a thriving business of being titular heads of trusts and corporations. Evidence has been uncovered of one such lawyer heading 400 separate "corporations."

Secret bank accounts have also been used by corporate "insiders" to hide sales of stock they hold in their own company. "Insiders" are those corporate officials owning more than a certain percentage of stock in the company they work for. Under American law, transactions involving that stock must be specially reported.

But by dealing through secret foreign bank accounts, such transactions for profit have been hidden. The secrecy afforded by the foreign bank account opens the way for the unscrupulous corporate official to take advantage of "inside" news and sell at enormous profits.

SIXTY-FIVE PERCENT

Again, because the transaction is in the name of the bank and not the person, the income derived from this remains hidden—and thus out of reach of the American tax collector.

U.S. officials also say that Swiss bank accounts are enabling more and more American citizens to avoid Federal Reserve Board requirements on how much credit can be extended by brokers to persons buying stock. The current requirement is that the buyer must put up 65 percent of the purchase price of the stock: the broker may then provide the rest of the purchase price by extending credit. But by dealing through Swiss bank accounts, Americans can purchase stock for as little as 10 percent down because the banks will extend the rest of the purchase price in credit. If the stock starts to drop, the bank quickly sells to protect its investment.

But if the stock rises, the customer has gained an advantage that's not available to U.S. citizens who abide by Federal Reserve Board requirements. Again, any profit does not have to be reported to the American tax collector as income; it remains hidden in his secret bank account.

U.S. officials have little doubt that more and more Americans are using the Swiss bank route for the purchase and sale of securities. Last year alone, foreign purchases of American securities amounted to $12.4 billion and sales reached $10.9 billion.

Also, many American brokers are happy to handle Swiss bank business. "That's good clean stuff," admits one broker. "It comes in volume, payment is prompt and we've never had any trouble with them."

Another transaction which has been used by American businessmen is to hide profits in secret bank accounts through "double invoicing." It works this way, as described by U.S. officials in testimony before a congressional committee:

An American corporation selling abroad will invoice the product twice. One will be a lower invoice, which eventually will be shown to U.S. tax officials. The other will be a higher invoice; this will carry the real selling price. But the overseas customer will pay the amount of the lower invoice directly to the seller. By pre-arrangement he will deposit the difference between the invoices in the American businessman's secret bank account. There is little chance of tracing this money for taxation.

"These activities—and the apparent willingness of American bankers, brokers and businessmen to go along with them—have appalled the U.S. officials who are seeking to stem the outflow of illegal money.

In a recent appearance before the House Banking and Currency Committee, Morgenthau said: "What has been perhaps the most galling development to the law enforcement officer is that U.S. persons, even legitimate U.S. bankers, have become foreign bankers claiming the advantage of the secrecy of foreign banking laws. U.S. banks have opened branches in countries having bank secrecy laws. These foreign branches have been used directly to circumvent U.S. restrictions on U.S. banks and to facilitate illegal activities of American citizens.

NASSAU BANKS

"When the U.S. law enforcement agencies have sought to subpoena U.S. banks to produce records of accounts maintained in a foreign branch in the belief that these ac-

counts were being used to commit crimes in the United States, the banks on occasion have refused to produce such account records on the grounds that by so doing they would violate the bank secrecy law of the country where the branch is located," Morgenthau testified. "Their refusal to produce records on this grounds has in some cases been sustained by the courts. I find it shocking that an American bank, by opening a branch abroad, can lend its facilities to citizens who are defrauding Internal Revenue and violating our laws, then successfully deny its obligation to make account records available to the Department of Justice by claiming that the laws of a foreign country would be violated."

Morgenthau also pointed to other straws in the wind. "Note that Nassau, which lies only a half-hour off Florida, has recently become an extremely active banking center with many American-controlled and branch banks. The explanation for this activity is obviously the convenience which its secret bank accounts offer to Americans to unload cash which they prefer not to deposit in their non-secret American accounts."

Morgenthau also commented bitterly that foreign bankers have not been content to sit back and wait for business to come to them. "Many foreign banks have offices or representatives in New York City. Other foreign bankers make frequent trips to the United States to solicit business . . . foreign bankers have organized a system of international couriers who carry large amounts of cash to Switzerland and Nassau for a fee," he said.

One fact which bothers Morgenthau is "the significant change in the identity and ownership of foreign banks. Today, numerous banks in Switzerland and the Bahamas are owned and controlled not only by Americans but in some cases by American hoodlums closely linked to loansharking, gambling rackets and other illegitimate businesses."

An incident last year caused concern for Morgenthau and other U.S. officials. An officer of a Swiss bank told a New York brokerage house that "a fellow with $100,000 will come into your office in the next few days. Take it." Over the next few weeks, deliveries of money were made by an anonymous individual until the total reached some $840,000 in cash. When the Swiss bank official flew to the United States to solicit business and pick up deposits, the broker and the bank official were called to Morgenthau's office.

"Do you know what you've been doing?" they were asked. "You've been taking payoffs for heroin."

Both men were shocked. "I didn't really think about it," said the broker. The Swiss banker said he "thought it was something a bit illegal, like diamond smuggling. If I had known it was narcotics, I never would have touched the money."

Even when cases of violations have been uncovered and successfully prosecuted, however, the penalties have been light for American citizens. Tongue lashings by the judge and fines—which the defendants have been easily able to pay—have been the rule in the few cases which have been brought to court.

What, then, is being done about these "white-collar" crimes? And what efforts are being made to close the easy route for illicit American money and help the U.S. government pinpoint the tax losses involved?

First of all, the United States is seeking to negotiate a treaty with the Swiss government with the aim of opening the door of secrecy on accounts which American officials know involve money from illegal activities. The bar here, however, is the difference between what Americans and the Swiss view as a tax violation. The history of Swiss cooperation makes U.S. officials somewhat pessimistic about making the treaty into an effective instrument of control.

The Swiss say, okay, show us a crime and we'll cooperate, says one U.S. investigator. "Only you can never show them a crime because stock manipulations or income tax violations are not crimes to them. The only time you get any help is when it's really scandalous."

In short, tax evasion to the Swiss is an administrative rather than a criminal matter. Swindling may be beyond the pale. But Swiss securities laws as to what constitutes a swindle are neither so sophisticated nor demanding as ours.

Yet enough of the iceberg of illicit operation has been revealed to cause the Swiss to worry about their "world image"—meaning the possible loss of deposits and resulting incomes, so American officials do have some hopes of eventually concluding a treaty. The gut of the matter, however, is how this treaty will be enforced. And diplomacy, however successful in the end, can use up a lot of time.

Many direct approaches are being made in Congress. The House Banking and Currency Committee has taken the lead under Chairman Wright Patman, D-Tex. Hearings have been completed and a bill forwarded to the full House.

The Patman bill would give American authorities much stronger weapons than they now have in combating the practices revealed. It would:

Require all banks, brokerage houses and similar institutions to microfilm checks and see that any person transacting business for a foreign bank properly identifies himself and the persons for whom he is acting. The provision could end the common practice of signing false names and addresses on forms for cash transfers to Switzerland of large sums of money.

Direct any person carrying more than $5,000 in cash out of the United States at any time, or $10,000 in a year, to report these transfers to the U.S. Treasury.

Make it illegal for an American citizen or corporation to have a secret foreign account unless records are kept in this country or, where required, reports are made to the U.S. Treasury.

Give the Secretary of the Treasury the power to seek court orders against anyone, individual or corporation who is violating, or appeared to violate, the laws in the area.

Give U.S. attorneys the power to force a witness to testify by a court order granting immunity from personal criminal prosecution, thus preventing the witness from invoking the Fifth Amendment.

Create stiff criminal and civil penalties for infractions. A simple violation would bring a penalty of not more than twice the amount of money involved in the transaction, a year in jail or both. Violations exceeding $100,000 in any 12-month period as well as violations involving other federal laws, such as the income tax laws, could bring a fine of $500,000 or five years in jail, or both. Civil penalties would require forfeiture of the entire transaction.

REMOVE SECRECY

As a result of the activity by the House committee, the Senate Banking and Currency Committee has held hearings similar to those initiated by Patman. The Senate bill by Sen. William Proxmire, D-Wis., closely follows the Patman bill. Proxmire, concerned about possible violations of U.S. securities laws, has included two specific provisions dealing with questionable foreign stock transactions through secret bank accounts. One would prevent U.S. broker-dealers from trading in U.S. securities in behalf of a foreign bank or broker unless the foreign bank or broker discloses the individual for whom it is acting, or else states that it is not acting for a U.S. citizen or resident. That would be intended to remove the cloak of secrecy from the foreign stock transactions.

The other section in the Proxmire bill would require U.S. citizens who place stock orders through foreign banks or brokers to give the foreigners permission to disclose the person's identity to the U.S. broker-dealer who ultimately handles the transaction. That would allow the foreign banks or broker to disclose the U.S. citizen's identity without violating the foreign country's secrecy laws.

It is little wonder that both of these measures have begun to run into opposition. There is, to understate it, a lot of money involved which many people wish to see protected. Already banks and brokers have lodged complaints—rightly or wrongly—about the additional paperwork burden. The paperwork requirements will be substantial, no doubt.

But if the U.S. officials who have been battling the secret bank account problem for so many years are correct, the return to the Federal Government in recovered tax revenues will more than pay the cost.

And hopefully it will spell the end of a giant conspiracy for which the average American taxpayer has been paying the bill.

OCCUPATIONAL SAFETY BILL RECEIVES NATIONAL ATTENTION

(Mr. DANIELS of New Jersey asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DANIELS of New Jersey. Mr. Speaker, in the past few weeks, three major newspapers, the Christian Science Monitor, Newsday, and the New York Times, have called national attention to the Occupational Safety and Health Act, H.R. 16785, which is pending before the House Rules Committee.

Surely no issue is more vital to America's 80 million working men and women than their safety and health, and it is incumbent upon the Rules Committee and the Congress to move swiftly to end the carnage in our factories and on our farms. A year ago the Select Subcommittee on Labor began hearings on a number of occupational safety and health bills. Since that date, another 14,500 workers have died and 2.2 million have been maimed or otherwise injured as a result of their employment.

This Nation cannot afford the loss of its citizens when, as the New York Times states in its editorial:

Virtually all of today's occupational diseases and most of the accidents could be avoided if the necessary time, money, and equipment were invested in preventing them.

This Congress cannot remain aloof to the national attention focused on this important legislation. It cannot let H.R. 16785 fail to reach the floor where this body can give the bill its full consideration.

I am including the complete newspaper reports so that the Members of the House may note the discussion and support centered on occupational safety and health legislation:

[From the Christian Science Monitor, Aug. 28, 1970]

JOB-SAFETY BILLS HEAD FOR SHOWDOWN IN CONGRESS

(By Ed Townsend)

NEW YORK.—Congress is moving toward a showdown on controversial occupational health and safety legislation. Organized la-

bor, the Nixon administration, and large business interests appear to be on a collision course.

Worried political strategists on Capitol Hill are trying to avert troubles at least until after the congressional elections this November. The issue could hurt many candidates.

Occupational health and safety is protected now—"inadequately" according to labor—by a hodgepodge of state regulations. Almost everyone believes that conditions need to be improved. The question is how, and whether, the federal government should take primary responsibility for doing it.

REPORTING SYSTEMS STUDIED

Organized labor supports a strong measure introduced in the House and Senate by two New Jersey Democrats, Rep. Dominick V. Daniels and Sen. Harrison A. Williams Jr. The House Education and Labor Committee recently reported the Daniels bill favorably by a 21 to 13 vote . . .

Two years ago, the Johnson administration sponsored similar legislation, and the Chamber of Commerce of the United States and other major employer groups mustered Republican and conservative Democrat support to overwhelm it on the hill. The chamber is girding for another fight on the Daniels-Williams bill as "a very dangerous piece of legislation based upon harassment." It contends that the labor-backed proposals would give "czarlike powers to the secretary of labor and allow safety inspectors to close down plants and impose fines at their discretion."

Business and the Nixon administration have other ideas about what should be done. The administration would empower the federal government to set and enforce safety standards. The Chamber of Commerce favors proposals by Rep. William A. Steiger (R) of Wisconsin for three-way cooperation between the government, labor, and management without a system of "penalties and harassment" and without "attempts to federalize the whole safety and health field."

The Labor Department will release shortly a study of national statistics on occupational injuries and illnesses, being prepared for it by Jerome B. Gordon, a private consultant, at a cost of $58,000. The government also has under way a study by the American National Standards Institute on injury- and illness-reporting systems, and a task-force project on new legislation.

ONLY HALF THE STORY?

Recently the AFL–CIO asked the Labor Department to release the Gordon study; the administration said it would be premature—the study is still not official. But labor says inside information indicates that the study will show that there has been a gross undercounting of job injuries and deaths, by as much as 10 percent or some 200,000 accidents each year. It also says the study will show that only disabling injuries (those that cause at least the loss of a day's work) are reported now, and that "there is a ratio of 10 serious injuries for every disabling injury reported."

The AFL–CIO charges that industrial-safety records kept by the Bureau of Labor statistics "may be telling only half the story of the yearly toll of job-related accidents."

According to labor, the partial story is bad enough:

On every working day, it says, 55 U.S. working men or women, lose their lives because of on-the-job accidents or illnesses; more than 14,500 were killed on jobs in 1969.

Another 27,200 are injured and 5,480 are reported disabled daily; government figures show 2.2 million were disabled in 1969—but labor contends that the number disabled probably was as high as four million, twice the figure reported to the Labor Department's bureau of labor statistics (BLS) on a voluntary basis by states, and that injuries probably totaled at least 25 million instead of the nearly 10 million reported to the BLS.

The daily total, it notes, is "a lot more than the U.S. casualty list in Vietnam." The cost to workers is estimated at $1.5 billion a year in lost wages—plus another $600 million in medical expenses. The cost to the American economy is set at $6.8 billion.

One of labor's concerns is "occupational health hazards from chemicals and other substances . . . harder to identify than conventional safety hazards." The Oil, Chemical, and Atomic Workers and the United Rubber Workers, among others, are pressing in collective bargaining for industry-labor research programs to identify and seek safeguards against such hazards.

GRANTS-IN-AID FAVORED

The struggle for stronger laws in this area went on without gain for years. There is less opposition to changes now, in part because the shock of the Farmington, W. Va., mine disaster which resulted in 78 fatalities. Increased occupational health and safety protection is considered almost a certainty in a matter of months.

Labor wants the Daniels-Williams legislation that would provide for federal-state regulations. The Secretary of Labor would be responsible for the administration of the program and for promulgating standards for enforcing regulations and for setting civil penalties for violations. States meeting certain federal criteria—minimum standards set forth in the bill—would be certified by the labor secretary to carry out the provisions of the act within the state, with grants in-aid from the federal government.

The administration has its own bill and is seeking union support for it as a "compromise" providing for establishment of an independent agency with administrative powers, instead of giving authority to the Labor Department. So far labor has balked at this, calling it "a watered-down version" of health-and-safety legislation that would "break down the regulatory processes and decisionmaking into too many independent elements" to work effectively.

The Chamber of Commerce and business favorite is the Steiger bill. It would establish an independent health and safety board to set standards, provide for the labor secretary to carry out inspections and an outside commission to make judgments on the results of the inspections. In the chamber's view the bill would refrain from safety requirements which would put an employer in jeopardy for "something he knows nothing about." It would permit plants to be closed only by federal court order and penalties to be set on a basis of each infraction.

[From Newsday, Aug. 29, 1970]

THE FACTORIES AND SHOPS ARE ENVIRONMENTS, TOO

(By Stewart Udall)

Of all the environments inhabited by Americans, the places where 80,000,000 of us work and spend half our waking hours are among the most lethal. The blue collar employe, in particular, merits hazardous duty pay. He is surrounded by unsafe machines. Toxic substances often seep into his lungs and bloodstream. He may die of job-induced cancer, metal poisoning, quick crushing or slow suffocation from lung disease.

In short, the blue collar worker suffers from an environmental neglect that is overwhelming. Industry seldom treats him with adequate care. His union, when it negotiates for his health and safety, rarely wins full safeguards. State compensation boards seem unmoved by his working conditions.

Environmental groups, above all, act as if the blue collar worker did not exist. Their lack of concern for his workplace—their failure even to recognize it as an environment—is the most glaring defect in their young movement.

This defect can be remedied—and there is no more appropriate vehicle for doing so than the Occupational Safety and Health Act which will soon come to a floor vote in the U.S. House of Representatives. Inspired by Rep. Dominick V. Daniels of New Jersey, this is the most far-reaching work of environmental legislation (disguised as labor legislation) to come along in decades. It is vehemently opposed by the U.S. Chamber of Commerce and other industrial groups, which have been waging a drumfire lobbying campaign against it.

Environmentalists, however, seem nowhere in sight. Of the hundreds of environmental lobbying organizations in this country—organizations which have sought and won labor support for air pollution, SST and wildlands legislation—only Environmental Action of Washington, DC, has responded on this issue.

Where *are* the environmentalists? Anthony Mazzocchi, legislative director of the Oil, Chemical and Atomic Workers Union says: "The environmental groups are rightfully up in arms about air pollution in the Delaware Valley and oil slicks along the Gulf Coast, but they are blind to the places where 28,000,000 blue collar employes earn a living. They think the 'environment' begins out there in the trees. They really don't believe industry is killing its workers."

Last year, partly because of unhealthy and unsafe industrial environments, 14,500 working Americans died from on-the-job accidents or illness. Millions more suffered from job-related diseases or impairments. Approximately 25,000,000—nearly a third of the work force—were seriously injured.

The negligence behind the death, disease and injury toll is shocking. In the states today there are 1,600 occupational health and safety inspectors and 2,800 game wardens. Elk and deer are better protected than working men and women.

Nobody has adequately measured the scope of this scandal. "The occasional man who is crushed by heavy equipment becomes a statistic," says Mazzocchi, "but the man who withers away with cancer, emphysema or brain damage does not." Steelworkers die of sulfur dioxide poisoning. Cobblers, painters and dry cleaners die from benzene vapors. Asbestos workers die of lung cancer. Machinists lose their hearing and inhale lung-shredding slivers of metal. Textile workers are killed by the particles of lint they breathe. How many become victims? Nobody counts.

The workplace is an environmental disaster partly because employers find it less costly to pay modest compensation fees than to monitor lethal substances, install safe equipment and otherwise treat workers with care. Only 500 of all 6,500 industrial chemicals now in use have been tested and given safe tolerance levels. In some states, fatal or disabling diseases such as asbestosis are not even compensable. Existing compensation laws pay workers or their widows only a tiny fraction of the income lost through incapacitation or death. Says Gary Sellers, a work environment specialist with the Center for Study of Responsive Law: "This system gives employers a license to commit mayhem and manslaughter."

In a bold departure from all previous labor legislation, the Daniels bill would:

Impose on industry the "general duty" of furnishing workers "a place of employment which is safe and healthful."

Empower the Secretary of Labor to set nationwide health and safety standards for work environments.

Call for unannounced federal inspections

of workplaces and prompt disclosure of the findings to workers.

Authorize the Secretary of Labor to impose fines and seek court action against employers who violate the "general duty" or specific standards.

Permit the Secretary of Labor to close down all or part of any plant where workers are in "imminent danger" of injury or disease.

Direct the secretary of health, education and welfare to publish a list of all known or potentially toxic substances—including those whose analysis is specifically requested by workers.

Allow employes to refuse work, without loss of pay, in areas where toxic substances are found at dangerous concentrations.

The poisons that menace workers inside our factories inevitably foul the outside environment—and only then are they recognized as "pollution." When arsenic powder is spilled inside a Monsanto chemical plant in Illinois, says one worker, "Why, we just hose down the room where the spill is and it goes into the sewer and on out into the river."

This is one more reason—beyond safeguarding the lives and livelihood of millions of workers—why the Daniels bill is sorely needed. It is heading for a crucial floor vote amid stiff opposition from industry. It may well go down to defeat.

Environmentalists have only a few weeks to wake up and act.

[From the New York Times, Sept. 1, 1970]

DANGER ON THE JOB

Every day men and women go to work and lose their lives or suffer crippling injuries. Every year nearly a half-million workers come down with job-related illnesses of varying duration and severity. Approximately two million persons suffer from chronic diseases picked up from their work.

The "black lung" of the coal miners is the best known, but there are many other occupational diseases, such as the "brown lung" of the textile workers who breathe cotton dust, the radiation-related diseases of those who work with uranium and other more obscure and exotic ailments.

The struggles to enact workmen's compensation laws and to achieve health and safety standards in industry were fought and won so long ago that it comes as a surprise that these problems are still the subject of controversy. But as with other battles won in the past, complacency gradually creeps in.

The irony is that virtually all of today's occupational diseases and most of the accidents could be avoided if the necessary time, money and equipment were invested in preventing them. Dr. Irving J. Selikoff, Professor of Preventive Medicine at the City University of New York, told a Senate subcommittee of many industrial health measures devised in recent decades but not put fully into effect.

A year ago President Nixon proposed new legislation in this field. Democratic-controlled committees in Congress have now written more aggressive and comprehensive bills than the one the Administration proposed. The House Labor Committee last month approved on almost a straight party-line vote a measure by Representative Daniels of New Jersey, which is expected to be voted on in the House next month. A somewhat similar bill is taking shape in the Senate Labor Committee.

Some of the differences between the Administration bill and the Congressional versions are open to compromise. But experience has shown that Federal standards are necessary and, if they are to be effective, Federal inspectors must have the authority to assess civil penalties and to close a plant temporarily if an overwhelming peril exists. In addition to the human suffering and anxiety involved, avoidable hazards and illnesses in industry are a waste of economic resources which the nation can no longer tolerate.

THE ELEMENTARY AND SECONDARY EDUCATION ACT: 5 YEARS LATER

(Mr. MEEDS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MEEDS. Mr. Speaker, September 23 marks the fifth anniversary of the first implementation of the historic Elementary and Secondary Education Act of 1965—Public Law 89-10. On that day, 5 years ago, President Johnson signed into law the first appropriation act which made the ESEA a reality instead of a dream. Federal dollars, almost a billion of them, began to flow to the Nation's hard-pressed rural and urban school systems.

Now, 5 year later, memories have faded and the underlying thrust of the Elementary and Secondary Education Act has dimmed from view. A new group of administrators at the Department of Health, Education, and Welfare and the Office of Education has taken over the reins of governing this and other educational programs. Much of what the Congress had in mind when it enacted the ESEA is either unknown to or forgotten by this new generation of administrators. Many of the crucial objectives of the ESEA, consequently, are not given the attention or the care they deserve.

Now, Dr. Samuel Halperin, formerly Deputy Assistant Secretary for Legislation in the Department of Health, Education, and Welfare has recalled in writing the important assumptions and expectations underlying the Elementary and Secondary Education Act of 1965. In so doing he not only sets the historical record straight but also helps to rekindle our dedication to the education of the disadvantaged, to educational innovation, to equality of educational opportunity, and to the other key objectives of the ESEA.

Because I believe that my colleagues will enjoy reading his article and that educational administrators may learn much from it, I include Dr. Halperin's article at this point in the RECORD:

ESEA: FIVE YEARS LATER

(By Samuel Halperin)

If birthday candles burn on September 23 in celebration of the fifth anniversary of the first appropriation bill for the Elementary and Secondary Education Act,[1] it is hard to imagine where. Not among the ranks of federal budget-makers and top policy-makers, many of whom seem to doubt that the Act is "cost-effective." Not among educators, many of whom accept its funds but complain of excessive red-tape and bureaucracy in order to obtain relatively little federal money. Not among the embittered parents of ghetto children, most of whom have seen precious little change for the better in the quality of their children's education. Not even among the Congressional liberals who were the Act's most dedicated advocates but who are now embarrassed by the critics and seem unable to counter with dramatic success stories made possible by ESEA.

Yet, five years ago, the nation's press, most of the Congress, and top educational spokesmen hailed President Johnson's signing of the Elementary and Secondary Education Act as a "social breakthrough" of the first magnitude. After a century of failure to pass major school aid bills, a "down payment" of a billion dollars was delivered—more help in a single year than in the entire 189-life of the Republic.

That euphoria of 1965 has now given way to grim soul-searching and not a few recriminations. As if to write off most recent education legislation, President Nixon's recent Message on Education Reform proclaims a major new criterion for judging federal school aid programs: "What do the children learn?"

It is difficult to quarrel with that statement as an ultimate test for federal expenditures. But lest we fall prey to the slogans of the moment or, worse yet, compound error by failing to learn from the past, it may be useful to recall the assumptions underlying ESEA when it was developed and enacted five years ago.

THE POLITICAL IMPERATIVE: "PASS A BILL!"

Unlike 1970, when some $10 billion in annual federal outlays are authorized, the stark problem facing ESEA's authors in 1964 was how to get any kind of major school aid bill enacted. Consequently, the place to begin an understanding of ESEA is with the recognition of the heavy legacy of conflict and defeat resulting from 100 years of abortive federal efforts to aid the schools. Much of the Congress, both intellectually and politically, was committed to school aid. Yet premonitions of doom dogged policy-makers contemplating the possibility of large-scale federal financing of the schools. ESEA's founding fathers had a keen sense of history, and they were painfully aware that the federal aid proposition had, in Robert Bendiner's words, "been beaten down in every way known to parliamentary man." Having passed the Senate seven times and the House twice since the 1960's, a large-scale school aid measure had yet to reach the President's desk for signature.

The first task of the Administration's legislative team, then, was to devise a bill which was politically viable. Politicians needed assurance that the aid to education issue would not create yet another bruising battle on the church-state, desegregation, or "equitable" distribution formula issues—the three traditional obstructions to federal aid bills. They also needed leadership to assert that the time was finally at hand to establish a permanent federal role in the improvement of the nation's schools.

To this overreaching political objective, based on the now-respectable assumption that school problems would not be solved unless the federal government did its part, much of what our changing value system today considers educationally important was submerged. "Getting the law on the books" was the objective uniting perhaps the widest constellation of interest groups ever assembled on a domestic issue. In the spirit of "Consensus Politics" which then dominated Washington, legislative success in important new social areas—like school aid, Medicare, and civil rights—was taken as a valid end in itself. In time, one reasoned, the legislative process would remedy any imperfections or omissions in the original ESEA concept. Andy Biemiller, chief lobbyist for the politically potent AFL-CIO, said bluntly what most ESEA backers were thinking:

"Let's get started . . . and get a bill through here, and begin to get some money into our school systems where we now know it is badly needed, and then we can take another good look and get closer to the goal that both you and I want; and we make no

[1] Public Law 89-199.

bones about it, that we want a general education bill."

In hindsight, some have said that the overwhelming Democratic Congressional majority won in the 1964 landslide should have enabled the Johnson Administration to take its time, to develop a "more workable" statute. Yet all those involved with ESEA recall vividly the periodic waves of near-panic which accompanied the bill's hurried passage through the legislative mills: this or that key educational group was rumored to be departing from the coalition; the church-state compromise was about to become unglued; pending court cases were about to be decided which could wreck the tenuous political alliance; this or that influential Member of the Congress was going to denounce one of the bill's major compromise sections, etc. And so, from its introduction on January 12 to its signing only 89 days later, on April 11, 1965, no effort was spared to speed ESEA to the President's desk. (No wonder some critics called it "The Railroad Act of 1965!") If there were lingering doubts about the efficacy of any of the bill's features, they would have to be deferred until the principle of federal aid was first firmly established.

FIRST PRIORITY: THE DISADVANTAGED

While ESEA's prime objective constituted a political "first," its second was no less ambitious: to begin the tedious task of making the mammoth American educational system (then 29,000 districts, 123,000 schools, 2 million teachers) more responsive to the need for overall educational change. Above all, the Act called for a better deal for the disadvantaged.

Title I, which provides aid to school districts with concentrations of children from low-income families, has always commanded the lion's share of Congressional and public attention. In fact, the allocation of a billion dollars in the first year—far surpassing any school aid bill ever proposed—was a Texas-sized gesture specifically designed to capture the popular imagination. In each of the several extensions and large-scale revisions of ESEA since 1965, Title I continued to be in the spotlight.

As much as any other act of government, Title I characterizes the nation's commitment to eliminating the educational deficits of the young. Nothing has changed more dramatically from pre-1965 to today than the national dialogue over Title I. Then the issue was: "Is it a proper federal responsibility to pump money into slum schools?"

Today the only real question seems to be: "Is Title I working? Can federal aid, in fact, make a difference in the lives of kids? Indeed, are the children learning?"

Erroneously regarded by many of its backers as a general aid program, Title I was actually something new in federal aid statutes: the broadest type of categorical aid ever devised for elementary and secondary schools. Its major thrust was toward discovering ways to educate the "category" called disadvantaged children. But local educational judgments, weighed and approved by state authorities, were given almost complete reign.

In this spirit, more than pork-barrel politics underlay the Administration's decision to provide funds to more than 90 percent of the nation's school districts. Not all such districts lacked the fiscal capacity to raise their own funds. Rather, by earmarking federal funds for the exclusive use of the educationally disadvantaged, it was hoped that all schools would embark quickly upon a new era of concern for the underprivileged. The Act's central task of "public education" could not be trusted to the indefinite workings of a so-called general aid, tax credit or revenue-sharing bill. Instead, using the lure of categorical federal money, the Johnson Administration hoped to see school bureaucracies rethink their priorities and put educationally disadvantaged children at the forefront of the schools' concern.

ESEA was part of a team effort. The Economic Opportunity Act, passed the previous summer, would aid the young outside the formal "power structure"—through Head-start, Community Action, Job Corps, Neighborhood Youth Corps, VISTA, and the like.

By design, the "educational establishment" would be prodded into action by OEO-financed "outside competition." Title I, on the other hand, would undertake the far more difficult task of rejuvenating the schools from within. In theory, then, the War on Poverty would be waged on several fronts simultaneously.

However, Title I's concept of extra help for the poor ran against the grain of American educational tradition which held that all children were to be treated equally, that school resources were to be divided equally, and that the job of the educator was to serve his students even-handedly. Even among some liberals who had recently discovered "The Other America," the concept of compensatory programs for the "disadvantaged" or the "culturally deprived" grated on the ears, smacked of "special treatment."

Reluctance to embrace compensatory education programs was difficult enough to overcome; what compounded the problem was a sheer lack of lore and know-how about them. Today's curricular materials, special research efforts, and evidences of professional concern—journals, seminars, training courses, etc.—no matter how inadequate they may ultimately prove, were almost nonexistent in 1964–1965. Indeed, as the House and Senate Committee Reports (drafted with the aid of the Administration) indicated, no one in America knew exactly how to reach and teach the culturally deprived youngsters of the urban slums and rural depressed areas. Consequently, the committees suggested to educators literally fifty different types of programs which might conceivably improve the quality of life, as well as the formal education program, of the children of the poor.

Why not use federal money, asked the Congress, for "supplemental health and food services," "educational summer camps," "afterschool study centers," "scheduling of concerts, dramas, and lectures; mobile art exhibits and libraries," etc.

In the level sunlight of 1970 much of this seems terribly naive to many an onlooker. Yet there was, in the "era of good feeling" of 1965, a widespread belief that educators did want "to do right" and, given the funds for which they longed, would in time discover how to strengthen the system from within. There were then few cynics (now called "realists") to question whether dollars would, in fact, make a difference; the system simply craved dollars, especially dollars for the poor and dollars to stimulate innovation. There were then scarcely any "system engineers" to insist that the only way to judge federal aid programs was by how much kids improved their ability to read and write. These were concerns whose time had not yet come.

THE BIRTHPANGS OF ACCOUNTABILITY

One exception, by its uncommonness, helps to illuminate the actual state of affairs of that time. Phrases like "accountability," "performance requirements," "educational achievement output," and the like are stock-in-trade rhetoric today. But almost no one in Washington voiced such notions during the period when ESEA was being developed and enacted. Those who dreamed of effective measurements of educational achievement laid their dreams aside in order to pass a school aid bill; the charge of "federal control of education" had to be avoided.

A notable exception was freshman Senator Robert F. Kennedy, whose national eminence made him impossible to ignore. Almost as soon as ESEA reached Capitol Hill, Mr. Kennedy let it be known to HEW that, unlike most of his colleagues in the Congress, he had scant confidence in the ability or motivation of educators to serve the poor. From Commissioner of Education Francis Keppel he won ready agreement that "the school system itself has created an educationally deprived system." Of Mr. Keppel and HEW Secretary Celebrezze he inquired rhetorically:

"Would you not agree, that one of the really great problems we have in the country, being blunt about it, is the school boards of some of these communities, in some of these states, and the commissioners of education in some of the states, that they are just not going to take the necessary steps to deal with the problem?"

Mr. Celebrezze's response—"That is the price of democracy"—received Kennedy's tart retort: "It may be the price of democracy but we don't have to accept it."

Kennedy's impatience with "the educational establishment" did not end there. He conditioned his subsequent support for passage of the ESEA upon good-faith Administration efforts to hold educators responsive to their constituencies and to make educational achievement the touchstone of success in judging ESEA.

After receiving the Senator's ultimatum, the HEW legislative team worked intently with Mr. Kennedy's Legislative Assistant, Adam Walinsky, to develop the first primitive legislative requirement in history which would hold educators accountable for educational progress under federally-funded programs. Section 105(a)(6) of the ESEA was drafted requiring the States to adopt "effective procedures, including provision for appropriate objective measurements of educational achievement . . . for evaluating at least annually the effectiveness of the programs in meeting the special educational needs of culturally deprived children." This and other Kennedy-inspired provisions, such as a watchdog National Advisory Council on the Education of Disadvantaged Children and Section 105(9): "effective procedures . . . for acquiring and disseminating to teachers and administrators significant information derived from educational research, demonstration and similar projects, and for adopting, where appropriate, promising educational practices developed through such projects" were then carried by the Administration to the House Committee on Education and Labor and introduced by friendly Congressmen.

All of this was done by the Administration and its backers with great fear and trembling; fear that opponents of the bill would find ammunition for their charge that ESEA represented unwarranted federal control over local school districts; trembling that pro-ESEA educational lobbies would break with the Administration on the same issue. Yet Senator Kennedy's language survived and a tenuous beginning at accountability was at least possible.

The subsequent history of these fledgling provisions for evaluation and dissemination is not encouraging to those who believe in the power of federal legislative dicta to change human behavior rapidly. The response of much of the educational community varied from "We already have too much evaluation" to "Nobody knows how to do educational evaluation" to "Years will be required until anybody can do it." (At about the same time the Administration was expending thousands of man-hours attempting to keep afloat the now-respectable National Assessment of Education, a large-scale testing project which had been launched by Commissioner Keppel and several of the foundations in the face of much educator outcry.) The emotionally charged battle cry

"Federal control!" intimidated the Office of Education from meaningful efforts to find out what worked in education and how these successes could be disseminated to the country at large. Years would have to elapse before a climate of sufficient concern could be generated to begin in earnest the task of discovering what difference federal dollars make in the lives of children.

THE THEME OF REFORM

As we have seen, a major objective of ESEA was to give educators the fiscal tools and the national encouragement which, most observers then believed, were required to focus attention on schooling in the slums and to wage a meaningful war on educational neglect. The notion of assessing federal progress by measuring academic achievement ("pupil output") had hardly dawned in Washington. Yet it would be unfair to characterize ESEA's founding fathers as thinking that "money alone would solve all problems."

On the contrary, ESEA's authors believed that the educational system was non-responsive and stody. Their solution was to *buy* educational reform; "Mad money" from Washington would stimulate educational change. Indeed, despite all of the public attention surrounding Title I of ESEA, with its emphasis on one neglected segment of the educational system, it was really the theme of reform which dominated the concerns of ESEA's authors. From the 1964 Task Force on Education, chaired by John W. Gardner, to the Office of Education's nine mid-1965 regional "road shows" set up to publicize the new Act, the federal commitment to educational change was paramount.

The "buying of reform" dictated other, lesser-known parts of ESEA: to the clearly documented state of neglect of the nation's school libraries, Title II respond with support for the purchase of textbooks and school instructional materials. In the view of that time, books and teaching aids were not regarded as "frills" to adorn the schools but as indispensable tools to raise the quality of learning for all children. Not incidentally, Title II also firmly cemented private educators' support of ESEA by ensuring equal access to instructional materials by both public and private school children.

Title III, a conception of the Gardner Task Force, complemented the overall strategy of reform by calling for a broadly-based coalition among educators and every other type of community educational resource—universities, museums, orchestras, galleries, parks, etc. The schools were to be a partner in a consortium of inspired laymen and professionals who, together, would apply their talents to the education not merely of children but the community's adults as well.

The best minds and talents of the community would be harnessed for the common good; the "closed corporation of educationists" would be cracked by the infusion of fresh ideas and new perspectives; concrete expression would be given to Commissioner Keppel's dictum: "Education is too important to be left solely to the educators."

In the view of some reformers, the demise of this program of Supplementary Centers and Services was sealed at the outset. To protect itself on church-state grounds, the Congress insisted that Title III programs be operated solely by local public schools, instead of by community corporations in which the schools would be only a partner and not the master. Two years later, the "educational anti-establishment" was further depressed when approval of Title III projects was turned over completely to the States. Whatever theoretical virtues might have been inherent in the award of grants on the basis of "a national competition in the marketplace of new educational ideas" now became moot. Educational reformers washed their hands of what had been proudly hailed as the "dream title."

Title IV of ESEA authorized the construction of a national network of Regional Educational Laboratories to perform better basic research and to introduce into the classroom quickly the effective results of that work. (The rhetoric used in urging the Act's passage in 1965 is echoed strongly in President Nixon's 1970 Message on Education Reform. Apparently, fear of a large federal R&D effort in education has faded even if support for such an effort has not yet become politically irresistible.)

Concurrently, educational research grants were to be vastly increased with a view toward involving non-education academics and other talented "outsiders" in the work of the schools. The lengthy task of inducing social and physical scientists and experts in the humanities to abandon their traditional aloofness to the work of the "pedagogues" was clearly the underlying thrust of this ESEA title.

MAKING THE STATE MACHINERY WORK

The theme of reform and revitalization was given a special prominence by another objective of ESEA's authors: the commitment to improve federal-state educational relations through a massive build-up of state educational agencies. Almost single-handedly, Commissioner Keppel convinced the executive branch that Washington's educational bureaucracy could not and should not be the operating focus for most federal programs. State departments of education, generally weak and understaffed, needed federal aid if they were to be able to shoulder their vast new responsibilities under the ESEA.

Title V and other earmarked funds were included in ESEA to greatly enlarge and, hopefully, strengthen state educational leadership. In some states, as much as 70 percent of all state department personnel were soon federally financed in the expectation that these new educational cadres would exercise the judgment required of them in approving some 20,000 local district plans under Title I, the state library plans under Title II, and in giving advice and technical assistance to the thousands of consortia-based plans under Title III. Prodded by federal dollars, the states would have to "measure up" in unprecedented fashion.

MONEY AND TIME: THE WORK OF A GENERATION

But reform was more than a theme throughout ESEA. The Act's authors also believed that change would be a very lengthy and expensive undertaking. Congressional and public opinion had been electrified by President Johnson's unprecedented commitment of $1½ billion to the improvement of education in 1965–66. Yet virtually everyone connected with the legislation was convinced that the ambitious goals of ESEA would require years and annual appropriations at least 3 to 10 times greater than those of the first year.

One important meeting at the Budget Bureau in late 1964 sheds light on what was on the minds of ESEA's founding fathers. There, HEW representatives were amazed to learn that their traditionally skeptical, if not penurious, colleagues in the Bureau, were critical of the proposed Title I formula because it didn't spend enough money! By limiting payments on behalf of children from families with incomes under $2000, Title I would cost "only" slightly over a billion dollars. Even raising the family income factor to $3000 or $4000 would not provide the nation's schools with the minimum 5 to 10 billion dollars which was then believed required to make a meaningful impact upon the lumbering educational system. Consequently, the Budget Bureau designed, and the Congress subsequently enacted, a special "incentive grant" program. This add-on feature was deliberately designed to stimulate state and local effort and to spend many hundreds of millions of federal dollars over and above the regular Title I formula, then projected to grow to appropriations of $3–4 billion by 1968–69.

Then, to the chagrin of its authors and backers, the distant cloud of Viet Nam grew to behemoth proportions. Budget deficits and inflation took over center stage from the schools and from America's year-old "unconditional war against poverty." As a result, the nation's appropriation of $1.3 billion for Title I in 1970 is, in real purchasing power, actually less than Title I's fiscal 1966 appropriation. (Per pupil expenditures under Title I, in fact, have fallen sharply over the years: from $213 in fiscal 1966 to $173 in fiscal 1971.)

Budget Bureau and HEW projections for Title III of ESEA were even more ambitious: over a billion dollars by the early 1970's (as contrasted with an actual appropriation in 1970 of only $116.4 million). The point is simply that in 1964–65 there may have been many illusions, but about the cost and time required for change, very few.

INTERSTATE EQUALIZATION

Yet another objective of ESEA's authors was that of channeling federal funds to low-income regions of the country and to our harassed big cities, without proportional aid to most high-income communities. Aware that previous federal aid bills had foundered on the rocks of this "equalization" issue, ESEA's authors steered clear of traditional aid formulae. Instead, they devised a series of ingredients in Title I which provided both the needy South and the North's great cities with proportionally greater assistance than any bill proposed before (or since) ESEA.

After enactment, the distinguished economist Murray Weidenbaum, now Assistant Secretary of the Treasury, concluded from his studies that Title I:

Is a highly progressive program . . . tending to lessen regional income differentials . . . it appears to be more oriented to directing funds to low-income regions, even more effectively than pure income transfer payments such as public assistance. . . .

"Government expenditures on education—with their heavy orientation to investment in human beings—may be considered in an even more favorable light vis-a-vis the more traditional welfare and income maintenance programs. This may become increasingly the case when it is realized that the new type of federal aid to education contributes both to the anti-poverty efforts, by channeling funds into low-income areas, and to raising the economic potential of the nation by increasing the productivity of its present and future labor force."

In the last years of the Johnson Administration, too, support for Title I rested more on its merits as an equalizing vehicle than as a proven instrument of educational improvement.

EASING THE PAIN OF DESEGREGATION

Finally, the architects of ESEA harbored yet another expectation about ESEA: they saw it as a potent lever for inducing southern school districts to undertake quick and "cooperative" school integration. Just as ESEA was seen as the in-school complement to the Economic Opportunity Act of 1964, so it was believed to be the "sugar solvent" which could break the log-jam on desegregation, as mandated by the Civil Rights Act of 1964. Under Title I alone, hundreds of southern school districts would receive an increment to their total operating budget of as much as 50 percent (Congress limited this payment to 30 percent in the first year). Administration leaders expected that southern school districts would be in-

duced to desegregate faster in order to be eligible for such windfall funds.

In this expectation, as in the others enumerated above, only careful historical research can ascertain whether, in fact, the availability of federal funds hastened the pace of southern school desegregation. But it is amply clear that, by judicious display of county-by-county fund distribution tables, the White House was able to garner greater southern support for ESEA than for any school aid bill since the *Brown* decision of 1954.

In sum, ESEA was designed to achieve a number of distinct objectives: establish firmly the principle of federal aid to the schools; begin reform of the entire fabric of American education; redirect educational priorities to put the disadvantaged at the head of the class; provide sorely needed funds, particularly to the nation's poor rural areas and overburdened cities; strengthen federal-state educational relations by building up state departments of education; and speed the pace of school desegregation in the South.

Such is the context of expectations in which ESEA was born. The validity of these original objectives is still worth pondering even while we share the historical perspective (or charity) of the President's Counsellor, Daniel P. Moynihan, when he summed up recent experience under compensatory education programs:

"By and large, these programs have not achieved what was hoped for them. It is not to say they could not and that they don't achieve some things, but on balance, this subject has turned out to be more complicated than we had understood or thought, and there was no way to learn this except to try."

Learning by trying is what ESEA was all about. On its fifth birthday in 1970 one wonders if ESEA has yet had a fair trial.

HEARINGS ON LIBRARY SERVICES AND CONSTRUCTION ACT AMENDMENTS

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I would like to take this opportunity to announce that the Select Subcommittee on Education, which I chair, will hold hearings on Thursday, September 10, on amendments to the Library Services and Construction Act.

This legislation, which was initially passed in 1964, has been extremely important in expanding public library services throughout the country, supporting new library construction, and promoting interlibrary cooperative networks.

Witnesses at the September 10 hearings will include: Burton E. Lamkin, Associate Commissioner for Libraries and Educational Technology, U.S. Office of Education; Keith Doms, director of the Free Library of Philadelphia; and Carlton Rochell, director of the Public Library of Atlanta.

Also scheduled are State librarians Helen Miller of Idaho and Roger McDonough of New Jersey, and library trustees Alex Allain of Louisiana and Margaret Warden of Montana.

The hearings, which are open to the public, will be held in room 2175 of the Rayburn House Office Building at 9:45 a.m.

HEARINGS SCHEDULED ON LEGISLATION TO ESTABLISH KENDALL SCHOOL AS DEMONSTRATION SCHOOL FOR THE DEAF

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, on Friday, September 11, the Select Subcommittee on Education will hold hearings on H.R. 18766, introduced by the distinguished gentlemen from New York (Mr. CAREY), and related bills, which would establish a demonstration elementary school for the deaf at Gallaudet College in Washington, D.C.

The school to be established under Mr. Carey's bill would be an expansion of the present Gallaudet School for the Deaf on the Gallaudet campus and would serve as a working demonstration center where learning problems of the deaf could be dealt with on a day-by-day basis and where new techniques, media, materials, and technology could be readily observed.

Mr. Speaker, I should like to take this opportunity to salute Congressman CAREY for his initiative in bringing this significant measure to the attention of Congress. All of his colleagues in Congress know HUGH CAREY as one of the best friends of handicapped persons in the Nation.

Mr. Speaker, our witnesses for the September 11 hearing are: Dr. Edward Merrill, Jr., president of Gallaudet College; the Very Reverend John Hourihan, executive director of the Mt. Carmel Guild in Newark, N.J.; Thomas Coleman, executive director of the National Association of Hearing and Speech Agencies; Fred Schrieber, executive secretary, National Association of the Deaf; Alfred Cranwill from the Council of Organizations Serving the Deaf; and Mr. Barbara Stevens, a teacher and graduate of the present Kendall School; and David Denton, superintendent of Maryland School for the Deaf.

Hearings will be held at 9:45 a.m. in room 2261 of the Rayburn House Office Building.

AIRCRAFT HIJACKING

(Mr. HORTON asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous material.)

Mr. HORTON. Mr. Speaker, I want to commend my able colleague, GERALD R. FORD, for his remarks on the shocking international hijacking in Jordan.

This is a very personal situation to me since more that 20 of my constituents are victims of the hijacking. They are either incarcerated in a blistering-hot aircraft parked on a desert runway outside Amman, Jordan, or in an Amman hotel which has been subjected to shelling. This act of terrorism and piracy deeply worries me. And the welfare of the people held by the guerrillas greatly concerns me.

I completely agree with the gentleman from Michigan, and I have proposed a solution to international hijacking to Secretary of State William Rogers and Secretary General U Thant. I would like to share this proposal with my colleagues:

Hon. WILLIAM P. ROGERS,
Secretary of State,
Department of State,
Washington, D.C.

DEAR BILL: With each shocking saga of international hijacking of civilian aircraft, the danger of a total breakdown of a safe and reliable system of airline routes between nations become greater.

At the present time, it is reported that more than 20 of my constituents are either incarcerated in a blistering-hot aircraft parked on a desert runway outside Amman. Jordan, or in an Amman hotel which has been subjected to mortar fire.

While we must concentrate current efforts on obtaining the safe return of the passengers and crews of the hijacked aircraft, we must not let this emergency pass without taking steps, far stronger and more positive than before, toward a long-term solution to the air piracy problem.

In my analysis, the problem is centered on terrorist groups around the world who have some reliable assurance of immunity from punishment at certain ports of call. In the nations which offer this immunity, there is neither incentive or sanction to pursuade them to apprehend and punish these criminals. Neither the community of nations, the airlines, the pilots associations nor the United Nations have been able to come to any agreement on sanctions against the nations which have caused repeated breakdowns in the safety and reliability of civilian air travel.

The key to any international effort to end air hijacking must be to force these host-nations to bear the responsibility for the acts of the terrorists who come to them for sanctuary. Mr. Jack Dempsey, National News Director of Mairite Broadcasting Company, Rochester, New York, has suggested to me that our government and the United Nations should seek to establish an international mechanism which would automatically suspend international air travel to or from any nation which offers sanctuary to a hijacker. After a minimum number of hours after the hijacked aircraft is landed and the passengers, crew and plane are not returned intact, the host nation would be subjected to a world-wide air boycott—permitting neither departures to nor arrivals from ports of call in that country.

So that the highly-charged regional political questions could be resolved and compromised within this sanction agreement, it should offer the host nation a choice as to where the hijackers should be brought to trial.

If for political or other reasons the host-nation does not want to prosecute the pirates themselves, they would have the option of returning them to the nation over which the hijacking occurred, or to the nation whose airline was the victim of the attack. These and other details of the mechanism needed to trigger the sanctions could be worked out by the International Civilian Aviation Organization of the United Nations.

I urge you as the highest foreign policy official of our government to place extreme urgency on initiatives within and outside the United Nations to reach such an agreement. As long as the world remains disorganized with respect to hijackings, the only answer will be to give in to the capricious demands made by successful terrorists—and each time one of their demands is met, it will stimulate more and more dangerous hijackings and more and more unreasonable demands until a total breakdown of order is threatened. Already, one hijacker set free by Syria earlier this year has felt bold enough to hijack another aircraft.

In the absence of an effectual international sanction agreement, we should consider the temporary employment of armed guards on civilian aircraft, as well as more thorough airport search procedures. Without such action, we will have little alternative than to inform our citizens and those of other nations that they must travel at their own peril, with little guarantee of their safety or protection from terrorists.

With kindest personal regards, I am,

Sincerely,

FRANK HORTON.

TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. There are more museums in the United States than any other nation in the world. In 1965 there were 4,595 museums in the United States with over 187 million reported visitors. France has 1,014 museums, the United Kingdom 964, and the Soviet Union 937.

RELIEVE POLICE OF CONSULATE PROTECTION

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, today I am introducing a bill to extend protection by the Executive Protection Service to foreign missions and consulates throughout the country. The Executive Protection Service was established in March of this year as an adjunct to the White House Secret Service to give protection to foreign diplomatic missions in the District of Columbia. While this act has relieved the Washington police of their consulate protection duties, critically needed police manpower in other cities continues to be diverted to foreign diplomatic mission guard duty.

The drain on the police department's manpower is a problem which particularly affects New York City's 19th precinct in my congressional district; the 19th precinct extends from 59th Street to 89th Street on the East Side and includes the United Nations and most of the missions and consulates of the foreign delegations. As a result, New York taxpayers pay an estimated $1.57 million a year in salaries to 150 police officers guarding the missions; the total cost of this service comes to $1.9 million a year.

In addition, New York City suffers a loss in real estate taxes because of the consulates' tax exempt status. Last year I introduced a bill, H.R. 8441, to provide reimbursement by the Federal Government for this revenue loss and for expenses incurred in providing police protection for officials and visiting dignitaries.

The bill I am introducing today, H.R. 19099, would go one step further. It would take out of the hands of the metropolitan police departments the responsibility for guarding the consulates, thus freeing the local police to protect the entire neighborhood.

Mr. Speaker, not only are the people of New York bearing the burden of this service in tax dollars, but they are also suffering from a lack of protection for several hundred thousand people living and working in the 19th precinct. While policemen are performing guard duty at the foreign missions, there are few officers left to patrol the neighborhood. This has resulted in spiraling crime rates placing the 19th precinct first in Manhattan in auto theft and second in burglary. Many stores now keep their doors locked during business hours because of the threat of armed robbery, and many businesses and residents have been forced to hire private, but unarmed, security guards.

Is it right that we place the burden of protecting foreign missions on the local governments? The whole country benefits from having the United Nations and the foreign consulates located in New York City—not just New York and surely not just the residents of the East Side of Manhattan; $2 million is but a small sum in the Federal budget, but a sizable amount for a city even as large as New York where local taxes are so high and the municipal dollar so short.

Both policemen and local residents are unhappy about the use of police manpower at the consulates. Community Board No. 8 on the East Side has recommended that all police officers be withdrawn immediately from the consulates to create an emergency situation forcing the President to act.

I urge, Mr. Speaker, that we not wait for an emergency situation to develop, but that instead we move to meet a responsibility that rightfully belongs to the Federal Government. I hope that the Congress can take prompt and favorable action mandating that the Executive Protection Service extend its jurisdiction to all foreign diplomatic missions and consulates located in the United States.

The text of the bill which my colleague from New York (Mr. BINGHAM) is cosponsoring with me, follows:

H.R. 19099

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the second sentence of section 202 of title 3, United States Code, is amended by striking out clauses (4) and (5) and inserting in lieu thereof "and (4) foreign diplomatic missions (including consulates) located in the United States, its territories, and possessions."

(b) Section 203 (a) of title 3, United States Code, is amended by striking out the words "as may be necessary but not exceeding eight hundred and fifty in number" and inserting in lieu thereof "as the Secretary of the Treasury determines is necessary to carry out the provisions of this chapter."

TEACHER'S DAY RESOLUTION

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, our teachers have a greater responsibility than any other class of workers for the future attitudes and mores of our Nation. The members of this great profession are on the firing line, day in and day out, where the battle of minds is taking place. In this period of rapid social change and resulting friction, it is to our teachers that we assign the awesome task of making sense out of the apparent chaos and arming our youth with the knowledge and values that will prepare them to assume the role of responsible adults.

Often they are asked to bear this responsibility, and the prodigious labor that goes with it, under the worst possible conditions, working in overcrowded classrooms, with inadequate equipment, with salaries that keep them one step ahead of the bill collector, harried with custodial and administrative chores, and often misunderstood and vilified by those who need a scapegoat on which to fix the blame for the problems our troubled youth is experiencing.

In recognition of these facts, Mayor Ronald James of San Jose has proclaimed September 28, 1970, as "Teacher's Day" in that city, and the Santa Clara County Board of Supervisors has done likewise for the county. The purposes of these proclamations are:

To increase public awareness of the important responsibility of our teachers in formulating the ideals and goals of our young.

To bring about understanding that the strengths and weaknesses of our Nation's future leaders depend greatly on the mental, spiritual and leadership qualities of our teachers.

To recognize publicly our appreciation of the many fine educational achievements of our teachers.

To recognize the many years of exacting training necessary for teachers to prepare for their profession.

To encourage a greater understanding between our young and those responsible for helping to realize their ideals and goals, thus helping to bridge the apparent generation gap.

This form of recognition, the setting aside of a special day to show our esteem for a special group, has its precedence in Mother's Day, initiated in Philadelphia in 1908, and in Father's Day, begun in Spokane, Wash., in 1910.

The Teacher's Day Committee of San Jose has proposed September 28 as "Teacher's Day" because it coincides with the birthdate of Confucius and has been celebrated by the Han people as Teacher's Day for 20 centuries. I believe the date is entirely appropriate and the fact that it coincides with the birthdate of Confucius is in keeping with the spirit of understanding and cooperation toward which the human race is striving.

Today I am introducing a resolution to establish September 28 as "Teacher's Day"—a day of national recognition for the most important profession in our society. I hope it will find prompt and unanimous approval among my colleagues.

STATEMENT BY REPRESENTATIVE JOHN M. MURPHY—INTRODUCING VINCENT THOMAS LOMBARDI NATIONAL CANCER RESEARCH PROGRAM

(Mr. MURPHY of New York asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MURPHY of New York. Mr. Speaker, Vincent Thomas Lombardi thrived on challenge.

Whether on or off the field, Vince Lombardi had one overriding philosophy: play hard, play fair, play to win.

But Vincent Thomas Lombardi lost his most important battle last Thursday—victim of a heinous disease called cancer.

Vince was aware of this challenge.

This man of intense dedication, this devout man, this stern man, this gentle and humble man, succumbed to this insidious poison that claims more than 300,000 Americans each year.

This man, who played on guts as one of the famed Seven Blocks of Granite at Fordham, who led the Green Bay Packers to an unprecedented five National Football League championships and two Super Bowl victories, was but one of the more than 1 million Americans who are currently under treatment for this dread disease.

With the death of Vince Lombardi, the Nation suffered a most serious loss. Vince was more than a giant in the world of athletics. He was a leader in every sense. He justified hard work, dedication, pride, and love. He instilled the dividends that can be reaped by sacrifice for a goal, respect for authority, and commitment to duty in everyone associated with him.

I know, for I had the good fortune and honor to be coached by Vince Lombardi when I played football at the U.S. Military Academy.

Throughout his coaching days—as an assistant at Fordham, West Point, and the New York Giants, then as headman at Green Bay and finally the Washington Redskins—Lombardi committed himself fully to the challenges before him.

Among his many civic commitments, Vince was a member of the Board of Trustees of the American Cancer Society in Washington.

He knew of the challenge of cancer. He battled for the necessary funds that can help find a cure to the curse of cancer. He knew, also, that current appropriations were inadequate to accomplish this task.

But he knew that it was both necessary and desirable that a national commitment be immediately undertaken to achieve a cure and control for cancer in this decade.

He died of a virulent cancer, believing this. In lieu of flowers, his brave family requested that contributions be made instead to the American Cancer Society.

So Vince Lombardi died leaving us a challenge—a test of our national priorities. There is no reason why this Nation, with its medical minds and medical resources, backed up by Federal funds in a total national effort, cannot solve the mystery of cancer. There is no reason why we cannot cure every patient who gets the disease, prevent the disease as well, and bring to an end its great cost in money, suffering and loss of life.

The prospects of an early breakthrough in cancer are very real.

If we follow the example of Vince Lombardi, utilizing to the fullest our talents and resources to a given goal, there is no limit to what we can do as a Nation, to bring dramatic results. In World War II, we developed the atom bomb and we did it with an incredible concentration of management, money, and brains. More recently, we sent men to the moon and our approach in the space program was very much like the atomic Manhattan project.

I now ask, in the name of Vincent Thomas Lombardi, that we do the same thing in cancer.

Let it be resolved that it is the sense of the House of Representatives that no less than $1 billion be appropriated over the next 10 fiscal years for the Vincent Thomas Lombardi national cancer research program; and be it further resolved, that no less than $500 million of this appropriation be utilized to construct five new Vincent Thomas Lombardi cancer research institutes in the United States during the first 2 years of the new appropriations.

Let this be our memorial to a great and good man from a grateful Nation; let this be our dedication to a challenge.

PRESIDENTIAL COMMISSIONS ON THE INCREASING TIDE OF PORNOGRAPHY AND ANARCHISTS ON OUR CAMPUSES

(Mr. GROSS asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. GROSS. Mr. Speaker, the country will soon be confronted with the reports of two Presidential Commissions which have been given the unrealistic task of providing solutions for two of our major domestic problems—the increasing tide of pornography and the anarchists on our campuses.

I say that these Commissions have been given unrealistic tasks because the underlying, fatal flaw with such groups, as Senator GORDON ALLOTT recently pointed out, is that they are literally irresponsible.

They do not have to answer to any set of voters. They can, by their actions, generate high tempers and much flamboyant publicity and then go out of existence, leaving others to clean up the debris left by the instant experts. I am pleased to note by Senator ALLOTT's recent remarks that the Republican leadership is showing concern over the probable outcome of the work of these two groups.

If the results are as I anticipate them, the Nixon administration will be well advised to repudiate them in the most immediate and forceful manner possible.

There are some alarming indications that both of these so-called blue ribbon commissions will hand in reports which, if they do not actually encourage smut and adolescent rioters, will at least condone them.

We already have much evidence—in the form of a draft report—that the President's Commission on Obscenity and Pornography had such intentions as late as last month. It may be that the publicity attendant to the surfacing of this draft report will result in its being toned down somewhat.

But it is clear that the majority of the members and the staff of this Commission are of the true head-in-the-sand liberal school that believes that pornography is just dandy and has no ill effect on anybody.

I am afraid that the President's Commission on Campus Unrest is also composed mainly of the illiberal-liberal types who gave us the ruinous decade of the permissive sixties where anything went as long as it was done in the name of the so-called repressed, the so-called disadvantaged, or the so-called disenchanted youth.

The liberal do-gooders who openly encouraged and fostered the arrogance of the modern campus anarchist are, unfortunately, too well represented on this Commission which is to tell us why rioters riot and what the rest of us can do to mollify them.

The evidence of this is plainly present in the manner in which the Commission allowed its hearings to become little more than a forum for anti-American harangues by the young hoodlums, who also took the occasion to threaten any and all who show signs of resisting their demands or who are not responsive to them.

Then, too, the Commission became a favorite outlet for advancing the leftist politics embraced by some of its members and many of its witnesses. For example, the statement by the youngest Commission member who, upon appointment, and without waiting for even one hearing, announced that President Nixon was to blame for the situation at Kent State.

That one statement alone proved not only his absolute uselessness as an impartial investigator but also his lack of elemental commonsense.

The blame for the situation at Kent State, and the conditions on so many other campuses, lies no more with the President or this administration than it does with the administration of Ulysses S. Grant.

The blame rests on the ultraliberal politicians and bureaucrats who went up and down this land in the last decade decrying almost every institution, while they held out utopian promises they well knew could not be fulfilled.

They encouraged the destruction of our institutions. They applauded the so-called leaders who urged their followers to break any law they found inconvenient and to present—as arrogantly as possible—their nonnegotiable demands to the despised establishment.

And the blame for the present campus situation rests also on those cringing, spineless, hand-wringing college presidents who whimperingly abdicated to the first Nazi-like knot of nihilists who showed up.

I do not imply that the members of this Commission on Campus Unrest—

the very name is a sop to the brick and bottle crowd—have been out making speeches to encourage this lawlessness. But their conduct of this alleged investigation points to a report that will be as appeasing as Chamberlain at Munich. And everyone above college age knows what that has gotten us.

I sincerely hope that I am dead wrong in my estimate of what is going to come from these two Presidential Commissions.

I sincerely hope that the one will urge an immediate and effective brake on the dissemination of all types of pornography, and that the other will demand the application of swift and severe punishment for these hoodlums of the privileged class, who are so hellbent to tear down this Republic.

I hope it, but I doubt it.

GOOD WORD FOR UNCLE SAM

(Mr. PHILBIN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PHILBIN. Mr. Speaker, the recent article forwarded to the able writer, Mr. Jenkin Lloyd Jones, and recently published in Copenhagen, taking the side of the United States, seems to be an enlightening and pleasing piece.

In this article, the very distinguished former Minister Viggo Starcke, Danish statesman, defended the United States against the tide of criticism which is the current fashion of some Europeans who have forgotten some quite recent lessons of history, according to Mr. Jones.

Minister Starcke stated in his remarks, and I quote him, as reported:

> We, who have experienced the first World War, have seen how America ultimately turned the scales when liberty was at stake.
>
> We, who have lived through the Second World War, have seen how America ultimately deprived the unrighteous of their power.
>
> We, who have seen the crimes of Fascism, the infamy of Nazism, and the terror of Communism, have seen America's strength and magnificence prevent a third World War, and the unleashing of the bears of Russia on the remnants of Europe.

This is very strong language in any man's book, and the thoughts expressed have often found more than passing lodgement in my mind.

I am, therefore, very glad to know that this great Danish statesman reminded some people of the great debt that they owe to this country, and to the American people, for the assistance and help that has been so unselfishly given some European nations in the name of human freedom and friendship.

The Minister does not hesitate to speak out strongly against the failure of his own government to support NATO more substantially.

I do not wish to comment in any way upon the Government of Denmark, because what they do is their own business, but I do want to urge that every nation that is associated with the forces of freedom in this world, should well realize at this time, how important it is to render support to NATO so that in case of aggression this force created to keep the peace and security of Europe can continue to be the deterrent force that it has been in so largely preventing aggression on the European continent, with just a few rather noteworthy exceptions.

Minister Starcke has referred to the oppressive conquests in Europe, also with the approval of the people involved:

> Country after country has been "liberated," meaning suppressed. Czechoslovakia has been "liberated" twice. The Communist gains in territory are not based on internal success of the system, for why would it be necessary with machine guns, barbed wire and mine fields to prevent the inhabitants, who know communism at close quarters, from fleeing from paradise?
>
> This galloping imperialism of the Communists is hardly unusual in the history of the world. What is unusual is the firm, steady conduct of the United States. In two world wars America has been victorious without subduing any country, without taking possessions of any territory.
>
> In spite of this honest behavior, the Communists and their crypto-communistic helpers have succeeded in smearing the name of America."

Minister Starcke recalls that in 1948 when the United States had a monopoly of atomic weapons, the British philosopher, Bertrand Russell, suggested a preventive atomic war to destroy the Russian threat. America, of course, paid no attention to this wild proposal. Years later when he was far gone in his dotage and under the influence of a young left-wing companion, Russell lent his name to a farcical "trial" of America for aggression which the Swedes hosted and many Danes applauded.

Starcke concludes:

> The safe foundation for Danish foreign policy is confident co-operation with a great power that has not subdued other nations and holding aloof from a great power which has subdued one country after another.

This statement by a great Danish leader puts the position of the United States vis-a-vis Communist Russia in context.

It shows that one nation has devoted much of its energies to open aggression and conquest as well as infiltration of other nations, while the other, the United States, has fought unselfishly and without hope of territorial conquest or return of any kind, except for the satisfaction and reward of helping all peoples who desire to live in a free world.

Attacks being made upon the United States are not based on reason, logic, or fact, but rather on Communist propaganda and left-wing circulation of standard canards older than Methuselah. The pity is that some of these groundless criticisms and factual deceptions, echoed time and time again in the left-wing places all over the world, have reached, and no doubt influenced, certain public opinion outside of Communists in the United States.

What is more, they have been parrotted by Communists and their cronies in many ways and places to downgrade and belittle the American Government, American policy in support of freedom, and all the efforts we have made, or are making, to try to keep man free.

It is too bad that any of our American youth should fall for this badinage and palpable, left-wing propaganda.

I doubt that these words of caustic criticism and expressed hatred toward the United States would ever cause our great country to cease to take an interest in the people who inhabit the globe with us—let alone abandon our comrades and friends.

This statement by a wise leader should alert people that there are, not only enemies abroad, but enemies at home, who are doing everything they can to topple over our free system, and replace it with the repression, brutal domination of monolithic, police-state communism.

One lesson we can take from this situation is that we must not let down our guard, that we must not allow anything to soften us to the point where we dissipate our strength, and fail to keep our country equipped to meet every contingency that may develop in this dangerous world, where powerful forces are trying to extinguish the lamps of freedom and replace them with the black crepes of the Marxist society.

If we allow our national defense to weaken, so that it is no longer a match, or a deterrent force, for our enemies in the world, that is the time this country will begin to experience real problems that will put things of the present into obscurity by comparison.

We do not want a world of combat and aggression and war. We seek peace with all our hearts. But until the day comes when the Soviet Union agrees to negotiate with us and other free nations, and puts down the sword for the plowshare, this Nation must remain strong, or it will perish like many others in the past, stricken by those who plotted, and schemed, and in the end moved to destroy them.

We are all pleased to learn of possible meaningful negotiations in the Middle East area. There are many conflicting issues, and the survival of the new State of Israel is a basic problem, and our Nation is deeply concerned and deeply interested in the security and well-being of this young state and is committed to helping this fine young country to defend itself against enemies that would destroy it.

But there are disquieting factors that must be taken into account.

Minister Starcke has struck a note of just appraisal of the great contributions of the United States to the salvation of civilized, free government and a free world. We must thank him for his able talk, admire him for his courage, and hail him for his wisdom and sense of justice.

ANNIVERSARY CELEBRATION BY LEAGUE OF WOMEN VOTERS OF 19TH AMENDMENT AND STAMP FOR SUSAN B. ANTHONY

(Mr. PHILBIN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PHILBIN. Mr. Speaker, on August 26 at Adams, Mass., the League of Women Voters, under the brilliant leadership of Mrs. Bruce Benson, conducted a very

impressive celebration of the 50th anniversary of the 19th amendment that gave women the right to vote and ceremonies attending the commemorative stamp honoring the famous champion of women's rights, Susan B. Anthony.

I was sorry previous engagements made it impossible for me to join my able, distinguished, admired friend and colleague, Congressman SILVIO CONTE, the esteemed and beloved representative of this great district, and the very distinguished company that gathered in the charming New England town of Adams to commemorate these great events in American history, which are so meaningful to the League of Women Voters and looked upon with such great pride by the American people.

I would like to congratulate and commend Mrs. Benson, the famous and inspiring head of the League of Women Voters, whose work has been so outstanding, and the members of the league and the many enthusiastic people who joined in these exercises of celebration.

As we all know, these great events in American history are extremely meaningful to the League of Women Voters and the American people, because they emphasize the important place that American women have played in the development of our Government, our free institutions, and the enrichment of American life.

I heartily congratulate and commend the league and its officers and members for the initiative and leadership their fine organization has displayed in making this great day possible, and in arranging the memorable program that was presented to recall and commemorate these moving events in the history of our country.

I am honored to send to Mrs. Benson, and to her entire organization, the warm greetings of the people of my district and my own cordial, best wishes for the continuance and success of their vital work in promoting the cause of American womanhood and their constructive purposes and effective advocacy of lofty public causes that have won support and appreciation throughout the Nation and in the hearts of the American people.

I also want to express my pleasure and pride in these most commendable, memorable exercises, and wish for Mrs. Benson and the league many more successful achievements in behalf of community, State and Nation.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. BLATNIK (at the request of Mr. ALBERT), for today, on account of official business.

Mr. DANIEL of Virginia (at the request of Mr. ALBERT), for today, on account of official business.

Mr. HAGAN (at the request of Mr. ALBERT), for today, on account of official business.

Mr. CHARLES H. WILSON (at the request of Mr. ALBERT), for today, on account of official business.

Mr. PEPPER (at the request of Mr. ALBERT), for today and the balance of the week, on account of official business.

Mr. SKUBITZ (at the request of Mr. GERALD R. FORD), for today and balance of week, on account of official business.

Mr. PRICE of Texas (at the request of Mr. GERALD R. FORD), for today and balance of week, on account of official business as a member of the House Committee on Science and Astronautics.

Mr. BUCHANAN (at the request of Mr. GERALD R. FORD), for today and balance of week, on account of official business as member of the House Committee on Foreign Affairs.

Mr. FOUNTAIN (at the request of Mr. WAGGONNER), for today and remainder of week, on account of official business.

Mr. CORMAN for Wednesday, September 9, on account of official business.

Mr. HICKS (at the request of Mr. MEEDS), from October 9, 1970, to October 16, 1970, on account of official business,

Mr. LANDGREBE (at the request of Mr. GERALD R. FORD), for today and balance of week, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. STEIGER of Arizona) and to revise and extend their remarks and include extraneous matter:)

Mr. MORSE for 60 minutes, on September 10.

Mr. WYDLER for 30 minutes, on September 15.

Mr. MYERS for 5 minutes, today.

Mr. HALPERN for 5 minutes, today.

(The following Members (at the request of Mr. JONES of North Carolina) and to revise and extend their remarks and include extraneous matter:)

Mr. REUSS for 30 minutes, today.

Mr. FALLON for 30 minutes, today.

Mr. FARBSTEIN for 15 minutes, today.

Mr. HARRINGTON for 20 minutes, today.

Mr. RARICK for 10 minutes, today.

Mr. CORMAN for 60 minutes, September 14.

(The following Members and to revise and extend their remarks and include extraneous matter:)

Mr. RANDALL for 10 minutes, today.

Mr. PUCINSKI for 60 minutes, tomorrow, September 10.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. SIKES in five instances and to include extraneous matter.

Mr. VANIK and to include extraneous matter.

Mr. MCMILLAN, and to include extraneous material.

Mr. GROSS to extend his remarks and include extraneous matter.

Mr. GERALD R. FORD to include with remarks made in the Committee of the Whole a letter from the Secretary of Defense.

(The following Members (at the request of Mr. STEIGER of Arizona) and to include extraneous matter:)

Mr. COUGHLIN in seven instances.
Mr. SPRINGER.
Mr. SCHERLE in 10 instances.
Mr. LANGEN.
Mr. FINDLEY.
Mr. SCHMITZ in four instances.
Mr. KLEPPE in two instances.
Mr. HALL.
Mr. HUNT.
Mr. GERALD R. FORD.
Mr. CUNNINGHAM in five instances.
Mr. MICHEL.
Mr. WYMAN in two instances.
Mr. BYRNES of Wisconsin.
Mr. GOLDWATER in three instances.
Mr. MINSHALL in three instances.
Mr. GOODLING in two instances.
Mr. QUILLEN in four instances.
Mr. FULTON of Pennsylvania in 10 instances.
Mr. ANDERSON of Illinois.
Mr. RHODES in six instances.
Mr. FISH.
Mr. SCHWENGEL in three instances.
Mr. DERWINSKI in three instances.
Mr. ASHBROOK in two instances.
Mr. STEIGER of Wisconsin.
Mr. BRAY in four instances.
Mr. HOSMER in two instances.
Mr. ZION.
Mr. COLLINS in five instances.

(The following Members (at the request of Mr. JONES of North Carolina) and to include extraneous matter:)

Mr. HATHAWAY in two instances.
Mr. OTTINGER in two instances.
Mr. FISHER in six instances.
Mr. MONTGOMERY.
Mr. BOLLING.
Mr. ROYBAL in eight instances.
Mr. CORMAN in six instances.
Mr. MURPHY of New York in three instances.
Mr. ROONEY of New York.
Mr. O'HARA in four instances.
Mr. ABBITT.
Mr. COHELAN in 10 instances.
Mr. NATCHER in two instances.
Mr. BINGHAM in three instances.
Mr. EILBERG in two instances.
Mr. MAHON in two instances.
Mr. MATSUNAGA in two instances.
Mr. ROGERS of Florida in six instances.
Mr. ULLMAN in 10 instances.
Mr. RARICK in six instances.
Mr. DONOHUE in two instances.
Mr. JACOBS in two instances.
Mr. VANIK in two instances.
Mr. BOLAND in two instances.
Mr. DIGGS in three instances.
Mr. PUCINSKI in six instances.
Mr. HANNA in five instances.
Mr. GARMATZ.
Mr. DADDARIO in two instances.
Mr. LEGGETT.
Mr. WILLIAM D. FORD.
Mrs. SULLIVAN in three instances.

SENATE BILLS AND JOINT AND CONCURRENT RESOLUTIONS REFERRED

Bills and joint and concurrent resolutions of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 578. An act to include firefighters within the provisions of section 8336(c) of title 5, United States Code, relating to the retirement of Government employees engaged in certain hazardous occupations; to the Committee on Post Office and Civil Service.

S. 721. An act to safeguard the consumer by prohibiting the unsolicited distribution of credit cards and limiting the liability of consumers for the unauthorized use of credit cards, and for other purposes; to the Committee on Banking and Currency.

S. 1196. An act for the relief of the Casa Angelica mental retardation facility of Albuquerque, N. Mex.; to the Committee on Interstate and Foreign Commerce.

S. 1785. An act for the relief of Irene Sadowska Sullivan; to the Committee on the Judiciary.

S. 1943. An act for the relief of Arie Abramovich; to the Committee on the Judiciary.

S. 2735. An act to provide for the conveyance of certain public lands in Wyoming to the occupants of the land; to the Committee on Interior and Insular Affairs.

S. 3032. An act for the relief of Mrs. Leonarda Buenavendura Ocariza and daughter, Lucila B. Ocariza; to the Committee on the Judiciary.

S. 3129. An act for the relief of Dr. Pio Albert Pol y Zapata; to the Committee on the Judiciary.

S. 3196. An act to declare that certain federally owned lands in the State of Nevada are held by the United States in trust for Reno-Sparks Indian Colony, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 3225. An act to provide that the U.S. District Court for the Western Division of the Southern District of Mississippi shall be held at Natchez; to the Committee on the Judiciary.

S. 3330. An act to authorize rural housing loans to lessees of nonfarm rural land, and for other purposes; to the Committee on Banking and Currency.

S. 3431. An act to amend sections 13(d), 13(e), 14(d), and 14(e) of the Securities Exchange Act of 1934 in order to provide additional protection for investors; to the Committee on Interstate and Foreign Commerce.

S. 3487. An act to authorize the sale and exchange of certain lands on the Coeur d'Alene Indian Reservation, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 3529. An act for the relief of Johnny Mason, Jr. (Johnny Trinidad Mason, Jr.); to the Committee on the Judiciary.

S. 3553. An act to amend the Water Resources Research Act of 1964 to increase the authorization for water resources research and institutes, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 3702. An act for the relief of Dr. Nahid Mansoori Diaz; to the Committee on the Judiciary.

S. 3775. An act to amend section 1811 of title 38, United States Code, to authorize the Veterans' Administration to make direct loans to any veteran who is determined to be eligible for assistance in acquiring specially adapted housing under chapter 21 of title 38, United States Code; to the Committee on Veterans' Affairs.

S. 3796. An act for the relief of Reynaldo Canlas Beecher; to the Committee on the Judiciary.

S. 3853. An act for the relief of Mrs. Pang Tai Tai, to the Committee on the Judiciary.

S. 4078. An act to provide for the disposition of funds appropriated to pay judgments in favor of the Snohomish Tribe in Indian Claims Commission docket numbered 125, the Upper Skagit Tribe in Indian Claims Commission docket numbered 92, and the Snoqualmie and Skykomish Tribes in Indian Claims Commission docket numbered 93, and for other purposes; to the Committee on Interior and Insular Affairs.

S. 4319. An act to extend the Clean Air Act, as amended, and the Solid Waste Disposal Act, as amended, for a period of 90 days; to the Committee on Interstate and Foreign Commerce.

S.J. Res. 230. Joint resolution extending the duration of copyright protection in certain cases; to the Committee on the Judiciary.

S. Con. Res. 79. Concurrent resolution favoring the supsension of deportation of certain aliens; to the Committee on the Judiciary.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 1749. An act for the relief of Eagle Lake Timber Co., a partnership, of Susanville, Calif.;

H.R. 2849. An act for the relief of Anan Eldredge;

H.R. 5655. An act for the relief of Low Yin (also known as Low Ying);

H.R. 6265. An act to provide that a headstone or marker be furnished at Government expense for the unmarked grave of any Medal of Honor recipient;

H.R. 8662. An act to authorize command of the U.S. ship *Constitution* (IX–21) by retired officers of the U.S. Navy;

H.R. 9052. An act to amend section 716 of title 10, United States Code, to authorize the interservice transfers of officers of the Coast Guard;

H.R. 12400. An act for the relief of Tae Pung Hills;

H.R. 12446. An act to confer U.S. citizenship posthumously upon Jose Gaudalupe Esparza-Montoya;

H.R. 12959. An act for the relief of Gloria Jara Haase;

H.R. 13195. An act to amend title 10 of the United States Code to provide that U.S. flags may be presented to parents of deceased servicemen.

H.R. 13265. An act to confer U.S. citizenship posthumously upon L. Cpl. Frank Krea;

H.R. 13383. An act for the relief of Mrs. Marcella Coslovich Fabretto;

H.R. 13434. An act to provide for the disposition of judgment funds on deposit to the credit of the Hualapai Tribe of the Hualapai Reservation, Arizona, in Indian Claims Commission Dockets Numbered 90 and 122, and for other purposes;

H.R. 13712. An act for the relief of Vincenzo Plicano;

H.R. 13716. An act to improve and clarify certain laws affecting the Coast Guard Reserve;

H.R. 13895. An act for the relief of Mrs. Maria Elosia Pardo Hall;

H.R. 13971. An act granting the consent of Congress to the Falls of the Ohio Interstate Park Compact;

H.R. 13997. An act to confer U.S. citizenship posthumously upon S. Sgt. Ryuzo Somma;

H.R. 14097. An act to authorize the use of funds arising from a judgment in favor of the Citizen Band of Potawatomi Indians of Oklahoma in Indian Claims Commission Docket No. 96, and for other purposes;

H.R. 14827. An act to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indian Claims Commission docket No. 220, and for other purposes;

H.R. 14827. An act to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indian Claims Commission Docket No. 220, and for other purposes; and

H.R. 16416. An act to reimburse the Ute Tribe of the Uintah and Ouray Reservation for tribal funds that were used to construct, operate, and maintain the Uintah Indian irrigation project, Utah, and for other purposes.

ADJOURNMENT

Mr. JONES of North Carolina. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 36 minutes p.m.) the House adjourned until tomorrow, Thursday, September 10, 1970, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2311. A letter from the Deputy Secretary of Defense, transmitting the second semiannual report on funds obligated in certain research programs, for the second half of fiscal year 1970, pursuant to section 409 of Public Law 91–121; to the Committee on Armed Services.

2312. A letter from the Assistant Secretary of State for Congressional Relations, transmitting copies of Presidential Determination 71–3, authorizing military grant assistance to an economically developed country, pursuant to section 614(a) of the Foreign Assistance Act of 1961, as amended; to the Committee on Foreign Affairs.

2313. A letter from the Chairman, U.S. Civil Service Commission, transmitting the 46th and 47th annual reports of the Board of Actuaries of the Civil Service Retirement System for the fiscal years ended June 30, 1966 and 1967, pursuant to 5 U.S.C. 8347(a) (H. Doc. 91–380); to the Committee on Post Office and Civil Service and ordered to be printed.

2314. A letter from the Clerk, U.S. House of Representatives, transmitting the semiannual report of the Clerk covering receipts and expenditures of appropriations and other funds for the period January 1 through June 30, 1970, pursuant to Public Law 88–454 (2 U.S.C. 104a) (H. Doc. 91–379); to the Committee on House Administration and ordered to be printed.

2315. A letter from the Architect of the Capitol, transmitting a report of all expenditures during the period January 1, 1970, through June 30, 1970, from moneys appropriated to the Architect of the Capitol, pursuant to section 105(b) of Public Law 88–454; to the Committee on Appropriations.

2316. A letter from the Deputy Director, Office of Management and Budget, Executive Office of the President, transmitting a report that the appropriation to the Department of the Interior for "Management of lands and resources," Bureau of Land Management, for the fiscal year 1971, has been apportioned on a basis which indicates a need for a supplemental estimate of appropriation, pursuant to section 3679 of the Revised Statutes, as amended; to the Committee on Appropriations.

2317. A letter from the Deputy Director, Office of Management and Budget, Executive Office of the President, transmitting a report that the appropriation to the Department of the Interior for "Management and protection," National Park Service, for the fiscal year 1971, has been apportioned on a basis which indicates the necessity for a supplemental estimate of appropriation, pursuant to section 3679 of the Revised Statutes, as amended; to the Committee on Appropriations.

2318. A letter from the Assistant Secretary of Defense, transmitting a report on the value of property, supplies and commodities provided by the Berlin Magistrate for the quarter April 1 to June 30, 1970, pursuant to section 620, Public Law 91–171; to the Committee on Appropriations.

2319. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notification of the location, nature, and estimated cost of facilities projects proposed to be undertaken for the Air Force Reserve, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

2320. A letter from the Deputy Assistant Secretary of the Army (Research and Development), transmitting a report on Army research and development contracts for $50,000 or more which were awarded during the period January 1, through June 30, 1970, pursuant to section 4 of chapter 882 of Public Law 557, 82d Congress; to the Committee on Armed Services.

2321. A letter from the Deputy Chief of Naval Materiel (Procurement and Production), transmitting a report on Navy research and development procurement actions of $50,000 or more, covering the period January 1 through June 30, 1970, pursuant to 10 U.S.C. 2357; to the Committee on Armed Services.

2322. A letter from the Secretary, Export-Import Bank of the United States, transmitting a report of actions taken by the Bank under the authority of Public Law 90–390 during the quarter ended June 30, 1970, pursuant to that act; to the Committee on Banking and Currency.

2323. A letter from the Commissioner of the District of Columbia, transmitting a draft of proposed legislation to provide for the payment of medical or surgical services of hospital treatment for certain disabled former members of the Metropolitan Police Department, the Fire Department of the District of Columbia, the U.S. Park Police force, the Executive Protection Service, and the U.S. Secret Service Division, and for other purposes; to the Committee on the District of Columbia.

2324. A letter from the Acting Commissioner of Education, Department of Health, Education, and Welfare, transmitting an interim report on research in the area of school finance, pursuant to section 809 of the Elementary and Secondary Education Amendments of 1969; to the Committee on Education and Labor.

2325. A letter from the Secretary of the Treasury, transmitting a report on foreign credits by the U.S. Government as of December 31, 1969, pursuant to section 634(f) of the Foreign Assistance Act of 1961, as amended; to the Committee on Foreign Affairs.

2326. A letter from the Acting Secretary of Health, Education, and Welfare, transmitting a report covering personal property donated to public health and educational institutions and civil defense organizations under section 203(j), and real property disposed of to public health and educational institutions under section 203(k), pursuant to section 203(o) of the Federal Property and Administrative Services Act of 1949, as amended; to the Committee on Government Operations.

2327. A letter from the Secretary of the Interior, transmitting a report on the reclassification of lands in the Midvale Irrigation District of the Riverton project in Wyoming, pursuant to the provisions of section 8 of the Reclamation Project Act of 1939; to the Committee on Interior and Insular Affairs.

2328. A letter from the Acting Secretary of the Interior, transmitting a copy of a proposed grant agreement with the board of trustees of the Leland Stanford, Jr., University, Stanford, Calif., for a research project entitled "Atmospheric Pollution Aspects of Magnetohydrodynamic Powerplants," pursuant to Public Law 89–672; to the Committee on Interior and Insular Affairs.

2329. A letter from the Assistant Secretary of the Interior, transmitting notification of the receipt of a project proposal for the Graham-Curtis project of Safford, Ariz., pursuant to section 10 of the Small Reclamation Projects Act of 1956; to the Committee on Interior and Insular Affairs.

2330. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to declare that certain federally owned land is held by the United States in trust for the Lac Courte Oreilles Band of Lake Superior Chippewa Indians of Wisconsin; to the Committee on Interior and Insular Affairs.

2331. A letter from the Executive Director, Federal Communications Commission, transmitting a copy of the report on backlog of pending applications and hearing cases in the Commission as of July 31, 1970, pursuant to section 5(e) of the Communications Act as amended; to the Committee on Interstate and Foreign Commerce.

2332. A letter from the Chairman, Federal Power Commission, transmitting copies of the publications entitled, "Hydroelectric Plant Construction Costs and Annual Production Expenses, 1968" and "Part III of the 1970

National Power Survey"; to the Committee on Interstate and Foreign Commerce.

2333. A letter from the Chairman, Federal Power Commission, transmitting a draft of proposed legislation to amend section 14 of the Natural Gas Act; to the Committee on Interstate and Foreign Commerce.

2334. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting reports concerning visa petitions approved according certain beneficiaries third and sixth preference classification, pursuant to section 204 (d) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

2335. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting reports concerning visa petitions approved according certain beneficiaries third and sixth preference classification, pursuant to section 204(d) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

2336. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in the cases of certain aliens found admissible to the United States, pursuant to section 212(a)(28)(I)(ii) of the Immigration and Nationality Act; to the Committee on the Judiciary.

2337. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in cases in which the authority contained in section 212(d)(3) of the Immigration and Nationality Act was exercised in behalf of certain aliens, together with a list of the persons involved, pursuant to section 212(d)(6) of the act; to the Committee on the Judiciary.

2338. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders suspending deportation, together with a list of the persons involved, pursuant to section 244(a)(1) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

2339. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders suspending deportation, together with a list of the persons involved, pursuant to section 244(a)(2) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

By Mr. BROOMFIELD:

H.R. 19073. A bill to establish uniform relocation assistance and land acquisition policies applicable to Federal programs and Federal grant-in-aid programs; to the Committee on Public Works.

By Mr. BURTON of Utah:

H.R. 19074. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges, and quality of medical service; to the Committee on Ways and Means.

By Mr. CASEY:

H.R. 19075. A bill to amend the Consumer Credit Protection Act; to the Committee on Banking and Currency.

By Mr. DERWINSKI:

H.R. 19076. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges, and quality of medical service; to the Committee on Ways and Means.

By Mr. DINGELL (for himself, Mr. ROGERS of Florida, Mr. DOWNING, Mr. HANNA, Mr. ANNUNZIO, and Mr. MCCLOSKEY):

H.R. 19077. A bill to amend the National Environmental Policy Act of 1969 to require a longer period of notice before a Federal agency commences any action significantly affecting the environment, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. ESCH (for himself, Mr. GERALD R. FORD, Mr. GAYDOS, Mr. MCKNEALLY, Mr. BARING, Mr. BURTON of California, and Mr. ANDERSON of Tennessee):

H.R. 19078. A bill to extend for 2 months the period within which the Secretary of Commerce is required to report the decennial census tabulation of total population by States for the apportionment of Representatives; to the Committee on Post Office and Civil Service.

By Mr. FULTON of Pennsylvania:

H.R. 19079. A bill to authorize the National Science Foundation to conduct research and educational programs to prepare the country for conversion from defense to civilian, socially oriented research and de-

velopment activities, and for other purposes; to the Committee on Science and Astronautics.

By Mr. GALLAGHER:

H.R. 19080. A bill to amend title 10 of the United States Code to provide that members of the Armed Forces be assigned to duty stations near their homes after serving in combat zones; to the Committee on Armed Services.

By Mr. LANGEN:

H.R. 19081. A bill to provide for the reauthorization of the project on the Red River of the North at East Grand Forks, Minn., in the interest of flood control and allied purposes; to the Committee on Public Works.

By Mr. McDONALD of Michigan:

H.R. 19082. A bill to amend the Federal Property and Administrative Services Act of 1949 in order to establish Federal policy concerning the selection of firms and individuals to perform architectural, engineering, and related services for the Federal Government; to the Committee on Government Operations.

By Mr. MINSHALL:

H.R. 19083. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges, and quality of medical service; to the Committee on Ways and Means.

By Mr. MURPHY of New York:

H.R. 19084. A bill to authorize the Secretary of the Interior to establish the Thaddeus Kosciuszko Home National Historic Site in the State of Pennsylvania, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MURPHY of New York (for himself, and Mr. RUPPE):

H.R. 19085. A bill to provide for the establishment of a Metropolitan Drug Addiction Commission to coordinate and make more effective in the New York metropolitan area the various Federal, State, and local programs for the control, treatment, and prevention of drug addiction; to the Committee on Interstate and Foreign Commerce.

By Mr. RODINO:

H.R. 19086. A bill to assist in the provisions of housing for the elderly, and for other purposes; to the Committee on Banking and Currency.

H.R. 19087. A bill to amend the Older Americans Act of 1965 to authorize a special emphasis transportation research and demonstration project program; to the Committee on Education and Labor.

By Mr. ROGERS of Florida (for himself, Mr. DINGELL, Mr. DOWNING, Mr. HANNA, Mr. ANNUNZIO, and Mr. McCLOSKEY):

H.R. 19088. A bill to amend the National Environmental Policy Act of 1969 to require a longer period of notice before a Federal agency commences any action significantly affecting the environment, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. ROSENTHAL:

H.R. 19089. A bill to amend the Federal Trade Commission Act to make sales promotion games unfair methods of competition; to the Committee on Interstate and Foreign Commerce.

By Mr. SISK:

H.R. 19090. A bill to extend the Consolidated Farmers Home Administration Act of 1961 to Guam; to the Committee on Agriculture.

By Mr. STOKES (for himself and Mr. HOWARD):

H.R. 19091. A bill to authorize a program for the improvement of the Cuyahoga River, Ohio; to the Committee on Public Works.

By Mr. TALCOTT:

H.R. 19092. A bill to amend title 38, United States Code, to authorize educational assistance and home loan benefits to wives of members of the Armed Forces who are missing in action or prisoners of war; to the Committee on Veterans' Affairs.

By Mr. TEAGUE of California:

H.R. 19093. A bill to provide that certain time spent by Federal employees assigned to the California offshore Islands shall be considered as hours of employment; to the Committee on Post Office and Civil Service.

By Mr. TIERNAN:

H.R. 19094. A bill amending title 13 of the United States Code by authorizing the Secretary of Commerce through the Bureau of the Census to undertake a quadrennial enrollment of those persons to vote in elections of the President and Vice President that meet the qualifications of the various States other than residency; to the Committee on House Administration.

H.R. 19095. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure, through maximum use of indigenous resources, that the United States requirements for low-cost energy be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

H.R. 19096. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole or for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges, and quality of medical service; to the Committee on Ways and Means.

By Mr. CONABLE:

H.R. 19097. A bill to establish the Federal City Bicentennial Development Corp., to provide for the preparation and carrying out of a development plan for certain areas between the White House and the Capitol, to further the purposes for which the Pennsylvania Avenue National Historic Site was designated, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HANNA:

H.R. 19098. A bill to provide protection for the fish resources of the United States including the freshwater and marine fish cultural industries against the introduction and dissemination of diseases of fish and shellfish, for the study of water pollution and fish diseases, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. KOCH (for himself and Mr. BINGHAM):

H.R. 19099. A bill to amend chapter 3 of title 3 United States Code to provide for the protection of foreign diplomatic missions; to the Committee on Public Works.

By Mr. PATMAN (for himself, Mr. BARRETT, Mrs. SULLIVAN, Mr. REUSS, Mr. ASHLEY, Mr. MOORHEAD, Mr. STEPHENS, Mr. ST GERMAIN, Mr. GONZALEZ, and Mr. HALPERN):

H.R. 19100. A bill to provide for the establishment of a national urban growth policy, to encourage and support the proper growth and development of our States, metropolitan areas, cities, counties, and towns with emphasis upon new community and inner city development, to extend and amend laws relating to housing and urban development, and for other purposes; to the Committee on Banking and Currency.

By Mr. ROONEY of Pennsylvania:

H.R. 19101. A bill to amend title XVIII of the Social Security Act to provide medicare benefits (financed from general revenues) for disabled coal miners without regard to their age; to the Committee on Ways and Means.

By Mr. WYDLER:

H.R. 19102. A bill to provide for a temporary reduction in the salaries of certain officials of the Federal Government; to the Committee on Post Office and Civil Service.

By Mr. HORTON:

H.J. Res. 1357. Joint resolution authorizing the President to declare one week each September as "National S.S. Hope Week"; to the Committee on the Judiciary.

By Mr. JACOBS:

H. J. Res. 1358. Joint resolution to set forth a national policy on the stabilization of the population of the United States of America; to the Committee on Government Operations.

By Mr. MILLS:

H.J. Res. 1359. Joint resolution proposing an amendment to the Constitution of the United States providing for the election of the President and Vice President; to the Committee on the Judiciary.

By Mr. MINSHALL:

H.J. Res. 1360. Joint resolution to authorize the President to designate the period beginning October 5, 1970, and ending October 9, 1970, as "National PTA Week"; to the Committee on the Judiciary.

By Mr. MYERS (for himself, Mr. LANDGREBE, Mr. BEALL of Maryland, Mr. SCOTT, Mr. CRANE, Mr. PUCINSKI, Mr. MONTGOMERY, Mr. DERWINSKI, Mr. YATRON, Mr. SCHADEBERG, Mr. NICHOLS, Mr. FREY, Mr. MESKILL, Mr. BUCHANAN, Mr. HUNT, Mr. HORTON, Mr. PIRNIE, Mr. McDONALD of Michigan, Mr. TALCOTT, Mr. BURTON of Utah, Mr. GROVER, Mr. DUNCAN, Mr. ERLENBORN, Mr. TUNNEY, and Mr. RHODES):

H.J. Res. 1361. Joint resolution to authorize the President to issue a proclamation designating the week in November which includes Thanksgiving Day in each year as "National Family Week"; to the Committee on the Judiciary.

By Mr. MYERS (for himself, Mr. DONOHUE, Mr. ANDERSON of Illinois, Mr. LUKENS, Mr. GOLDWATER, Mr. KUYKENDALL, Mr. FULTON of Pennsylvania, Mr. MIKVA, Mr. FRIEDEL, Mr. WILLIAMS, and Mr. McKNEALLY):

H.J. Res. 1362. Joint resolution to authorize the President to issue a proclamation designating the week in November which includes Thanksgiving Day in each year as "National Family Week"; to the Committee on the Judiciary.

By Mr. ADAMS:

H. Con. Res. 720. Concurrent resolution to utilize more effectively the expertise and abilities of the scientists and engineers associated with the National Aeronautics and Space Administration in the fight against environmental pollution; to the Committee on Science and Astronautics.

By Mr. EDWARDS of California:

H. Con. Res. 721. Concurrent resolution to establish a National Day of Recognition for Teachers; to the Committee on the Judiciary.

By Mr. OTTINGER:

H. Con. Res. 722. Concurrent resolution expressing the sense of the Congress with respect to religious discrimination in Northern Ireland; to the Committee on Foreign Affairs.

By Mr. MURPHY of New York:

H. Res. 1201. Resolution calling for a national commitment to cure and control cancer within this decade; to the Committee on Interstate and Foreign Commerce.

By Mr. FARBSTEIN:

H. Res. 1202. Resolution urging the President to take unilateral action, as well as collective action through the United Nations,

to stop air piracy; to the Committee on Foreign Affairs.

By Mr. HANLEY:

H. Res. 1203. Resolution designating January 22 of each year as Ukrainian Independence Day; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BELL of California:

H.R. 19103. A bill for the relief of Mr. and Mrs. Francisco de Paula Baptista and Joao Baptista; to the Committee on the Judiciary.

By Mr. BERRY:

H.R. 19104. A bill for the relief of the estate of Vesta A. Habicht; to the Committee on the Judiciary.

By Mr. BROYHILL of Virginia (by request):

H.R. 19105. A bill for the relief of M. Sgt. Robert M. Stachura; to the Committee on the Judiciary.

By Mr. BURTON of California:

H.R. 19106. A bill for the relief of Miguel Angel Ortiz; to the Committee on the Judiciary.

H.R. 19107. A bill for the relief of Silvia Italia Vassallo-Pastor; to the Committee on the Judiciary.

By Mr. HELSTOSKI:

H.R. 19108. A bill for the relief of Rita Swann; to the Committee on the Judiciary.

By Mr. McCLURE:

H.R. 19109. A bill for the relief of Alfonso Guerricabieta; to the Committee on the Judiciary.

H.R. 19110. A bill for the relief of Esther Catherine Milner; to the Committee on the Judiciary.

By Mr. MATHIAS:

H.R. 19111. A bill for the relief of Mrs. Gloria Vazquez Herrera; to the Committee on the Judiciary.

By Mr. MORSE:

H.R. 19112. A bill for the relief of Denise Korbani; to the Committee on the Judiciary.

By Mr. MYERS:

H.R. 19113. A bill to provide for the free entry of a 61-note cast bell carillon and a 42-note subsidiary cast bell carillon for the use of Indiana University, Bloomington, Ind.; to the Committee on Ways and Means.

By Mr. NELSEN:

H.R. 19114. A bill for the relief of Kyu Whan Whang and spouse, nee Young Won Lee; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

433. By the SPEAKER: A memorial of the 10th Guam Legislature, relative to the statute of limitations with respect to claims by the citizens of Guam arising from the taking of private property by the Federal Government following World War II; to the Committee on Interior and Insular Affairs.

434. Also, a memorial of the Senate of the State of California, relative to the protection of the Farallon Islands; to the Committee on Merchant Marine and Fisheries.

435. Also, a memorial of the Legislature of the State of California, relative to water pollution; to the Committee on Public Works.

436. Also, a memorial of the Senate of the Commonwealth of Massachusetts, relative to oil imports; to the Committee on Ways and Means.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

571. By Mr. BOW: Petition of the Youngstown City Council approving and endorsing the efforts of Congressman Frank T. Bow to rename the West Branch Reservoir on the Mahoning River the Michael J. Kirwan Dam and Reservoir; to the Committee on Public Works.

572. By the SPEAKER: Petition of the Executive Board, Oil, Chemical, and Atomic Workers International Union AFL–CIO, Denver, Colo., relative to expenditure of public funds for development of the supersonic transport; to the Committee on Appropriations.

573. Also, petition of the Honorable Robert J. Lagomarsino, California State Senate, Sacramento, relative to open-pit mining in the Los Padres National Forest; to the Committee on Interior and Insular Affairs.

574. Also, petition of the Congress of Micronesia, Saipan, Mariana Islands, relative to relations between the United States and Micronesia; to the Committee on Interior and Insular Affairs.

575. Also, petition of Orville L. Cain, Grass Valley, Calif., relative to redress of grievances; to the Committee on Internal Security.

576. Also, petition of the Honorable John F. McCarthy, California State Senate, Sacramento, relative to control of news media in a market area; to the Committee on Interstate and Foreign Commerce.

577. Also, petition of the American Bar Association, Chicago, Ill., relative to observing an annual national holiday entitled "Family Day USA"; to the Committee on the Judiciary.

578. Also, petition of Barry Dale Holland, Portsmouth, Va., relative to lowering the voting age to 18; to the Committee on the Judiciary.

579. Also, petition of Elizabeth B. Smith, Atlanta, Ga., relative to appointment of Justices of the Supreme Court; to the Committee on the Judiciary.

580. Also, petition of Robert E. Williams, Forest Heights, Md., relative to redress of grievances; to the Committee on the Judiciary.

581. Also, petition of the Association of Midwest Fish and Game Commissioners, Denver, Colo., relative to resolutions adopted by the association concerning various matters that affect fish and game; to the Committee on Merchant Marine and Fisheries.

582. Also, petition of the Washington State Sportsmen's Council, Vancouver, Wash., relative to extending the U.S. fishery zone from 12 miles to 200 miles or to the outer edge of the Continental Shelf, whichever is greater; to the Committee on Merchant Marine and Fisheries.

583. Also, petition of the city council, Youngstown, Ohio, relative to transportation policy; to the Committee on Public Works.

584. Also, petition of the Hollywood AFL Film Council, Hollywood, Calif., relative to imported motion picture and television productions; to the Committee on Ways and Means.

585. Also, petition of the National Association of Life Underwriters, Washington, D.C., relative to the national debt; to the Committee on Ways and Means.

586. Also, petition of the town board, Ogden, N.Y., relative to Federal-State revenue sharing; to the Committee on Ways and Means.

SENATE—*Wednesday, September 9, 1970*

The Senate met at 10 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God, whose presence is everywhere in the universe, help us to "be still and know—to be still and know that Thou art God." Let not this voice stand between Thee and the Members of this body. Help us in this holy silence to give ear to the "still small voice" which whispers love and peace, poise and power—the presence of a friend nearer than breathing, closer than hands or feet. Enable us to hear the message too high for words, too deep for human utterance, the eternal beyond the temporal, so vivid we are made new. And hearing Thy voice may we obey it. Call us back to Thee, keep up close to Thee, lead us forward with Thee in the spirit of Thy Son who went about doing good.

We pray in His name. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., September 9, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, September 8, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AUTHORIZATION FOR THE PRINTING OF THE 71ST ANNUAL DAR REPORT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1147, Senate Resolution 452.

The ACTING PRESIDENT pro tempore. The resolution will be stated by title.

The assistant legislative clerk read as follows:

S. Res. 452, authorizing the printing of the seventy-first annual report of the National Society of the Daughters of the American Revolution as a Senate document.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the resolution?

There being no objection, the resolution was considered and agreed to, as follows:

Resolved, That the seventy-first annual report of the National Society of the Daughters of the American Revolution for the year ended March 1, 1968, be printed, with an illustration, as a Senate document.

PROGRAM

Mr. MANSFIELD. Mr. President, for the information of the Senate, today is the day on which the joint leadership agreed to go on a two-shift basis.

Later this afternoon, it is anticipated that the Senate will proceed to the consideration of amendments to the Public Health Service Act, covering bills H.R. 18110, H.R. 17570, S. 3355, S. 3418; and then S. 437, a bill to eliminate the reduction in the annuities of employees or Members who elected reduced annuities.

If we dispose of these measures today, the Senate will consider the Disaster Relief Act. There will be debate on all of these bills.

Hopefully, with these and other measures out of the way by the end of the week, it is anticipated we may well get started, on Monday next, on H.R. 18546, the so-called farm bill.

This announcement is for the information of the Senate. It is a joint leadership declaration.

Mr. SCOTT. If the distinguished majority leader will yield, that is correct.

I repeat, the calendar may be called at the beginning of business following the prayer on any day.

Senators are thus on notice.

Mr. MANSFIELD. Yes. We have to serve notice the day before that that will be the case. It will be the case tomorrow, if Senators do not object.

Mr. SCOTT. I thank the distinguished majority leader.

CIVIL UNREST AND CIVIL RIGHTS

Mr. SCOTT. Mr. President, I ask unanimous consent that two editorials dealing with civil unrest and the McGovern-Hatfield amendment, plus a column on the civil rights accomplishments of the Nixon administration, be printed in the RECORD.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Inquirer, Sept. 2, 1970]

SENATE DOES ITS DUTY

It seems to us that both proponents and opponents of the Hatfield-McGovern amendment to the military sales bill were guilty of unwarranted flights of hyperbole and exaggeration which served no good purpose.

We believe the Senate was right in defeating the amendment which would have put a Congressional limit on the Vietnam war; indeed, that it had no real choice in the matter.

It is one thing to be against the war, which many Americans are, but another thing entirely to tell the enemy that he need not exert himself, you're going to quit anyway by such-and-such a date.

Senator George McGovern (D., S.D.), one of the authors of the measure, was quoted as saying he thought, "far from causing the enemy to attack . . . it would have quite the opposite impact; it would cause him to see that we are terminating our activities and that therefore there's no reason to press an attack on American forces."

That's guesswork, and it could have been a bloody mistake if the Vietcong and North Vietnamese, seeking to score political and propaganda points, pressed even harder to prove their "superiority" over retreating Yanks.

Senator Mark Hatfield (R., Ore.), the co-author, said in his last-minute effort before the vote that to oppose his amendment, because it would hamper executive branch maneuvering, would amount to "idolatry of the Presidency and acceptance of one-man rule."

This seems equally overstated to us. President Nixon did not precipitate the war and is, as far as we can see, doing more than anyone else to date to extricate our troops honorably and safely. One need not "idolize" him to give him a chance to continue this highly desirable effort.

On the other hand, those Senators who chose to view the 55–39 defeat of the amendment as some football-field kind of "triumph" for the President—a "vote of confidence" of sweeping dimensions—might also reconsider the realities.

Thirty-nine senators—well over a third of the Senate—voted in favor of the amendment despite considerable doubts of what disastrous effects it might have; and of the 55 defeating it, many undoubtedly had serious reservations about what effects THAT might have.

All were correct, we think, in assuming that the general public wants the war over. But this was not the way. And no "magic" alternative has yet appeared.

We don't think one should be expected, high-flown oratory notwithstanding.

PUBLIC ENEMIES

Anyone who would deliberately kill or attempt to kill a policeman or a Park Guard—merely because the target is a law-enforcement officer and is representative of the forces of law and order in the community—is a public enemy without parallel.

Let there be no mistake about this: Unless there is strong community support for the guardians of law and order, there can be no lawful and orderly protection of the citizenry against criminal violence.

The outrageous attacks upon policemen and Park Guards in Philadelphia over the past few days are shocking reminders of the daily hazards confronted by law-enforcement authorities in the performance of their duties.

We extend our deepest sympathies to the families of the victims of these attacks and our prayerful wishes for a speedy and full recovery to those among the victims whose wounds were not fatal.

But to deplore and to sympathize is not enough.

We believe there has been far too much complacency, bordering on encouragement, in public attitudes toward organizations that make no secret of their hostility toward police.

When facilities are made readily available for such organizations to hold meetings, when their antipolice literature is widely circulated and viewed by some people as harmless or even humorous, the inevitable consequence is an erosion of the forces of law and order.

When revolving-door justice allows hardened criminals to be turned loose on the streets again and again, making a mockery of efforts by police to enforce the law and protect the public, the result is a weakening of the war against crime and a strengthening of the forces of lawlessness.

When the phrase "law and order" is itself held in scorn and contempt by some supposedly responsible persons, the lawless and the disorderly are inspired to ever more reckless assaults upon structures of government and democracy.

Fortunately, the police have the overwhelming and unequivocal support of the vast majority of the people. One laudable evidence of this was the heroic cooperation given to police which aided in the arrest of suspects in the latest shootings of police and Park Guards.

A story in Sunday's Inquirer by Robert S. Boyd of our Washington Bureau gave further evidence of the widespread popular support for law and order. It was pointed out that conservative and liberal politicians are trying to outdo one another in championing the law and order cause in this election year.

Politicians of every ideological stripe embrace the law and order theme for one reason: They know the people want law and order and a tougher crackdown on violence and crime.

The vociferous few who declare war on the police as a counter-attack against the war on crime are a public menace and should be dealt with accordingly.

Their crime is not against the police alone but against the entire community of law-abiding and law-respecting citizens.

NIXON COMPILES AN IMPRESSIVE LIST OF CIVIL RIGHTS ACCOMPLISHMENTS

(By Roscoe and Geoffrey Drummond)

WASHINGTON.—"By any criterion the civil rights record of the Nixon Administration is better than any of its predecessors."

Attorney General John Mitchell told this to a group of reporters at a recent breakfast interview.

Skepticism was so great that not one bothered to demand: Prove it.

We took Mitchell's statement as so challenging that it ought to be checked, not dismissed out of hand. We didn't set out to prove or disapprove it, only to look at the facts. Here is what we found:

Money—The budgets of the civil rights division of the Justice Department for the last two fiscal years of the Johnson Administration were $2.6 million and $3 million.

For the first two years of the Nixon Administration they were $4.37 million and $5.3 million.

Staff—The number of Justice Department lawyers handling civil rights cases during the last two years of the Johnson Administration was 105 and 116.

For the first two years of the Nixon Administration it was 138 and 159.

Cases—During the last fiscal year of the Johnson Administration 98 civil rights cases were filed. In fiscal 1969 the Nixon Administration filed 145 civil rights cases and in fiscal 1970, 197 cases—or double the number of civil rights cases over 1968 involving school integration, fair housing, voting rights and equal employment opportunity.

Question: Were these expanded assets—money, manpower and case load—put to significant use?

School desegregation—Prior to the 1969–70 school year only 5.2 percent or 164,273 of the 3.1 million Negro public school students in 11 Southern states had been in desegregated school systems.

At the opening of the 1970–71 school year, either as the result of court orders or voluntary agreements, 58.9 percent or 1.8 million

Negro children were in schools in desegregated systems.

More headway is imminent. As the result of new litigation plus the negotiating efforts of both Health, Education and Welfare and the Justice Department, it is a near certainty that 97 percent or all but 7000 of the 3.1 million Southern black students will, within the next month, be attending school in desegregated systems.

More than 500 districts will be desegregated this fall—half at the direction of court orders and half as the result of HEW-Justice Department negotiations.

Through aggressive negotiation and litigation, it is accurate to say that the dual school system as it existed prior to the Supreme Court decision of 1954 is being eliminated.

Philadelphia plan—This is the first coordinated federal attempt to remedy racial discrimination in construction unions where there has been extreme anti-Negro bias. It was fought by the unions and by some political liberals. It has been upheld by the courts and is opening up new job opportunities to minorities.

Housing—The civil rights division of the Justice Department is utilizing the fair housing law to open up suburban housing to low-income blacks. It has been filing a nationwide network of suits to make houses, apartments and developments available to nonwhites, to strike down obstacles to low-income housing and to prevent block-busting of stable neighborhoods by unscrupulous real-estate firms.

Assistant Attorney General Jerris Leonard, who heads the civil rights division, would undoubtedly agree that much remains to be done and that this record does not touch the racially discriminatory practices in the Northern school districts which neither the courts nor any administration has begun to deal with effectively.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. KENNEDY. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

HIJACKING OF AIRLINERS BY PALESTINIAN GUERRILLAS

Mr. BYRD of Virginia. Mr. President, the hijacking of three airliners by Palestinian guerrillas threatens not only the lives of the Americans and others held captive, but is a menace to the cease-fire in the Middle East so painfully negotiated over the last few months.

This situation is extremely grave.

Negotiations for the safe release of the passengers must be left to the diplomatic officials of the nations involved. Public comment on these negotiations by a U.S. Senator would contribute nothing to the solution of the problem.

However, I believe that the United States must take warning from this tragic affair. We must look ahead to see what can constructively be done to prevent future crises of this kind.

Last year the Senate overwhelmingly ratified the Tokyo Convention on hijacking of aircraft, which among other things provides that signatory governments "shall take all appropriate measures to restore control of the aircraft to its lawful commander or to preserve his control of the aircraft."

But it is obvious from the most recent hijackings that some nations may be powerless to act.

Therefore, even if all nations signed the Tokyo Convention—and they have not—it may not be an effective instrument to insure the safety of air travelers.

A Swedish security official was quoted in the press today as saying:

> There is no really effective way to stop hijackers.

I suggest that under the circumstances, the time may have come for the United States to order its own airlines to halt service to those nations who act as willing hosts to hijackers, or treat hijacking as a minor offense, or simply lack the power to prevent hijacking. As a further step, the U.S. Government might deny landing rights to the airlines that serve such nations.

I recognize the complexity of the problems involved in landing rights treaties. But at the same time, I believe that the deep concern of civilized nations over the hijacking problem would lead to adoption of similar sanctions by most other nations—if the United States takes the lead.

The safety of American citizens—and perhaps grave questions of war and peace overseas—are at stake here. Hijacking of international civil aircraft is being used for both blackmail and as an instrument to determine foreign policy.

The United States should not hesitate to act vigorously.

Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "The Showdown in the Desert," published in the Washington Post today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SHOWDOWN IN THE DESERT

The grim drama being played out on the sands of the Jordanian desert is international blackmail in its basest form. The lives of scores of innocent people have been put on the auction block by a gang of vicious, desperate outlaws. What these gangsters expect to gain from this deadly exercise in ransom and threat is a renewal of the Arab-Israeli war; there is no place for rabid fanatics in a peaceful settlement. By raising their demands to include the release of 3,000 guerrillas held captive in Israel, the Palestine "liberators" made clear their purpose of increasing the pressure on the Israeli government to break the cease-fire, either before or after the ransom deadline runs out tonight.

The negotiations to release the hostages are so delicate now that no useful purpose would be served by public comment on them. Only those in close contact with them can judge the temper of the kidnapers. Those who are making that judgment for the Western nations now being blackmailed are entitled to proceed as best they can without a background of noisy advice. We only hope that in this, as in any other kidnaping, they chose wisely among the few courses of action open.

It is possible, however, to begin to plan ahead in hopes that the nations of the world can take some immediate steps to prevent any repetition of this tragic affair. The world cannot tolerate a threat of this kind to international air travel—a threat in which innocent people are pawns in a deadly international power play. There have been long negotiations and much talk in many national capitals since the wave of airplane hijackings broke out many months ago but very little concerted action. The massive dose of criminal activity that took place in one day—four planes under attack and three seized—ought to convince every nation that this outrage has gone on long enough.

The United States, in our view, should seize the initiative in this situation by ordering this country's airlines to suspend all service to and from any nation that welcomes hijackers, that treats hijacking as a minor offense, or that is unable to prevent its citizens from engaging in hijacking. At the same time, the government should deny landing rights in this country to any airline that serves such nations. This action should be taken, not so much as an economic sanction against offending nations—although there would be significant economic effects—but as a simple safety measure designed to protect American citizens.

There may be legal red tape in such a unilateral approach; international treaties governing landing rights and so on are complex affairs. But this should not be allowed to stand in the way. For one thing, surely most other civilized nations would join in such a ban since it would place the responsibility for hijacking squarely where it belongs—on those governments which have encouraged it by throwing welcoming parties for the pirates. Even if other nations did not join immediately, the United States should take the first step since its prime responsibility in this situation is the safety of its citizens and of those citizens of other countries who travel on American air carriers.

The airlines themselves can help by strengthening their security measures, although the fact that would-be pirates got aboard an El Al plane last Sunday indicates that even Israel's relatively strict precautionary measures are far from fool-proof. It may be that for a while international travelers will have to undergo the kind of scrutiny now given to visitors of prison inmates. If so the price will not be too great if it helps to prevent another showdown on the desert sand.

A PROFILE ON GEORGE SHULTZ

Mr. BYRD of Virginia. Mr. President, on Sunday, September 6, 1970, the Associated Press distributed to its member papers an excellent profile on George

Shultz, who is now director of the newly created Office of Management and Budget. As such Mr. Shultz has been described, with some accuracy I think, as "Assistant President." Most certainly his responsibilities are great. I think it is appropriate that the Associated Press should have distributed this excellent article relating to Mr. Shultz to the Sunday newspapers.

Last week I had the opportunity to spend a good bit of time with George Shultz. Prior to that time I had been impressed with him as an individual and with his service as Secretary of Labor, and I had been impressed with his testimony whenever he came before the Committee on Finance. The more I see of Mr. Shultz the more highly I think of him.

In my discussions with him in the past week I found that he is not only a man of great ability but also that he is a man who is eminently fair in his dealings with other individuals and with the great problems with which he is so closely associated.

Mr. President, I ask unanimous consent to have printed in the RECORD the Associated Press article entitled "George Shultz: Economist in Hot Spot," which was published in the Sunday papers of September 6, 1970.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEORGE SHULTZ: ECONOMIST IN HOT SPOT

(By Neil Gilbride)

WASHINGTON.—George P. Shultz, the quiet man of the Nixon administration, is emerging as one of its most powerful figures in his new job of managing the federal government's vast spending programs.

The 49-year-old Shultz, who switched from secretary of labor to director of the newly created Office of Management and Budget at President Nixon's request, described the formidable job simply as "a challenge." To his wife, Helena, Nixon's entrusting the post to her husband was "a great honor."

But 10-year-old son Alex Shultz, showing signs of his father's economic training and bent for wry humor, summed up the change in jobs in more practical terms: "Less money and no cars."

"I'm an expert in taking pay cuts," Shultz grinned, and said fellow economists had kidded him about the wisdom of switching from the $60,000-a-year labor post to the $42,500 OMB post.

He also lost the big, blue limousine that goes with the labor secretary's job, though he still gets the use of a government car when he needs it.

IMPORTANT POST

Despite the pay cut, knowledgeable Washington sources in and out of government describe Shultz's new post in such terms as "assistant president" and "general manager of the United States" and "the most important new government post to be created in years."

The task is no less than trying to manage the entire range of the federal government's spending programs adding up to some $300 billion a year.

Shultz, who left the relative quiet of academic life as dean of the University of Chicago Graduate School of Business for the maelstrom of national political life, is a polite and scholarly man with a quiet sense of humor he doesn't mind turning on himself.

He likes to tell the story of his first venture into politics—leading a drive to create a new consolidated school board in Stow, Mass., when he was teaching at the Massachusetts Institute of Technology several years ago.

"The voters, in their wisdom, defeated the proposal for a regional school board—but they elected me to head the nonexistent school board as its director," he laughed.

Shultz's amiable demeanor hides a tough-minded firmness of purpose that can be surprising and disconcerting to those inclined to view him as a mild professor unversed in the rough-and-tumble of high political life.

"We're going to get some control over the cascading flow of federal expenditures," Shultz said firmly when sworn in by Nixon to the new job. "We're doing everything we can to see that each dollar expended is expended effectively."

It still is too early to say how Nixon's new effort to manage the budget in businesslike fashion will work under Shultz, but most of those who knew him believe Shultz can do it if anyone can. A major part of the job is resisting the blandishments of other federal officials demanding more money for their own pet programs.

Shultz's track record so far indicates he can resist such pressures.

As labor secretary in an unenviable period of the steepest inflation in 20 years, sharply rising unemployment and a declining economy, Shultz wasted no time in telling off either labor or business leaders he believed wrong.

He chided Chamber of Commerce officials at their own national conference for overemphasizing the threat of strikes to the nation. And he told construction union leaders bluntly they could wind up pricing themselves out of the market by demanding too high wage increases.

LIKED BY BOTH

Yet he was given high marks by both business and labor leaders generally.

Shultz shows little ambition toward becoming the traditional power-broker in high places, softly discounting any suggestion that his new post amounts to being an economics "czar."

Nor, he said, will there be any prestige struggle between himself and John Ehrlichman, another major Nixon aide who heads the newly formed Domestic Council to work with him in overseeing federal programs.

"There's so much to do, and you're anxious to get it done well, and if you find somebody else who can do it well and get him to do it, you're just that much ahead of the game," Shultz said.

Although obviously deeply involved in the prodigious job of managing federal expenditures and trying to take the teeth out of inflation, Shultz does not appear overawed by his own position or that of the President he works for.

Yet, after more than a year-and-a-half under the relentless pressure of the national spotlight, he still sometimes seems surprised at the tough pace.

"If you told me a year ago that I'd be working this hard, I'd have said you were crazy," he confided to an aide not long after taking the labor secretary's job—and now he's even working harder.

"They start meetings at 7:30 in the morning and meet all day," an informant said of Shultz' operations in the White House to get the new job underway.

But, as a husky 6-footer of considerable athletic ability who does not smoke and drinks sparingly, Shultz appears to have the stamina for the job.

A blocking back on Princeton's football team in 1939 and 1940, Shultz won his letter. His tennis game is aggressive and competent, and he shoots 80 on the golf course despite infrequent opportunities to break away from the government grind for recreation.

"No," he said when asked if he lost his White House tennis privileges in addition to the salary cut and the loss of the blue Cadillac. "But I don't know how often I'll get a chance to use it."

Shultz' high ranking in Nixon's esteem blossomed early while he was labor secretary, but there was nothing new in his rapid climb to prominence. In World War II, Shultz entered the Marine Corps as an enlisted man and emerged a major. After that he quietly, unspectacularly built a solid reputation as one of the nation's keenest experts on economics and labor affairs as professor, mediator, arbitrator and writer.

He and wife Helena, whom he met and married when she was a military nurse in World War II, have five children—10-year-old Alex; Barbara, 12; Margaret, 22, a teacher; Kathleen, 20, a University of Denver student, and 18-year-old Peter, who attends Palo Alto High School in California.

Shultz was virtually unknown to Washington when he became labor secretary, and the ways of the nation's capital sometimes irked him.

Observing the maneuvering for power and position, and frequent job switches many political Washingtonians go through to obtain them, Shultz said: "I think you ought to be what you are. If you're an economist, you ought to be an economist. If you are a newspaperman you ought to be a newspaperman."

Shultz, despite his swift climb to the heights of power, is still basically what he was, an economist—if perhaps the nation's foremost. One of Shultz's most surprising friendships in Washington was with George Meany, the blunt and shrewd plumber from the Bronx who rose to head the 13.6-million-member AFL-CIO.

Despite frequent policy clashes between the labor federation and the Nixon administration whose election Meany had fought tooth and nail to defeat, the two men—Shultz and Meany—hit it off.

BACKED BY MEANY

Meany appeared to appreciate Shultz's sincerity toward the problems of the nation's rank-and-file workers—even though they sometimes quarreled about such things as sharply rising plumbers' wages.

"George Shultz has served with distinction as chief of the Department of Labor. He has fully deserved the confidence that American workers, their unions and the AFL-CIO have placed in him," Meany said on Shultz's elevation to federal budget manager. "We are sure he will do well in his new assignment."

Shultz, gently tying together his criticism of high wages and his theory that a man should stick to his own trade, likes to tell a story about another ex-plumber, Republican Rep. William H. Ayres of Akron, Ohio.

Shultz, speaking at an international labor conference at which Ayres was a delegate, mentioned the Ohio congressman had once been a plumber.

"From the back of the room," Shultz said, "a voice asked, 'then how can he afford to be a congressman?' "

Shultz, stuck with the difficult task of defending Nixon's stringent economic policies to control inflation, doesn't duck the problem.

"There's nothing like a profit squeeze to put backbone into management," he once said of a tough set of labor negotiations in explaining that Nixon's policies were designed to slow business, take the heat out of the economy and pressure labor and business into more moderate wage and price hikes.

The remark infuriated Meany and other labor leaders, but the ill feeling over that incident didn't damage his over-all relations with union leaders.

On the other hand, Shultz was the first Nixon administration economist to side with labor complaints and warn that the government's tight money and high interest policies had become a "stranglehold" that threatened to slow the economy too much.

Shultz had to buck other highly placed federal economic policymakers on that issue, and he won. The Nixon policy since has been to ease the money supply in an effort to guide the economy back into a hopefully moderate growth without renewing inflationary pressures.

Shultz makes no bones that the job is tough.

"It's clear enough that the inflation we inherited is a very tough thing to get hold of. Tougher than I thought it would be," he said. "It's a hard road, there's no doubt about it."

At the Western White House recently, faced with the less than happy news of the highest rise in wholesale prices in six months, Shultz said, "We're still hanging in there and working to contain inflation."

Nixon is staking a large part of his political fortunes on Shultz's ability to check inflation before the 1972 presidential election.

Besides acquitting himself well in advising Nixon on labor and economic affairs during his tenure as labor secretary, Shultz is also credited with rescuing Nixon's proposed revolutionary Family Assistance Plan, designed to wean welfare recipients to gainful employment through a sliding formula of federal payments that embrace the low-paid "working poor" in addition to unemployed welfare clients.

The big hangup was in devising the sliding scale formula that would encourage welfare recipients to train for jobs and go to work without penalizing them financially with wages lower than welfare payments.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE PROFILE IS LOWERING

Mr. GRIFFIN. Mr. President, on last Thursday another benchmark in the Nixon administration's program of Vietnamization was reached with the departure of 2,800 more American troops from Vietnam. For the first time since 1967 there are fewer than 400,000 American soldiers in Vietnam.

The American command in Saigon announced over the weekend that our troop level in Vietnam is now 399,500.

This lowering of the American profile in Asia is a firm, rational effort on the part of the Nixon administration to return the problem of protecting South Vietnam to the Vietnamese themselves.

From 1961 until the spring of 1969 it was otherwise. Day by day, month by month, the number of Americans directly involved in the fighting grew and grew. When President Nixon took office in January 1969, there were nearly 550,000 Americans fighting in Southeast Asia.

President Nixon almost at once began to reverse the trend. In the spring of 1969 he announced the first withdrawal of American troops with the promise that this would be followed by other withdrawals as the war became more and more the affair of the South Vietnamese themselves and less and less the business of young Americans.

Success of the Vietnamization program can be judged by reports from Vietnam. The South Vietnamese Government now controls most of the countryside, according to unbiased observers. The Vietcong, which once commanded the loyalty of the vast majority of the peasants in the Mekong Delta area, is now despised and hated. Their powerful hold on the area has been broken. Only the presence of troops from North Vietnam prevents peace in much of the countryside.

A little recognized fact is that, at long last, the promised land reforms are taking place and South Vietnamese peasants really do have something worth fighting for—their own land. These reforms were promised and repromised throughout the 1960's, but it was not until the Nixon administration took a firm, hard-nosed stand that land reform actually began.

Mr. President, the war in Vietnam is not over, and peace has not yet come to that land. But American participation in that war is growing less and less, day by day.

Mr. CURTIS. Mr. President, will the distinguished Senator yield?

Mr. GRIFFIN. I yield.

Mr. CURTIS. I want to commend the Senator for calling the attention of the country to the troop withdrawals from Vietnam. There is a parallel set of figures to which attention should also be called. I refer to the draft calls. At the same time that we are recalling trips from Vietnam, the draft calls have gone down and down. I believe it was yesterday that the Secretary of Defense announced that hereafter emergencies would be met by the use of National Guard Reservists, and indicated a dwindling use of draft calls.

When we think back to the middle 1960's, when the buildup was taking place in Vietnam and we were escalating action there and the United States was sending troops and more troops there, the draft calls likewise were escalating and increasing rapidly.

Just when the draft can end remains to be seen, but the point is that without the Vietnamization program and the withdrawal program that has been underway, we could not look forward to any ending of the draft soon.

I commend the distinguished acting minority leader for bringing out this fact.

Mr. GRIFFIN. I thank the Senator.

Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAYH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMUNICATION FROM EXECUTIVE DEPARTMENT

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letter, which was referred as indicated:

REPORT ON GRANTS WHICH ARE FINANCED WHOLLY WITH FEDERAL FUNDS

A letter from the Acting Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report on grants approved by that office which are financed wholly with Federal funds, for the period April 1, 1970 to June 30, 1970 (with an accompanying report); to the Committee on Finance.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. ALLEN):

A resolution of the Senate of the State of California; to the Committee on Commerce:

"SENATE RESOLUTION 286 RELATIVE TO THE PROTECTION OF THE FARALLON ISLANDS

"Whereas, For the first time in more than a century, the southeast island of the Farallon chain will be uninhabited when the United States Coast Guard, late this year, completes the automation of its lighthouse there; and

"Whereas, All of the picturesque rocky islands of the chain are breeding grounds for thousands of sea birds and a temporary refuge for a fantastic number of land birds; and

"Whereas, California and Steller sea lions breed there, and the elephant seal uses the islands as a resting area; and

"Whereas, The Coast Guard personnel for more than sixty years have acted as unofficial game wardens for all the islands; and

"Whereas, The Audubon Society, the Wilderness Society, and the Sierra Club, have succeeded in their efforts to add South Farallon Island to the Farallon National Wildlife Refuge, but it will turn into a grim joke unless a caretaker is stationed there to enforce regulations; and

"Whereas, Because there are numerous reports of killing and disturbing of the animals and birdlife in spite of the protection offered by the Coast Guard, it is feared there may be wholesale slaughter when the islands are left defenseless; and

"Whereas, The Point Reyes Bird Observatory is seeking funds from the Fish and Wildlife Department to establish a permanent base on the island for scientific studies and protection from vandals; now, therefore, be it

"Resolved by the Senate of the State of California, That the Members do hereby urge the federal government to finance the permanent base on the Farallon Islands as proposed by the Point Reyes Bird Observatory; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Secretary of the Interior, to the Speaker of the House of Representatives and to each Senator and Representative from California in the Congress of the United States.

"This is to certify that the above resolution was adopted by the Senate on August 6, 1970.

"DARYL R. WHITE,
"Secretary of the Senate."

A resolution adopted by the board of trustees of the National Association of Life Underwriters, Washington, D.C., praying for the establishment of a planned procedure for the expeditious reduction and ultimate

retirement of the national debt; to the Committee on Finance.

A resolution adopted by the International Conference of Police Associations, Washington, D.C., praying for immediate steps to be taken to end the vengeful and senseless killings of police officers throughout the United States and Canada; to the Committee on the Judiciary.

The petition of Polytechnic Institute of Technology, Grass Valley, Calif., praying for a redress of grievances; to the Committee on the Judiciary.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore (Mr. ALLEN) laid before the Senate sundry messages from the President of the United States submitting nominations received on September 3, 1970, under the order of September 1, 1970, which were referred to the Committee on the Judiciary.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. ANDERSON, from the Committee on Aeronautical and Space Sciences, without amendment:

H.R. 16539. An act to amend the National Aeronautics and Space Act of 1958 to provide that the Secretary of Transportation shall be a member of the National Aeronautics and Space Council (Rept. No. 91–1161).

By Mr. PELL, from the Committee on Labor and Public Welfare, with an amendment:

S. 3318. A bill to amend the Library Services and Construction Act, and for other purposes (Rept. No. 91–1162).

By Mr. SPONG, from the Committee on the District of Columbia, with amendments:

H.R. 4182. An act to authorize voluntary admission of patients to the District of Columbia institution providing care, education, and treatment of mentally retarded persons (Rept. No. 91–1163).

By Mr. NELSON, from the Committee on Labor and Public Welfare, with amendments:

H.R. 18260. An act to authorize the U.S. Secretary of Health, Education, and Welfare to establish educational programs to encourage understanding of policies and support of activities designed to preserve and enhance environmental quality and maintain ecological balance (Rept. No. 91–1164).

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. TYDINGS:

S. 4324. A bill to amend title I of the Narcotic Addict Rehabilitation Act of 1966 to cover addicts charged with misdemeanors in the District of Columbia; to the Committee on the District of Columbia.

(The remarks of Mr. TYDINGS when he introduced the bill appear below under the appropriate heading.)

By Mr. WILLIAMS of New Jersey:

S. 4325. A bill to prohibit flight in interstate or foreign commerce to avoid prosecution for the killing of a policeman or fireman; to the Committee on the Judiciary.

S. 4326. A bill to provide additional protection for the rights of participants in private pension plans, to establish minimum standards for vesting and funding of private pension plans, to provide an insurance program guaranteeing plan termination protection, and for other purposes; and

S. 4327. A bill to amend the Welfare and Pension Plans Disclosure Act; to the Committee on Labor and Public Welfare.

(The remarks of Mr. WILLIAMS of New Jersey when he introduced the bills appear below under the appropriate headings.)

By Mr. TYDINGS:

S. 4328. A bill to improve judicial machinery by providing the district courts with jurisdiction over certain types of civil actions, and for other purposes; to the Committee on the Judiciary.

(The remarks of Mr. TYDINGS when he introduced the bill appear below under the appropriate heading.)

By Mr. SMITH of Illinois:

S. 4329. A bill to amend title 18, United States Code, to strengthen the laws concerning illegal use, transportation, or possession of explosive and the penalties with respect thereto, and for other purposes; to the Committee on the Judiciary.

By Mr. SMITH of Illinois (by request):

S. 4330. A bill for the relief of Jean Panagiote Anastasakis; to the Committee on the Judiciary.

By Mr. HART (for himself, Mr. MAGNUSON, Mr. HARTKE, and Mr. NELSON):

S. 4331. A bill to amend the National Traffic and Motor Vehicle Safety Act of 1966 in order to promote competition among motor vehicle manufacturers in the design and production of safe motor vehicles having greater resistance to damage, and for other purposes; to the Committee on Commerce.

(The remarks of Mr. HART when he introduced the bill appear below under the appropriate heading.)

S. 4324—INTRODUCTION OF A BILL RELATING TO NARCOTICS TREATMENT

Mr. TYDINGS. Mr. President, I am introducing today a bill to amend title I of the Narcotic Addict Rehabilitation Act of 1966 in order to allow addicts charged with misdemeanors in the District of Columbia to be eligible for the treatment provisions under that act.

Currently, under that act, all suspects charged with felony violations of Federal law who are adjudged to be addicts may be committed to treatment in lieu of prosecution at the discretion of the U.S. attorney. But because of a legislative oversight, persons charged with misdemeanors, who are adjudged to be addicts, cannot be committeed to treatment in lieu of prosecution, even if the U.S. attorney believes treatment is the best course to follow.

Since the District of Columbia is the only jurisdiction where persons charged with misdemeanors are tried in Federal courts, my bill would correct that legislative oversight.

I ask unanimous consent that my amendment to title I of the Narcotic Addict Rehabilitation Act of 1966 be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. CRANSTON). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4324) to amend title I of the Narcotic Addict Rehabilitation Act of 1966 to cover addicts charged with misdemeanors in the District of Columbia, introduced by Mr. TYDINGS, was received, read twice by its title, referred to the Committee on the District of Columbia, and ordered to be printed in the RECORD, as follows:

S. 4324

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Section 2902(a) of Title 28 of the United States Code, is amended by inserting in the first sentence after the word "court" and before the word "believes" the phrase "or the Court of General Sessions in the District of Columbia."

S. 4325—INTRODUCTION OF A BILL TO PROHIBIT FLIGHT IN INTERSTATE OR FOREIGN COMMERCE TO AVOID PROSECUTION FOR THE KILLING OF A POLICEMAN OR FIREMAN

Mr. WILLIAMS of New Jersey. Mr. President, during the past several weeks the American people have become deeply disturbed by the increasing frequency of senseless attacks upon law enforcement officers at the State and local levels. The brutal pointblank shooting of a Philadelphia policeman is just the most recent example in what has become an alarming trend toward brutal assaults upon policemen and firemen.

This year alone there have been all too many instances of unprovoked attacks on policemen throughout the Nation:

In July, an officer on Chicago's South Side was shot and killed as he sat in his patrol car filling out a report; in mid-August an Omaha policeman was killed when a bomb exploded as he and seven of his fellow officers were investigating a report of a screaming woman; in San Francisco, a patrol car was blown up as two police officers were checking out a burglary report; a New York City policeman was shot in the right arm while investigating a report of gunfire at a Brooklyn yacht club; and in my own State of New Jersey a State trooper was grazed in the head by a bullet in a brief exchange of gunfire during a 13-mile chase of a stolen truck.

Since 1960 more than 600 policemen have been killed in this country. Thus far this year, 16 police officers have been murdered in unprovoked attacks—nearly four times the annual average for the past 10 years. At least 57 have died in the line of duty so far in 1970. And last year there was an all-time record of 86 such police deaths.

This is an absolutely intolerable situation and we must move quickly to stop this gruesome trend before it spreads further. Today I am introducing legislation which will enable the Federal Bureau of Investigation to join the search for killers of policemen and firemen within 24 hours of the crime. The bill makes it a specific Federal crime to flee across State lines to avoid prosecution for the killing of a policeman or fireman. The key section of the bill provides that if no person alleged to have committed the offense has been apprehended and taken into custody within 24 hours after the crime was committed it will be assumed that he has fled across State lines. Thus, if the killer is still at large

24 hours after the murder of a policeman or fireman the FBI will be automatically authorized to take part in the search.

The FBI has repeatedly proven itself to be a most effective law enforcement agency and it is feared by lawbreakers throughout the world. I believe the knowledge that the FBI will enter the hunt for the killer of a policeman or fireman within a short time of the commission of the crime will prove an important deterrent to anyone contemplating an attack on our police or firefighters.

I am well aware that under the existing fugitive felon law the FBI is authorized to conduct a search in the case of any crime where the offender crosses State lines to avoid arrest. However, it is not clear from the law as to when specifically the FBI will enter into the case. And although it is my understanding that the FBI has an informal arrangement with State and local police to lend at least technical and laboratory assistance in the case of a police or fireman shooting I think this arrangement should be formalized in the Federal statute books without delay.

This Nation, and every civilized nation relies upon its law enforcement officials to enforce the rules of conduct which separate man from the wild animals. We also know the tremendous importance of our firefighters who not only protect our property from burnings and bombings but, more importantly, who save countless lives each year through their ambulance and resuscitation units.

Today the policeman is the man in the middle. We expect him to be a lawyer, a sociologist, a guard, a doctor, and sometimes a gunfighter. The same is true for the fireman who we count on to heroically save our burning buildings, rush victims of fires and ill health to safety, and perform many other public services particularly for our children. Yet, we want them to work for ridiculously low wages and often pay them little respect.

Police and firemen in big cities are in an especially precarious position because they must do their jobs in an atmosphere of strong and conflicting emotions which can, and often do, explode into violence.

Congress is moving to help build thoroughly professional law enforcement agencies throughout the Nation by providing more Federal assistance. But we must also back up our policemen and firemen by making sure that anyone who contemplates attacking these public servants knows beforehand that he will have to face the full force of our law enforcement machinery. This is a critical situation and we should not lose any more time in striving to correct it.

The PRESIDING OFFICER (Mr. SAXBE). The bill will be received and appropriately referred.

The bill (S. 4325) to prohibit flight in interstate or foreign commerce to avoid prosecution for the killing of a policeman or fireman, introduced by Mr. WILLIAMS of New Jersey, was received, read twice by its title, and referred to the Committee on the Judiciary.

S. 4326 AND S. 4327—INTRODUCTION OF BILLS TO PROVIDE ADDITIONAL PROTECTION FOR RIGHTS OF PARTICIPANTS IN PRIVATE PENSION PLANS AND TO PROVIDE FOR MINIMUM UNIFORM FIDUCIARY RESPONSIBILITY ON PERSONS HANDLING WELFARE AND PENSION FUNDS

Mr. WILLIAMS of New Jersey. Mr. President, for some months now the Subcommittee on Labor, of which I am chairman has been engaged, pursuant to Senate Resolution 360, in a major study of welfare and pension plans. A very significant part of our effort is a survey of major private pension and welfare plans currently in progress. We have now distributed our initial survey form to a sample of more than 1,500 of the approximately 34,000 plans registered with the Department of Labor. This survey is designed to elicit vitally needed data on the vesting, funding, portability, investment and fiduciary operations of the private pension system.

We expect that some time will be required to process the incoming information and I expect that recommendations evolving from this study will be ready early in the next Congress.

There is, however, in my judgment a need for a continuing congressional inquiry into private pension plans so as to illuminate the serious problems many American workers suffer as a result of certain insufficiencies in the private pension system.

Our recent hearings on the UMWA welfare and retirement fund have illustrated that this area needs serious attention. We have found that frequently, when workers and their families need help most, they find it wanting. When workers and their families think that sufficient provision has been made for their security, they find it an illusion.

I believe the failure to provide workers with complete information concerning their expectancies under a private pension plan results in grave consequences to that worker, his family, and society when he reaches retirement age. Too frequently, a worker reaching retirement finds the promised benefits to be an empty cupboard. I believe that there is an urgent need to provide a worker with adequate information about retirement years early in his career, so that he will have an opportunity to consider and plan for his retirement needs.

We must devote more attention to the question of standards for vesting, funding, insurance, and portability of pension benefits for each American worker so that if he is forced to leave his job, as so many workers are finding it necessary to do because of today's sluggish economy, he will not be faced with a termination of future pension benefit rights.

We must also fully explore the area of fiduciary responsibilities of pension plan administrators and trustees in order to be assured that appropriate standards are followed in the operation of private pension plans so as to eliminate and prevent pension abuses.

There are presently several different bills pending before the Senate to regulate private pensions. Today, in the interest of presenting the Senate with additional options in this regard, I am introducing two bills that were introduced in the last Congress by the distinguished chairman of the Committee on Labor and Public Welfare, Senator YARBOROUGH.

There are many points of view on these bills, and much has been written and said already. Some will say all the bills go too far, others will say the bills do not go far enough—both positions may be right in certain respects. In my judgment none of the bills presented thus far represent the ideal approach. Consequently, I anticipate close scrutiny of this legislation by the committee, and I expect that many of the ideas embodied in the various bills will be included in the final legislation.

The bills I introduce today are directed at providing the worker with some degree of certainty with respect to his retirement benefits and will provide for necessary fiduciary standards by those who are charged with the operation of their pension funds.

The first bill I am introducing, "The Pension Benefit Security Act," contains a number of provisions relating to vesting, funding, termination insurance, and portability studies, as follows:

First. A minimum standard is imposed that would require vested retirement benefits to all participants who have worked for the same employer for 10 or more years after reaching the age of 25.

Second. A minimum standard of funding is required to assure that sufficient assets are accumulated to carry out promises to employees and the dependents.

Third. The bill creates a Pension Benefit Insurance Corporation to administer a system of termination insurance to provide payment of benefits in the event a pension fund is terminated before it is fully funded.

Fourth. The bill authorizes the Secretary of Labor to conduct studies of pension plans including studies relating to the "portability" of pension credit.

The second bill, I am introducing, "The Welfare and Pension Plan Protection Act of 1970," is addressed to the fiduciary aspects of pension plans. It amends the Welfare and Pension Plans Disclosure Act as follows:

First. New disclosure requirements are provided in order to establish a sound basis for evaluating fiduciary conduct.

Second. The bill provides minimum and uniform standards of fiduciary responsibilities on persons handling pension and welfare funds, including the imposition of and liability for those breaching the standard.

Third. The bill provides limiting standards on the investment of retirement funds in the securities of the employer company.

Fourth. The bill gives the Secretary of Labor added investigative and enforcement powers with respect to the requirements of the act, and establishes an Ad-

visory Council on Employee Welfare and Pension Benefit Plans to advise the Secretary of Labor.

Mr. President, I ask unanimous consent that the texts of these two bills and an explanatory statement of each bill's provisions be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. SAXBE). The bills will be received and appropriately referred; and, without objection, the bills and statements will be printed in the RECORD.

The bills, introduced by Mr. WILLIAMS of New Jersey, were received, read twice by their titles, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

S. 4326

A bill to provide additional protection for the rights of participants in private pension plans, to establish minimum standards for vesting and funding of private pension plans, to provide an insurance program guaranteeing plan termination protection, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Pension Benefit Security Act of 1970".

FINDINGS AND POLICY

SEC. 2. (a) The Congress finds that private pension plans are a major and increasing factor with respect to the continued well-being and security of millions of employees and their dependents; that because of the present and anticipated size and importance of these plans they have a significant bearing on industrial relations, on employment, and on the national economy; that owing to their interstate character they have become an important factor in commerce, that a large volume of the activities carried on by such plans are effected by means of the mails and instrumentalities of interstate commerce; that they substantially affect the revenues of the United States because they they are afforded preferential Federal tax treatment; that despite the enormous growth in such plans many employees with long years of employment are losing anticipated retirement benefits owing to the lack of vesting provisions in such plans; that owing to the inadequacy of current minimum standards, the soundness and stability of plans with respect to adequate funds to pay promised benefits may be endangered; that owing to the involuntary termination of plans before requisite funds have been accumulated, employees and their dependents have been deprived of anticipated benefits; and that it is therefore desirable in the interests of employees and their beneficiaries, for the protection of the revenue of the United States, and to provide for the free flow of commerce, that minimum standards be provided assuring the equitable character of such plans, their financial soundness, and protection of benefits in the event of involuntary plan termination.

(b) It is hereby declared to be the policy of this Act to protect interstate commerce, the Federal taxing power, and the interests of participants in private pension plans and their beneficiaries by improving the equitable character and the soundness of such plans by requiring them to vest the accrued benefits of employees with significant periods of service, to meet minimum standards of funding, and to protect the vested rights of participants against losses due to involuntary plan termination.

DEFINITIONS

SEC. 3. When used in this Act—

(a) The term "Secretary" means the Secretary of Labor.

(b) The term "pension plan" means any plan, fund, or program which is communicated or its benefits described in writing to the employees as a group and which was heretofore or is hereafter established or maintained by an employer or by an employer or by an employer together with an employee organization, for the purpose of providing for its participants or their beneficiaries, by the purchase of insurance or annuity contracts or otherwise, retirement benefits, including any profit-sharing plan which provides benefits at or after retirement; providing that nothing herein shall be construed to include any plan, fund, or program to which only employees contribute.

(c) The term "employee organization" means any labor union or any organization of any kind, or any agency or employee representation committee, association, group, or plan, in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers concerning an employee pension plan, or other matters incidental to employment relationships.

(d) The term "employee" means any individual employed by an employer.

(e) The term "participant" means any employee or former employee of an employer or any member of an employee organization who is or may become eligible to receive a benefit of any type from a pension plan, or whose beneficiaries may be eligible to receive any such benefit.

(f) The term "beneficiary" means a person designated by a participant or by the terms of a pension plan who is or may become entitled to a benefit thereunder.

(g) The term "employer" means any person acting directly as an employer or indirectly in the interest of an employer in relation to a pension plan, and includes a group or association of employers acting for an employer in such capacity.

(h) The term "person" means an individual, partnership, corporation, mutual company, joint stock company, trust, unincorporated organization, association, or employee organization.

(i) The term "State" means any State of the United States, the District of Columbia, the Canal Zone, the Commonwealth of Puerto Rico, any territory or possession of the United States, or the Outer Continental Shelf Lands as defined in the Outer Continental Shelf Lands Act (43 U.S.C. 1331–1343).

(j) The term "administrator", whenever used in this Act, means, in the case of a pension plan established or maintained by a single employer, the employer; in the case of a plan established or maintained by two or more employers or jointly by one or more employers and one or more employee organizations, the association, committee, joint board of trustees or other similar group of representatives of the parties who established or maintained the plan.

(k) The term "regular retirement benefit" means only that benefit payable under the plan in the event of retirement at the regular retirement age.

(l) The term "accrued portion of the regular retirement benefit" means—

(1) Under a plan which provides for payment of a fixed benefit, that portion of such benefit which would have been payable at regular retirement age, computed as of the day of termination of employment, as the number of years of credited service under the plan bears to the total possible years of credited service had employment continued to the regular retirement age.

(2) Under a plan which provides for benefits based solely upon the amount contributed to the employee's account, the amount credited to such account toward regular retirement benefits at the time of termination of employment.

(m) The term "regular retirement age" means not later than age sixty-five.

(n) The term "vested liabilities" means the present value of the immediate or deferred benefits for participants and their beneficiaries which are nonforfeitable and for which all conditions of eligibility have been fulfilled under the provisions of the plan prior to its termination.

COVERAGE

SEC. 4. (a) Except as provided in subsections (b) and (c), this Act shall apply to any pension plan—

(1) if it is established or maintained by any employer engaged in commerce or in any industry or activity affecting commerce or by such employer together with any employee organization representing employees engaged in commerce or in any industry or activity affecting commerce; or

(2) if such plan is established or maintained by any employer or by any employer together with any employee organization and if, in the course of its activities, such plan, directly or indirectly, uses any means or instruments of transportation or communication in interstate commerce or the mails.

(b) This Act shall not apply to any pension plan if—

(1) such plan is administered by the Federal Government or by the government of a State or by a political subdivision of a State, or by an agency or instrumentality of any of the foregoing;

(2) such plan is established and maintained outside the United States primarily for the benefit of persons who are not citizens of the United States;

(3) such plan provides contributions or benefits for a sole proprietor or in the case of a partnership, a partner who owns more than 10 per centum of either the capital interest or the profits interest in such partnership.

(c) In addition, titles II, III, and IV, shall not apply to any pension plan if—

(1) the plan has a fixed contribution rate and does not provide an amount expected to be paid as a fixed benefit;

(2) the plan is a profit-sharing plan which provides benefits at or after retirement;

(3) the plan is one in which benefits are paid solely from the general assets of the employer.

(d) For purposes of this section—

(1) The term "commerce" means trade, traffic, commerce, transportation, transmission, or communication, among the several States or between any State and any place outside thereof.

(2) The term "industry affecting commerce" means any activity, business, or industry in commerce or in which a labor dispute would hinder or obstruct commerce or the free flow of commerce and includes any activity or industry "affecting commerce" within the meaning of the Labor-Management Act, 1947, as amended, or the Railway Labor Act, as amended.

EFFECTIVE DATE

SEC. 5. The provisions of titles I, II, and III of this Act shall become effective two years after enactment of this Act. The provisions of titles IV and V of this Act shall become effective upon the date of the enactment of this Act.

TITLE I—VESTING

ELIGIBILITY REQUIREMENTS

SEC. 101. No pension plan subject to this title which was adopted after the date of enactment of this Act shall, after the effective date of this title, provide as a condition for eligibility to participate in such plan a period of services longer than three years on an

age higher than age 25. Any pension plan subject to this title which was in effect on or before the date of enactment of this Act may retain its eligibility requirements until such plan is amended to provide increased benefits to participants or beneficiaries or ten years after the date of enactment of this Act, whichever occurs first. Thereafter, such pension plan shall comply with the eligibility requirements applicable to pension plans adopted after the date of enactment of this Act.

NONFORFEITABLE BENEFITS

SEC. 102. Every pension plan subject to this title shall provide for nonforfeitable rights to regular retirement benefits when the plan has been in effect for five years or more, as follows:

(a) PRESENT PLANS.—Every pension plan created before the date of enactment of this Act shall, in accordance with one of the following alternatives, provide that the rights of employees to receive benefits are non forfeitable:

(1) After a specified period of service not exceeding ten years, as to that part of the accrued portion of the regular retirement benefit (including benefits provided under amendment) which is attributable to periods after the effective date of this title, or

(2) After a specified period of service not exceeding ten years, as to not less than 10 per centum of the entire accrued portion of the regular retirement benefit (including benefits provided under amendment) which percentage shall increase at a rate equivalent to at least 10 percentage points for each year the plan has been in effect after the effective date of this title, so that the percentage will reach 100 per centum no more than nine years after the effective date of this title; or

(3) After a specified period of service not to exceed twenty years, as to the entire accrued portion of the regular retirement benefit (including benefits provided under amendment) which period shall be reduced at a rate equivalent to at least one year for each year the plan has been in effect after the effective date of this title, so that ten years after the effective date of this title the required period of service does not exceed ten years; or

(4) In accordance with such other provisions making nonforfeitable, after a specified period of service, the entire accrued portion of the regular retirement benefit, which are approved by the Secretary, after notice and opportunity to be heard, as substantially consistent with the purposes of this section as expressed in subsection (a) paragraphs 2 and 3.

(b) NEW PLANS.—Every pension plan created on or after the date of enactment of this Act shall provide that the rights of the employees to receive benefits shall be nonforfeitable—

(1) After a specified period of service not to exceed fifteen years, as to the entire accrued portion of the regular retirement benefit as of the sixth year of the plan's operation, which period shall be reduced at a rate equivalent to at least one year for each year after the sixth year of the plan's operation, so that in the eleventh year of the plan's operation, the required period of service does not exceed ten years; or

(2) After a specified period of service not to exceed ten years, as to 50 per centum of the entire accrued portion of the regular retirement benefit as of the sixth year of the plan's operation, which percentage shall increase at a rate equivalent to at least 10 percentage points for each year the plan has been in effect after the sixth year of the plan's operation, so that in the eleventh year of the plan's operation, the entire accrued portion of the regular retirement benefit shall be nonforfeitable after a period of service not to exceed ten years.

(c) COLLECTIVE BARGAINING AGREEMENTS.—With respect to a pension plan created or operated under a collective bargaining agreement in existence as of the date of enactment of this Act but due to expire after the effective date of this title, the provisions of this title shall apply after the expiration date of such collective bargaining agreement but in no event later than one year after the effective date of this title.

(d) PERIOD OF SERVICE.—In computing the period of service under the plan, an employee's entire service with the employer contributing to or maintaining the plan shall be considered, except the following may be disregarded:

(1) service prior to age 25;

(2) service during which the employee declined to contribute to a plan requiring employee contributions;

(3) service with a predecessor of the employer contributing to or maintaining the plan (except where the plan of the predecessor has been continued in effect by the successor employer); and

(4) service broken by periods of suspension of employment, provided that the rules governing such breaks in service are not unreasonable or arbitrary as determined under regulation of the Secretary.

(e) PROVISIONS DEALING WITH FORFEITURE OF BENEFITS. Nothing contained in this title shall be construed to disallow any plan provision—

(1) making benefits forfeitable for misconduct such as theft, dishonesty, or divulging the employers' trade secrets to competitors: *Provided,* That such provisions are not unreasonable or arbitrary as determined under regulation of the Secretary; or

(2) adopted pursuant to regulations of the Secretary of the Treasury or his delegate to preclude discrimination in the event of early termination of a plan.

(f) CONTRIBUTORY PLANS.—No penson plan subject to this title to which employees contribute shall provide for forfeiture of benefits which accrued during participation in the plan by the employee and which were attributable to employer contributions, solely because of withdrawal by such employee of amounts attributable to his own contributions.

DISTRIBUTION OF NONFORFEITABLE BENEFITS TO TERMINATION PARTICIPANTS

SEC. 103. (a) Nonforfeitable benefits accrued by terminating participants may be distributed in the manner set forth in the plan: *Provided,* That distribution of such benefits shall commence no later than the regular retirement age and that such benefits are paid in the same form as retirement benefits are paid.

(b) The administrator shall, upon termination of a vested participant's employment prior to regular retirement age, report to the Secretary of Health, Education, and Welfare such information as the Secretary of Health, Education, and Welfare may prescribe by regulation to facilitate notification of vested rights to such participants or their beneficiaries. The Secretary of Labor shall reimburse the Secretary of Health, Education, and Welfare for use by the latter of personnel and facilities in the performance of his functions under this subsection.

ENFORCING OF VESTING STANDARDS

SEC. 104. Whenever the Secretary finds it necessary or appropriate for the enforcement of the provisions of this title or any rule or regulation thereunder, he may require a certificate of approval with respect to the vesting provisions of any pension plan. Denial of any such certificate shall be by order of the Secretary, and only after reasonable opportunity for hearing. A certificate of approval shall be issued by the Secretary when he determines that the vesting provisions in question do not violate the requirements of this title. Whenever a certificate of approval is required for any pension plan, it shall be unlawful for the administrator of any such plan to maintain or operate such plan unless a certificate has been obtained.

TITLE II—FUNDING

FUNDING SCHEDULE

SEC. 201. (a) GENERAL RULE.—Every pension plan subject to this title shall—

(1) provide for contributions to the plan in amounts necessary to meet an amount equal to the normal cost since inception of the plan plus interest on any unfunded past service costs, and

(2) maintain a minimum ratio of assets to vested liabilities according to the following schedule:

If the plan has been in effect (in years)	The ratio of assets to vested liabilities shall be at least (in percent)
5	20
6	24
7	28
8	32
9	36
10	40
11	44
12	48
13	52
14	56
15	60
16	64
17	68
18	72
19	76
20	80
21	84
22	88
23	92
24	96
25	100

(b) SPECIAL PROVISION FOR PLANS FIVE OR MORE YEARS OLD.—In the case of a plan which on the effective date of this title has been in effect for five or more years, the administrator, when he files the first funding status report required by section 202 of this Act, may choose as the required funding ratio—

(1) the ratio specified by the schedule in subsection (a)(2), or

(2) the actual funding ratio of the plan.

Beginning with the ratio thus chosen, the required ratio shall increase by 3 percentage points each year for the next five years and 4 percentage points each year thereafter until the ratio becomes 100 percent.

(c) SPECIAL PROVISION FOR PLANS LESS THAN FIVE YEARS OLD.—A plan which on the effective date of this title has been in effect for less than five years shall become subject to (a)(2) above as soon as the plan has been in effect for five years. The options provided in subsection (b) shall be available to a plan in this category except that the time allowed for increasing the required ratio by 3 percentage points each year shall be limited to a period equal to the number of years the plan has been in effect prior to the effective date of this title.

(d) SPECIAL PROVISION FOR PLAN AMENDMENTS.—If, after the effective date of this title, a plan which has been in existence for five or more years is amended with a resulting increase in vested liabilities, the administrator may adjust the required funding schedule according to one of the following methods:

(1) The plan's funding ratio may be decreased in proportion to the ratio which the additional vested liabilities bear to the total vested liabilites after the amendment. The resulting ratio will be increased each year by percentage point increments according to the applicable funding rate specified in subsection (a)(2) or (b).

(2) If the amendment results in a 25 per

centum or greater increase in vested liabilities, the portion of vested liabilities created by the amendment may be regarded as a new plan subject to the funding schedule imposed by subsection (a)(2). In this case, the administrator shall keep separate records for ascertaining the funding status of the vested liabilites created by the amendment.

FUNDING STATUS REPORTS

SEC. 202. (a) Within one hundred and fifty days after the end of the plan's first fiscal year during which it is subject to section 201(a)(2), and within one hundred and fifty days after the end of each third fiscal year thereafter, or within one hundred and fifty days after the end of any fiscal year in which the plan is amended so as to increase vested liabilities, the administrator of the plan shall file with the Secretary, a statement containing the following information:

(1) the amount of normal cost since inception of the plan plus interest on any unfunded past service costs;

(2) the total amount of the plan's vested liabilities at the close of its preceding fiscal year;

(3) the assets held by the plan as of the close of its preceding fiscal year valued at market value or by any other method approved by the Secretary pursuant to regulation;

(4) the number of years the plan has been in effect;

(5) a statement of the amount, if any, by which the assets held by the plan either exceed or fall below the amount of assets required in order for the plan to meet the funding ratio required under section 201(a)(2);

(6) such other information determined by the Secretary by regulation to be necessary for adequate disclosure of a plan's funding status.

(b) At such times as the administrator of a plan subject to this title is required to file a report with the Secretary pursuant to (a) above, the administrator shall make available to each person having a vested benefit such report, by posting such report in a prominent location at the employer's place or places of business or through such other means that will insure that persons with vested benefits have adequate access to such information.

ENFORCEMENT OF FUNDING STANDARDS

SEC. 203. (a) When the contributions to a pension plan fall below amounts necessary to meet the requirements of section 201(a)(1), the Secertary shall require by order, after notice and oppotrunity for hearing, that the administrator take such steps as the Secretary shall find necessary to guarantee that the rights of each participant to benefits accrued to the date of such failure to make appropriate contributions, to the extent then funded, or the rights of each participant to the amounts credited to his account at such time, are nonforfeitable in the event of the participant's termination, except that nonforfeitable benefits resulting other than through operation of this subsection shall take priority over nonforfeitable benefits resulting exclusively from operation of this subsection with respect to any allocation of plan assets or distribution to participants.

(b) When a pension plan's ratio of assets to vested liabilities falls below the funding ratio required by section 201(a)(2) as determined by the Secretary—

(1) the plan's vested liabilities shall not be increased by an amendment until the plan's actual funding ratio is equal to or greater than the required funding ratio;

(2) the administrator shall inform, in writing, each person having a vested benefit as to (A) the amount of his vested benefit, (B) the portion of his vested benefit protected by assets and insurance, and (C) the portion of his vested benefit not protected by assets and insurance. Such reports shall be made annually until the plan's actual funding ratio is equal to or greater than the required funding ratio; and

(3) the administrator shall make such additional reports to the Secretary as the Secretary may by rule or regulation prescribe to aid in the enforcement of this title.

(c) When a pension plan's ratio of assets to vested liabilities falls below the funding ratio required by section 201(a)(2) for five consecutive years the Secretary shall require by order, after notice and opportunity for hearing, that the administrator take such steps as the Secretary shall find necessary to suspend further accumulation of vested liabilities until such time as the funding deficiency has been removed: *Provided, however,* That the Secretary may, after notice and opportunity for hearing, order the action specified herein to be taken at any time after a funding deficiency has occurred but prior to expiration of the five-year period whenever, in his discretion, such action is necessary to protect the interests of participants. The Secretary may by order revoke or modify any order previously made under this subsection, if, after notice and opportunity for hearing, he finds that the circumstances upon which the order was predicated do not exist.

(d) During any time that a pension plan is in suspended status pursuant to action taken under subsection (c), the Secretary, whenever he finds it necessary to protect the interests of participants, may, after notice and opportunity for hearing, require by order that the plan terminate and wind up its affairs in accordance with the provisions of title III and procedures established by the Pension Benefit Insurance Corporation.

TITLE III—VESTED LIABILITY INSURANCE

INSURANCE COVERAGE

SEC. 301 (a) Every pension plan required to meet a specified funding ratio in accordance with section 201(a)(2) of this Act shall obtain insurance covering unfunded vested liabilities to protect participants and beneficiaries against possible loss of vested benefits arising from an essentially involuntary termination of the plan. The amount of insurance shall be the plan's vested liabilities less the greater of—

(1) 90 per centum of the assets needed to meet the funding ratio required under section 201(a)(2), or

(2) 90 per centum of the plan's actual assets.

(b) The Pension Benefit Insurance Corporation shall issue a certificate of insurance coverage to each plan administrator after receipt by the Corporation from the Secretary of a copy of the statement required by section 202(a). A plan's insurance coverage shall be continuous from the date of issuance of the certificate until canceled.

(c) The Pension Benefit Insurance Corporation shall not insure—

(1) any unfunded vested liabilities created by a plan amendment which took effect within three years immediately preceding termination of the plan; or

(2) any unfunded vested liabilities resulting from the participation in the plan by a participant owning 10 per centum or more of the voting stock of the employer contributing to the plan or by any participant owning a 10 per centum or more interest in a partnership contributing to the plan.

PREMIUMS

SEC. 302 (a) Each plan shall pay a premium for insurance under this title at such uniform rates prescribed by the Pension Benefit Insurance Corporation, based upon the amount of unfunded vested liability which is to be insured and upon such other factors as the Corporation determines to be appropriate. The premium for the initial three-year period shall be not more than 0.6 per centum of the amount insured.

(b) Should any administrator of a plan subject to this title fail to pay any premiums required to be paid under subsection (a), the Pension Benefit Insurance Corporation shall give the administrator of the plan not less than thirty days' notice of intention to cancel insurance unless the premium is paid by the end of such period. If the unpaid premium is not paid by the end of such period, the Corporation shall cancel the plan's certificate of insurance and the plan shall give notice of such cancellation to each person entitled to a vested benefit under the plan.

CLAIMS PROCEDURE

SEC. 303. (a) The administrator of a plan insured under the provision of this title shall file a claim with the Pension Benefit Insurance Corporation in the event the plan is terminated for reasons of financial difficulty or bankruptcy, plant closing, by order of the Secretary, or such other reasons as the Corporation by regulation shall specify as reflecting an essentially involuntary plan termination. The Corporation shall be authorized to honor such claim up to the limits prescribed by section 304 if it finds that the assets of the plan may not be sufficient to pay vested liabilities.

(b) Claims shall be made as specified in the rules and regulations of the Pension Benefit Insurance Corporation. The Corporation shall also require the administrator who files a claim to submit proof of all facts necessary to establish a claim, but in any event, the Corporation may in its discretion independently make such investigation as may be necessary for it to determine the validity of any claim. The Corporation shall require the payment of any contributions owing to the plan and required to meet the funding ratio specified in section 201(a)(2) of this Act, and may sue to recover such contributions on behalf of the plan in connection with settling any claim.

(c) The Pension Benefit Insurance Corporation shall give written notice to the administrator of its decision on any claim. Upon notice that a claim will be honored the administrator shall wind up the affairs of the plan by arranging for the purchase of single premium annuities from a qualified life insurance company for each person entitled to vested benefits, or by making such other arrangements for the distribution of vested benefits as the Corporation may by regulation approve as providing adequate protection to persons with vested benefits. The administrator shall be allowed a reasonable period in which to liquidate the assets of the plan. Upon completing the process of liquidation he shall thereafter submit to the Corporation, within such period specified by regulation of the Corporation, a plan termination report. Such report shall fully disclose the amount of the vested benefit payable to each person under the terms of the plan as of the date the plan was terminated, the amount realized from liquidating assets, the aggregate amount of funds needed to purchase single premium annuities to provide the vested benefit to which each person is entitled under the terms of the plan, and such additional information as may be prescribed by rules of the Corporation. Upon receipt of the plan termination report, the Corporation shall direct the purchase of annuities or authorize the implementation of such other approved arrangement for distributing vested benefits, and pay the claim for insurance in the amount authorized under this title.

PAYMENT OF CLAIMS

SEC. 304. The amount of insurance payable under a valid claim shall be the difference between the realized value of the assets of the plan and the amount of vested liabilities, limited to the amount of insurance determined under section 301 at the time the plan was terminated: *Provided,* That—

(a) in any case where a plan would be entitled to relief under section 502 of this Act with respect to meeting the funding ratio specified in section 201(a)(2) if it were not terminating, such relief may be accorded to the plan upon termination and the amount of insurance to be paid shall be adjusted to take into account the relief so provided; except that no relief in this connection shall be accorded where the only basis presented for such relief is a decline in the value of the assets of the plan;

(b) in any case where Pension Benefit Insurance Corporation is unable to recover any contributions or portions thereof owing to a terminating pension plan to meet the funding ratio specified in section 201(a)(2), the amount of insurance to be paid shall be adjusted to take into account such unpaid contributions.

(c) in any case where a plan is terminated as the result of the closing of a plant of an employer contributing to such plan and the vested liabilities of such terminated plan are less than 20 per centum of the vested liabilities of all the pension plans maintained by such employer, such employer shall be liable to reimburse the Pension Benefit Insurance Corporation for any insurance paid by the Corporation in satisfaction of a claim presented by such terminated plan, and the Corporation is authorized to sue such employer to recover the amount of any unpaid liability lawfully payable under this provision.

UNINSURED PLANS

SEC. 305. It shall be unlawful for any administrator of a plan subject to this title to maintain or operate such a plan without the certificate of insurance required by this title.

TITLE IV—PENSION BENEFIT INSURANCE CORPORATION

CREATION OF PENSION BENEFIT INSURANCE CORPORATION

SEC. 401. There is hereby created a Pension Benefit Insurance Corporation (hereinafter referred to as the "Corporation") which shall insure the vested liabilities of pension plans subject to title III. Such Corporation shall be an agency and instrumentiality of the United States, within the Department of Labor, subject to the general supervision and direction of the Secretary of Labor. The principal office of the Corporation shall be in the District of Columbia but there may be established agencies or branch offices elsewhere in the United States under rules and regulations prescribed by the Corporation.

GENERAL POWERS OF CORPORATION

SEC. 402. The Corporation—

(a) shall have succession in its corporate name;

(b) may adopt, alter, and use a corporate seal, which shall be judicially noticed;

(c) may enter into and carry out such contract or agreements as are necessary in the conduct of its business;

(d) may sue and be sued, in any district court of the United States or its territories or possession or the Commonwealth of Puerto Rico, which courts shall have exclusive original jurisdiction, without regard to the amount in controversy, of all suits brought by or against the Corporation;

(e) may adopt, amend, and repeal by laws, rules, and regulations governing the manner in which its business may be conducted and the powers vested in it may be exercised;

(f) shall be entitled to the use of the United States mails in the same manner and upon the same conditions as the executive departments of the Federal Government;

(g) shall have power when necessary to carry out the provisions of title III, to make investigations and in connection therewith to enter such places and inspect such records and accounts and question such persons as the Corporation may deem necessary to determine the facts relative thereto. For the purpose of any investigation provided for herein, the provisions of sections 9 and 10 (relating to the attendance of witnesses and the production of books, papers, and documents) of the Federal Trade Commission Act of September 16, 1914, as amended (15 U.S.C. 49, 50), are hereby made applicable to the jurisdiction, powers, and duties of the Corporation or any officers designated by the Corporation;

(h) shall determine the character of and the necessity for its obligations and expenditures and the manner in which they shall be incurred, allowed, and paid, subject to provisions of law specifically applicable to wholly owned Government corporations; and

(i) shall have such powers as may be necessary or appropriate for the exercise of the powers specifically vested in the Corporation and all such incidental powers as are customary in corporations generally.

SPECIFIC POWERS OF CORPORATION

SEC. 403. In the fulfillment of its purposes and in carrying out its annual budget programs submitted to and approved by the Congress pursuant to the Government Corporation Control Act, the Corporation is authorized to use its general powers in accordance with the provisions of title III of this Act to—

(a) establish adequate premium rates to cover the insurance of vested liabilities of private pension plans and the administrative expenses of the Corporation. In determining such premium rates, the Corporation shall consult with the Technical Advisory Committee on Pension Benefit Insurance established by section 405;

(b) establish procedures for the application, renewal, and cancellation of insurance, including the prescribing of such forms and reports as may be necessary or appropriate to implement such procedures;

(c) collect premiums and manage and invest the funds of the Corporation;

(d) adjust and pay claims for insurance under rules prescribed by the Corporation;

(e) conduct research, surveys, and investigations relating to pension plan insurance and assemble data for the purpose of establishing sound bases for insurance;

(f) bring an action in the proper district court of the United States or United States court of any place subject to the jurisdiction of the United States, to enjoin any acts or practices that constitute or will constitute a violation of title III or IV or of any regulation or order issued thereunder, or obtain any other appropriate relief, and the United States district courts and the United States courts of any place subject to the jurisdiction of the United States shall have jurisdiction for cause shown, to restrain violations of title III or title IV and provide for any other appropriate relief; and

(g) carry out such other functions as are required by this Act and as Congress may specifically authorize or provide for.

PENSION BENEFIT INSURANCE FUND

SEC. 404. (a) There is hereby created within the Treasury a separate fund for pension benefit insurance (hereafter in this section called the fund) which shall be available to the Corporation without fiscal year limitation for the purposes of this title.

(b) There is hereby authorized to be appropriated such sums as are necessary to provide capital for the fund. All amounts received as premiums and any other moneys, property, or assets derived from operations in connections with this title shall be deposited in the fund.

(c) All claims, expenses, and payments pursuant to operation of the Corporation under this title shall be paid from the fund. From time to time, and at least at the close of each fiscal year, the Corporation shall pay from the fund into the Treasury as miscellaneous receipts interest on the cumulative amount of appropriations provided as capital to the fund, less the average undisbursed cash balance in the fund during the year. The rate of such interest shall be determined by the Secretary of the Treasury, taking into consideration the average market yield during the month preceding each fiscal year on outstanding marketable Treasury obligations. Interest payments may be deferred with the approval of the Secretary of the Treasury, but any interest payments so deferred shall themselves bear interest.

BOARD OF DIRECTORS: TECHNICAL ADVISORY COMMITTEE

SEC. 405. (a) The management of the Corporation shall be vested in a Board of Directors (hereinafter referred to as the "Board"). The Board shall consist of the Secretaries of Labor and Commerce ex officio and three other Directors appointed by the President by and with the advice and consent of the Senate. The President shall designate a Chairman of the Board from among the three Directors he appoints. Of the first three Directors, one shall be appointed to serve for a term of two years; one shall be appointed to serve for a term of four years; one shall be appointed to serve for a term of six years. Thereafter, upon the expiration of the term of office, each succeeding Director shall be appointed to serve for a term of six years. Not more than three of the members of such Board of Directors shall be members of the same political party. Each appointed Director shall receive compensation at the rate of $150 per diem when engaged in the actual performance of duties of the Board, and may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government employed intermittently, except that any such Director who holds another office or position under the Federal Government shall serve without additional compensation. A majority of the Directors shall constitute a quorum of the Board and action shall be taken only by a majority vote of those present.

(b) In addition to the Board of Directors there shall be a Technical Advisory Committee on Pension Benefit Insurance which shall consist of five members to be appointed by the Secretary after consultation with the Secretary of Commerce, to advise and consult with the Corporation with respect to carrying out the purposes of this title. The Secretary shall select for appointment to the Committee individuals who are, by reason of training or experience, or both, familiar with and competent to deal with, problems involving employees' pension plans and problems relating to the insurance of such plans. Members of the Committee shall be appointed for a term of two years. Members shall be compensated at the rate of $100 per day for each day they are engaged in the duties of the Committee and, while serving away from their homes or regular places of business, may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government employed intermittently. The Committee shall meet at Washington, District of Co-

lumbia, upon call of the Chairman of the Board of Directors who shall serve as Chairman of the Committee. Meetings shall be called by such Chairman not less often than twice a year.

PERSONNEL OF CORPORATION

SEC. 406. The Corporation shall appoint and fix the compensation of such officers, attorneys, and employees as may be necessary for the conduct of its business in accordance with the provisions of title 5, United States Code, governing appointment in the competitive service, and chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, and may obtain the services of experts and consultants in accordance with section 3109 of title 5, United States Code, at rates for individuals not to exceed the per diem equivalent for GS–18.

COOPERATION WITH OTHER GOVERNMENTAL AGENCIES

SEC. 407. The provisions of section 509 shall be applicable to the Corporation.

INVESTMENT OF FUNDS

SEC. 408. All money of the Corporation except appropriated funds, may be invested in obligations of the United States or in obligations guaranteed as to principal and interest by the United States.

TAX EXEMPTION

SEC. 409. The Corporation, including its franchise, its capital, reserves, and surplus, and its income and property shall be exempt from all taxation imposed by any State, county, municipality, or subdivision thereof, except nothing herein exempts from taxation any real property acquired and held by the Corporation.

RECORDS; ANNUAL REPORT

SEC. 410. The Corporation shall at all times maintain complete and accurate books of account and shall file annually with the Secretary of Labor a complete report as to the business of the Corporation, a copy of which shall be forwarded by the Secretary of Labor to the President for transmission to the Congress.

GOVERNMENT CORPORATION CONTROL ACT

SEC. 411. The provisions of the Government Corporation Control Act (59 Stat. 597; 31 U.S.C. 841), as applicable to wholly owned Government corporations, shall be applicable to the Corporation.

TITLE V—ADMINISTRATION, CIVIL PROCEEDINGS, AND MISCELLANEOUS PROVISIONS

RULES AND REGULATIONS

SEC. 501. The Secretary shall prescribe such rules and regulations as he finds necessary or appropriate to carry out the provisions of titles I, II, and V. Among other things, such rules and regulations may define accounting, technical, and trade terms used in such provisions; and may prescribe the form and detail of all reports required to be made under such provisions; and may provide for the keeping of books and records, and for the inspection of such books and records.

VARIATIONS; APPEALS BOARD

SEC. 502. (a) PROCEDURE FOR VARIATIONS.—The Secretary on his own motion or after having received the petition of an administrator may, after giving interested persons an opportunity to be heard, and in accordance with the provisions of subsection (b) or (c) below, prescribe an alternative method for satisfying the requirements of title I or II, or both, with respect to any pension plan or any type of pension plan subject to this Act.

(b) GENERAL RULE FOR GRANTING VARIATIONS.—The Secretary may prescribe an alternative method for satisfying the requirements of title I or II, or both, for such limited periods of time as is necessary or appropriate to carry out the purposes of this Act and which will provide adequate protection to the participants and beneficiaries in the plan, whenever he finds that the application of title I or II, or both, would (1) increase the costs of the parties to the plan to such an extent that there would result a substantial risk to the voluntary continuation of the plan or a substantial curtailment of pension benefit levels or the levels of employees' compensation, or (2) impose unreasonable administrative burdens with respect to the operation of the plan, having due regard to the particular characteristics of the plan or the type of plan involved. Nothing herein shall be construed to authorize the Secretary to grant a permanent variation from the requirements of title I or II, or both, except as indicated in subsection (c) below.

(c) SPECIAL RULE FOR MULTIEMPLOYER PLANS.—On the basis of the factors described in (b) above, the Secretary may grant a variation from the provisions of title I on a permanent basis to any plan jointly entered into by five or more employers within a single industry (other than employers under common ownership or control) in which (1) employees in the plan represent a substantial proportion of employees in the industry, either nationally or in a particular region or labor market area, (2) the plan provides for complete transferability of pension benefit credits within the group of employers who are parties to the plan, and (3) a substantial proportion of job changes involving a shift of employers by plan participants takes place within the scope of the plan. No permanent variation shall be authorized which has the effect of permitting the adoption of a period of service longer than 15 years for vesting accrued portions of regular retirement benefits.

(d) VARIATION APPEALS BOARD.—There is hereby established a Variation Appeals Board which shall hear and determine appeals from decisions denying grants of variations in accordance with procedures promulgated by the Secretary pursuant to regulation. Such Board shall include the Secretary of Labor or his designee, the Secretary of Commerce or his designee, and a person jointly selected by the Secretaries of Labor and Commerce from outside the Federal Government who is, by reason of training or experience, or both, familiar with and competent to deal with, problems involving employees' pension plans. The Secretary of Labor or his designate shall serve as presiding officer on such Board. Such non-Federal Government member of the Board shall be compensated at the rate of $100 per day for each day he is engaged in the work of the Board, and, while serving away from his home or regular place of business, may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government employed intermittently.

INVESTIGATIONS

SEC. 503. (a) The Secretary, in his discretion, may investigate any facts, conditions, practices, or matters which he may deem necessary or appropriate to determine whether any person has violated or is about to violate any provisions of titles I, II, and V or any rule, regulation, variation, or order thereunder, or to aid in the enforcement of the provisions of titles I, II, and V, in the prescribing of rules, regulations, variations, or orders thereunder, or in obtaining information with respect to studies undertaken pursuant to section 506. The Secretary, in his discretion, may publish or make available to any interested person or official, information concerning any matter which may be the subject of investigation.

(b) For the purpose of any investigation provided for in (a), the provisions of sections 9 and 10 (relating to the attendance of witnesses and the production of books, papers, and documents) of the Federal Trade Commission Act of September 16, 1914, as amended (15 U.S.C. 49, 50) are hereby made applicable to the jurisdiction, powers, and duties of the Secretary or any officers designated by him.

CIVIL ENFORCEMENT

SEC. 504. (a) Whenever it shall appear to the Secretary that any person is engaged or about to engage in any acts or practices that constitute or will constitute a violation of any provision of titles I, II, or V or of any regulation, variation, or order issued thereunder, he may in his discretion, bring an action in the proper district court of the United States or United States court of any place subject to the jurisdiction of the United States, to enjoin such acts or practices, and upon a proper showing a permanent or temporary injunction or restraining order shall be granted.

(b) The United States district courts and the United States courts of any place subject to the jurisdiction of the United States shall have exclusive jurisdiction with respect to violations of titles I, II, or V or regulations, variations or orders issued thereunder, and of all suits in equity and actions at law brought to enforce any liability or duty created by, or to enjoin any violation of, titles I, II or V or regulations, variations or orders thereunder, and to provide such other relief as may be appropriate.

COURT REVIEW OF ORDERS

SEC. 505. The administrator of any pension plan who has been denied a certificate of approval under title I, or whose plan has been suspended or ordered terminated under title II or who has been aggrieved by any final decision with respect to any claim for payment of insurance under title III or with respect to denial of a request for a variation under this title, may obtain a review of the order denying such application for a certificate of approval, such order suspending or terminating the plan, such final decision with respect to an insurance claim or denial of a request for a variation, or any other order or final decision made under this Act, in the United States district court for the district where the principal office of the plan is located. Such court shall have jurisdiction to affirm, modify or set aside such order or decision, in whole or in part. The administrative findings as to the facts, if supported by the evidence, shall be conclusive.

STUDIES

SEC. 506. The Secretary is authorized and directed to undertake research studies relating to pension plans, including but not limited to (1) the effects of this Act upon the provisions and costs of pension plans, (2) the role of private pensions in meeting the economic security needs of the Nation, and (3) the operation of private pension plans including types and levels of benefits, degree of reciprocity or portability, and financial characteristics and practices.

ANNUAL REPORTS

SEC. 507. The Secretary shall submit annually a report to the Congress covering his administration of this Act for the preceding year and including such information, data, research findings, and recommendations for further legislation in connection with the matters covered by this Act as he may find advisable.

ADMINISTRATIVE PROCEDURE ACT

SEC. 508. The provisions of the subchapter II of Chapter 5 of title 5, United States Code, shall be applicable to this Act.

OTHER AGENCIES AND DEPARTMENTS

SEC. 509. In order to avoid unnecessary expense and duplication of functions among Government agencies, the Secretary may make such arrangements or agreements for cooperation or mutual assistance in the performance of his functions under this Act and the functions of any such agency as he

may find to be practicable and consistent with law. The Secretary may utilize, on a reimbursable basis, the facilities or services of any department, agency, or establishment of the United States or of any State or political subdivision of a State, including the services of any of its employees, with the lawful consent of such department, agency, or establishment; and each department, agency, or establishment of the United States is authorized and directed to cooperate with the Secretary and, to the extent permitted by law, to provide such information and facilities as he may request for his assistance in the performance of his functions under this Act. The Attorney General or his representative shall receive from the Secretary for appropriate action such evidence developed in the performance of his functions under this Act as may be found to warrant consideration for criminal prosecution under the provisions of this Act or other Federal law.

SEPARABILITY PROVISIONS

SEC. 510. If any provision of this Act, or the application of such provision to any person or circumstances, shall be held invalid, the remainder of this Act or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

PENALTIES

SEC. 511. Any person who willfully—

(a) violates any provision of this Act or any rule, regulation, variation, or order issued thereunder,

(b) makes, passes, utters, or publishes any statement in any application, report, document, account, or record filed or kept or required to be filed or kept under the provisions of this Act or any rule, regulation, variation, or order thereunder, knowing such statement or entry to be false or misleading in any material respect,

(c) forges or counterfeits any instrument, paper, or document, or utters, publishes, or passes as true any instrument, paper, or document, knowing it to have been forged or counterfeited, for the purpose of influencing in any way the action of the Secretary or the Pension Benefit Insurance Corporation,

(d) destroys (except after such time as may be prescribed under any rules or regulations under this Act), mutilates, alters, or by any means or device falsifies any account, correspondence, memorandum, book, paper, or other record kept or required to be kept under this Act or any rule, regulation, variation, or order thereunder,

(e) influences or induces or attempts to influence or induce the Secretary or the Pension Benefit Insurance Corporation with respect to any action of the Secretary or the Corporation, by fraud, deceit, misrepresentation, or by any manipulative or deceptive device or contrivance,

shall upon conviction be fined not more than $10,000 or imprisoned not more than five years, or both, except that in the case of such violation by a person not an individual, the fine imposed upon such person shall be a fine not exceeding $200,000.

ADMINISTRATIVE ASSESSMENTS AND APPROPRIATIONS

SEC. 512. (a) The Secretary shall, pursuant to regulation, assess each plan which is subject to this Act such fees or charges as the Secretary deems appropriate to cover administrative costs incurred by the Secretary, and as are consistent with the policy of title V of the Independent Offices Appropriation Act of 1952 (31 U.S.C. 483a; 65 Stat. 290).

(b) There is hereby authorized to be appropriated such sums, without fiscal limitation, as may be necessary to enable the Secretary to carry out his functions and duties under this Act.

S. 4327

A bill to amend the Welfare and Pension Plans Disclosure Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to strengthen and improve the protections for the interests of participants in and beneficiaries of employee welfare and pension benefit plans, under the Act of August 28, 1958, as amended (72 Stat. 997), such Act is amended to read as follows:

"SHORT TITLE, FINDINGS, AND DECLARATION OF POLICY

"Section 1. This Act may be cited as the 'Welfare and Pension Plan Protection Act of 1970.'

"FINDINGS AND POLICY

"SEC. 2. (a) The Congress finds that the growth in size, scope, and numbers of employee welfare and pension benefit plans in recent years has been rapid and substantial; that the continued well-being and security of millions of employees and their dependents are directly affected by these plans; that they are affected with a national public interest; that they have become an important factor affecting the stability of employment and the successful development of industrial relations; that they have become an important factor in commerce because of the interstate character of their activities, and of the activities of their participants, and the employers, employee organizations, and other entities by which they are established or maintained; that owing to the lack of employee information and adequate safeguards concerning their operation, it is desirable in the interests of employees and their beneficiaries, and to provide for the general welfare and the free flow of commerce, that disclosure be made and safeguards be provided with respect to the operation and administration of such plans.

"(b) It is hereby declared to be the policy of this Act to protect interstate commerce and the interests of participants in employee welfare and pension benefit plans and their beneficiaries, by requiring the disclosure and reporting to participants and beneficiaries of financial and other information with respect thereto, by establishing fiduciary standards of conduct, responsibility, and obligation upon all persons engaged in, or responsible for receiving, disbursing, or exercising any control or authority with respect to employee welfare and pension benefit funds, and by providing for sanctions in the case of a breach of such fiduciary standards as well as for recovery of losses suffered by such funds by reason of such breach.

"DEFINITIONS

"SEC. 3. When used in this Act—

"(1) The term 'employee welfare benefit plan' means any plan, fund, or program which is communicated or its benefits described in writing to the employees, and which was heretofore or is hereafter established by an employer or by an employee organization, or by both, for the purpose of providing for its participants or their beneficiaries, through the purchase of insurance or otherwise, medical, surgical, or hospital care or benefits, or benefits in the event of sickness, accident, disability, death, or unemployment.

"(2) The term 'employee pension benefit plan' means any plan, fund, or program which is communicated or its benefits described in writing to the employees, and which was heretofore or is hereafter established by an employer or by an employee organization, or by both, for the purpose of providing for its participants or their beneficiaries, by the purchase of insurance or annuity contracts or otherwise, retirement benefits, and includes any profit-sharing plan which provides benefits at or after retirement.

"(3) The term 'employee organization' means any labor union or any organization of any kind, or any agency or employee representation committee, association, group, or plan, in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers concerning an employee welfare or pension benefit plan, or other matters incidental to employment relationships; or any employees' beneficiary association organized for the purpose, in whole or in part, of establishing such a plan.

"(4) The term 'employer' means any person acting directly as an employer or indirectly in the interest of an employer in relation to an employee welfare or pension benefit plan, and includes a group or association of employers acting for an employer in such capacity.

"(5) The term 'employee' means any individual employed by an employer.

"(6) The term 'participant' means any employee or former employee of an employer or any member of an employee organization who is or may become eligible to receive a benefit of any type from an employee welfare or pension benefit plan, or whose beneficiaries may be eligible to receive any such benefit.

"(7) The term 'beneficiary' means a person designated by a participant or by the terms of an employee welfare or pension benefit plan who is or may become entitled to a benefit thereunder.

"(8) The term 'person' means an individual, partnership, corporation, mutual company, joint-stock company, trust, unincorporated organization, association, or employee organization.

"(9) The term 'State' includes any State of the United States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, Wake Island, the Canal Zone, and Outer Continental Shelf lands defined in the Outer Continental Shelf Lands Act (43 U.S.C. 1331–1343).

"(10) The term 'commerce' means trade, commerce, transportation, or communication among the several States, or between any foreign country and any State, or between any State and any place outside thereof.

"(11) The term 'industry or activity affecting commerce' means any activity, business, or industry in commerce or in which a labor dispute would hinder or obstruct commerce or the free flow of commerce and includes any activity or industry affecting commerce within the meaning of the Labor-Management Relations Act, 1947, as amended, or the Railway Labor Act, as amended.

"(12) The term 'Secretary' means the Secretary of Labor.

"(13) The term 'party in interest' means any administrator, officer, trustee, custodian, counsel, or employee of any employee welfare benefit plan or employee pension benefit plan, or a person providing benefit plan services to any such plan, or an employer any of whose employees are covered by such a plan or officer or employee or agent of such employer, or an officer or agent or employee of an employee organization having members covered by such plan.

"(14) The term 'administrator' means—

"(A) the person or persons designated by the terms of the plan or the collective bargaining agreement with responsibility for the ultimate control, disposition, or management of the money received or contributed; or

"(B) in the absence of such designation, the person or persons actually responsible for the control, disposition, or management of the money received or contributed, irrespective of whether such control, disposition, or management is exercised directly or through an agent or trustee designated by such person or persons.

"COVERAGE

"SEC. 4. (a) Except as provided in subsection (b), this Act shall apply to any em-

ployee welfare or pension benefit plan if it is established or maintained by an employer or employers engaged in commerce or in any industry or activity affecting commerce or by any employee organization or organizations representing employees engaged in commerce or in any industry or activity affecting commerce or by both.

"(b) This Act shall not apply to an employee welfare or pension benefit plan if—

"(1) such plan is administered by the Federal Government or by the government of a State, by a political subdivision of a State, or by an agency or instrumentality of any of the foregoing;

"(2) such plan was established and is maintained solely for the purpose of complying with applicable workmen's compensation laws or unemployment compensation disability insurance laws;

"(3) such plan is administered by an organization which is exempt from taxation under the provisions of section 501(a) of the Internal Revenue Code of 1954 and is administered as a corollary to membership in a fraternal benefit society described in section 501(c)(8) of such Code or by organizations described in sections 501(c)(3) and 501(c)(4) of such Code: *Provided*, That the provisions of this paragraph shall not exempt any plan administered by a fraternal benefit society or organization which represents its members for purposes of collective bargaining; or

"(4) such plan covers not more than twenty-five participants.

"DUTY OF DISCLOSURE AND REPORTING

"SEC. 5. The administrator of an employee welfare benefit plan or an employee pension benefit plan shall publish in accordance with section 8 to each participant or beneficiary covered thereunder (1) a description of the plan and (2) an annual financial report. Such description and such report shall contain the information required by sections 6 and 7 of this Act in such form and detail as the Secretary shall prescribe and such other information as the Secretary shall determine to be necessary and appropriate to carry out the purposes of this Act, and copies thereof shall be executed, published, and filed in accordance with the provisions of this Act and the Secretary's regulations thereunder. The Secretary may by regulations provide for the exemption from all or any part of the reporting and disclosure requirements of this Act of any class or type of welfare or pension benefit plans, if the Secretary finds that the application of such requirements to such plans is not required in order to effectuate the purposes of this Act.

"DESCRIPTION OF THE PLAN

"SEC. 6. (a) Except as provided in Section 4, the description of any employee welfare or pension benefit plan shall be published as required herein within ninety days of the effective date of this Act or within ninety days after the establishment of such plan, whichever is later.

"(b) The description of the plan shall be published and signed by the person or persons defined as the 'administrator' and shall include their names and addresses, their official positions with respect to the plan, and their relationship, if any, to the employer or to any employee organizations, and any other offices, positions, or employment held by them; the name, address, and description of the plan and the type of administration; the schedule of benefits; the names, titles, and addresses of any trustee or trustees (if such persons are different from those persons defined as the 'administrator'); whether the plan is mentioned in a collective bargaining agreement; copies of the plan or of the bargaining agreement, trust agreement, contract, or other instrument, if any, under which the plan was established and is operated; the source of the financing of the plan and the identity of any organization through which benefits are provided; whether the records of the plan are kept on a calendar year basis, or on a policy or other fiscal year basis, and if on the latter basis, the date of the end of such policy or fiscal year; the procedures to be followed in presenting claims for benefits under the plan and the remedies available under the plan for the redress of claims which are denied in whole or in part. Amendments to the plan reflecting changes in the data and information included in the original plan, other than data and information also required to be included in annual reports under section 7, shall be included in the description on and after the effective date of such amendments. Any change in the information required by this subsection shall be reported in accordance with regulations prescribed by the Secretary.

"ANNUAL REPORTS

"SEC. 7. (a) The administrator of any employee welfare or pension benefit plan, a description of which is required to be published under section 6, shall also publish an annual report with respect to such plan if the plan is subject to section 14 of this Act or if it covers one hundred or more participants. However, the Secretary, after investigation, may require the administrator of any plan otherwise covered by the Act to publish such report when necessary and appropriate to carry out the purposes of this Act. Such report shall be published as required under section 8 within one hundred and fifty days after the end of the calendar year (or, if the records of the plan are kept on a policy or other fiscal year basis, within one hundred and fifty days after the end of such policy or fiscal year).

"(b) A report under this section shall be signed by the administrator and such report shall include the following: 'The amount contributed by each employer; the amount contributed by the employees; the amount of benefits paid or otherwise furnished; the number of employees covered; a statement of assets, liabilities, receipts, and disbursements of the plan; a detailed statement of the salaries and fees and commissions charged to the plan, to whom paid in what amount, and for what purposes.'

"(c) If the plan is unfunded, the report shall include only the total benefits paid and the average number of employees eligible for participation, during the past five years, broken down by years; and a statement, if applicable, that the only assets from which claims against the plan may be paid are the general assets of the employer.

"(d) If some or all of the benefits under the plan are provided by an insurance carrier or service or other organization such report shall include with respect to such plan (in addition to the information required by subsection (b)) the following:

"(1) The premium rate or subscription charge and the total premium or subscription charges paid to each such carrier or organization and the approximate number of persons covered by each class of such benefits.

"(2) The total amount of premiums received, the approximate number of persons covered by each class of benefits, and the total claims paid by such carrier or other organization; dividends or retroactive rate adjustments, commissions, and administrative service, or other fees or other specific acquisition costs, paid by such carrier or other organization; any amounts held to provide benefits after retirement; the remainder of such premiums; and the names and addresses of the brokers, agents, or other persons to whom commissions or fees were paid, the amount paid to each, and for what purpose: *Provided*, That if any such carrier or other organization does not maintain separate experience records covering the specific groups it serves, the report shall include in lieu of the information required by the foregoing provisions of this paragraph (A) a statement as to the basis of its premium rate or subscription charge, the total amount of premiums or subscription charges received from the plan, and a copy of the financial report of the carrier or other organization and (B), if such carrier or organization incurs specific costs in connection with the acquisition or retention of any particular plan or plans, a detailed statement of such costs.

"(e) Details relative to the manner in which any funds held by an employee welfare benefit plan are held or invested shall be reported as provided under paragraphs (B), (C), (D), (E), (F), and (G) of subsection (f)(1).

"(f) Reports on employee pension benefit plans shall include, in addition to the applicable information required by the foregoing provisions of this section, the following:

"(1) If the plan is funded through the medium of a trust, the report shall include—

"(A) the type and basis of funding, actuarial assumptions used, the amount of current and past service liabilities, and the number of employees, both retired and nonretired, covered by the plan;

"(B) a statement showing the assets of the fund which shall be valued on the basis regularly used in valuing investments held in the fund and reported to the United States Treasury Department, or shall be valued at their aggregate cost or present value, whichever is lower, if such a statement is not so required to be filed with the United States Treasury Department;

"(C) a detailed list, including information as to cost and present value, of all investments of the fund, separately identifying investments in securities or properties of the employer or employee organization or any other party in interest;

"(D) a statement of the aggregate purchases, sales, redemptions and exchanges of investment securities (including bonds and debentures) made during the period covered by the report, identified by issuer and by each type of security such as, common stock, preferred stock, bond issues, and so forth, and including information as to the number of shares of stock or the principal amount of bonds or debentures; in the case of purchase, the purchase price; and in the case of sale, redemption or exchange, the cost, proceeds (including a description and value of consideration other than cash, if any), and the net gain (or loss);

"(E) a detailed list of all purchases, sales or exchanges of investment assets other than securities, including information as to the identity of the asset purchased, sold or exchanged (and, in the case of fixed assets such as land, buildings, leaseholds, and so forth, the location of the asset); the purchase or selling price; expenses incurred in connection with the purchase or sale; the cost of the asset and proceeds, and the net gain (or loss) on each sale; the identity of the seller in the case of a purchase, and the identity of the purchaser in the case of a sale, and their relationship, if any, to the plan, the employer, or any employee organization;

"(F) a detailed list of all loans made by the plan during the year and all loans outstanding at the end of the year, separately identifying loans made to the employer or employee organization or any other party in interest, including information as to the identity and address of the debtors, dates made and maturity dates, interest rate, face amount of the loans, amount outstanding at the end of the year, type and value of collateral held, and any other terms and conditions: *Provided, however*, That Veterans' Administration and Federal Housing Administration insured mortgage loans and mortgages on single-unit residences which were

purchased on a block basis from banks or similar institutions need not be listed, nor loans made to plan participants where such loans are available to all participants on a nondiscriminatory basis and are made in accordance with specific provisions regarding loans to participants set forth in the plan, but the total amounts of each category of such loans outstanding at the end of the year shall be reported;

"(G) if some or all of the assets of a plan or plans are held in a common or collective trust maintained by a bank or similar institution or in a separate account maintained by an insurance carrier, the report shall include a statement of assets and liabilities and a statement of receipts and disbursements of such common or collective trust or separate account and such of the information required under section 7(f)(1) (C), (D), (E), and (F) with respect to such common or collective trust or separate account as the Secretary may determine appropriate by regulation. In such case the bank or similar institution or insurance carrier shall certify to the administrator of such plan or plans, within one hundred and twenty days after the end of each calendar or other fiscal year, as the case may be, the information determined by the Secretary to be necessary to enable the plan administrator to comply with the requirements of this Act.

"(2) If the plan is funded through the medium of a contract with an insurance carrier, the report shall include—

"(A) the type and basis of funding, actuarial assumptions used in determining the payments under the contract, and the number of employees, both retired and nonretired, covered by the contract; and

"(B) except for benefits completely guaranteed by the carrier, the amount of current and past service liabilities, based on those assumptions, and the amount of all reserves accumulated under the plan.

"(3) If the plan is funded through the medium of a trust invested, in whole or in part, in one or more insurance or annuity contracts with an insurance carrier, the report shall include, as to the portion of the funds so invested, only the information required by paragraph (2) above.

"(4) If the plan is unfunded, the report shall include the total benefits paid to retired employees for the past five years, broken down by year.

"(g) If some or all of the benefits under the plan are provided by an insurance carrier or service or other organization, such carrier or organization shall certify to the administrator of such plan, within one hundred and twenty days after the end of each calendar, policy, or other fiscal year, as the case may be, such reasonable information determined by the Secretary to be necessary to enable such administrator to comply with the requirements of this Act.

"(h) The administrator of an employee welfare or pension benefit plan shall cause an audit to be made annually of an employee benefit fund established in connection with or pursuant to the provisions of the plan. Such audit shall be conducted in accordance with accepted standards of auditing by an independent certified or licensed public accountant, but nothing herein shall be construed to require such an audit of the books or records of any bank, insurance company, or other institution providing an insurance, investment, or related function for the plan, if such books or records are subject to periodic examination by an agency of the Federal Government or the government of any State. The auditor's opinion and comments with respect to the financial information required to be furnished in the annual report by the plan administrator shall form a part of such report.

"PUBLICATION

"SEC. 8. (a) Publication of the description of the plan and the latest annual report required under this Act shall be made to the participants and to the beneficiaries covered by the particular plan as follows:

"(1) The administrator shall make copies of such description of the plan (including all amendments or modifications thereto upon their effective date) and of the latest annual report available for examination by any participant or beneficiary in the principal office of the plan.

"(2) The administrator shall deliver upon written request to such participant or beneficiary a copy of the description of the plan (including all amendments or modifications thereto upon their effective date) and a copy of the latest annual report, by mailing such documents to the last known address of the participant or beneficiary making such request.

"(b) The administrator of any plan subject to the provisions of this Act shall file with the Secretary a copy of the description of the plan and each annual report thereon. The Secretary shall make available for examination in the public document room of the Department of Labor copies of descriptions of plans and annual reports filed under this subsection.

"(c) The Secretary shall prepare forms for the descriptions of plans and the annual reports required by the provisions of this Act, and shall make such forms available to the administrators of such plans on request.

"ENFORCEMENT

"SEC. 9. (a) Any person who willfully violates any provision of this Act shall be fined not more than $1,000, or imprisoned not more than six months, or both.

"(b) Any administrator of a plan who fails or refuses, upon the written request of a participant or beneficiary covered by such plan, to make publication to him within thirty days of such request, in accordance with the provisions of section 8, of a description of the plan or an annual report containing the information required by sections 6 and 7, may in the court's discretion become liable to any such participant or beneficiary making such request in the amount of $50 a day from the date of such failure or refusal.

"(c) Action to recover such liability may be maintained in any court of competent jurisdiction by any participant or beneficiary. The court in such action may in its discretion, in addition to any judgment awarded to the plaintiff or plaintiffs, allow a reasonable attorney's fee to be paid by the defendant, and costs of the action.

"(d) The Secretary shall have power, when he believes it necessary in order to determine whether any person has violated or is about to violate any provision of this Act, to make an investigation and in connection therewith he may enter such places and inspect such records and accounts and question such persons as he may deem necessary to enable him to determine the facts relative thereto. The Secretary may report to interested persons or officials concerning the facts required to be shown in any report required by this Act and concerning the reasons for failure or refusal to file such a report or any other matter which he deems to be appropriate as a result of such an investigation.

"(e) For the purposes of any investigation provided for in this Act, the provisions of sections 9 and 10 (relating to the attendance of witnesses and the production of books, records, and documents) of the Federal Trade Commission Act of September 16, 1914, as amended (15 U.S.C. 49, 50), are hereby made applicable to the jurisdiction, powers, and duties of the Secretary or any officers designated by him.

"(f) Whenever it shall appear to the Secretary that any person is engaged in any violation of the provisions of this Act, he may in his discretion bring an action in the proper district court of the United States or United States court of any place subject to the jurisdiction of the United States, to enjoin such acts or practices, and upon a proper showing a permanent or temporary injunction or restraining order shall be granted.

"(g) The United States district courts and the United States courts of any place subject to the jurisdiction of the United States shall have jurisdiction, for cause shown, to restrain violations of this Act.

"(h) In addition to the rights of action specified above, the Secretary or any participant or beneficiary may bring an action—

"(1) to recover the liability specified in section 14 or to enjoin any acts or practices which constitute or will constitute a violation of section 14 and for such other relief as may be appropriate,

"(2) to remove any person occupying a fiduciary position under section 14 and, pending the replacement of such person, to appoint an appropriate individual to carry out the duties of the person removed, in any district court of the United States and in the United States courts of any place subject to the jurisdiction of the United States where the fund is administered or where the breach took place or where the defendant is an inhabitant or may be found, and process in such cases may be served in any other district of which the defendant is an inhabitant or wherever the defendant may be found. No proceeding specified in clause (1) or (2) shall be brought by a participant or beneficiary except upon leave of the court obtained upon verified application and for good cause shown which application may be made ex parte. The court in any such action may in its discretion, in addition to any judgment awarded to the participant or beneficiary, allow a reasonable attorney's fee to be paid by the defendant, and costs of the action. Upon the filing of a complaint by the Secretary to enforce the provisions of section 14 or to remove a fiduciary, the jurisdiction of the district court over the subject matter of the action shall be exclusive and the final judgment shall be res judicata.

"(i) The district courts of the United States and the United States courts of any place subject to the jurisdiction of the United States shall have jurisdiction—

"(1) to award the liability specified in section 14, and, for cause shown, to grant injunctive and other appropriate relief in any action involving a violation of section 14,

"(2) to order the removal of any person serving as a fiduciary, and to appoint a replacement pending the appointment or election of a person to fill the vacancy created, if the court finds (A) that such person is failing to carry out his fiduciary responsibilities, or (B) such person is disqualified from serving in a fiduciary capacity under the provisions of section 15.

"(j) In order to avoid unnecessary expense and duplication of functions among Government agencies, the Secretary may make such arrangements or agreements for cooperation or mutual assistance in the performance of his functions under this Act and the functions of any such agency as he may find to be practicable and consistent with law. The Secretary may utilize the facilities or services of any department, agency, or establishment of the United States or of any State or political subdivision of a State, including the services of any of its employees, with the lawful consent of such department, agency, or establishment; and each department, agency, or establishment of the United States is authorized and directed to cooperate with the Secretary and, to the extent permitted by law, to provide such information and facilities as he may request for his assistance in the performance of his functions

under this Act. The Attorney General or his representative shall receive from the Secretary for appropriate action such evidence developed in the performance of his functions under this Act as may be found to warrant consideration for criminal prosecution under the provisions of this Act or other Federal law.

"REPORTS MADE PUBLIC INFORMATION

"SEC. 10. The contents of the descriptions and regular annual reports filed with the Secretary pursuant to this Act shall be public information, and the Secretary, where to do so would protect the interests of participants or beneficiaries of a plan, may publish any such information and data. The Secretary may use the information and data for statistical and research purposes, and compile and publish such studies, analyses, reports, and surveys based thereon as he may deem appropriate.

"RETENTION OF RECORDS

"SEC. 11. Every person required to file any description or report or to certify any information therefor under this Act shall maintain records on the matters of which disclosure is required which will provide in sufficient detail the necessary basic information and data from which the documents thus required may be verified, explained, or clarified, and checked for accuracy and completeness, and shall include vouchers, worksheets, receipts, and applicable resolutions, and shall keep such records available for examination for a period of not less than five years after the filing of the documents based on the information which they contain.

"RELIANCE ON ADMINISTRATIVE INTERPRETATIONS AND FORMS

"SEC. 12. In any action or proceeding based on any act or omission in alleged violation of this Act, no person shall be subject to any liability or punishment for or on account of the failure of such person to (1) comply with any provision of this Act if he pleads and proves that the act or omission complained of was in good faith, in conformity with, and in reliance on any written interpretation or opinion of the Secretary, or (2) publish and file any information required by any provision of this Act if he pleads and proves that he published and filed such information in good faith, on the description and annual report forms prepared by the Secretary and in conformity with the instructions of the Secretary issued under this Act regarding the filing of such forms. Such a defense, if established, shall be a bar to the action or proceeding, notwithstanding that (A) after such act or omission, such interpretation or opinion is modified or rescinded or is determined by judicial authority to be invalid or of no legal effect, or (B) after publishing or filing the description and annual reports, such publications or filing is determined by judicial authority not to be in conformity with the requirements of this Act.

"BONDING

"SEC. 13. (a) Every administrator, officer, and employee of any employee welfare benefit plan or of any employee pension benefit plan subject to this Act who handles funds or other property of such plan shall be bonded as herein provided; except that, where such plan is one under which the only assets from which benefits are paid are the general assets of a union or of an employer, the administrator, officers and employees of such plan shall be exempt from the bonding requirements of this section. The amount of such bond shall be fixed at the beginning of each calendar, policy, or other fiscal year, as the case may be, which constitutes the reporting year of such plan. Such amount shall be not less than 10 per centum of the amount of funds handled, determined as herein provided, except that any such bond shall be in at least the amount of $1,000 and no such bond shall be required in an amount in excess of $500,000: *Provided*, That the Secretary, after due notice and opportunity for hearing to all interested parties, and after consideration of the record, may prescribe an amount in excess of $500,000, which in no event shall exceed 10 per centum of the funds handled. For purposes of fixing the amount of such bond, the amount of funds handled shall be determined by the funds handled by the person, group, or class to be covered by such bond and by their predecessor or predecessors; if any, during the preceding reporting year, or if the plan has no preceding reporting year, the amount of funds to be handled during the current reporting year by such person, group, or class, estimated as provided in regulations of the Secretary. Such bond shall provide protection to the plan against loss by reason of acts of fraud or dishonesty on the part of such administrator, officer, or employee, directly or through connivance with others. Any bond shall have as surety thereon a corporate surety company which is an acceptable surety on Federal bonds under authority granted by the Secretary of the Treasury pursuant to the Act of July 30, 1947 (6 U.S.C. 6–13). Any bond shall be in a form or of a type approved by the Secretary, including individual bonds or schedule or blanket forms of bonds which cover a group or class.

"(b) It shall be unlawful for any administrator, officer, or employee to whom subsection (a) applies, to receive, handle, disburse, or otherwise exercise custody or control of any of the funds or other property of any employee welfare benefit plan or employee pension benefit plan, without being bonded as required by subsection (a) and it shall be unlawful for any administrator, officer, or employee, of such plan, or any other person having authority to direct the performance of such functions, to permit such functions, or any of them, to be performed by any such person, with respect to whom the requirements of subsection (a) have not been met.

"(c) It shall be unlawful for any person to procure any bond required by subsection (a) from any surety or other company or through any agent or broker in whose business operations such plan or any party in interest in such plan has any significant control or financial interest, direct or indirect.

"(d) Nothing in any other provision of law shall require any person, required to be bonded as provided in subsection (a) because he handles funds or other property of an employee welfare benefit plan or of an employee pension benefit plan, to be bonded insofar as the handling by such person of the funds or other property of such plan is concerned.

"(e) The Secretary shall from time to time issue such regulations as may be necessary to carry out the provisions of this section. When, in the opinion of the Secretary, the administrator of a plan offers adequate evidence of the financial responsibility of the plan, or that other bonding arrangements would provide adequate protection of the beneficiaries and participants, he may exempt such plan from the requirements of this section.

"FIDUCIARY RESPONSIBILITY

"SEC. 14. (a) Except as provided in subsection (b), the term 'employee benefit fund', when used in this section, means a fund of money or other assets established pursuant to or in connection with an employee welfare or pension benefit plan or plans and includes contributions to a plan made by employees, either through withholding or otherwise.

"(b) This section shall not apply to—

"(1) an employee welfare or pension benefit plan in which the benefits payable to participants or other beneficiaries are provided solely from the general assets of an employer or of an employee organization;

"(2) premiums or subscription charges for which benefits are guaranteed and which are received by an insurance carrier or service or other organization;

"(3) moneys deposited with an insurance carrier, the repayment of which including interest thereon is guaranteed;

"(4) any investment company registered under the Investment Company Act of 1940.

"(c) An employee benefit fund whenever established, shall be deemed to be a trust fund available only for the sole and exclusive purpose of (1) providing the benefits to participants in the plan and their beneficiaries, and (2) defraying the reasonable costs of administering the plan.

"(d) Every person who receives, disburses, or exercises any control or authority with respect to any employee benefit fund is a fiduciary and occupies a position of trust with relation to such fund and to the participants and their beneficiaries for whose benefit the fund was established. Each such fiduciary shall handle, manage, invest, and expend such fund with the same degree of care and skill as a man of ordinary prudence would exercise in dealing with his own property.

"(e) Except to the extent permitted by subsection (g), no person who is a fiduciary of an employee benefit fund shall—

"(1) sell or lease property of the fund to any employer of employees for whose benefit such fund is established, to any employee organization for whose members such fund is established, or to any official of such employer or employee organization;

"(2) purchase or lease on behalf of the fund any property of such employer, employee organization, or official thereof;

"(3) deal with such fund in his own interest or account;

"(4) represent any other party dealing with such fund, or in any way act on behalf of an adverse party relating to the fund or to the interests of the participants or beneficiaries for whose benefit the fund was established; or

"(5) receive any consideration from any other party dealing with such fund on account of any of the foregoing transactions or dealings whether or not such fiduciary participates in such transactions or dealings on behalf of such fund.

"(f) No loan of money or other assets shall be made from an employee benefit fund to a fiduciary with relation to such fund, or to any relative of such fiduciary, or to his employer, employee, partner, or other business associate, or to a labor organization for the benefit of whose members the fund was established or to any official thereof, or to an employer who contributes to the fund on account of his employees or any official of such employer. For the purposes of this subsection, the term 'relative' means a spouse, ancestor, descendant, brother, sister, son-in-law, daughter-in-law, father-in-law, mother-in-law, brother-in-law, or sister-in-law.

"(g) Nothing in this section shall be construed to prohibit any fiduciary from—

"(1) receiving any benefit to which he may be entitled as a participant or beneficiary in the plan under which the fund was established;

"(2) receiving any reasonable compensation for services rendered, or for the reimbursement of expenses properly and actually incurred, in the performance of his duties as a fiduciary of such fund;

"(3) serving as a fiduciary in addition to being an officer, employee, agent, or other representative of an employer whose employees are participants in the plan under which the fund was established, or of an employee organization whose members are participants in such a plan;

"(4) Engaging in the following transactions:

"(A) purchasing on the market on behalf of the fund any security, as defined in the Securities Act of 1933, which has been issued by an employer whose employees are participants in the plan under which the fund was established: *Provided,* That the purchase of any security is for no more than adequate consideration in money or money's worth: *Provided, further,* That if an employee benefit fund is one which provides primarily for benefits of a stated amount, or an amount determined by an employee's compensation, an employee's period of service, or a combination of both, or money purchase type benefits based on fixed contributions which are not geared to the employer's profits, no investment shall be made subsequent to the enactment of this Act by a fiduciary of such a fund in stock or securities of such an employer or of a corporation owned or controlled by such an employer, if such investment, when added to such securities previously held, exceeds 10 per centum of the fair market value of the assets of the fund, regardless of the ability of such an investment to meet a fiduciary test. Notwithstanding the foregoing, such 10 per centum limitation shall not apply to profit-sharing plans, nor to stock bonus, thrift and savings, or other similar plans which have the requirement that some or all of the plan funds shall be invested in stock or securities of the employer.

"(B) selling on the market on behalf of the fund any security, as defined in the Securities Act of 1933, which is acquired or held by the fund, to an employer whose employees are participants in the plan under which the fund was established, to an employee organization whose members are participants in such a plan, or to an officer, employee, agent, or other representative of the foregoing: *Provided,* That the sale of such security is for no less than adequate consideration in money or money's worth;

"(C) for purposes of this paragraph, the term 'on the market' means through a securities exchange, regardless of whether it is a national securities exchange registered with the Securities and Exchange Commission, or a purchase or sale in an over-the-counter transaction.

"(D) for purposes of this paragraph, the term 'adequate consideration' means either (i) at the price of the security prevailing on a national securities exchange which is registered with the Securities and Exchange Commission, or (ii) if the security is not traded on such a national securities exchange, at a price not less favorable to the fund than the offering price for the security as established by current bid and asked prices quoted by persons independent of the issuer.

"(5) making any loan to participants or beneficiaries of the plan under which the fund was established where such loans are available to all participants or beneficiaries on a nondiscriminatory basis and are made in accordance with specific provisions regarding such loans set forth in the plan;

"(6) contracting or making reasonable arrangements with an employer or an employee organization of which he is an officer for office space and other services necessary for the operation of the plans and paying reasonable compensation therefor.

"(h) Any fiduciary in relation to an employee benefit fund who breaches any of the responsibilities, obligations, or duties imposed upon fiduciaries by this section shall be personally liable to make good to such fund any losses to the fund resulting from such breach, and to restore to such fund any profits of such fiduciary which have been made through use of assets of the fund by the fiduciary.

"(i) When an employee benefit fund is held by and under the management and control of two or more trustees each shall participate in the administration of the trust and shall use reasonable care to prevent a cotrustee from committing a breach of trust, or to compel a cotrustee to redress a breach of trust. If there are more than two trustees any power vested in such trustees shall be exercised by no less than a majority of such trustees but no trustee who has not joined in exercising a power shall be liable for the consequences of such exercise: *Provided, however,* That nothing in this provision shall excuse a cotrustee for liability for inactivity in the administration of the trust nor for failure to prevent a breach of trust.

"(j) Each employee benefit plan shall contain specific provisions for the disposition of its fund assets upon termination. In the event of termination, whether under the express terms of the plan or otherwise, such fund, or any part thereof, shall not be expended, transferred, or otherwise disposed of, except for the exclusive benefit of the plan participants and their beneficiaries. Notwithstanding the foregoing, after the satisfaction of all liabilities with respect to the participants and their beneficiaries under a pension plan in accordance with the Internal Revenue Code and regulations promulgated thereunder, any remaining fund assets may be returned to any person who has a legal or equitable interest in such assets by reason of having made financial contributions thereto.

"(k) Any exculpatory provisions in the agreement establishing an employee benefit fund or any resolution or agreement by the parties thereto which purports to relieve any fiduciary with relation to any such fund from liability for breach of the responsibilities, obligations, or duties declared by this section shall be void as against public policy.

"PROHIBITION AGAINST CERTAIN PERSONS HOLDING OFFICE

"SEC. 15. (a) No person who has been convicted of, or has been imprisoned as a result of his conviction of, robbery, bribery, extortion, embezzlement, grand larceny, burglary, arson, violation of narcotics laws, murder, rape, kidnaping, perjury, assault with intent to kill, assault which inflicts grievous bodily injury, any crime described in section 15(b)(5)(B) of the Securities Exchange Act of 1934 (15 U.S.C. 78o–(b)(5)(B)), or in section 9(e)(1) of the Investment Company Act of 1940 (15 U.S.C. 80a–9(a)(1)), any crime involving the misuse of the funds of a labor organization or the funds of an employee welfare or pension benefit plan, or a violation of any provision of this Act, or a violation of section 302 of the Labor-Management Relations Act of 1947 (61 Stat. 157, as amended, 29 U.S.C. 186), or a violation of chapter 63 or 73 of title 18, United State Code, or a violation of section 1027 of title 18, United States Code, or a violation of the Labor-Management Reporting and Disclosure Act of 1959 (chapter 11 of title 29, United States Code) or conspiracy to commit any such crimes or attempt to commit any such crimes, or a crime in which any of the foregoing crimes is an element, shall serve—

"(1) as an administrator, officer, trustee, custodian, counsel, agent, or employee of any employee welfare or pension benefit plan, or

"(2) as a consultant to any employee welfare or pension benefit plan,

during or for five years after such conviction or after the end of such imprisonment, unless prior to the end of such five-year period, in the case of a person so convicted or imprisoned, (A) his citizenship rights, having been revoked as a result of such conviction, have been fully restored, or (B) the Board of Parole of the United States Department of Justice determines that such person's service in any capacity referred to in clause (1) or (2) would not be contrary to the purposes of this Act. Prior to making any such determination the Board shall hold an administrative hearing and shall give notice of such proceeding by certified mail to the State, County, and Federal prosecuting officials in the jurisdiction or jurisdictions in which such person was convicted. The Board's determination in any such proceeding shall be final. No person shall knowingly permit any other person to serve in any capacity referred to in clause (1) or (2) in violation of this subsection.

"(b) Any person who willfully violates this section shall be fined not more than $10,000 or imprisoned for not more than one year, or both.

"(c) For the purposes of this section, any person shall be deemed to have been 'convicted' and under the disability of 'conviction' from the date of the judgment of the trial court or the date of the final sustaining of such judgment on appeal, whichever is the later event, regardless of whether such conviction occurred before or after the date of enactment of this section.

"(d) For the purposes of this section, the term 'consultant' means any person who, for compensation, advises or represents an employee welfare or pension benefit plan or who provides other assistance to such a plan, concerning the establishment or operation of such plan.

"ADVISORY COUNCIL

"SEC. 16. (a) There is hereby established an Advisory Council on Employee Welfare and Pension Benefit Plans (hereinafter referred to as the 'Council') which shall consist of thirteen members to be appointed in the following manner: One from the insurance field, one from the corporate trust field, two from management, four from labor, and two from other interested groups, all appointed by the Secretary from among persons recommended by organizations in the respective groups; and three representatives of the general public appointed by the Secretary.

"(b) It shall be the duty of the Council to advise the Secretary with respect to the carrying out of his functions under this Act, and to submit to the Secretary recommendations with respect thereto. The Council shall meet at least twice each year and at such other times as the Secretary requests. At the beginning of each regular session of the Congress, the Secretary shall transmit to the Senate and House of Representatives each recommendation which he has received from the Council during the preceding calendar year and a report covering his activities under the Act for the preceding fiscal year, including full information as to the number of plans and their size, the results of any studies he may have made of such plans and the Act's operation and such other information and data as he may deem desirable in connection with employee welfare and pension benefit plans.

"(c) The Secretary shall furnish to the Council an executive secretary and such secretarial, clerical, and other services as are deemed necessary to the conduct of its business. The Secretary may call upon other agencies of the Government for statistical data, reports, and other information which will assist the Council in the performance of its duties.

"(d) Appointed members of the Council shall be paid compensation at the maximum per diem rate authorized in the current Department of Labor Appropriation Act for consultant, and experts when such members are engaged in the work of the Council, including traveltime, and shall be allowed travel expenses and per diem in lieu of subsistence as authorized by law (5 U.S.C. 5703) for persons in the Government service employed intermittently and receiving compensation on a per diem, when actually employed, basis.

"ADMINISTRATION

"SEC. 17. (a) The provisions of the Administrative Procedure Act shall be applicable to this Act.

"(b) No employee of the Department of Labor shall administer or enforce this Act with respect to any employee organization of which he is a member or employer organization in which he has an interest.

"EFFECT OF OTHER LAWS

"SEC. 18. (a) In the case of an employee welfare or pension benefit plan providing benefits to employees employed in two or more States, no person shall be required by reason of any law of any such State to file with any State agency (other than an agency of the State in which such plan has its principal office) any information included within a description of the plan or an annual report published and filed pursuant to the provisions of this Act if copies of such description of the plan and of such annual report are filed with the State agency, and if copies of such portion of the description of the plan and annual report, as may be required by the State agency, are distributed to participants and beneficiaries in accordance with the requirements of such State law with respect to scope of distribution. Nothing contained in this subsection shall be construed to prevent any State from obtaining such additional information relating to any such plan as it may desire, or from otherwise regulating such plan.

"(b) The provisions of this Act, except subsection (a) of this section and section 13, shall not be held to exempt or relieve any person from compliance with any Federal or State law imposing obligations, duties, responsibilities, or other standards of conduct with respect to the operation or administration of employee welfare or pension benefit plans; nor, except as explicitly provided to the contrary, shall anything in this Act take away any right or bar any remedy to which participants or beneficiaries are entitled to under such other Federal or State law: *Provided, however,* That no State law shall relieve any persons of the obligations, duties, responsibilities, and standards provided in this Act.

"SEPARABILITY OF PROVISIONS

"SEC. 19. If any provision of this Act or the application of such provision to any person or circumstance is held invalid, the remainder of this Act and the application of such provision to other persons or circumstances shall not be affected.

"EFFECTIVE DATE

"SEC. 20. The amendments made by this Act shall take effect upon enactment of this Act, except that the amendments made by this Act which modify the reporting requirements of section 7 shall take effect one year after enactment or upon publication of implementing regulations in the Federal Register, whichever is sooner."

AMENDMENT OF SECTIONS 664, 1027, AND 1954 OF TITLE 18, UNITED STATES CODE

SEC. 3. Section 664, 1027, and 1954 of title 18, United States Code, are hereby amended so that the term "Welfare and Pension Plan Protection Act" is substituted for "Welfare and Pension Plans Disclosure Act" or "Welfare and Pension Plans Disclosure Act, as amended," wherever these terms appear in sections 664, 1027, and 1954.

The statements, presented by Mr. WILLIAMS of New Jersey, are as follows:

ANALYSIS OF THE PENSION BENEFIT SECURITY ACT OF 1970 (S. 4326)

The proposed legislation would:

1. Establish a minimum standard of vesting of retirement benefits after ten years' service after age twenty-five;

2. Establish minimum funding standards to assure accumulation of assets in line with obligations;

3. Establish a system of plan termination protection to assure payment of benefits in the event of involuntary termination of the plan before it is fully funded;

4. Provide specially designed transitional arrangements for existing plans to provide adequate opportunity to adjust to the new standards;

5. Authorize the Secretary to approve alternative methods of meeting the vesting or funding standards where he finds that these standards result in unreasonable cost or impose unreasonable administrative burdens on a plan or certain types of plans;

6. Provide that the vesting and funding requirements are to be administered by the Secretary of Labor;

7. Establish a Pension Benefit Insurance Corporation, a wholly-owned government corporation within the Department of Labor, to administer the termination insurance program;

8. Provide rule-making and enforcement powers with provision for judicial review of administrative decisions;

9. Authorize the Secretary of Labor to conduct studies of pension plans, including among other things, studies related to portability of pension credits.

Section 1—Title: "Pension Benefit Security Act".

Section 2—Findings and Policy: Congress finds that pension plans are a major factor in the Security of millions of persons; that they are an important factor in commerce, and substantially affect the revenues because of preferred tax treatment; that many do not contain vesting provisions, are not properly funded to pay promised benefits, and do not afford adequate protection in the event of involuntary plan termination; and that minimum standards for vesting and funding and protection of benefits in the event of involuntary termination are therefore needed.

Section 3—Definitions.

Section 4—Coverage: The Act will apply to any pension plan in interstate commerce of which uses any means or instruments of transportation or communication in interstate commerce or the mails, if the plan is established or maintained by an employer or employers alone or with an employee organization. The Act will not apply to plans administered by a government unit or agency, or to a plan established outside of the United States for non-citizens, or to certain plans established for the benefit of a proprietor or a partner.

In addition, the funding and insurance requirements of the Act will not apply to unfunded plans, profit-sharing plans, or plans which have fixed contribution rates but no fixed benefits. The vesting provisions will apply to all such plans, however.

TITLE I—VESTING

Basic standard: Full vesting after ten years of employment after age 25.

Transition rules—Existing plans are permitted to: 1. Vest only benefits based on service after the effective date of the standard for any employee with 10 years service, or

2. Vest an increasing proportion of benefits for past and future service for any employee with 10 years service (first year—10 percent; tenth year—100 percent), or

3. Vest benefits for past and future service, beginning in the first year for employees with 20 or more years of service reducing gradually to employees with ten or more years of service after the tenth year.

Transition rules—New plans are permitted to: 1. Vest benefits for past and future service beginning in the sixth year of the plan's operation for employees with 15 or more years of service, reducing gradually to employees with ten or more years of service after the tenth year of the plan's operation, or

2. Vest an increasing proportion of benefits or past and future service, with 50% of the benefits for 10 years of service (in the sixth year of the plan's operation) and reaching 100% of benefits after the tenth year of the plan's operation.

Limitation on vested benefits: Only regular retirement benefits are vested, not ancillary benefits such as death or "special" early retirement benefits.

Service conditions: Continuous service may be required in order for benefits to vest but safeguards are adopted to prevent artificial breaking of service.

Calculation of vested benefits: Proportionate credit rule will apply under which the vested employee is entitled to his prorated share of the benefit he would have attained had he remained under the plan until retirement.

Distribution of vested benefits: Not later than age 65—To facilitate notification of vested benefits, information on employees terminating with vested benefits will be furnished to the Secretary, HEW, for use at time individual applies for Social Security benefit.

Age and service requirements for plan eligibility: Maximum requirement permitted will be age 25 and three years of service; existing plans may retain current eligibility requirements until plan is amended but not beyond ten years after enactment of this Act.

Contributory plans: Employer-purchased benefits are vested even though the employee is permitted to withdraw his contributions.

Enforcement: The Secretary of Labor may require a certificate of approval for a plan's vesting provisions. Once such a certificate is required, it is unlawful to operate a plan without such a certificate.

TITLE II—FUNDING

Funding standards

Basic approach: To continue the present Internal Revenue Service minimum funding standard as a basis for prescribing a plan's minimum annual contribution but to introduce an additional funding standard as a more meaningful basis for plan termination protection.

Termination funding standard: Built around a plan's funding ratio of plan assets to vested liabilities—a schedule is established under which a plan's funding ratio is expected to increase at a rate of 4 percentage points annually, reaching 100 percent (full funding of vested liabilities) after 25 years.

Transition rule for existing plans: Existing plans are accepted into the funding schedule at their current ratio, if this is lower than the funding target specified in the schedule; in addition, for the first five years after the standard is effective, the scheduled increase in the funding target is at the rate of 3 percentage points annually.

Transition rule for new plans: No funding target for first five years at which point the funding is 20 percent.

Implementing the funding standards

Periodic testing: Each plan will submit basic information on funding status every three years and whenever plan is amended to increase vested liabilities.

Amendments: Funding target can be adjusted after amendments which add to vested liabilities; amendments which increase liabilities by more than 25% may be treated as new plans with new funding targets.

Enforcement: Plans failing to meet IRS minimum funding standard would be required to make accrued benefit rights nonforfeitable (essentially the same as current rule).

Plans failing to meet termination funding standard (1) could not liberalize benefits, (2) would have to inform each employee of effect of funding deficit on his vested benefit, and (3) make such additional reports to the Secretary as are necessary. If a plan

fails to meet funding standard for five years, the Secretary can order the plan to suspend further accumulation of vested liabilities. He may do this earlier at his discretion. The Secretary may further require by order the termination of a suspended plan to protect the interests of participants.

TITLE III—VESTED LIABILITY INSURANCE

Basic concept: Full protection for employees' vested benefits against involuntary plan termination through a system providing insurance and enforceability of employer contributions to meet termination funding standard.

Method of providing protection: For plans meeting termination funding standard, vested benefits would be insured—plans not meeting termination funding standard would not be permitted insurance coverage for the amount by which their funding fell short of funding target but in event of plan termination, employing unit, if solvent, would be liable for this amount; otherwise such amount would be covered by insurance.

Insurance procedures: Insurance will be obtained on a three year basis predicated on the report of the plan's funding status.

Amount of insurance: Total vested liabilities less the greater of 90 percent of the actual assets or the assets needed to meet the funding ratio under title II. The 90 percent of assets requirement is intended to provide a uniform limited hedge against loss due to market depreciation of assets.

Premium: Plans would pay premium based on uniform percentage of unfunded vested liabilities—maximum premium rate for initial three-year period is 0.6 percent.

Payment of claims: Claims against insurance fund to be honored only upon essentially involuntary plan termination caused by financial difficulty or bankruptcy, plant closing affecting 20% or more of the vested liabilities of the firm's pension plans, or order of the Secretary—claims to be paid by the purchase of annuities or other approved arrangement.

Additional restrictions on insurance coverage: Benefits created by amendments will not be insured for three years—benefits accruing to participants owning 10 percent or more of the firm will not be insured.

Enforcement: Unlawful to operate a plan without required insurance.

TITLE IV—PENSION BENEFIT INSURANCE CORPORATION

Establishment of Corporation: A wholly-owned Government corporation under the supervision of the Secretary of Labor is established to administer the termination insurance provisions of title II. The management of the Corporation is vested in a five-man board of directors, two of whom shall be the Secretaries of Labor and Commerce serving ex officio. The other three directors, including the Chairman, are to be appointed by the President with the advice and consent of the Senate, and shall serve for a term of six years. No more than three members of the Board of Directors can be of the same political party.

A five-member Technical Advisory Committee on Pension Benefit Insurance is created to advise the Corporation, the members to be appointed by the Secretary after consultation with the Secretary of Commerce.

Powers of Corporation: The Corporation, in addition to possessing general corporate powers, is specifically authorized to: (1) establish adequate premium rates, (2) establish procedures for the application, renewal and cancellation of insurance, (3) collect premiums and manage and invest its funds, (4) adjust and pay claims, (5) conduct research relating to pension plan insurance, and (6) bring actions to enjoin insurance violations.

Financing and administration: To finance the Corporation a revolving fund is established to which premium payments shall be made and from which claims, Payments, and expenses shall be paid. The Corporation may also receive appropriations for capital which shall be repayable with interest.

Personnel of the Corporation are to be appointed in accordance with the civil service laws. The Corporation must file annual reports. The Government Corporation Control Act is made applicable to the Corporation.

TITLE V—ADMINISTRATION, CIVIL PROCEEDINGS, AND MISCELLANEOUS PROVISIONS

Variations: Relief from the vesting and funding standards may be provided if such standards would impose unreasonable administrative burdens. In general, this relief would be provided only for temporary periods. However, with respect to the vesting standards, broadly based multi-employer plans could apply for permanent variation relief based on their experience in granting transfer rights to employees changing employers within the plan. A Variation Appeals Board is established to review decisions denying such relief.

Administration: The Secretary is authorized to promulgate rules and regulations; the Administrative Procedure Act is made applicable to the Act. The Secretary is authorized to assess and collect an appropriate user charge to cover costs in administering this Act.

The Secretary is authorized to conduct studies into all phases of pension plans, including such important areas as portability of vested credits and plan financial practices. In addition, the Secretary is authorized to cooperate with all other agencies and to utilize their facilities (on a reimbursable basis) to assist him.

Enforcement: The Secretary is authorized to conduct investigations into violations of the vesting and funding requirements, or to assist him in prescribing rules or regulations or making studies. He may bring action for injunctive or other appropriate relief in federal district courts with respect to violations of the vesting and funding provisions. Judicial review in the federal district courts is provided for all orders and administrative decisions made by the Secretary or the Corporation.

Criminal penalties are provided for willful violations of any provision of the Act, for making false statements or records, for forging or counterfeiting documents for purposes of influencing the Secretary or the Pension Benefit Insurance Corporation, for destroying or falsifying records or for practicing fraud or deceit on the Secretary or the Pension Benefit Insurance Corporation for the purpose of influencing any of their actions. The penalties provided are a fine of $10,000 or imprisonment for not more than five years or both, except that in the case of a corporation, the fine can be as high as $200,000.

EFFECTIVE DATE

The vesting, funding, and insurance provisions become effective 2 years after enactment; all other provisions become effective upon enactment.

ANALYSIS OF MAJOR OBJECTIVES OF AMENDMENTS TO WELFARE AND PENSION PLANS DISCLOSURE ACT IN THE WELFARE AND PENSION PLAN PROTECTION ACT OF 1970 (S. 4327)

The changes contemplated by the proposed amendments to the Welfare and Pension Plans Disclosure Act fall in three categories:

1. The prescription of fiduciary responsibilities and duties upon persons handling welfare and pension funds; the imposition of civil liability for a breach of such duties and responsibilities; provision for the remedy of such breaches by civil action, including the right to recover funds lost by reason of the breach; and disqualification of persons convicted of certain crimes from serving in a fiduciary capacity with respect to welfare and pension funds.

2. Collateral changes in the existing law necessary to enforce and implement the new provisions relating to fiduciary responsibility. These changes expand the investigatory and enforcement powers of the Secretary of Labor and expand the financial reporting requirements to aid in implementing the provisions concerning fiduciary responsibility.

3. Minor technical modifications of the law.

The provisions of this bill pertaining to fiduciary responsibility are similar to the general principles and rules evolved by courts of equity for the governing of the conduct of trustees, with certain modifications deemed to be appropriate and desirable in the operation of the particular types of funds covered under the bill.

The imposition of a fiduciary responsibility on persons handling welfare and pension funds is necessary to protect the funds and the interests of the participants and their beneficiaries from losses arising from lack of ordinary care and prudence in the management and investment of the funds. Existing Federal law makes theft, embezzlement, bribery and kickbacks in connection with welfare and pension plans Federal crimes; but it does not deal with breaches of fiduciary responsibility except to the limited extent that the Internal Revenue Code provides that the tax-exempt status of a pension fund may be lost if the investments made by the trustees constitute so-called prohibited transactions within the meaning of the Code. These provisions of the Code have not proved adequate to the task of maintaining fiduciary responsibility particularly since use of this sanction in effect penalizes the participants and beneficiaries perhaps more severely than the persons responsible for the prohibited transactions.

Legal protection against breaches of truth has generally been left to State law. However, the mere labeling of employee benefit funds as "trust funds" does not by itself impose on the persons handling such funds the law regulating the duties of a trustee. The terms of the plan, trust agreement, or other agreement under which the fund is established and operated may relieve such persons of duties which otherwise the law would regulate and define. Moreover, there is considerable uncertainty under existing law as to whether, and to what extent, participants of the plan have enforceable rights against the plan or the administrators.

The proposed bill, therefore, by its terms prescribes the duties and responsibilities of the persons defined therein as "fiduciaries" so that the terms of the plan, trust, or other agreement under which the fund is established and operated cannot immunize such persons or relieve them from liability for the breach of their fiduciary duties and responsibilities.

In order to establish effective sanctions, the bill expands the investigatory and enforcement powers of the Secretary of Labor. While the bill also creates civil remedies for participants and beneficiaries with respect to breaches of trust, self-policing of benefit funds on their part is not a sufficient nor adequate method of insuring that such funds are not misused. In addition, it is necessary to insure that criminal elements do not infiltrate the management and operation of these funds. Accordingly, there is a specific prohibition against certain convicted criminals serving in a fiduciary capacity.

Further and more detailed disclosure as to the financial operations of these funds is a necessary complement to the imposition of fiduciary responsibility. It is well-established that fiduciaries are required to give a detailed accounting of their stewardship. Present disclosure provisions limit the amount and type of financial information re-

garding these funds. It is essential that further disclosure be obtained so as to provide participants and beneficiaries with an adequate basis for evaluating the fiduciary's performance of his obligations.

Finally, experience in administering the present law has demonstrated that minor technical amendments are needed to resolve certain details of procedure and to otherwise make the law more workable.

S. 4328—INTRODUCTION OF A BILL TO EXPAND THE JURISDICTION OF FEDERAL DISTRICT COURTS TO PROTECT FIRST AMENDMENT CONSTITUTIONAL RIGHTS

Mr. TYDINGS. Mr. President, I introduce today a bill to expand the jurisdiction of Federal district courts to issue injunctions against those who by physical force or disruptive tactics interfere with the first amendment rights of others. This bill provides the full power of the Federal judiciary, as recommended by the President's Commission on the Causes and Prevention of Violence, to protect fundamental rights against disruption and violence by private or public persons.

No one can help but note the increase of violence in our society. Whether it be street rioting, student battles, or individual bombing, our Nation is beset with increasing resort to physical force aimed at disruption and disorder. Such a trend threatened the very heart of our democratic procedures. No system of free speech, persuasion, and majority rule can exist in a climate of violence and disruption. Violence breeds hatred and division; it creates only unreason and distrust. It cannot be constructive. Violence brings only more violence.

Disruption and violence are antidemocratic and morally indefensible. No matter how strong his beliefs, no one has a right to disrupt and destroy. No one has a right to shout down speakers with whom he disagrees or to break up a school session, a church service, or a public meeting. No one has the right to take the law into his own hands.

Much of the disruption and disorder comes from a few who evidently would like to destroy our democratic processes. Others either do not understand the responsibilities of democratic citizenship or take them too lightly. So I think our Nation must reassert its respect for its own constitutional principles and strengthen its enforcement of them.

The key constitutional principle of our system—and the one most under attack—is the first amendment's guarantee of free speech, free assembly, and the petition of the Government for redress of grievances. Without these protections, our society will no longer be free.

Most disturbing is the fact that a few radicals and protesters have gone beyond the law and have repeatedly violated the constitutional rights of the law-abiding citizen. Examples are, unfortunately, easy to give—students interrupt classes or seize buildings, ending school for all the other students; or they threaten teachers or blackmail administrators, demanding that their ideas and programs be followed. Radicals break up or interrupt meetings or speeches of local civic groups or private groups, or they disrupt the meeting of local officials. Some dissidents have stopped church services. Civic parades, veterans gatherings, business meetings have all been threatened. All of these incidents are examples of our constitutional rights being arrogantly ignored by a few.

In order to bolster our constitutional protections and rights from a few who would violate them, I am introducing today a bill to give Federal district courts jurisdiction to enjoin interference with first amendment rights. Individuals whose rights have been infringed or are about to be infringed by private or public persons can go to court and seek to halt interference

First, with the orderly conduct of any meeting, address, discussion, worship, or other assembly, or with the free passage of persons or the conduct of business or research in any street, building, or other place incidental to the exercise of the constitutional rights of religion, speech, press, assembly, or petition; or

Second, with the exercise by any person or group, by demonstration, picketing, publication, or other means, of the rights of free speech, free press, peaceable assembly, or petition to the Government for redress of grievances.

Thus those who try to break up meetings or lectures, who occupy buildings, or who try to interrupt marches or demonstrations will meet the full force of Federal law. This is proper, for our strongest Federal institutions should be used to protect our most important freedoms.

This bill does not create any new first amendment rights; rather, it grants a new and effective remedy for those precious rights. Under this bill, both private and public parties, if they have been or will be injured, may go to court. And injunctions will prohibit the interference of their constitutional rights by official or private acts. These court injunctions will protect freedom of speech and assembly from violation whether or not the interference is under color of law or not.

Further, this legislation protects the first amendment freedoms of everyone—those of the majority and the minority. Any group of dissidents or radicals who try to disrupt a parade, to seize a school building, to shout down a speaker, or to end a church service can be enjoined. Also, any unpopular or minority group that wants to be heard, to march, or to speak will be protected against a mob or officials who would seek to quiet this group.

This bill does not try to handle the problem of violence and disruption in our tense times by narrowing our freedoms. To the contrary it strengthens our freedoms by creating more power to protect them. This bill will not silence debate, but encourage it. It will not halt protest or dissent, but merely keep it within constitutional limits.

The legislation seeks to stop those who abuse our free society—those who break the law and interfere with others' constitutional rights.

Hopefully this remedy of Federal court injunction will be effective. The full prestige and power of our Federal legal system will be used. To enforce our laws against those who ignore them, we will use the orderly processes of a democratic society. And one of the basic principles of that system, free speech, itself is being invoked. To defy such a court injunction, disrupters would have to reject not only property rights and trespass laws, which some of the alienated feel are unimportant when protest is involved, but also reject the very foundations of a free society.

Present State law deals inadequately with this problem. Trespass statutes and disorderly conduct laws in most cases are ill suited or irrelevant to the full sweep of first amendment protections. These laws are just not written to deal with the complex problems of handling demonstrations. And the most fundamental freedoms of the Constitution should be dealt with in our Federal courts. They are best suited to develop uniform and complex precedents in this area, and they can deal most effectively and fairly with the enforcement of these injunctive powers.

On the Federal level at present, the most nearly effective Federal remedy available today for forcible interference with first amendment rights is a court injunction under 42 U.S.C. 1983, a Reconstruction era statute creating liability for "deprivation of any rights, privileges, or immunities secured by the Constitution and laws" by any person "under color of" State law. In the landmark case of *Hague* v. *CIO*, 307 U.S. 496 (1939), the Supreme Court upheld under section 1983 a Federal district court injunction against an antiunion campaign involving interference with free speech and assembly by the mayor, police chief, and other officials of Jersey City, N.J.

But section 1983 does not specifically enumerate and define the first amendment freedoms to be protected or the kinds of interference against which they are protected. It does not, in the first amendment context, adequately establish the right to relief from threatened violations as opposed to violations that are already in progress. Most importantly, in instances in which private individuals and groups—not public officials—obstruct free speech, peaceful assembly and petition, such conduct cannot be reached under section 1983, since the interfering individuals are not acting under color of law.

The limitation of section 1983 to State action stems from the jurisdictional statute. The type of action in the bill I have introduced to protect against private interference of constitutional rights is fully constitutional. Of course, in the civil rights cases, 109 U.S. 3 (1883), Justice Bradley narrowed the scope of the 14th amendment to State action, in spite of the eloquent protests of Justice Harlan. But this position was reversed when six members of the Supreme Court held that Congress could legislate against private interference of constitutionally protected rights in *Guest v. United States*, 383 U.S. 745 (1966):

> There now can be no doubt that the specific language of § 5 [of the Fourteenth Amendment] empowers the Congress to enact laws punishing all conspiracies—with

or without state action—that interfere with Fourteenth Amendment rights. (Justice Clark, with whom Justices Black and Fortas join, concurring.) (383 US 745, 762).

A majority of the members of the Court expresses the view today that § 5 empowers Congress to enact laws punishing *all* conspiracies to interfere with the exercise of Fourteenth Amendment rights, whether or not state officers or others acting under the color of state law are implicated . . . § 5 authorizes Congress to make laws that it concludes are reasonably necessary to protect a right created by and arising under that Amendment. . . .

Some decisions of this Court . . . have declared Congress' power under § 5 is confined to the adoption of "appropriate legislation for correcting the effects of . . . prohibited state law and state acts. . . ." I do not accept—and a majority of the Court today rejects—this interpretation of § 5. (Justice Brennan, with whom the Chief Justice and Justice Douglas join, concurring.) (383 US 745, 782–83).

See also *Adickes* v. *S. H. Kress and Co.*, 398 U.S. 144, 208 (1970)—Brennan, J., concurring.

Congress has explicitly relied upon this power of section 5 of the 14th amendment when, as part of the 1968 Civil Rights Act, it barred private interference with the right to vote or to participate in various other Federal and State benefits. So now 18 United States Code 245(b) reads:

Whoever, whether or not acting under color of law, by force or threat of force, willfully injures, intimidates or interferes with . . .

See also Senate Report No. 721, 90th Congress, second session. (1968): *Jones* v. *Mayer Co.*, 392 U.S. 409, 438 (1968).

The President's Commission on the Causes and Prevention of Violence specifically recommended that this type of Federal remedy be created. In its final report, "To Establish Justice, To Insure Domestic Tranquility," the Commission stated:

Society's failure to afford full protection to the exercise of these rights is probably a major reason why protest sometimes results in violence. Although these rights are expressly safeguarded by the Federal Constitution, the existing remedies available to aggrieved persons are not adequate. The only approximation to an effective remedy at the federal level is a court injunction authorized under 42 U.S.C. sec. 1983, a Reconstruction era civil rights statute that creates a private cause of action for the "deprivation of any rights, privileges, or immunities secured by the Constitution" by any person acting "under color of" state law. The relative ineffectiveness of this private remedy is indicated by the rarity with which injunctions have been sought in the thirty years since the statute was first interpreted to apply to interference with First Amendment rights. Moreover, state officials acting under color of state law are not alone in posing threats to First Amendment rights; on college campuses, for example, the protesters themselves have obstructed free speech and peaceful assembly. No present federal law affords a remedy for private abridgement of First Amendment rights.

Accordingly, we recommend that the President seek legislation that would confer jurisdiction upon the United States District Courts to grant injunctions, upon the request of the Attorney General or private persons, against the threatened or actual interference by any person, whether or not under color of state or federal law, with the rights of individuals or groups to freedom of speech, freedom of the press, peaceful assembly and petition for redress of grievances. (Page 77–78.)

This bill will not solve the problem of violence and disruption in our society. And it will not fully protect our first amendment freedoms. But it shall be an important step in doing both. We should turn to our processes of law to reinforce and protect our most precious rights. In these times, we should protect free speech and dissent and end interference with them. This is the prerequisite of a free society. I think this bill is a good beginning in that task.

The PRESIDING OFFICER (Mr. SPARKMAN). The bill will be received and appropriately referred.

The bill (S. 4328) to improve judicial machinery by providing the district courts with jurisdiction over certain types of civil actions, and for other purposes; introduced by Mr. TYDINGS, was received, read twice by its title, and referred to the Committee on the Judiciary.

S. 4331—INTRODUCTION OF THE MOTOR VEHICLE INFORMATION ACT

Mr. HART. Mr. President, those who wish to dramatize the significance of auto ownership are fond of saying that—next to a house—the car represents the largest investment a consumer ever makes.

That does give perspective. It is impressive.

But, it understates the cost.

A Department of Transportation study determined that if a consumer drove one $3,300 car over its 10-year lifespan, the total cost would be almost $12,000. It would be greater if crash repairs, insurance deductibles and finance and interest charges were included.

Because most of us own cars over a 40-to-50-year span, the total outlay is obviously more like $50,000—far more than the investment in the average family home.

In a Nation where the average family income is $10,577, the burden that $1,200 in annual car support puts on many consumers is clear. Yet, consumers have little choice. For most a car is a necessity. In fact more than 25 percent of our families have two cars and 82 percent of commuting workers rely on their car to get them back and forth to work.

About 3 years ago, in response to many consumer complaints, the Senate Antitrust and Monopoly Subcommittee undertook a study to find out why a part of the cost of owning a car—insurance—was so high.

We were only ankle-deep in that study when it was clear that a close look at the role repair costs play in the total tally would be desirable.

These were not casual studies. Together, they produced 12 volumes, encompassing the testimony of more than 150 witnesses, statements submitted by dozens of others, reports, studies and other exhibit material.

In a nutshell, we determined:

That about $15 billion of the $45 to $55 billion spent annually for auto repairs and auto insurance buys little or no value.

Conservatively, $8 to $10 billion goes for auto repairs that are unneeded, undone or improperly done. Several billion goes to buy auto insurance that duplicates other insurance coverage—such as medical or protection of lost income. And we are only getting about half the compensation for injury and death under the present insurance system that we could buy with the same $12 billion outlay under another system.

Worse, the compensation under the present system is frequently inadequate. A DOT study showed that small claimants were overcompensated—with $500 claims settled for four and one-half times their value. Yet, serious losses were undercompensated—with claimants with $25,000 losses getting only 30 percent back.

And, the ones most desperately needing the money must wait the longest to get any. The average delay in settlement on claims over $2,500 was 19 months.

Obviously, changes are needed.

Today I am suggesting one set—in the Motor Vehicle Information Act. I offer it on behalf of myself and the senior Senator from Indiana (Mr. HARTKE). This bill zeros in on the car itself—trying to cut its contribution to high insurance and maintenance costs.

While the bill focuses on economic losses—it also would do a great deal to cut the number of injuries and deaths.

In a few days, I will propose three bills aimed at reforming the insurance system.

Many will find these bills short of perfection. I am in that camp myself. Hearings on the bills and debate I am confident will improve them. But they represent time, thought, and effort, and are the result of discarding other solutions which seemed more imperfect.

The purpose of introducing these bills now is to allow interested parties to study them, to point out any flaws, and to suggest their ideas of better ways to meet the problems.

If that process begins now, we can hope for early legislative hearings next Congress.

The bill I introduce today basically would do three things:

First. Require rating of cars for relative susceptibility to damage in low-speed collisions;

Second. Strengthen and implement vehicle inspection standards, and

Third. Establish a nationwide uniform titling system.

Mr. President, about 55 percent of the Nation's insurance premiums pay for protection against damage to cars. Forty-five percent covers potential damage to persons.

About $3.8 billion of the $6.6 billion paid out by the insurance industry in 1968 went to repair crash-damaged cars. Consumers paid $385 million more in deductibles out of their own pockets.

In our hearings, we learned that 75 percent of crash claims paid by the insurance industry are under $200. That is a bit startling to a people conditioned to think of an "auto accident" as a twisted pile of metal pictured on the front page of a newspaper. More startling is the fact that when the Insurance Institute of Highway Safety crashed four popular

models of 1969 sedans at 5 miles an hour into a solid barrier, the average amount of damage was $200.

So—if we are trying to protect consumers against high insurance premiums for collision coverage and to keep the frustration of dents, dings and laid up cars from their lives, we should reduce the "little accidents."

What we need are cars that pull away from low-speed collisions virtually unscathed.

Two roads to that destination are apparent. We could regulate the design of cars by government edict—much as the safety amendments do. Or, we could turn industry loose and let the company that produces the toughest car reap the rewards for its ingenuity.

Both as the senior Senator from Michigan and the chairman of the Senate Antitrust and Monopoly Subcommittee, "competition" won my vote.

For I know—and have deep respect for—the way this industry can solve problems presented it. And Government regulation, in my book, is truly the court of last resort because of its many drawbacks.

So, this bill is aimed at the production of cars which will survive low-speed collisions by encouraging a market for them. Thus, the marketplace itself—aided only by a requirement for information much like that supplied by other consumer products—will handle the problem itself.

Under the bill, manufacturers would report to the Department of Transportation—and prospective buyers—how each model of a car likely would fare in a collision.

Insurance companies would assign lower collision premiums to those cars which would cost them less in repairs. Consumers, seeking the lower premiums and to save deductibles, would buy the cars making these things possible.

This is in keeping with the philosophy of telling consumers the true interest on loans or the weight and contents of packaged goods, so they may make rational buying decisions.

Our information is that it is now possible to develop a system for evaluating the crash damage a particular model would incur—and that this does not necessarily mean each car would have to be crashed.

However, there is debate as to how reliable at this point any system would be in determining the anticipated injury to occupants in collisions.

Therefore, the bill directs the Secretary of the Department of Transportation to conduct a feasibility study of this aspect. If such a system cannot be developed, he is to tell Congress by July 1, 1972. If it can, he is to proceed to implement the testing and require the results be made public.

Mr. President, the second section of the bill—requiring inspection—also seeks to save money through loss prevention. But it goes further and promises the consumer some assurance that he gets a full dollar's value for money spent on used cars and repairs.

Back in 1966, with the safety bill, Congress decided that a national system of periodic motor vehicle inspection and registration was necessary. It directed the Secretary of Transportation to issue standards and to require such programs be operating in each State by mid-1968. Twenty-one States had inspection programs in 1966. Ten have enacted them since. However, none of the remaining 19 have lost the 10 percent of their Federal highway construction funds—a penalty Congress instructed the Department of Transportation to impose effective January 1, 1970.

The lackadaisical implementation of Congress' decree is disappointing. This bill not only insists that the will of Congress no longer be frustrated but strengthens the inspection standard.

It requires that all vehicles be inspected before being sold to a consumer and after safety-related crash repairs.

Mr. President, more than 32 million consumers buy a new or used car each year.

Probably in no other purchase does the average consumer understand less what he is buying—and yet he is paying out hundreds or thousands of dollars. Thousands of letters received by the subcommittee in the past 2 years, show that surprisingly even the new cars frequently are not up to snuff on delivery. How much better it would be—for the consumer and the dealer—if the hidden defects were uncovered before sale. Certainly this appraisal would be of even more obvious value when we are talking of the 22 or more million used cars.

The inspection process would be equally useful in checking out the competency of repairs—another area the consumer cannot judge for himself. And $25 to $30 billion is paid out each year for repairs. Yet, testimony before the subcommittee was that conservatively one-third or more of that work is not done properly. And, if it does not result in an accident the consumer winds up returning two or three times to finally get it corrected.

For too long, those seeking reasons for accidents have looked to the driver, the road, or the weather. Seldom have they looked to the car. Statistics on how many accidents are caused by defects in cars are hard to come by—because of this lack of emphasis. However, there is an increasing body of evidence pointing to the vehicle as a contributor to our rising accident rate.

A study, done by the Automobile Club of Missouri, indicated that safety defects in cars is frightenly common. Based on inspection of 10,000 cars, the report showed 43.9 percent of the then-current models—1968's—driven less than 500 miles—had potentially dangerous defects. The figure rose to 92 percent of cars 5 years old.

Our hearings demonstrated that not only are consumers hard put to know what is wrong with their cars—or if they are repaired correctly. Testimony showed that a substantial number of auto mechanics were themselves unable to diagnose the trouble with today's complex machines. Thus, part of this bill is a requirement for standards so cars manufactured after January 1, 1975, will be designed so they are easier to inspect, diagnose, and repair.

The inspection facilities established under this bill also could be available to consumers who might want an expert diagnosis before taking the car in for maintenance repairs.

This would enable more rational decisions on whether the car is worth repairing. It would also encourage shopping around for the best quality repair at the best prices.

Such shopping is difficult—if not impossible—today when the mechanic frequently has your car in pieces on the garage floor before he sadly announces it may take a couple of hundred dollars to make it right.

The final section of the Motor Vehicle Information Act provides that a uniform titling act be enacted by the seven States which do not now have one.

In 1968, 871,000 cars were stolen, one-third of them are never recovered. This form of crime in the streets is costing insurance companies $1.6 billion in annual losses. The impact a titling law can have on these figures can be easily demonstrated: In States that have titling acts, an average of 86 percent of cars are recovered, compared with 51 percent in New York which has no title law.

Mr. President, it would be puffing for a senior Senator from Michigan to sing the praises of the automobile—and how this Nation moves on wheels. Consumers for years have had a love affair with their cars. Many other things would be sacrificed before a family would face the prospect of life without a car. But in recent months or years, consumers have suspected that despite its great value to them, owning a car was costing more than necessary.

The subcommittee investigation of auto repairs and auto insurance proved that suspicion well founded. It also showed ways to lighten the burden.

This bill is offered as a means, a necessary step to that end.

Mr. President, I ask unanimous consent that the Motor Vehicle Information Act be printed at this point in the RECORD.

Now, Mr. President, the distinguished Senator from Washington (Mr. MAGNUSON) had intended to speak on this bill at this time. Official business prevents him coming to the floor and I ask unanimous consent that his remarks be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. SPARKMAN). The bill will be received and appropriately referred; and, without objection, the statement of the Senator from Washington (Mr. MAGNUSON) will be printed in the RECORD.

The bill (S. 4331) to amend the National Traffic and Motor Vehicle Safety Act of 1966 in order to promote competition among motor vehicle manufacturers in the design and production of safe motor vehicles having greater resistance to damage, and for other purposes, introduced by Mr. HART (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Commerce.

The statement of Mr. MAGNUSON is as follows:

Mr. President, I am very pleased to join with Senator Hart and others in sponsoring the Motor Vehicle Information Act.

The concepts underlying this bill are logical extensions of the National Highway and Motor Vehicle Act of 1966 and are greatly needed additions to it. The original act was intended to bring safer vehicles onto our Nation's highways. The Motor Vehicle Information Act is intended to increase auto safety and to bring additional economic benefits to auto purchasers. It would assure the American consumer that his automobile—whether new or used—is safe when he buys it. It would stimulate dissemination of information about comparative risks of accident injury for various makes and models of vehicles. Further, it would provide information to both consumers and insurance companies on the costs of repairing various makes and models of automobiles, hopefully giving manufacturers incentive to make cars that will be cheaper to repair—and to insure.

Of course, although the bill introduced today is the result of careful drafting and is based on extensive hearings, I expect it to be refined and altered as a result of hearings and deliberation on it. Therefore, I support this bill as a working paper and as a way of bringing its concepts before Congress.

ADDITIONAL COSPONSORS OF BILLS

S. 3619

At the request of the Senator from Alabama (Mr. ALLEN), his name was added as a cosponsor of S. 3619, to create, within the Office of the President, an Office of Disaster Assistance, to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes.

At the request of the Senator from Mississippi (Mr. STENNIS), his name was added as a cosponsor of S. 3619, to create, within the Office of the President, an Office of Disaster Assistance, to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes.

At the request of the Senator from Louisiana (Mr. ELLENDER), his name was added as a cosponsor of S. 3619, to create, within the Office of the President, an Office of Disaster Assistance, to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes.

S. 3927

At the request of the Senator from Michigan (Mr. HART), the Senator from Minnesota (Mr. MONDALE) was added as a cosponsor of S. 3927, to revise and clarify the Federal Aid in Wildlife Restoration Act and the Federal Aid in Fish Restoration Act, and for other purposes.

S. 3939

At the request of the Senator from Illinois (Mr. SMITH), the Senator from South Carolina (Mr. HOLLINGS) was added as a cosponsor of S. 3939, to amend the Federal Aviation Act of 1958 in order to provide for an Air Travel Protection Agency.

S. 4236

At the request of the Senator from Oklahoma (Mr. HARRIS), the Senator from Michigan (Mr. HART), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Maine (Mr. MUSKIE), and the Senator from Maryland (Mr. TYDINGS), were added as cosponsors of S. 4236, which would designate certain election days as legal public holidays.

AMENDMENT OF BANK HOLDING COMPANY ACT OF 1956—AMENDMENTS

AMENDMENTS NOS. 879 AND 880

Mr. PROXMIRE submitted two amendments, intended to be proposed by him, to the bill (H.R. 6778) to amend the Bank Holding Company Act of 1956, and for other purposes, which were ordered to lie on the table and to be printed.

SOCIAL SECURITY AMENDMENTS OF 1970—AMENDMENTS

AMENDMENTS NOS. 881 AND 882

Mr. TYDINGS. Mr. President, I rise today to submit two amendments to H.R. 17550 to help provide retired Americans with the economic security and quality health care they so richly deserve.

The first amendment is designed to lift much of the excessive property tax burden from senior citizens. It would provide a Federal income tax credit of up to $215 a year in property tax relief to Americans over 65 with annual incomes of $3,500 or less and higher than normal property tax rates.

Many elderly homeowners in Maryland and across the Nation have a great deal of difficulty paying their local property taxes. Frequently they purchased their homes years ago when property taxes were lower and their incomes were higher. Now they suddenly find themselves saddled with drastically increased property tax bills which must be paid out of smaller fixed retirement incomes rapidly shrinking under the pressure of inflation.

Over the years the security they thought they had bought for their retirement has become a burden. As a result, many retired Americans are being forced to sell their homes despite the inconvenience and the sentimental attachment to old familiar residences.

This legislation meets this problem by providing elderly homeowners with a Federal income tax credit or a refund, for those who pay no Federal tax, to offset that portion of their property tax that is well in excess of what is normal. Property taxes are considered unusually high if they exceed a certain percentage of household income. These percentages are increased as household income increases.

After determining what amount of the property tax paid in an excessive portion of a senior citizen's income, a percentage of this excessive portion is relieved. For households with incomes over $1,000, there is a refund or a credit for 60 percent of the excessive part, for those with incomes under $1,000, the refund or credit is 75 percent of the excessive part. The bill limits the amount of property taxes that can be used in computing relief to $300.

To insure that only truly needy persons receive relief, applicants must list all forms of money income, including nontaxable income such as social security, veterans' disability benefits, public assistance payments, and railroad retirement benefits.

Renters would also qualify for relief under this bill. It is assumed that 25 percent of the rent payment is in effect payment for property taxes.

My second amendment would authorize Federal grants to public agencies, institutions of higher education, and private nonprofit organizations to develop curricula, establish courses, and hire teachers to train qualified nursing home administrators. The amendment would also provide Federal loan money to help those interested in becoming nursing home administrators to pay the tuition cost of these courses.

With the number of retired Americans living in nursing homes expected to double to two million by 1975, dramatic action is required to insure that we have enough qualified administrators to provide excellent care to our retired citizens. Present Federal grants extend assistance only for training courses offered to persons who already were nursing home administrators at the time the State required that all nursing home administrators be licensed. Given the expected growth in our nursing homes population and the probable commensurate growth in the number of nursing homes, there is clearly a need for training new nursing home administrators beyond those who are already in that profession.

The nursing home administrator is the key man in assuring excellent care to our retired citizens. It is he who oversees the purchase of food, makes sure that the preparation of food occurs in sanitary surroundings, and hires nurses and doctors to care for the residents of his house. We should also remember that more efficient administrators of these nursing homes will allow the taxpayer to purchase more care for the elderly for his medicare and medicaid dollar.

After a man and a woman have worked hard for 40 or 50 years to raise a family and help build this Nation, we owe them the best care we can provide if they become ill.

The PRESIDING OFFICER (Mr. CRANSTON). The amendments will be received and printed, and will be appropriately referred.

The amendments (Nos. 881 and 882) were referred to the Committee on Finance.

AGRICULTURAL ACT OF 1970—AMENDMENT

AMENDMENT NO. 883

Mr. SMITH of Illinois (for himself, Mr. WILLIAMS of Delaware, Mr. CANNON, Mr. CASE, Mr. HART, Mr. MCINTYRE, Mr. MATHIAS, Mr. PROUTY, and Mr. SCHWEIKER) submitted an amendment, intended to be proposed by them, jointly, to the bill (H.R. 18546) to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes, which was ordered to lie on the table and to be printed.

AMENDMENT OF THE CONSTITUTION RELATING TO DIRECT POPULAR ELECTION OF THE PRESIDENT AND VICE PRESIDENT—AMENDMENT

AMENDMENT NO. 884

Mr. EAGLETON (for himself, Mr. DOLE, and Mr. STEVENS) submitted an amendment in the nature of a substitute, intended to be proposed by them, jointly, to the joint resolution (S.J. Res. 1) proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States, which was ordered to lie on the table and to be printed.

NOTICE OF HEARINGS ON S. 4268, TO AMEND THE EXPORT-IMPORT BANK ACT OF 1945

Mr. SPARKMAN. Mr. President, I wish to announce that the Committee on Banking and Currency will hold a hearing on S. 4268, a bill to amend the Export-Import Bank Act of 1945, as amended, to allow for greater expansion of the export trade of the United States, to exclude bank receipts and disbursements from the budget of the U.S. Government, and for other purposes.

The hearing will be held on Thursday, September 17, 1970, and will begin at 10 a.m. in room 5302 New Senate Office Building.

ADDITIONAL STATEMENTS OF SENATORS

TRAGIC PLIGHT OF ANTIPOLLUTION EFFORTS

Mr. SAXBE. Mr. President, Art Buchwald, the well known satirist, expressed the tragic plight of our antipollution efforts the other day in his column "Capitol Punishment." The usually humorous column lacks its customary mirth. I find it a frank and honest indictment of our indifference to the death of our environment.

Mother Nature is not sick; she is dying. She needs more than opiates; she needs a cure. Mr. Buchwald suggests that we may be talking ourselves to death.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOTHER NATURE IS DYING

(By Art Buchwald)

MARTHA'S VINEYARD, MASS.—The other night I was home reading a book when I received a telephone call that Mother Nature was dying. I dressed hurriedly and rushed over to the hospital. A lot of people had gotten there before me and they were all sitting in the waiting room crying and wringing their hands. I searched out the doctors who were in another room having a heated argument as to how to save her. Each doctor seemed to have a different remedy.

One doctor said, "We have to get her some fresh air. She can't breathe. We'll have to turn off the power plant because of the smoke."

"Are you out of your mind?" another doctor said. "We turn off the power, and she'll freeze to death."

"Perhaps we could keep all cars away from the hospital," a third doctor suggested. "That would relieve her breathing."

"Out of the question," a fourth doctor barked. "How would we get back and forth to work if we prohibited cars near the hospital?"

"Gentlemen," another doctor said, "I don't believe it's the air that's hurting her as much as the water. We have to find some water that's drinkable. Strong measures must be taken immediately against polluting the hospital water."

The director said, "Where would we get the money to support the hospital if we closed down the factories because they're polluting the streams?"

"We'd also have to give up detergents," a doctor added, "and we can't have a clean hospital if you give up detergents."

"Isn't anybody going to do anything?" I shouted.

They saw me for the first time and one of the doctors said angrily, "We're sorry, this is a medical conference for professionals only. Would you kindly leave?"

I walked out, and down the hall. Suddenly I saw a closed room, which had the name "Mother Nature" hand-printed on the door. Underneath it, in large red letters, was another sign: "No Visitors."

No one was in the hall, so I opened the door. There was Mother Nature propped up on pillows. She looked old and tired and haggard. I couldn't believe anyone could have changed so much in 10 short years. But she seemed glad to see someone and smiled weakly.

"Hi, Ma," I said. "You're looking swell."

"You wouldn't kid a very sick lady, would you?" she said, gasping.

"No, I'm not kidding. You look wonderful. I've just been talking to the doctors and they say they'll have you on your feet in no time."

"Those quacks don't know anything," she said. "All they do is come in every few hours and take my temperature and give me something to relieve the pain. I think I've had it this time."

"Don't talk that way, Ma. You're going to pull through. You've survived worse things than this before."

"It's never been this bad," she said and then started having a coughing fit. "This time the grim reaper's coming to get me."

"But if you go, we'll all have to go, Ma," I cried. "You have to hold on. Please, Ma."

"I kept complaining of pain," she whispered, "but no one would pay attention to me. I said, 'If you keep on doing what you're doing I'm going to die.' But everyone said, 'Ma, you'll never die.' Why didn't they listen to me?"

"We're listening now, Ma. We're listening. We have the best doctors in the world. They're out there now, and they have a plan."

"I guess the real thing that hurts," she said, "is that my will won't be worth anything now. I left every person in the world clear water, pure air, green fields, brilliant sunsets and blue skies. It wasn't much, but it was everything I had."

Just then the door opened and a nurse came in. She went over to the bed waving a thermometer.

"Come on, Mother. It's time to take your temperature."

TREATED LIKE ANIMALS

Mr. GRIFFIN. Mr. President, for some 1,400 Americans 1 weary day follows another in drab succession and the future seems just as bleak. For the American prisoners of war being held in North Vietnam, days have blended into weeks and months and, in many cases, years of uncertainty. They have been treated less like humans than animals; they have been denied the barest essentials. Perhaps, worst of all, they are denied that mental uplift that comes only with the knowledge that their families are well and the ability to let their families know they are well. They have been barred from the most minimal communications with their families.

Ours must be the continuing task of striving to see that these men are provided with the decent treatment to which they are entitled under the Geneva Convention.

THE BEAUTY OF LAKE POWELL

Mr. MOSS. Mr. President, I have attempted many times on the floor of the Senate to describe the beauty of Lake Powell, which is created by the Glen Canyon Dam in southern Utah and northern Arizona. It has remained for Merlo J. Pusey, a Utah man who is on the editorial staff of the Washington Post, to put into type the glory and the splendor of the region. There is little I can say after reading Mr. Pusey's beautiful prose—except to urge Senators to see Lake Powell and the surrounding area for themselves.

I would make only one correction—and the fault is that of the headline writer, not of Merlo Pusey. Lake Powell spreads also into Utah—in fact about 97 percent of Lake Powell is in Utah. The beauty which Mr. Pusey specifically describes is Utah beauty.

Mr. President, I ask unanimous consent that Mr. Pusey's article, published in the Washington Post of August 31, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAN-MADE BEAUTY OF ARIZONA'S LAKE POWELL

(By Merlo J. Pusey)

PAGE, ARIZ.—Lake Powell is winning increasing recognition as the gem of the Southwest. Its deep blue waters are an exhilarating contrast to the burning sun and the dry sand of this largely desert area. It may well be the most magnificent body of water that man has ever created.

There are still many who lament that this lake has filled the gorge of the Colorado River in Arizona and Utah for a distance of 185 miles and turned hundreds of once-accessible side canyons into spectacular fiords. They have a point in mourning the loss of much irreplaceable scenery that is now under water. But the water has greatly enhanced the magnificent views that remain and brought them within reach of ordinary folk whose response to the lure of nature may be no less keen than that of the few mountaineers and river-runners who used to penetrate the area before the lake was formed.

To thousands of boatmen, vacationers and connoisseurs of exotic scenery the controversy over Glen Canyon dam, which created the lake, has receded into the background. The blue paradise that extends from Wahweap, Ariz., almost to the Canyonlands National Park in Utah is the only reality of the 1970's. And it is a joy to residents of the area and visitors alike.

At Wahweap Marina you may put your own boat into the water or you may rent a boat for fishing, cruising or water skiing. If you prefer, you can take an excursion boat for a short cruise, for a one-day expedition or for a five-day cruise and hike into a wilderness that is still little known. There is not much to see at Wahweap and the southern end of the lake but the water and the

typical red sandstone mountains in the background. But as your boat moves up the canyon, one spectacular panorama succeeds another with almost bewildering profusion.

Some parts of the like widen, with long arms of water reaching into Warm Creek Bay, Padre Bay, Last Chance Bay and dozens of others. The last-named arm takes its name from the canyon used by early explorers to escape from the depths of the Colorado River gorge before venturing into dangerous rapids below. Today there is little disposition to escape. You glide over the clear water with increasing fascination as the once-forbidden Colorado yields its beauty without a struggle.

As the cruise proceeds, you are almost irresistibly lured into playing a child's game of discovery. With very little strain on the imagination, you see on the horizon beyond the cooling spray from the boat's propellers great monuments, cathedrals, statues and so forth carved out of red sandstone by wind and water over eons unknown to man.

Here on the right is a sinking battleship and in the distance a series of pyramids and perhaps even ancient mosques. At many points there are anticlines that will please the geologists, along with curious mounds, gargoyles and Mexican hats. At one point you will swear that the Arc de Triomphe is looming up in the distance.

You tire of counting pillared temples, acropolises with imaginary ruins and rocks fantastically balanced on pinnacles as only nature can do it. At one point a British-looking lion in stone appears to have strayed from Trafalgar Square. Looming up on the far horizon is a natural imitation of the Colosseum and a clock tower that is a reminder of Big Ben in London. On close inspection, too, you can scarcely fail to note a menagerie of dinosaurs, alligators, frogs and the like or the little stratified islands that might almost be mistaken for stacks of griddle cakes.

The most popular all-day trip in the lower canyon ends near one of the greatest freaks of nature on this continent—the Rainbow Natural Bridge. As the boat turns into Forbidding Canyon, the lake narrows to perhaps 200 feet, with sheer stone walls rising several hundred feet on each side. The physical world here consists of red sandstone cliffs, water and blue sky, with no vegetation in sight, except for occasional glimpses of Navajo Mountain in the distance.

The boat stops at Rainbow Marina, a floating service station and home for the attending personnel, because there is no ground between the vertical stone walls on which it could be built. All boats move at creeping speed on this part of the lake to avoid making waves that might keep residents of the marina in a perpetual state of seasickness.

From Forbidding Canyon the boat slips through the narrows—a space of possibly 60 or 70 feet between precipitous walls—into Bridge Canyon. Here you take a dusty and sometimes rocky trail up the ravine for one mile to the great natural bridge. The Indians call it "Monnezoschie"—a rainbow turned to stone. It is not a mere arch, with only air beneath, but a real bridge of stone spanning a canyon which has an active stream in wet weather. The bridge is said to be high enough to arch right over the Capitol dome, but out here in this wild country where wind and water are supreme the works of man are not a happy comparison.

Temperatures on the trail are likely to range between 100 and 110, but under the bridge itself the shade is cool and refreshing. A few years ago this unique natural wonder was rarely seen; now it is the objective of pilgrimages by about 60,000 persons a year. Their feet grind the primitive trail to dust, but as yet the "rainbow turned to stone" and its setting are unspoiled.

After a picnic lunch under the "rainbow" there is opportunity to continue up the trail for more advantageous pictures or merely different views of the great bridge. Photographers vie with one another to capture a maximum of sky or distant horizon under it. From any angle of sight it claims a high place among the wonders of the natural world.

The heat of the trail creates an almost irresistible longing to leap into the waters of Lake Powell at the conclusion of the return trip. But restraint is in order. The end of the trail is not an ideal place to swim, and as soon as you reboard the boat you will have an opportunity to change into your bathing suit and swim in a truly exotic setting.

The boat stops under an overhanging cliff in Cascade Canyon. Except for the overhang, the stone walls are perpendicular and there is no shore to swim to or even catch hold of. The water is about 200 feet deep but marvelously clear and cool. The grime and heat of the trail disappear with the first refreshing plunge.

Returning to Wahweap at the end of the day, you will be surfeited by a preponderance of fantastic sights and pleasant memories. But you will have viewed only a small fraction of the scenery available in the first 50 miles of the lake. Beyond those 50 miles lie Mystery Canyon, Hidden Passage, Hole in the Rocks, a large arm of the lake in San Juan Canyon, Halls Crossing and a vast array of inlets, fiords and watery amphitheaters. If you want to take a three-day cruise, you can visit the Cathedral in the Desert, Water Cave, Dinosaur Rock, the Cookie Jar, the historic Crossing of the Fathers and various Indian ruins.

A five-day cruise will add an additional variety of canyons along with waterfalls, pictographs and rare formations. Even if you love the out-of-doors and crave strange and beautiful sights, you are likely to be weary before you have seen a fraction of the mysteries and unique phenomena this strange land has to offer—now that it has an easily traversible waterway.

Travelers who are seeking the most fascinating and most unusual recreation areas in America can pass by many of our national parks without feeling that they have been cheated. But they cannot afford to ignore Lake Powell. It affords a rare opportunity to leave behind the world you know and venture into a setting that combines novelty with breath-catching beauty.

COUNTRY'S ECONOMIC SITUATION SERIOUS DESPITE ADMINISTRATION'S ROSE-COLORED GLASSES

Mr. PROXMIRE. Mr. President, we have had many statements from the administration lately attempting to persuade us that economic conditions are improving. Every statistical wiggle is analyzed at length in the hopes of discovering some evidence of less inflation or of more economic growth.

In an excellent article published in last Thursday's Washington Post, Hobart Rowen suggests that the administration would be well advised to stop looking at each statistical wiggle separately, to take off their rose-colored glasses, and take a good hard look at the basic economic situation today.

Let me quote Mr. Rowen:

> Everybody—not just the administration's politicos—is eager for good economic news. But the stubborn fact is that after adding in every favorable crumb of statistics for the past month, the economy is still running 4 percent below its capacity, unemployment is still 5 percent (and threatening to go higher), and the rate of inflation at the consumer level is still an unacceptable 5 percent.

Mr. Rowen notes that even Paul McCracken, Chairman of the Council of Economic Advisers, noted in a recent speech that we may be faced with "an unduly protracted period of excessive slack and unemployment."

The administration has repeatedly attempted to explain our rising unemployment as a result of a decline in defense spending and a shift in our priorities. Let me quote what Mr. Rowen has to say about this:

> Okay, that's fine; but if the priorities have been re-ordered, why haven't the men and the unoccupied facilities been shifted into nonwar activities? In other words, what the administration is using as an excuse for the downturn is really a critique of its own lack of planning.

I submit that it is time for the administration to come forward with some well-planned policies to do something effective about our rising unemployment rather than to continue to deluge us with excuses and explanations of why nothing can be done about it. I ask unanimous consent that Mr. Rowen's article entitled "Looking at the Economy Without Rose-Colored Glasses" be printed in the RECORD at the end of my remarks.

I also ask unanimous consent that the letter from Mr. Herbert Stein, a member of the Council of Economic Advisers, which appeared in the Washington Post on September 5, be printed in the RECORD.

Mr. Stein attempts to reply to Mr. Rowen's column by listing again the statistical wiggles in which the administration takes such comfort. I will not take time this morning to discuss each of Mr. Stein's nine points, but let me just refer to one or two of them. Mr. Stein points out with apparent satisfaction that real gross national product rose at an annual rate of 0.6 percent in the second quarter; 0.6 percent, when the real growth rate required just to keep unemployment from rising further is 4 percent or more. Is it a cause for satisfaction that the GNP growth rate is at least 3½ percent less than the rate of growth of our economic potential, so that the unemployment gap is increasing all the time?

Mr. Stein also appears to take satisfaction in the fact that the wholesale price index for industrial commodities rose at an annual rate of about 2 percent in August. Let me just point out that this same index was rising at exactly the same annual rate last February and March. If we use this index as our guide, it is only by comparison with the extraordinary increases in April and May that we can find any hint of improvement.

Mr. Stein's letter only reinforces Mr. Rowen's point. Perhaps that is what Mr. Stein intended to do. The basic truth is that the economy is falling farther below the full employment level all the time. At best it will be several years before our current "game plan" brings us back to full employment. I find this situation totally unsatisfactory. I call on Mr. Stein and other administration advisers to devote the same imagination and effort to proposing new economic policy that they have devoted to reading optimism into the latest economic statistics.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Washingon Post, Sept. 3, 1970]

LOOKING AT THE ECONOMY WITHOUT ROSE-COLORED GLASSES

(By Hobart Rowen)

Leafing through the accumulation of Nixon administration speeches and statements last month on the condition of the economy, the returning vacationist finds one dominant theme: self-congratulation. The economic downturn, the Nixon men say with satisfaction, is at an end; inflation has been cooled (or, at least, the rate of inflation is subsiding); labor efficiency is increasing; and there is probably a broad upturn in the offing.

The Vice President, in a guest column in this newspaper, went so far as to say that recession talk was a myth, and that things were now happily breaking the administration's way. One newspaper, reprinting Mr. Agnew's economic commentary, headlined it: "Spiro Says Everything's Coming Up Roses." But it is clear from the government's own statistics—and even from a close reading of some of the speeches—that there is not yet very much to crow about. It seems a reasonable assumption, with an election in the offing, that the White House has been pressing hard to put a rosy hue on skimpy evidence.

For example, White House aide George Shultz (who knows better) got a great deal of mileage out of one month's statistics showing slightly reduced wholesale price pressure, and Assistant Commerce Secretary Harold Passer then read too much into the July set of so-called "leading" indicators.

Everybody—not just the administration's politicos—is eager for good economic news. But the stubborn fact is that after adding in every favorable crumb of statistics for the past month, the economy is still running 4 per cent below its capacity, unemployment is still 5 per cent (and threatening to *go* higher), and the rate of inflation at the consumer level is still an unacceptable 5 per cent.

Paul W. McCracken, Chairman of the Council of Economic Advisers, has done his best—in a reasoned, academic way—to make the administration's case that the adjustment has been mild and that there is "some evidence" that a mild expansion "may be resuming." But he has been candid enough to say, as well, that the task ahead is very great because economic performance continues to be far below potential—and the nation's basic capacity to produce continues to grow.

If the nation fails to boost demand sharply, McCracken said recently in a speech at Madison, Wisc., we may be faced with "an unduly protracted period of excessive slack and unemployment." What McCracken was trying to convey (and this was not highlighted in any of the daily press reports of his speech) was that a below-par economy is in prospect for all of 1971, with unemployment still ranging around 5 per cent or higher, not dipping toward 4 per cent until 1972.

That's a new "game plan"—if you remember the administration's first "game plan," a gentler hand was going to contract inflation with unemployment never even hitting the 5 per cent mark in 1970; the average, in fact, would be held to 4.3 per cent.

But inflation proved to be tougher to handle than Mr. Nixon and his advisers thought, and the policy screws were turned tighter than had been planned. So the "progress" that is hailed in the canned statements by the Vice President, Treasury Secretary David Kennedy and Commerce Secretary Maurice Stans is mostly wishful thinking. The patient's temperature may have been reduced from, say, 103 degrees to 102 degrees (and he hasn't passed away). But the evidence of infection persists. The economic doctors are aware that the patient is not back to normal weight. They hope there will eventually be full recovery. But it will take time—and in the process, a further physical toll.

Curiously, the administration has ascribed to the two-year decline in defense activity a share of the blame for the economic decline—especially a "displacement" of 1,000,000 jobs. This has been a recurrent theme of administration propaganda ever since the President's June economic speech.

There's no denying that war-connected spending has been cut sharply, and the Nixon administration deserves more credit for this than its political opponents want to give it. Military prime contracts, for example, are at their lowest level in nearly five years, or since just after the Johnsonian escalation of the Vietnam war.

This typifies, the administration is fond of saying, a "re-ordering of national priorities." Okay, that's fine; but if the priorities have been re-ordered, why haven't the men and the unoccupied facilities been shifted into nonwar activities? In other words, what the administration is using as an excuse for the downturn is really a critique of its own lack of planning. There could have been offsets to lowered defense outlays. "When they blame reduced Pentagon contracting for unemployment," says a Democratic critic, "it's like a guy giving up candy and then complaining that he's skinny."

What is really needed at this point is less attention to the latest statistical wiggle, and action to promote a faster rate of real growth for the economy. There appears to be little prospective impetus from stronger capital goods expansion (in fact, the latest official government survey now points the other way), or from a consumer spending binge (individuals seem disposed for the time being to save more). And the Federal Reserve is still fearful enough of inflation to resist. McCracken's behind-the-scenes pressure for more stimulus from monetary policy. The main expansionary thrust is coming from a growing federal deficit.

If things continue this way, the economy for a long time will be essentially flat—it will do no more than creep upward sluggishly, with a growing multibillion gap between actual and potential production. The most one can hope for is that the election will come and go quickly; then, perhaps, the occasional irreverent public comment or criticism that formerly punctuated the administration's outpourings may return. At the moment, the internal skeptics—who are still present—raise their doubts in private.

[From the Washington Post, Sept. 5, 1970]

CEA MEMBER ON ROWEN'S ASSESSMENT OF THE ECONOMY

Three cheers for Hobart Rowen! I had been wondering how he would manage to find gloom in the economic statistics that were reported while he was away on vacation. He has managed this in a way that demonstrates again his great ingenuity.

The problem he faced was a difficult one. During the period August 15 to August 31 the following news was reported:

1. Total real output (GNP) rose at an annual rate of 0.6 per cent in the second quarter, compared to the preliminary estimate of 0.3 per cent made in July.

2. Total corporate profits, adjusted for inventory valuation, increased a little in the second quarter.

3. The index of wholesale prices, seasonally adjusted, declined in August for the first time since April 1967.

4. The index of wholesale prices for industrial commodities rose at an annual rate of about 2 per cent in August, or a rate of about 3 per cent for the three months May to August, compared to a rise of about 4 per cent in the year ended in May 1970.

5. The Consumer Price Index rose at an annual rate of about 3½ per cent in July, about the same as in June, as compared to 6 per cent in the year ended in June.

6. Housing starts rose sharply in July for the second month in a row—by 15 per cent.

7. Business appropriations for capital expenditures in manufacturing leveled out in the second quarter after declining during the preceding year.

8. Interest rates declined fairly generally.

9. The index of stocks (Standard and Poors) rose from 75.48 in the week ended August 14 to 81.25 in the week ended August 28.

This is not the kind of information Mr. Rowen usually ignores. In fact, it was in precisely this kind of information, when it was running in the other direction, that he found the picture of "the worst of both worlds"—mounting unemployment and mounting inflation.

What would he do now, upon return from vacation, to throw out the first ball in the season of discontent? Would he deny the facts, ignore them, or unveil some bad news that was exclusively his—like corn blight in Bethesda, Maryland?

Mr. Rowen, in his homecoming article of September 3, did something subtler than any of these. He turned attention from the facts of the economy to what some administration officials have said about those facts. He operates on the following syllogism:

(a) Administration officials have a tendency to see good news when there isn't any.

(b) Administration officials saw good news in August.

(c) Therefore there wasn't any.

(I don't feel personally involved in any of this because I was also on vacation in the second half of August, and while I sometimes exclaimed, "Great News!," I only exclaimed it to my wife, who is discreet.)

This is all very interesting and even amusing. But there is a danger of misleading your readers. The truth of the matter is that there was good economic news while Mr. Rowen was on vacation, He has us all so buffaloed that we must say in the same breath that the news in August is not as good as we had hoped in January and may not be as good in September as in August. Still the good news of August is a fact. You can kick it with your foot and feel it. And not only the administration economists but the American people including Mr. Rowen are entitled to be reassured by the news.

HERBERT STEIN,
Member, Council of Economic Advisers.
WASHINGTON.

THE FAMILY ASSISTANCE PLAN

Mr. WILLIAMS of Delaware. Mr. President, the Washington Post of Friday, September 4, contains an interesting article entitled "Welfarism and Society," relating to the family assistance plan, and written by Kevin P. Phillips.

Mr. Phillips points out that the plan does not emphasize work incentive, as contended by the proponents.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WELFARISM AND SOCIETY

It is bad enough, as the White House's new welfare proposal moves nearer enactment, to contemplate the federal projection that 29 million persons will be eligible for the relief rolls in 1975 and that increased benefits will cost the taxpayers an additional $10 billion a year.

Yet that is only the beginning. The "megadole," as conservatives are beginning to term it, has chilling implications for the fabric of society. Information compiled by the U.S. Labor Department, the General Accounting Office, the Committee on Economic Develop-

ment, and the City of New York illustrates the destructive impact of 1965–1970 federal welfarism on U.S. society and suggests the inaccuracy of the administration's contention that its plan emphasizes work incentive rather than a dole.

On Aug. 18, the General Accounting Office told the Senate Finance Committee that the administration's early 1970 study, which argued that welfare did not erode work incentive, was incomplete and misleading because it used only poor people with a background of employment and ignored the attrition of certain sampled families.

Data published by the U.S. Labor Department on public employee work stoppages during the last decade show a massive upsurge dating from 1965 when the impact of anti-poverty programs and Great Society welfarism began to make itself felt. As welfare recipients became "clients", as payments became "rights" rather than benefits; as welfare became fashionable and humdrum occupations something to scoff at, the motivational dynamics of working-class America began to break down.

In 1965, after years of stability, every index of public employee work discontent—man-days idle, workers involved, stoppages—took off like a rocket. By 1969, work losses were five to ten times those of 1964.

Nowhere has this demoralization of the working class been more poignant than in New York City, welfare capital of the world, where the half million persons on relief in 1965 when John V. Lindsay was elected mayor have become 1.1 million in June, 1970—15 per cent of the total population of the city. The lower-middle-class bedroom boroughs beyond Manhattan have become seething centers of hostility to the Manhattan welfare client-rich liberal axis.

In the face of the huge rise in welfare in New York City and elsewhere, the Committee for Economic Development—in an August statement, "Training and Jobs for the Urban Poor"—observes that there are hundreds of thousands of service jobs (as waiters, gas station attendants, household help) going begging, partly because rising welfare payments pose too attractive an alternative. And, it might be added, because the welfarist psychology decries such employment as insufficiently fulfilling.

New York's Mayor Lindsay recently labeled as "a return to the Dark Ages" the suggestion that able-bodied welfare recipients be put to work cleaning up city streets.

Because revulsion against this sort of welfarism helped put Richard Nixon in the White House, his support of a vastly inflated welfare program is puzzling. According to conservative Nixonites, the President, preoccupied with his productive efforts to achieve peace in the Middle East and wind down the Vietnamese war, has been intermittently misled on the welfare scheme (especially the work incentive features that formed the basis of his initial approval) by elements of the White House staff. The same advisers who blueprinted the program have wrongly convinced the President that his prestige is at stake so as to oblige Mr. Nixon to pull their chestnuts out of the fire at his own political expense.

Thus, many conservatives who believe that the welfare program is a sociological, economic, and political threat to the nation and the administration are hoping that the Senate Finance Committee will see that the prestige at stake is not the President's but that of the left wing of his White House staff, who will pay the piper if Congress rejects their handiwork.

VETERANS' ADMINISTRATION HOSPITALS

Mr. CRANSTON. Mr. President, on September 1, 1970, the senior Senator from Iowa (Mr. MILLER) placed in the RECORD an article published in the September issue of the American Legion magazine entitled "The Truth About the VA Hospitals—Are VA Hospitals Neglectful of Their Patients as Charged in Life Magazine?" It deals primarily with another article entitled "Our Forgotten Wounded," published in Life magazine for May 22.

I think it is most unfortunate that the VA and others have devoted so much time and attention to taking issue with the Life magazine article. That time and attention, it seems to me, might be better spent in attempting to obtain vitally needed appropriations to improve the quality of care for our disabled men in VA hospitals.

In my public statements on the VA hospital situation, I have tried to focus on conditions in those hospitals, rather than on the Life article. For example, in speeches I delivered this summer before the national conventions of the American Veterans Committee, the Disabled American Veterans, the Veterans of Foreign Wars, and the Jewish War Veterans, I did not stress the Life article. I did not even mention it when I spoke on the Senate floor on July 5 to support the Senate's increase of $125 million over the administration's budget request for VA medical care. Nor did I mention it when I spoke again on August 4 to support the $105 million increase agreed to in conference.

However, given the tremendous amount of time and attention which the Veterans' Administration, and then the American Legion magazine, have devoted to rebutting the Life article, I did state my views about it, in addressing the national convention of the American Legion on August 29. This is what I said:

In that regard, you will notice that I made only passing mention earlier in my statement to the now famous Life magazine article. That is, first, because I think the article speaks for itself. And, second, I think it is beside the point and peripheral to the real issue facing us to become involved in arguments over whether certain photographs were staged or not.

Rather, the question is what *are* conditions now in VA hospitals, and what can we do about them now. As I have indicated, our investigation has demonstrated beyond all doubt that in many veterans' hospitals conditions are deplorable. That is really the point of the *Life* article, and I think far too much time and attention has been devoted to nitpicking at the *Life* article by those who really should know better and who share major responsibility for seeing that we are providing the best quality care to our wounded veterans.

I do not wish what I have said about the *Life* article to indicate that I have any quarrel with its accuracy. I have talked personally to two individuals who were present when the pictures were taken and have received affidavits from fifteen paraplegics now at the Bronx Hospital, or who were former patients there, attesting to the accuracy of the conditions portrayed in the *Life* piece. These affidavits, by the way, were made a part of our public hearing record.

So, I have no reason to question the integrity of *Life's* photographers or editors. But, frankly, I am rather weary at the continuing attempt to focus on that article rather than on the actual conditions in our veterans hospitals. That is what I care about. That is what I am deeply worried about. And that is what I know you are equally concerned about.

I also repeated before the Legion convention what I had said at the VFW convention on August 20—in responding to a question—that my views on the Life article were strongly influenced by testimony to the Senate Independent Offices Appropriations Subcommittee on May 27 by Donald Broderick, executive director of the Eastern Paralyzed Veterans' Association who was present when the Life photographs were taken. This is what Mr. Broderick told the subcommittee:

We were very happy when we saw the article and there was this reaction when we saw the article throughout the organization.

The article is true. This is a picture of what goes on there day-to-day.

Now, the Senator made a statement before which I think was erroneous. He said there haven't been survivors, you know, though even after World War II. This is when it did begin was after World War II. And I think that maybe, instead of all the name-calling and everything else that goes on, maybe one of the things that is at the bottom of that is that the attitude then since nobody lived before was that let's try and keep these men alive. But we have come a long way since then. Yet the treatment is the same. We have these young fellows now who are coming in and they are vibrant; they are vital. They have interests. They have better educations usually than before. And they are subject to conditions that are so degrading that not to stand up for it, I couldn't face my family or my friends much less go back to these people.

It exists. I cannot really even understand why the VA could categorically deny these pictures or just even bother going into picture-by-picture denials because these pictures happen every day.

I guess part of it is the staff is overworked; maybe they are used to not seeing even what goes on around them. The staff has felt bad about these pictures and now there is some polarization there. But there was no attempt to degrade the staff. These people are overworked and, we feel, underpaid because there are all kinds of problems. We don't deny there are special problems. We want people to know it. This may be something else, that it is hidden shame. For awhile some people thought a guy in a wheelchair is a paraplegic.

Well, being in a wheelchair, sir, is the lesser part of it. I am a quadraparaplegic. Some of the guys in the picture are totally paralyzed, meaning from—what you do when you become spinal cord injured is you lose the use of your body including even the feel of sensation from the level of the injury down. There is no way you can get a worse injury. And there is no way that anyone can tell me you don't need special care. And even the fact that our staffing ratios are less than anything average it just doesn't make sense. It is special care for special needs.

The young fellow who was pictured in here, who was being maligned and assailed, he has made a lot of remarks from his heart, but nobody can question this man's patriotism. He volunteered to serve and he was on a voluntary mission when he got hurt. He is totally paralyzed. He can't move anything. He relies on people for every function.

This article is the first thing I have ever seen on this. We have gone to the VA for years and years with words about what is wrong. You can't be—like if you were blind, well, somebody could put a blindfold on say that is what it is like to be blind. You could stumble over something. You could say it is terrible. You couldn't see colors. You couldn't visualize a woman, something along that line. But no one can just sit in a wheelchair. You don't know what it is like to experience body dysfunction constantly, skin pressure sores.

All these things exist. And there are techniques that the VA has not availed itself of. Like one thing that comes to mind every time I see this one picture, if he even wants to move over to the window he has to get somebody to push him. Now, there exists, obviously in this era of scientific everything, simple procedures like an electric wheelchair which can be operated by somebody like him by using his head, getting a console and he can touch it with his breath or tongue or things like that.

Don't quote me on the tongue. Maybe the VA has said that has been done.

Now, there are others quite similar who are service-connected veterans, wartime veterans, any kind, in this situation who are home and probably out of the hospital having someone care for them who could avail themselves of such devices, yet we never see the equipment.

So I look again at the pictures and I have had calls from members who have been out of the hospital for years and who are business people now. They have made there way in life. They live now. They are productive, not bitter people. They are productive and they have families. They have pride and they don't like people seeing this knowing they went through similar things. But yet all calls I get are favorable and every one of these people has called to say that he would testify about the conditions.

And one remark that sticks so much in my mind is a remark by Dr. Maurice McGee and he's a professor of English at Montclair State College. He is the veteran of World War II and Korea. And he called up and he said the Life Magazine article is false, "because they didn't get the smell."

It is just incredible. It does exist. And the name calling is no good. It doesn't help anyone. And the polarization of the staff is going to drive away the dedicated people who are responsible for maintaining what we have. And we feel that spinal cord injury personnel should receive more money, a special appropriation because of the work they do. We don't malign them. We have had liaison with these people for a number of years, liaison with the VA personnel. I have met with them regularly and its been good. They have been honest and I hope to maintain that. But to deny funds when there is improvement—because we have been promised improvement—and I don't speak for the whole system. I can't. I would be foolish to. I speak for my members at the Bronx who have had it up to here. And as I speak for them, I know that they just need certain things done for them. It just has to be done, that is all.

On May 21, the junior Senator from Kansas (Mr. DOLE) placed in the RECORD letters from the Administrator of Veterans' Affairs and the Director of the Bronx VA hospital challenging the Life article. Since critics persist in attacking the magazine, I think it is only fair that Life now be afforded equal time and space to present its case. This is done in letters which Thomas Griffith, editor of Life magazine, sent on May 27 to the Administrator of Veterans' Affairs, Donald E. Johnson, and the director of the Bronx VA hospital, A. M. Kleinman, M.D.

I refrained from offering these letters previously because I did not believe that it served any useful purpose to extend further the debate on this question. But I now ask unanimous consent that these letters be printed at this point in the RECORD in order to give Life magazine an opportunity to defend itself against some very harsh charges.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

LIFE,
New York, May 27, 1970.

DONALD E. JOHNSON,
Administrator of Veterans' Affairs, Veterans' Administration, Washington, D.C.

DEAR MR. JOHNSON: Your telegram regarding our article "Assignment to Neglect" which appeared in the May 22nd issue of Life was waiting for me when I returned from Europe this morning.

The language you use—of photographs "obviously contrived" and "staged," and a narrative "totally distorted"—is as erroneous as it is intemperate.

Life magazine has built a reputation for accurate reporting over more than three decades, and has no desire to sensationalize a subject of such sensitivity and importance. Our article on conditions in Veterans Administration hospitals was thoroughly researched and documented. If you take issue with our facts I will be glad to discuss them with you.

I have received, as you know, a much longer and more temperate letter regarding the same article from Dr. A. M. Kleinman, director of the Veterans Administration Hospital in the Bronx where the pictures illustrating this article were taken.

We have carefully checked every question raised by Dr. Kleinman and a copy of my reply to him is enclosed.

Since copies of your telegram and Dr. Kleinman's letter were released by you to the news media before I saw them I hope you will not mind if I make my response similarly available.

Sincerely,

THOMAS GRIFFITH,
Editor.

LIFE,
New York, May 27, 1970.

A. M. KLEINMAN, M.D.,
Director, Veterans' Administration Hospital, Bronx, N.Y.

DEAR DR. KLEINMAN: Your letter regarding our article "Assignment to Neglect" which appeared in the May 22nd issue of Life arrived last Friday while I was out of the country. I saw it when I returned this morning, and have reviewed the questions you raised with all concerned.

We will be glad to print excerpts from your letter in the June 12th issue of Life, together with examples of other letters we have received about this article.

I think I should tell you in advance of that, however, that your charge that our pictures were staged is quite inaccurate.

Co Rentmeester, the photographer who took the pictures, was accompanied by Charles Childs, the reporter who worked on the story, and by Donald Broderick, executive director of the Eastern Paralyzed Veterans Association. All of them deny point by point the allegations in your letter that pictures were posed. They have, in addition, statements from patients affirming the conditions under which the pictures were taken.

The charges made against us we do not regard lightly. Life has built a reputation for accurate photographic reporting during more than three decades, and we have no intention of endangering that reputation for a momentary sensation. May I take up some of your accusations one by one:

You state in your letter that no patient is left under the shower after the completion of his bath. The fact is that Rentmeester, Childs and Broderick found the patient unattended in the shower and took the picture shown in Life. The patient will corroborate the fact. In addition, five other patients on the same ward have given Life written statements complaining of undue waiting during showering. If attendants have told you otherwise, I think you should investigate further.

At another point in your letter you allege that the photographer asked that curtains screening a patient's cubicle be drawn back out of sight. This also is not true. The curtains were open when Rentmeester, Childs and Broderick arrived and the picture accurately depicts the conditions they found. The patients also will corroborate that. If attendants have told you otherwise I again suggest that you investigate further.

You also charge that it was the photographer's idea to pose a paraplegic veteran throwing a sheet over a totally crippled patient nearby. This, again, is not true. When Rentmeester, Childs and Broderick arrived on the scene they found three paraplegics in wheel chairs struggling to transfer a quadriplegic patient from his stretcher to his bed. One of them said to the photographer: "I want you to photograph this. You see, we have to help ourselves." Then he tossed the covering over his friend in the bed. No part of this was the photographer's idea.

You write, about another picture, that a curtain was pushed back and a trash can pushed toward the stretcher of a patient "for misleading photographic effect." Again this is not true. In fact, the photographer visited the same room on different days and on each occasion found the trash cans unscreened and in the same relationship to patients. The patient who, according to your letter, was "disturbed at the invasion of his privacy" has, in fact, given us a written statement saying: "To my knowledge and my personal observation the conditions shown in the photo were true. It is also true that at times the condition of the room pictured is even more disgraceful."

You also object to a picture showing a sleeping patient and, on the floor beside him, a mouse caught in a trap. You write: "We do not use traps in our campaign against mice which admittedly we do have." We clearly stated in the article that it was the patients, not the hospital personnel, who set the traps. To substantiate that, we have the written statement of one patient reporting that he had trapped nine rodents, and a written statement from another patient that he had trapped 14 mice in a single room.

There are a number of other points in your letter about which I feel you have been misinformed. But since they do not directly impugn the integrity of Life I will not prolong this letter to debate them. You can be sure that we have given careful consideration to all you have written.

Life has admiration and sympathy for the thousands of capable and dedicated physicians, administrators and other personnel in the Veterans Administration medical system. VA staffers in many cases have performed better than could be expected, given their budget limitations.

Life believes, however, that these staffs should not have to work under the severe shortages and handicaps even you describe. Certainly the wounded should not have to endure substandard conditions. It was Life's intention and hope that its report would help those who are trying to correct those conditions.

As you know, a copy of your letter to me was placed in the Congressional Record last week by Senator Robert J. Dole, and copies have been distributed to news media by Donald E. Johnson, Administrator of Veterans Affairs. Therefore I am sending copies of this reply to Senator Dole and Mr. Johnson, and to news media.

If you have any further question on any of the points you have raised I will be happy to discuss them with you in person.

Sincerely,

THOMAS GRIFFITH,
Editor.

Mr. CRANSTON. Mr. President, the situation confronting Congress now with respect to the VA fiscal year 1971 appropriations is most unfortunate. The

VA appropriation, and others like the independent offices and housing and urban development appropriation bills, must be passed by the Congress all over again as a result of the President's August 11 veto.

I discussed this situation with respect to the VA medical care appropriation at considerable length in my August 29 address to the American Legion. I ask unanimous consent that the text of that statement be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS TO JOINT MEETING OF LEGISLATIVE, REHABILITATION, AND ECONOMIC COMMISSIONS OF THE AMERICAN LEGION NATIONAL CONVENTION, AUGUST 29, 1970

It is a great pleasure to be back with you key policymakers again. I enjoyed my appearance before your Washington meeting in March, and I welcome the Economic Commission members this morning. I regret that Senate business will not permit me to remain at the convention this week.

At the outset, I want to express my deep appreciation and admiration for the special cooperation our Veterans Affairs Subcommittee has received from your national staff. Herald Stringer, assisted by Chuck Mattingly and Terry Wertz, as well as Ed Golembieski and Austin Kerby have been of great support to us.

I want to touch on a few legislative matters first and then turn to the pressing hospital situation. I must note that our ability to proceed with legislation has been severely impeded by the need to continue to devote our major attention to the pending VA hospital appropriation.

Last spring, I made a rather lengthy report to you about the work and long-range plans of the Veterans Affairs Subcommittee since I became its chairman. Today I will try to bring you up to date on our activities and our more immediate plans in this final session of the 91st Congress.

We are currently working closely with the Veterans Administration and the House Veterans Affairs Committee staff to perfect five bills which we will consider in subcommittee executive session on September 10. I introduced four of these bills: S. 3656, which would (1) provide special financial assistance to veterans wanting to use their GI home loan entitlements, (2) extend all existing entitlements and restore those which have been lost, and (3) create a mobile homes loan program within the GI bill;

S. 3657, which would provide for advance payment of educational allowances and establish a special work-study program for trainees;

S. 3683, an administration bill which deals with some of the same subjects; and

S. 3907, which would move up the effective date for increasing GI bill allowances when trainees acquire dependents. We also have under active consideration a House-passed bill, H.R. 370, to increase and expand the special automobile allowance for seriously disabled veterans.

There is another bill pending in the Senate, H.R. 693, which has caused considerable controversy between the House and Senate over the part of the bill dealing with the so-called "pauper's oath" that a veteran must take before he can be admitted to a VA hospital for a non-service-connected condition. I have been working with members of both parties in the Senate and House committees to arrive at an acceptable resolution of our differences, and I firmly believe we will agree to liberalize the House-passed bill so that any veteran who is 65 years or older will be eligible for admission to a VA hospital or domiciliary for non-service-connected conditions, regardless of his financial means. This would eliminate the so-called pauper's oath for such veterans. The VA has already accepted our committee recommendation and such veterans no longer have to complete the detailed income questionnaire.

Virtually every veteran 65 or older is entitled to federal Medicare benefits. Yet, based on VA hospital per diem costs, it is more economical for the United States Government to permit him the option of VA hospitalization if a bed is available, rather than reimburse a civilian hospital at a substantially higher per diem rate under Medicare.

There is one legislative matter of particular concern to the Economic Commission that I want to discuss this morning. The Labor and Public Welfare Committee has just reported to the Senate S. 3867, the proposed "Training and Employment Opportunities Act of 1970." We all recognize what an enormous problem our rising unemployment rate is for the whole country, especially for returning Vietnam veterans. There just are not now enough decent, productive jobs at living wages available today or enough good training opportunities to fill jobs that are available. This bill attempts, effectively I believe, to deal with this situation.

During subcommittee and full committee consideration of the bill, I was successful in securing adoption of a number of amendments designed to ensure appropriate provision for veterans in employment, manpower and training programs.

The basic veterans' amendment that was adopted rewrote and updated present provisions of the veterans' law establishing in the Department of Labor the Veterans' Employment Service. The new provision attempts to strengthen Veterans' Employment Service, enlarge its staff and protect its appropriation from diversion to other Labor Department purposes. It also includes as a positive responsibility of the Labor Department job development activities for veterans and providing counseling for and referrals to appropriate training and manpower programs, as well as directly to job openings.

The amended provision establishes new administrative controls and data gathering and reporting requirements to attempt to ensure that all veterans seeking employment or training assistance will receive it promptly and adequately. And it calls for close coordination and cooperation with the Veterans' Administration especially in assisting the VA in its promising new job fair program and in its outreach services program, authorized in the new public law enacted last March. Hopefully, this will lead to the assignment of more state public employment counsellors to work at Veterans' Assistance Centers and to more such counsellors devoting their full time to meeting the needs of a growing veteran population generally.

I believe this new veterans' employment provision offers very tangible progress toward providing veterans with prompt, effective job and job training placement and assistance. I want to acknowledge the cooperation of Austin Kerby on this amendment and thank him for his help.

Now, I will turn to the most immediate and urgent business before all of us—the task of getting vitally necessary money for our crippled and disabled men who are in our VA hospitals.

On November 11, 1969—Veterans Day—I announced to the Senate the initiation of an investigation of medical care for Vietnam veterans in VA hospitals. My subcommittee proceeded to receive testimony from 45 witnesses, including eminent medical school deans and medical experts, seriously disabled veterans, and rehabilitation experts of the Legion and other veterans' groups. The subcommittee staff and I visited a number of VA hospitals—mostly unannounced—to talk with patients, administrators, physicians, nurses and other personnel, and look over the general hospital situation.

Our subcommittee investigation, focusing on immediate care problems for wounded Vietnam veterans, illustrated graphically that war is not merely a killer: It is a cruel and terrible crippler.

Everybody knows that men get wounded in war. We get the statistics of the wounded right along with those of the dead. But somehow, we don't seem to feel for the wounded the way we feel for the dead. We count the cost of battles in dead, not maimed. We count bodies not agonies.

For many, wounded men evoke a vision of a brief period of pain, a stay in the hospital, rest and recreation, and the purple heart. Then, many people seem to presume everything goes back to normal for these men, and they push them out of their minds. But the men that many Americans have forgotten have become uppermost in my mind since I learned what was happening to those whom the nation treated as heroes only a short while ago.

I found some eye-opening and heart-rending facts. I found that the Vietnam war is the most crippling and seriously disabling war in our history. So far 286,585 men have been wounded in Southeast Asia.

I found that the wounds suffered by our men are incredibly severe because of the kind of war we are fighting—a war of high-powered rifles on the one hand, and, on the other hand, a war of mines and primitive booby traps that destroy a man without killing him.

I found that ten percent of our surviving wounded are so badly shot-up or burned that they would have died in any other war. But, miraculously, we are keeping these men alive. It is a great tribute to our country that we are saving these men—a tribute to the intensity and compassion of our rescue operations.

Probably no other country spends as much manpower and money in rescuing a downed pilot or evacuating a wounded infantryman. But, science and man have their limitations. And I found that our veterans hospitals are being filled with more and more paraplegics and quadriplegics, more and more amputees and patients with multiple injuries.

And what is perhaps even worse, I found that these men—along with our hospitalized veterans of previous wars—are not getting the top quality medical care which they so richly deserve and have so painfully earned. I found hospitals severely understaffed, with insufficient numbers of general physicians and specialists, too few nurses, too few technicians. I found overcrowding in some hospitals and, in others, I found empty wings and idle equipment because there weren't enough trained people to put them to use.

I found dedicated and conscientious staffs—overworked because of personnel shortages, and frustrated by inadequate and obsolete facilities. I found many of the patients wasting precious months and years of their lives because they are not receiving the care and compassion they must have for rapid recovery and rehabilitation. I found others suffering deeply from debilitating neglect.

As a result of all this, when on May 27 I went before the Appropriation Subcommittee, headed by Senator John Pastore of Rhode Island, I asked for $174 million more than had been appropriated by the House for the hospital and medical program.

Our investigation showed that this sum was necessary to provide high-quality hospital and medical care to our disabled veterans—to make up for the major deficiencies that plague very many VA hospitals. For the financial squeeze over the last five years has produced deterioration and a dangerously enlarging crisis in our VA medical system. This crisis did not occur overnight. It's the result of a steady erosion.

A Democratic administration and a Republican administration share responsibility for the sad state of affairs that now confronts us—a crisis caused by taking it for granted

that things could be done without adequate funds. The Executive Branch in two administrations has turned down the budget requests of the VA's medical staff.

Year after year, the purchase of essential equipment and supplies has been deferred, along with renovation of facilities, construction of new facilities, and acquisition of staff. This process of slow deterioration, masterminded by the Bureau of the Budget, dramatically surfaced when increased numbers of Vietnam veterans began flowing into our VA hospitals.

The number one problem facing VA hospitals is a shortage of staff. VA hospitals have an overall staff-to-patient ratio of only 1.5 to 1 compared to staffing ratios of about 2.7 to 1 in community hospitals.

To help overcome this unfair, intolerable situation, I recommended to the Pastore subcommittee adding about $51 million to fund an additional 5,000 more staff positions in VA hospitals. This would increase staff ratios to about 1.7 to 1, a substantial improvement which should help every veteran in a VA hospital.

I also asked for $46 million to eliminate the serious backlog in equipment purchase, maintenance and repair.

The plight of those who have spinal cord injuries is especially deplorable. The ratio in the VA spinal cord injury units, as of April 1970, was approximately 1.02 staff for each spinal cord injury bed. In stark comparison, the ratio at New York's Institute of Rehabilitation Medicine, headed by the world famous Dr. Howard Rusk, who is a consultant to the VA, is 2.17 to 1—more than twice as high. Many VA spinal cord injury centers are well equipped, but I have found only a few patients actively engaged in therapy at one time. Others wait endlessly for their turn in an *unhappy, helpless, hopeless prone* line. And still others have lost the incentive to come and wait, and wait.

I have proposed that by the end of fiscal year 1971 we provide the Veterans Administration with $10 million to *double* the spinal cord injury staffing ratio.

Under the impetus of our investigation and embarrassed by the recent *Life* magazine article, the VA decided to reallocate funds and make a 25 percent increase in spinal cord injury staffing ratios for fiscal 1971. They had not planned to do this. I am glad we helped change their minds. I also recommended adding almost $6 million to eliminate an outrageous backlog in dental examinations and treatment.

Although I have focused my recommendations primarily on the needs of disabled Vietnam veterans, I have tried to stress that inadequate conditions in our hospitals afflict *all* veterans of *all* wars. You and I know, too, that there is growing, exploding need now for long-term care facilities for aging and infirm veterans of World War I and World War II. Because of this, I proposed an additional $6 million to convert 1,000 more present hospital beds to nursing care use.

Despite strong Veterans Administration opposition to every one of my recommendations, the Appropriations Committee accepted the bulk of them. It voted to increase the House-passed bill by $100 million.

During the subsequent Senate debate, 35 Senators took to the floor to state their strong support for this incresae, and the Senate passed it—*unanimously*.

Altogether, the Senate passed $175 million more than was requested in the President's initial budget—the $100 million added by the Senate—$25 million won on the House floor by your good friend and mine, Chairman Teague of the House Veterans Affairs Committee—and the $50 million belatedly added by the administration to its original budget after our Congressional investigations aroused the nation and shook the White House.

Congressman Teague energentically supported the Senate increase, and has been an indispensable ally from the start. He deserves the praise and respect of all Americans for his outstanding work for disabled veterans. So do Ralph Yarborough, Chairman of the full Labor and Public Welfare Committee and ranking member of the Veterans Affairs Subcommittee; Richard Schweiker, its ranking minority member, Senator Pastore; and Senator Gordon Aliott, the ranking minority member of the Appropriations Subcommittee.

The support we received in the Senate was characteristic of the bipartisan effort I have tried to foster for all veterans matters. So far—and I will do all I can to keep it this way—all actions of our subcommittee, our full committee, and the Senate on VA education and training and medical legislation and on appropriations for these programs has been *unanimous*.

The amount finally passed by both houses totalled $105 million above the administration budget request. Chairman Teague and I accepted the conference recommendation to eliminate $20 million which the Senate earmarked for additional construction, because it was our understanding that most of the priority items, including design of a replacement hospital for both the Bronx Hospital in New York and the Wadsworth Hospital in Los Angeles, would very likely be carried out by the VA with existing construction money.

We thus felt that the crucial money was in the medical care category. We were particularly pleased that the full $105 million for medical care was accepted by the conference committee.

That brings us up to date except for one small item. Last week, the President suddenly vetoed the VA appropriation, which was in the Independent Offices and HUD appropriation bill. This wholly unexpected, totally unjustified action has created a whole new crisis. Last Thursday, the House of Representatives failed to muster the necessary two-thirds vote to override the veto. Now, even if we are successful in restoring the vetoed $105 million—an assumption we cannot now make with any certainty—the VA will be delayed at least a month and a half, and perhaps far longer, before it can start hiring the new medical staff and before it can start buying and repairing the medical equipment which that increase would authorize. The tragic result of the veto is, therefore, the same kind of slow-down and deferral process which is largely responsible for bringing VA hospitals to the crisis that now confronts them.

Let me give you a sad, shocking statistic: If the President had signed that bill and turned loose the money, the VA today would have $622,000 a day more for our wounded veterans! This money is irreparably lost—yesterday, today, and tomorrow—because the VA is now without any fiscal year 1971 appropriation bill at all. So all it can do is spend money only at the totally inadequate, intolerably low level, wholly out-of-date level of the fiscal year that ended last June 30. Almost a quarter of a billion dollars less is available now than would have been available if the President had signed that bill!

If the Congress sticks to its guns, we will eventually be able to get that money back—but we'll get it back too late. We will never get back the lost medical care and the lost rehabilitation our maimed veterans desperately need now—*at this very moment!* And with every week that goes by until the VA finally receives its appropriatalon, it will be more and more difficult to recruit all the additional staff it so desperately needs. We must do all we can to break this log jam!

"Tiger" Teague and I have agreed on a united effort in our respective houses to restore the full amount of the VA medical increase that was in the bill rejected by the President.

So that is the situation that now confronts us. It is not a very attractive one. I feel that it is absolutely urgent that all of us devote our maximum efforts to securing the appropriation with the full increase intact and then seeing to it that it is expended.

In that regard, you will notice that I made only passing mention earlier in my statement to the now famous *Life* magazine article. That is, first, because I think the article speaks for itself. And, second, I think it is beside the point and peripheral to the real issue facing us to become involved in arguments over whether certain photographs were staged or not.

Rather, the question is what *are* conditions now in VA hospitals, and what can we do about them now. As I have indicated, our investigation has demonstrated beyond all doubt that in many veterans' hospitals conditions are deplorable. That is really the point of the *Life* article, and I think far too much time and attention has been devoted to nitpicking at the *Life* article by those who really should know better and who share major responsibility for seeing that we are providing the best quality care to our wounded veterans.

I do not wish what I have said about the *Life* article to indicate that I have any quarrel with its accuracy. I have talked personally to two individuals who were present when the pictures were taken and have received affidavits from fifteen paraplegics now at the Bronx Hospital, or who were former patients there, attesting to the accuracy of the conditions portrayed in the *Life* piece. These affidavits, by the way, were made a part of our public hearing record.

So, I have no reason to question the integrity of *Life's* photographers or editors. But, frankly, I am rather weary at the continuing attempt to focus on that article rather than on the actual conditions in our veterans hospitals. That is what I care about. That is what I am deeply worried about. And that is what I know you are equally concerned about.

That is why I count on you to help us make some very telling points to the Congress and to your many friends, Legion associates and neighbors. You as veterans' leaders and spokesmen bear a particularly heavy responsibility to look at the situation objectively and tell it how it really is.

We must explain that first the administration of Lyndon Johnson and then the administration of Richard Nixon have held down funds for the Veterans Administration, looking upon its program as if it were really no different from any other domestic program

Both administrations, one Democratic, one Republican, have been plagued with the problem of how to fight a war, maintain a balanced budget, and prevent inflation. Neither administration has succeeded in solving this problem, mostly because they have been attempting the impossible—every war in American history has brought inflation, inflation that hasn't ended until the war has ended.

Many people in our country have been unfairly hurt by this misguided brand of economics—but those who have been hurt the most have been our disabled veterans. They have already made one heavy sacrifice in this war that is the very cause of the inflation confronting us.

Then, when they come home, they are asked to make still another sacrifice—by giving up first-quality medical care. I believe preserving the lives and well-being of these men is far more important than preserving the value of somebody else's dollars. I believe the war against inflation must be fought on other fronts—not in the wards and clinics of our veterans hospitals.

I believe that President Nixon underestimates the American people. I believe that the American people know that high-quality medical care for our wounded veterans is a basic, inescapable cost of war that must be paid.

We demand the best possible weapons for our fighting men. We must also demand the best possible medical care for these men when they are hurt. I appeal to you, here and now, to help me bring these facts home to our fellow citizens.

Even then—if we succeed in getting the full $105 million increase finally appropriated—our job will not be ended. Administration spokesmen time after time have contended that they do not need any more money for more staff and better equipment. They say all is well in our VA hospitals.

That just is not so. You know it. I know it. And the very VA officials who are making blanket denials of the need know it most of all.

The Administration insists that the VA medical program does not need and cannot use more than the $1,752,000,000 in the proposed budget. You might think it logical to assume that the VA's medical officials agree. But that is just not so.

In early 1969, when they were making long-range forecasts of needs, the heads of the VA's department of medicine and surgery said they would need $78 million more than that amount for fiscal 1971.

This discrepancy between what the Budget Bureau said the VA medical program needs and what VA doctors say it needs grew even greater as time passed.

As the fiscal year approached, as costs continued to rise and it became possible to make an even more realistic appraisal of medical needs, the House Veterans Affairs Committee made a new analysis. The directors of the VA's 166 hospitals were asked how much money they needed for quality medical care for the fiscal year beginning last July 1, 1970. Their answer: they said they needed not $78 million more than the proposed budget, they said they needed $180 million more. Indeed, that is why I had initially asked for $174 million more.

The situation we are now in is that Congress has voted a $105 million increase in the medical budget, the VA's own hospital directors say they really need a $180 million increase, and the Budget Bureau requires Donald Johnson to say our VA hospitals don't need any increase at all!

Let me make clear that I do not intend my references to the Administrator of the VA to be in any way personally critical of him. I know that you and I and Donald Johnson and his staff all want the same thing—the finest possible medical care for our disabled veterans. I understand what public appointed officials are required to say and do. And I know full well the telltale signs of the Budget Bureau handcuffs, the Budget Bureau blindfold, the Budget Bureau gag, and the Budget Bureau straitjacket.

This past Wednesday was Women's Liberation Day. I propose a Donald E. Johnson Liberation Day! I call upon you to help Don Johnson liberate himself and the VA from these Budget Bureau restraints, so crippling and so unjust.

I call upon you to help Mr. Johnson communicate to the President that he should listen to the VA's own medical experts. I call upon you to help Mr. Johnson communicate to the President that he should listen to wounded and sick veterans.

I call upon you to help Mr. Johnson communicate to the President that he should listen to disabled veterans' families. I call upon you to help Mr. Johnson tell it how it really is to the President and tell him that he must stop listening to the penny pinchers in the Budget Bureau.

As recent activities make painfully clear, we cannot take the additional money for granted, if it is appropriated, any more than we could last year when the Bureau of the Budget held up for almost two months the $34 million by which the Congress increased the 1970 budget request.

The fact is that it wasn't until we had held four days of hearings in our investigation, and Chairman Teague had circulated his questionnaire to all VA hospital directors, that the Bureau of the Budget finally got the message. Only then did it release the funds.

Let there be no mistake about it: This is the hour of crisis for VA hospitals. If we fail now, with all of the momentum that has been built up by our Congressional investigations, by the veterans' organizations, and by the tremendous publicity from the news media, if we fail now, our hospitals will be doomed to continuing deterioration, and our veterans will be condemned to indifference and neglect. At that point, the VA's once proud motto, "Medical Care Second to None," would degenerate into "Medical Care, *Equal* to None."

You and I must not and will not allow this to happen!

I realize these are very strong words. But in my view, and the view of many highly knowledgeable experts on VA medicine—many inside the VA's own medical department—it is now or never.

With your help, with the enormous resources at the command of your mighty organization, we can make it "now" for first-quality medical care for all our disabled veterans.

CHALLENGES OF THE NEW ACADEMIC YEAR

Mr. PELL. Mr. President, we are again at that time of year when young men and women return to college and university campuses to resume their studies.

Our institutions of higher education, as they begin another academic year, are faced with serious challenges. The rights and responsibilities of administrators, faculty, and students of our universities are being questioned, and more basically, the role of the university itself in our society is being subjected to intensive reexamination.

In my own view, this questioning and reexamination can be highly beneficial to our universities and our society if it is conducted in good faith by all parties and in a constructive and cooperative spirit.

It is important, moreover, that this reexamination be conducted with full recognition of some basic precepts: the preservation of freedom of thought which is so vital to the functioning of a university; and adherence to law, on which the preservation of all of our freedoms depends.

The president of the University of Rhode Island, Dr. Werner A. Baum, addressed himself to these questions in an address at the Independence Day celebration in Bristol, R.I. Dr. Baum's remarks are, I think, particularly appropriate as a new academic year begins. I ask unanimous consent that the text of his address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REVOLUTION THEN: EVOLUTION NOW

(By Dr. Werner A. Baum)

I am deeply honored that you asked me to speak at this, the most distinguished Fourth of July celebration in our state. But I am also frightened by appearing among men recognized as magnificent orators not only here in our state but throughout this great nation of ours. Since you have given me the opportunity, I would like to put before you some of my thoughts on the Declaration of Independence we celebrate today, on its pertinence to our times, and on the role of your state university in its implementation.

Today's youth culture, which puzzles so many who do not live with it on a daily basis, announces its desire for a new beginning, a fresh start, the Age of Aquarius. Now, certainly our society is far from perfect. Certainly there are large gaps between what we profess and what we do. Certainly we all, individually and collectively, sometimes ignore the golden rule, the Ten Commandments, the Declaration of Independence, the Bill of Rights, and various other expressions of man's lofty and noble ambition.

But this I wonder: are some of us, at our idealistic best, confusing the imperfections inherent in man himself with the faults in the system which governs him?

I would like to quote a section of our Declaration of Independence which is rarely cited, important as it is, because it does not often suit people's convenience to do so:

"Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed."

By no stretch of the imagination, in my humble opinion, can any reasonable man claim that we today are subject to evils which are insufferable. Despite all the rhetoric about suppression, oppression, deteriorating environment, hunger, discrimination, unpopular war, and so on, the evils are, to use Thomas Jefferson's term, "Sufferable." They are sufferable because our system permits us to change them without, in the words of the Declaration, "abolishing the form."

One of the miracles of the form of government which grew from that Declaration 194 years ago has been its ability to survive despite certain built-in paradoxes. Two of these paradoxes I want to discuss in particular. They are the paradoxes of majority rule with minority rights, and of individual liberty within restraints of law.

The French writer Alexis de Tocqueville, writing 140 years ago in his "Democracy in America," was among the earliest observers to note one of these dilemmas—the one of reconciling majority rule and minority right. He saw the power of majority opinion to suppress unpopular views in a democracy, and he wrote, "The authority of a *king* is purely physical . . . but the majority possesses a power which is physical and moral at the same time. It acts upon the will as well as the actions of men, and it represses not only all contests, but all controversy."

I can think of no better example of the type of democratic institution we have developed to deal with this particular paradox than the university. One of the great achievements of American democracy has been the creation and support, on an unprecedented scale, of institutions which exist for the very purpose of analyzing and criticizing that society and seeking improvements in it. Those institutions are the American universities. They play a major role in resolving the dilemma of majority rule and minority right.

The university in its role as a sanctuary for diversity serves to answer Tocqueville. It is our duty in the university to help maintain the viability of the American democracy by providing a forum for all views.

In order that we may do this, the university has been accorded what is termed academic freedom, a freedom to examine any question from all viewpoints, to hear all voices. We anger many persons of many different viewpoints because we carry out Justice Oliver

Wendell Holmes' dictum that, "if there is any principle of the Constitution that more imperatively calls for attachment than any other, it is the principle of free thought. Not free thought for those who agree with us, but freedom for the thought we hate."

In this quest in the university we live up to the expression of the American mind which men put to words 194 years ago in the Declaration of Independence. We provide a forum for the minority opinion as well as the majority, even though the opinion may be hateful to the majority.

A second paradox of our system is that of liberty and law. The theory of government set forth in our Declaration of Independence was based on the natural law concept. Jefferson and his colleagues had absorbed the beliefs of philosophers like John Locke, who wrote of the state of nature. Said Locke, "The state of nature has a law to govern it, which obliges everyone. And reason, which is that law, teaches all mankind that being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions."

In Locke's state of nature, then, all men have freedom, yet are bound by law. This paradox, too, faces us all, including the university. The university would not be true to the Declaration of Independence if it failed to observe its dedication to law. And that is why academic freedom cannot exist without academic responsibility.

Civil law, like natural law, is based on the concept of responsibility. James Bryant Conant told the overseers of Harvard some years ago that the duty of educators to their students is to "cultivate in the largest possible number of our citizens an appreciation of both the responsibilities and the benefits which come to them because they are Americans and are free." As an institution, the university itself shares these responsibilities as well as these benefits of being American and of being free.

We cannot yield to the pressure of a political majority to suppress unpopular opinion. At the same time, we cannot allow any expression of opinion to violate the legal precedents, such as the doctrine of clear and present danger, which exist concerning the freedom of speech. Nor are we obligated to or can we permit excess which would violate both the safety of the government which supports the university and the spirit of the Declaration of Independence which foresaw a government of law.

The historian Samuel Eliot Morrison notes: "To the Americans of 1776, liberty meant, first, freedom under laws of their own making and, second, the right to do anything that did not harm another. One of the crisp sayings of John Locke, with whom all reading Americans were familiar, was "Where law ends, tyranny begins."

In the spirit of '76, I pledge to you as the president of this state's rapidly maturing university that there will be neither tyranny of the majority nor tyranny of the minority at the University of Rhode Island.

If our society is indeed undergoing basic change in this age of Aquarius, then let us ensure that the change is evolutionary not revolutionary. Let us ensure that it is based on the rule of reason and not on hysteria among a polarized population.

MORAL COURAGE IN THE FIGHT FOR HUMAN RIGHTS: THE LEGACY OF ROBERT F. KENNEDY

Mr. PROXMIRE. Mr. President, Robert Francis Kennedy knew the anguish of senseless death and destruction more than any of us truly realized. Speaking extemporaneously upon the assassination of the Rev. Dr. Martin Luther King, Kennedy remembered a treasured quotation from Aeschylus:

In our sleep, pain that cannot forget falls drop by drop upon the heart and in our own despair, against our will, comes wisdom through the awful grace of God.

Periodically, we all think and ponder over the gift and miracle of life. A run in the rain, along a beach, a football game—all these experiences give us the zestful, sensual feeling of breath, sweat, passion, and freshness. All these being portions of the experience of being alive.

The experience of being alive is as fragile as it is fresh and spontaneous. Auschwitz, Dachau, and Auterlitz remind us of its delicate and brittle nature. We, as a world family, cannot simply continue to hope that we will not again be ravaged and destroyed. For the systematic destruction of a people is a systematic devaluation and destruction of the fiber of all mankind. We can never allow these kinds of atrocities to occur again on this planet. We in the United States have an intense moral obligation to do all we can to make it known to the world that we will not tolerate genocide of any type, or in any conceivable form.

To this end, I again plead, as I have daily in this body for more than 3 years, that the Senate move expeditiously to the ratification of the United Nations Convention Against the Crime of Genocide.

INJUSTICE TO AMERICAN INDIANS

Mr. PELL. Mr. President, in the course of building this great Nation, in the zeal of westward expansion and economic development, we have at times in our history as a nation been less than fully sensitive to the rights of our fellow men.

We need not be reminded today of the injustices suffered by the black citizens of our country, and most of us now recall with shame the treatment accorded residents of Japanese descent during the Second World War. We are, however, prone to forget the injustices suffered by the original residents of this land—the American Indians. This is particularly true of we who live in the East, where reminders of Indian predecessors are few.

Perhaps because I have some Indian ancestry, I have had more than the average interest in the welfare of our American Indians, particularly in the East.

Recently, however, I have noted an instance of injustice of American Indians that I believe clearly calls for corrective action. I refer to the struggle by the Taos Pueblo Indians to regain control of the Blue Lake Lands in New Mexico. To the Taos Indians, these lands are a sacred place of worship.

These lands were seized by the U.S. Government more than 60 years ago and are now part of one of our national forests.

Mr. President, legislation to remove this land from the national forest and to place it under Government trusteeship for the Taos Pueblo has been introduced and passed by the other body. The passage of that bill, H.R. 471, has been urged by the President in a message to the Congress. Mr. President, I believe the bill affords an opportunity to correct an unfortunate injustice and I intend to support it.

PROGRAM OF PANAMA CANAL SOCIETY OF WASHINGTON, D.C., ANNUAL MEETING, AUGUST 15, 1970

Mr. THURMOND. Mr. President, August 15, 1970, was a day of interesting coincidences: the 56th anniversary of the opening of the Panama Canal and the 100th birthday anniversary of Hon. Maurice H. Thatcher, of Kentucky, former civil Governor of the Canal Zone, 1910–13, a most distinguished former Member of the Congress, 1923-33, and, for many years, the sole surviving member of the Isthmian Canal Commission that supervised the construction of the Panama Canal.

As a close student over many years of Panama Canal history and interoceanic canal problems, I consider it uniquely fitting that the Panama Canal Society of Washington, D.C., at its annual meeting on August 15, before a large and impressive gathering of his friends in the John Wesley Powell Auditorium of the Cosmos Club in the Nation's Capital City, commemorated the opening of the great interoceanic waterway and honored Governor Thatcher. The membership of this society, which was originally formed in 1936 by certain U.S. builders of the Panama Canal, with them Governor Thatcher, was later extended to include U.S. citizens who have participated in its subsequent maintenance, operation, sanitation, protection, defense, and modernization. A few oldtime canal builders were present and duly recognized.

Among the distinguished personages present were: Dr. Alexander Wetmore, former Secretary of the Smithsonian Institution; Rear Adm. Calvin B. Galloway, president of the Gorgas Institute of Tropical and Preventive Medicine; Dr. Fred L. Soper, distinguished authority on tropical diseases; Maj. Gen. Glen E. Edgerton, former Governor of the Panama Canal; John F. Stevens II, former official of the Baltimore & Ohio Railroad, and grandson of former Chairman and Chief Enginer John F. Stevens of the Isthmian Canal Commission; Capt. C. H. Schildhauer, former aviation executive, now vice chairman of the John F. Stevens Hall of Fame Committee; Mrs. Ailene Gorgas Wrightson, daughter of Maj. Gen. William C. Gorgas, the great sanitarian of Cuba and Panama; Mrs. David Pierre Gaillard, daughter-in-law of Col. D. D. Gaillard, after whom the famous Culebra Cut was renamed as Gaillard Cut; Dr. Edward L. R. Elson, pastor of the National Presbyterian Church and Chaplain of the U.S. Senate; Paul M. Runnestrand, executive secretary of the Canal Zone Government; Dr. Francis G. Wilson, author and political scientist; Ralph Townsend, author of books on transpacific affairs and former instructor of journalism at Columbia and Stanford Universities; Maj. Gen. Paul H. Streit, former president of the Gorgas Memorial Institute; Comdr. Homer Brett, Jr., historian general, Order of the Stars and Bars; and John R. Whit-

ney, deputy governor of the General Society of Mayflower Descendants.

The organizations represented by those present included the following: American Legion; the Filson Club of Louisville, Ky.; the Gorgas Memorial Institute of Tropical and Preventive Medicine of Washington, D.C.; the Jamestowne Society of Richmond, Va.; the Military Order of the World Wars, Washington, D.C.; the Scottish Rite Masons, Southern Jurisdiction, Washington, D.C.; the Societies of Mayflower Descendants, National and Local; the Sons of Confederate Veterans; and the Virginia Historical Society of Richmond, Va.

The officers of the Panama Canal Society for the year 1969–70 were Prof. Edwin J. B. Lewis, president; Brig. Gen. Herbert D. Vogel, vice president; and George L. Chapel, secretary and treasurer. Subsequent to the program, the following were elected as officers of the society: Brig. Gen. Herbert D. Vogel, president; Will G. Arey, vice president; and George L. Chapel as secretary and treasurer.

The Committee on Arrangements included James L. Hatcher, Comdr. William C. Humphrey, and Mr. Chapel. The program was of truly outstanding character. Preceded with a concert by a section of the U.S. Marine Corps Band, under the direction of Drum Major James R. Donovan, it was opened with the national anthem splendidly sung by Madame Patricia Bruchalski, mezzo-soprano of Baltimore, accompanied by the band, an invocation by Dr. Elson, and the Pledge of Allegiance to the Flag, led by Mr. Chapel, with professor Lewis presiding.

An interesting feature was the presentation of a huge birthday cake baked by Mrs. Charles Havlena with a slice for everybody present.

Expressions of regret, with congratulations included communications from Speaker JOHN W. MCCORMACK of the House of Representatives; Senators JOHN SHERMAN COOPER and MARLOW W. COOK of Kentucky; Representatives DANIEL J. FLOOD of Pennsylvania, LEONOR K. SULLIVAN of Missouri, and ROGERS CLARK B. MORTON from Maryland; former Panamanian Ambassador to the United States, Roberto Heurtematte, and many others, including a cablegram from Count H. d'Angerville, internationally famed genealogist of London.

The testimonials and awards for Governor Thatcher were many and of exceptional character. Those from the Isthmus, presented by Mr. Runnestrand as the special representative of Gov. Walter P. Leber of the Canal Zone were:

Certificate designating Governor Thatcher as Honorary Governor of the Canal Zone.

Night picture in color of the Thatcher Ferry Bridge.

Album containing pictures relating to Governor Thatcher's 60 years of Canal Zone associations, including visits by him and wife in recent years to the Isthmus.

Pen and pencil set mounted on historic wood.

Serving tray of tropical timber containing a mola made by San Blas Indian women.

Honorary public service award for 60 years service to the Panama Canal.

Special letters from Governor Leber with reference to Governor Thatcher's public services for which he will receive when minted the first gold medallion under the recently created Panama Canal Public Service Award.

Deputy Gov. John R. Whitney of the General Society of the Mayflower Descendants addressed the gathering briefly, referring to Governor Thatcher's service for seven terms as Governor of the District of Columbia Mayflower Society, as counsellor general of the General Society, and now as its honorary life counsellor general.

Another testimonial was the reading of a fine letter of commendation and congratulations from Gov. Louie B. Nunn of Kentucky, accompanied by the Governor's commission designating Governor Thatcher as a "Kentucky Colonel," both presented by Mrs. Franklin C. Mason of Frankfurt, Ky.

Mr. President, another feature was the announcement by Admiral Galloway that a history of the Gorgas Memorial Institute and Laboratory soon to be published is dedicated to Governor Thatcher and I ask unanimous consent that the dedication of this book be printed in the RECORD at this point in my remarks:

There being no objection, the dedication was ordered to be printed in the RECORD, as follows:

DEDICATION

This volume is affectionately dedicated to the Honorable Maurice H. Thatcher, distinguished public servant, Governor of the Panama Canal Zone 1910–1913, friend and wise counselor to Maj. General William Crawford Gorgas, member of the United States House of Representatives from the State of Kentucky 1923–1933, author and sponsor of the legislation which provided the first appropriation for the George Memorial Laboratory, Honorary President and General Counsel of the Gorgas Memorial Institute, Vice President 1948–1969, member of the Executive Committee, and strong advocate and staunch supporter of the Gorgas Memorial Institute and the Gorgas Memorial Laboratory for over 40 years.

Mr. THURMOND. Mr. President, the climactic testimonial was a letter of appreciation from the President of the United States read by General Vogel, vice president of the society, and I ask unanimous consent that it be printed in the RECORD at this point in my remarks.

There being no objection, the item was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, August 5, 1970.

Hon. MAURICE THATCHER,
Washington, D.C.

DEAR GOVERNOR THATCHER: Several days ago, H.R. 7517, a bill to provide for increased payments for certain former employees of the Canal Zone, came to my desk for signature. Since your term as Governor of the Canal Zone covered the period in which the Panama Canal was constructed, I know this legislation is of particular significance to you. For this reason, I am pleased to send you the enclosed pens to commemorate my signing this legislation.

I have also noted that you will celebrate your 100th birthday on August 15. Mrs. Nixon joins me in sending our best wishes and congratulations on this special occasion. We hope you have a most happy and memorable day and that the year ahead will bring you continued joy.

With warm regards,

Sincerely,

RICHARD NIXON.

Mr. THURMOND. Mr. President, the principal addresses were by a panel of speakers with outstanding qualifications to deal with the subjects assigned them:

Capt. Miles P. DuVal, Jr., distinguished historian of the Panama Canal and one of the Nation's leading authorities on interoceanic canal problems.

Dudley C. Bayliss, former Chief of Parkways of the National Park Service and a recognized authority on our Government's activities in the planning and development of our national parkway systems and related activities.

Prof. Richard B. O'Keeffe, former research associate for the Foreign Relations Commission of the American Legion specializing in Panama Canal history and interoceanic canal problems, who is now the assistant director of the library of the George Mason College of the University of Virginia.

The finale of the program was a moving response by Governor Thatcher followed with the singing by Madame Bruchalski, accompanied on the piano by Howard R. Thatcher, well known musician and composer of Baltimore, of one of the governor's poetic compositions, "Come You Back to Panama," to the melody of Kipling's "On the Road to Mandalay."

Following the celebration at the Cosmos Club, another feature of the day for Governor Thatcher was the reception for him by the Society of Mayflower Descendants in the District of Columbia on the beautiful lawn of the home in nearby Kenwood, Md., of Col. Frederick J. Ordway, Jr., the present governor of the local society, and Mrs. Ordway.

Features of the Ordway reception were the presentations to Governor Thatcher of a scroll bearing the names of all those in attendance and a handsome china crystal goblet, a souvenir of the celebration of the current 350th anniversary of the landing in December 1620 of the Pilgrims at Plymouth Rock.

In order that a suitable record of the August 15, 1970, historical program of the Panama Canal Society of Washington, D.C., be made available to the Nation at large, especially for research institutions, I ask unanimous consent for its principal parts to be printed at this point in the RECORD as follows:

First. Invocation by Dr. Edward L. R. Elson, S.T.D., Litt. D., LL.D., Chaplain of the U.S. Senate.

Second. Maurice H. Thatcher: "Dedicated Universal Man," by Capt. Miles P. DuVal, Jr., U.S. Navy, retired.

Third. Maurice H. Thatcher: "Conservationist Par Excellence," by Dudley C. Bayliss, Chief of Parkways, National Park Service, retired.

Fourth. Panama Canal: "Historical Prelude," by Prof. Richard Bennett O'Keeffe, George Mason College of the University of Virginia.

Fifth. Response of Gov. Maurice H. Thatcher.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

INVOCATION BY DR. EDWARD L. R. ELSON

Let us pray. Almighty God, Creator, Preserver, and Redeemer of Mankind, unto to Whom men of all ages have lifted up their hearts and hands in prayer, we give Thee hearty thanks for this good land that Thou has given us for our heritage, for the hero's valor, patriot's devotion, the toil of hand and mind by which we have become great and strong. We thank Thee for all of the natural resources and all the human resources with which Thou hast blessed us. Make us ever mindful of Thy favor, obedient to Thy laws and glad to do Thy will. We give Thee thanksgiving for this occasion which brings us to this hour, especially for him whom we honor, for the great length of his service to mankind, for all the good and gracious influences which have flowed from his life into the lives of others and made the world richer, for his high service to this nation, and the nations beyond. We give Thee thanks. Grant to him, we pray Thee, sacred memories and hallowed recollections and the knowledge of work well done. Guide us through this, our noonday meal, blessing our fellowship and our food. Make us ever mindful of the needs of others. In the Redeemer's Name we pray. Amen.

MAURICE H. THATCHER: DEDICATED UNIVERSAL MAN

(By Capt. Miles P. DuVal, Jr.)

Mr. President, Members of the Panama Canal Society and Distinguished Guests:

The celebrated English philosopher, Francis Bacon, in his *Essay*, "Of Youth and Age", made this significant statement: "A man that is young in years may be old in hours if he have lost no time; but that happeneth rarely."

The one whom we honor today is a leader whose life has illustrated the truth of Bacon's observation; and more. Born in Illinois, where his parents were temporarily domiciled, on August 15, 1870, and reared in western Kentucky, both of which states were once countries in Virginia when the Old Dominion extended from the Atlantic seaboard to the Mississippi, the Honorable Maurice H. Thatcher has ancestral lines tracing back to early colonial days and beyond. They include William Brewster, one of the passengers on the Mayflower and the spiritual leader of the Pilgrims.

Educated in public and private schools in Kentucky and having an aptitude for literature at an early age, he learned the art of printing in the composing room of the Butler County newspaper. Just after this, he was employed in the county offices. Thus acquiring at the start of his career the habits of close application, industry and integrity, he set high standards of performance for himself.

Recognized as a man of promise, young Thatcher, after reaching his majority, was elected Clerk of the Circuit Court of Butler County in 1892, and started the study of law. After three and a half years, he resigned and moved to Frankfort, the Capital of Kentucky, for a position on the staff of the State Auditor, continued his studies in law, became a licensed attorney, and was appointed in 1898 as the Assistant Attorney General of the State.

On the conclusion of this service, the youthful attorney went to Louisville in 1900 and, after a while in the private practice of law, was appointed in the year following as the Assistant United States District Attorney for the Western District of Kentucky. He soon established himself as an able and fearless prosecutor, and served in that position until 1906, when he again resumed his law practice in Louisville.

In 1908, Mr. Thatcher was chosen as the State Inspector and Examiner for Kentucky. During his two year tenure in this position, he had invaluable experience in the study of many aspects of civil government, especially in the operations of charitable and penal institutions, and in unprecedented collections of delinquent funds due the State. His investigations led to many reforms, including the abolition of flogging in the prisons.

An outstanding political activity by him during the Frankfort period of his life, was as chairman of the successful and historic campaign of former Governor William O. Bradley for election by the State Legislature to the United States Senate.

Following the resignation of the member of the Isthmian Canal Commission then functioning as Governor of the Canal Zone, President Taft began a search for a qualified successor. Mr. Thatcher's experience in Kentucky had made him a "natural" for the position, and on April 12, 1910, the President appointed him as a member of the Commission with special assignment as Head of the Department of Civil Administration. On May 6, with his bride of two days, the gifted former Anne Bell Chinn of Frankfort, he sailed from New York for the Isthmus on the old S.S. Panama.

For more than three years in the new office, he functioned both as a Member of the Isthmian Canal Commission, and as the civil Governor of the Canal Zone at the time of peak construction, and took full advantage of the opportunities thus afforded.

Making frequent inspection trips along the line of the canal and the surrounding areas, he saw the Atlantic and Pacific locks take shape; observed vast land slides in Culebra Cut; watched Gatun, Pedro Miguel and Miraflores Locks slowly rise, arranged for the acquisition of needed additional lands in the Republic of Panama for lake purposes; and observed Gatun Lake grow from a body of water no larger than a mill pond to what was then the largest artificial lake in the world, making islands out of mountains and providing the summit level channels for the Panama Canal from Gatun to Pedro Miguel.

Along the significant occurrences witnessed by Governor Thatcher during his Canal Zone career was the first nonstop transcontinental airplane flight. That event took place on April 27, 1913, when a small sea plane piloted by Robert G. Fowler flew from Panama Bay to the Atlantic entrance of the Canal. The observation of that historic flight was to bear important fruit in the future.

Governor Thatcher's Isthmian achievements, which reflected his previous public services in Kentucky, include matters of historical interest in the Canal Zone. He was the—

1. First to recognize the evils of flogging convicts and to abolish that practice.

2. First to institute a system of rewards and denials to prisoners as an instrument for enforcing discipline—a program that reduced infractions by fifty per cent in six months.

3. First to use prison labor in the Canal Zone for the construction of highways, some of which are still in use and have served as models for road building in other Latin American countries.

4. First to introduce the teaching of Spanish in Canal Zone public schools.

5. First to enforce the Mann Act in the Canal Zone, and, by such enforcement, to send a number of notorious criminals to prison.

6. First to draft a comprehensive vehicular traffic code for the Canal Zone, which was enacted into law by the Isthmian Canal Commission.

7. First to bring about the abolition of saloons in the Canal Zone, which had become a menace, especially to our soldiers stationed there.

Of the many close associations developed by Governor Thatcher in the Canal Zone, one of the most satisfying was that with Colonel William C. Gorgas, the celebrated sanitarian whose work made the Panama Canal possible.

Among the various responsibilities of the Governor was the conduct of all the relations of the Isthmian Canal Commission with the Republic of Panama and the representatives of other countries accredited to Panama. In these duties, which included health and sanitation to the terminal cities of Panama and Colon and contiguous Panamanian areas, Governor Thatcher always exemplified the principles of the good neighbor. No request of any character by him to Panamanian authorities was ever refused.

After a change in the national administration in Washington, Governor Thatcher, as of August 18, 1913, resigned his position after more than three years of eventful service, for which he was warmly commended by Secretary of War Lindley M. Garrison and President Porras of Panama. At the time, he had no idea of what an impact his Isthmian experiences had made on him, or what would later unfold from them.

Returning to Louisville in the fall, he again took up the practice of law and assumed an active role in politics and in 1917 became a member of the city's Board of Public Safety for two years. In 1919, he was appointed as department counsel for Louisville and served in that capacity for four years with outstanding success.

In 1922, he was elected to the Congress as the Representative from the Louisville District. He was re-elected four times, serving from March, 1923 to March, 1933. Throughout his Congressional service, he was a member of the powerful House Committee on Appropriations, with assignment to the Subcommittee for the Treasury and Post Office; also to the Subcommittee for the District of Columbia. In these capacities, Congressman Thatcher's services were of eminent distinction.

He was a principal leader in establishing our air mail services, foreign and domestic, a contribution that traces back to his witnessing in 1913 of the Fowler flight across the Isthmus that had inspired him to believe in the future value of aviation for mail and general transportation purposes.

He was the author of the 1928 legislation providing for the establishment, maintenance and operation with Federal appropriations of the Gorgas Memorial Laboratory in Panama City, for which the Republic of Panama granted the necessary land and original buildings. Under the Thatcher Act this laboratory has become the outstanding institution in the world dealing with research in the field of tropical diseases.

He contributed greatly in securing legislation for the conversion of the temporary World War I Camp Knox into the major permanent military post of Fort Knox, which included the construction of storage facilities for the metallic monetary reserves of the United States. In this effort, he worked closely with General Douglas MacArthur, then Chief of Staff of the Army, and fully recognized the splendid qualities of that great soldier.

He was the author of, or a key leader for, legislation for important projects, among them the following:

Construction of the George Rogers Clark Memorial Bridge at Louisville under pioneer fiscal legislation that resulted in its ultimate freedom from tolls; and which legislation has ever since served as a model throughout the nation.

Manufacture of braille books and apparatus for blind pupils of the United States.

Construction of Ohio River navigational improvements.

Construction of a new Federal post office, customs and court building and a new marine hospital in Louisville; also a veterans' hospital at Lexington.

Construction of the Madden Dam Project in the Canal Zone that has supplied more water for lockages, generated additional power, controlled floods, and improved navigation for the Panama Canal.

Establishment of the free Thatcher Ferry across the Pacific Entrance of the Canal at Balboa and of the Thatcher Highway connecting the ferry with the Inter American Highway system in Panama. The ferry operated from 1932 for a period of thirty years transporting millions of passengers and vehicles.

Also, he was the author of the kidnapping law for the District of Columbia, which is still in effect.

In recognition of the Governor's contributions for Pan Americanism, President Hoover, in 1930, named him to a special mission to present to the people of Venezuela at Caracas a statue of Henry Clay—the great protagonist of Latin American independence.

Especially notable in his Congressional career were his effective services in support of National Park systems and historic shrines, for which he came to be widely known as an effective conservationist. The story of his achievements in this field will be given by another speaker.

After leaving the Congress in 1933, Governor Thatcher entered into the practice of law in Washington. Because of his knowledge of the Isthmus and authorship of the legislation for the Gorgas Memorial Laboratory, he was chosen first as General Counsel and then as Vice President and General Counsel of the Gorgas Memorial Institute of Tropical and Preventive Medicine, which supervises the work of the Laboratory in Panama. He held these two positions from the late 1930's to September, 1969.

Through the years following his retirement from the Congress, he has been chiefly responsible for obtaining much Congressional legislation for the benefit of the Canal, its employees, the Laboratory and the Isthmus of Panama.

His latest effort in this general connection was his effective support in the 91st Congress for beneficial legislation for retired alien employees of the Canal, chiefly West Indians. All of the many services rendered by Governor Thatcher following his retirement from the Congress have been of humane character and without financial compensation.

When the time came in 1950 for the election of General Gorgas to the Hall of Fame for Great Americans, Governor Thatcher played an important role in securing that signal honor for the great sanitarian of Cuba and the Isthmus in a field of eminent competitors.

Since World War II, the problems of the Panama Canal have been the subject of extensive debate. Governor Thatcher recognized the pattern of events as repeating the Canal struggles in the early 20th Century, saw their implications for the United States, Panama, and the entire Western Hemisphere, and has urged policies derived from reasoned lines of thought.

Invited to the Canal Zone by our Government for special occasions, the Governor has participated in the following ceremonies:

March 31, 1954. Dedication of the Goethals Memorial.

October 27, 1958. Centennial of the Birth of Theodore Roosevelt.

October 12, 1962. Dedication of Thatcher Ferry Bridge.

August 15, 1964. Celebration of the 50th Anniversary of the opening of the Panama Canal, including the unveiling of the memorial to the builders of the Panama Canal.

The Governor's contribution has not been limited to material achievements. He has honored, and continues to honor, the Panama Canal, the Isthmian area, and Kentucky with impressive writing in prose and verse, much of it of universal character, which will be read for generations to come. He has studied, and still studies Panama Canal history and problems, especially the parts played by the great leaders in its design and construction.

In the course of his long career, Governor Thatcher has received many honors, including the highest civil orders of Panama, Ecuador and Venezuela. Here it may be added that he and Mrs. Thatcher visited five continents, including North America, and became one of the most traveled couples of their generation.

One of the greatest distinctions ever bestowed by the United States on those responsible for the construction of the Panama Canal was the naming in 1961 by Act of Congress of the magnificent new bridge across the Pacific entrance of the Canal at Balboa as the Thatcher Ferry Bridge, which was opened on October 12, 1962, to replace the Thatcher Ferry. The next day, the United States honored the memory of former Chairman and Chief Engineer, John F. Stevens of the Isthmian Canal Commission, the basic architect of the Panama Canal, by the naming of the traffic circle in Balboa as Stevens Circle and in the unveiling on it a monument to that great engineer. Governor Thatcher attended both of these events. In all but the 1962 and 1964 ceremonies, Mrs. Thatcher (deceased in 1960) accompanied him.

When the time came in 1968 to organize the John F. Stevens Hall of Fame Committee to sponsor the election of Stevens to that great honor, the Governor was selected as the senior Honorary Chairman and has effectively supported the movement for Stevens as he did for Gorgas.

In 1969, at the annual meeting of the Gorgas Memorial Institute, Governor Thatcher was elected as its Honorary Life President, a position previously occupied by Presidents of the United States from Coolidge to Johnson and was re-elected as its General Counsel; which positions he yet holds.

Adhering through his life to the high standards that he set for himself in his youth at Butler County in Kentucky, he has had a career that should be an inspiration to present and future generations.

On this occasion, which arouses so many memories and so much thought, there can be no higher tribute to this dedicated universal man than to paraphrase Bacon by saying that one in advanced years may be young in spirit if he has lost no time in keeping his mind sharp with constructive endeavor.

MAURICE H. THATCHER—CONSERVATIONIST PAR EXCELLENCE

(By Dudley C. Bayliss)

Mr. President, Governor Thatcher, Members of the Panama Canal Society, distinguished guests and friends:

My wife and I are greatly pleased and honored to be invited to this happy Centenary birthday gathering in honor of Governor Thatcher, whom we have known and loved for many years.

Because my professional architectural and landscape architectural career of 33 years has been with the National Park Service, and has been concerned almost entirely with the development of national parkways in the eastern part of the country, I am most familiar with those activities of Governor Thatcher concerned with the conservation and protection of our nation's scenic, historic and recreational resources. In this field he has been active and most effective over a period of many years both in and out of Congress. A mention of some highlights of his accomplishments, I think, will confirm the value of his distinguished contributions to this country's permanent and everlasting conservation treasury.

During his years of public service from 1912 to 1933 in the House of Representatives, in addition to many other important legislative accomplishments, Governor Thatcher was the author of, and steered through the Congress, the Acts for the creation of Mammoth Cave National Park; the permanent improvement and perpetual maintenance and operation of the Lincoln Birthplace farm—now designated the Abraham Lincoln Birthplace National Historic Site; and the creation of the Zachary Taylor National Cemetery, consisting of about 20 acres including the old Taylor burial ground and a new and handsome mausoleum to house the remains of President Taylor and his wife. All of these scenic and historic sites are in Kentucky.

In 1931 Governor Thatcher organized the Eastern National Park-to-Park Highway Association and was then elected and has ever since served as its President. This Association promoted and secured the improvement of existing highways linking up national parks and other scenic and historical areas. The basic soundness of this conception has been demonstrated in the suceeding years when independent studies made by National Park Service-Bureau of Public Roads survey teams have designated routes for new national parkways in close proximity to many sections of the 1931 plan.

As time went on Governor Thatcher recognized the ever increasing volume of truck traffic, commercial roadside development and billboards on these existing highways. He was also aware of the nearing completion of two pioneer large scale national parkways, the Blue Ridge and the Natchez Trace, with truck free, scenically protected park-like roadways being developed exclusively for passenger car use and pleasure travel. He therefore advocated a similar national parkway linking The Blue Ridge and Natchez Trace by way of Great Smoky Mountains National Park, Cumberland Gap National Historical Park and Mammoth Cave National Park as a logical and desirable improvement over the corresponding portion of the Eastern National Park-to-Park Highway, thus closing the gap between these two national parkways and providing a continuous national parkway and park road of over 1530 miles from Front Royal, Virginia to Natchez, Mississippi.

A Survey of such a national parkway has been the objective of legislation initiated by Governor Thatcher and introduced in several successive Congresses by United States Senator John Sherman Cooper and Representative Eugene Siler, both of Kentucky. In 1964 the National Park Service, on the basis of Governor Thatcher's and Congressional recommendations, initiated a feasibility study, with engineering assistance furnished by the Bureau of Public Roads.

As Chief of Parkways, I had the privilege of being in charge of the National Park Service activities on the study. The study was made by detailed investigation of several routes, topographic map and aerial photographic study. It proceeded intermittently as funds and circumstances permitted and the report was completed in 1967. Governor Thatcher contributed many valuable suggestions during the study and in the preparation of the report. Publication and filing of the report has been held up, unfortunately, since that time due to budgetary considerations. It would be most desirable for this report to be submitted to the Congress at an early date.

The study disclosed that such a national parkway, to be known as the Cumberland Parkway, would have unique and unusually fine recreational potential in addition to its rich variety of scenery. It would traverse mountain regions embracing national and state parks and forests, lakes and large reservoirs, rivers, sections of blue grass country, pioneer and historic areas, ancient Indian village sites, wilderness trails, stu-

pendous underground caverns and areas of pastoral beauty interspersed with far flung vistas and panoramas. Consistent with national parkway principles the route would bypass cities and follow the most scenic location, providing full opportunity for picnic areas and overnight camping and lodge sites.

The Cumberland Parkway would extend about 450 miles from Great Smoky Mountains National Park in Tennessee through Kentucky via Cumberland Gap National Historic Park and Mammoth Cave National Park and passing near the Abraham Lincoln Birthplace National Historic Site to the Natchez Trace Parkway south of Nashville, Tennessee. More importantly, it would close a gap between the 470 mile Blue Ridge Parkway, now virtually completed, and the 450 mile Natchez Trace Parkway, about three fourths complete. It would thereby provide an overall continuous national parkway and park road more than 1530 miles in length, free from trucks and billboards, from the north end of Shenandoah National Park near Front Royal, Virginia, to the southern end of the Natchez Trace Parkway at Natchez, Mississippi. It is a vital link in this eastern system of national parkways and park roads within easy access of the most populous section of our country.

Governor Thatcher's most recent conservation efforts extending over several years have also been directed toward the establishment of the Plymouth Rock National Memorial, embracing some 12 acres surrounding the famous landing place of the Pilgrims in 1620 in Plymouth, Massachusetts. He has been very active on this project all during his service as Honorary Life Counsellor General of the General Society of Mayflower Descendants. It now appears that legislation to establish the Memorial, which has been introduced in the Senate and the House, should shortly be enacted due largely to Governor Thatcher's efforts in its behalf.

In all of these conservation achievements, which have been carried on at his personal expense, with no reimbursement, Governor Thatcher has displayed unflagging enthusiasm and encouragement, unlimited patience and the rare ability to make lasting friendships with all parties concerned. He has acted as the catalyst in keeping things and people moving toward the final goal. The National Park Service and the people of the nation have been most fortunate to have this rare and devoted interest directed toward preserving the intrinsic character of our rapidly vanishing landscape and history.

In brief it may be said of him that he is one of the nation's finest and most effective conservationists.

I might mention an example of the great strength and dedication this man possesses. Last fall, while he was hurrying to get some papers together prior to attending the Triennial Congress of the General Society of Mayflower Descendants of Plymouth, Massachusetts, he fell and cut his head severely. Despite his serious injury he was able to staunch the flow of blood, summon a conveyance and go to the hospital where many stitches were required to close the wound. Fortunately no fracture was involved. The very next day he took off by automobile for Plymouth, where he presided over a ceremony in dedication of a memorial of his ancestor Elder William Brewster of Mayflower fame, as though nothing had happened! A superhuman effort even for a man half his age? Yes, but remember this descendant of Charlemagne and William the Conqueror is no ordinary man!

In addition to his administrative, legislative and conservation abilities, Governor Thatcher has a fine literary talent in the field of poetry. With his permission I would like to conclude by reading one of the many poems he has written concerning the major national parks. I believe this an eloquent expression of the deep and abiding love this wonderful man has for the crown jewels of our nation. It is titled:

"OUR NATIONAL PARKS

"Our National parks are bits of Paradise,
Created by the hand of God, to be
What man, at length, has come to realize
As Nature's richest realms, untamed and free,
And full-designed to serve his need and pleasure;
And therefore set apart. The terrains vast,
Of awesome majesty in matchless measure,
Are vested with a beauty unsurpassed.
These mountains, hills, streams, lakes, and sea-washed zone;
These mighty chasms and buttes, all irishued;
These boundless, sculptured caverns, deep and lone;
Woods, groves, and monarchs with deathless life endued,—
Combine into a wondrous, magic whole
Of healing for the body, mind, and soul."

PANAMA CANAL: HISTORICAL PRELUDE

(By Prof. Richard Bennett O'Keeffe)

Mr. President, members of the Panama Canal Society, distinguished guests, ladies and gentlemen, in the world of today, there is struggle. There is peace. This is the year in which young Poles hone their wits with conundrums such as: "What was the most important event in international affairs in the year 1875? Answer: Lenin was five years old." Two men saw daylight in that year 1870. One, Vladimir Ulyanov, knew struggle but no peace. Indeed, in a manner almost diabolical, he brought to the planet a permanent social malignancy that ails the world still, 47 years after his death. The other man, whose centenary we are so proud to honor today has known peace and has won, in his distinguished service, our most profound respect and gratitude.

This afternoon, in a most informal way, I would like to pass along to you some observations, the fruit of my studies of the great achievement that belongs to President Theodore Roosevelt, John F. Stevens, Colonel Goethals, but most fittingly, in this happy occasion's context, to Governor Thatcher.

Ladies and gentlemen, that man I first mentioned, V. I. Lenin, nee Ulyanov, left so many vicious legacies that you may wonder at my adding the accusation of corrupting the mother tongues of many peoples. Please bear with me, however, and I believe we can journey together to where we may see a little more clearly, the greatness of the Panama enterprise. Lenin and his fellows have degraded our language, specifically with the capture and misuse of the word "exploitation." Now I *could* proffer a detailed etymological defense of "exploit," citing the *Oxford English Dictionary* derivation from the Latin verb for "to unfold"; or I could pursue the historical analysis and reveal to you *that* time, not so long ago, when "exploit" denoted a deed of great bravery or the valorous achievement of some most difficult undertaking. No longer: along with "square" and "charity" and "law and order," the word "exploitation" has come to have a prejudicial meaning.

Comrade A: Tell me, comrade, what is your definition of capitalism?

Comrade B: Gladly, capitalism is the exploitation of man by man.

Comrade A: And what is your definition of socialism?

Comrade B: Just the other way round.

It is my conviction that the achievement at Panama is an "exploit," an exploitation of the natural resources of the new world which is worthy of our deepest admiration and emulation. I shall try to develop in my talk this theme, that the Isthmian bridge is "positive exploitation."

Using the term "Isthmian bridge" may fall upon your ears as bombast. Still, before there was a canal, the bridge across this narrowest strip of Isthmian land was on rails; and before the achievement of 1855, back in the days of the almost legendary exploits of "los cristianos", this bridge transported the goods and treasure of the New and the Old Worlds on beasts of burden and in canoes to waiting caravels, thus saving about 8,000 miles of voyage distance.

The era in Panama which began with the heroism of Vasco Muñez de Balboa is extravagant in interest and fascination for anyone professing to study that region. The person and authentically documented character of the man makes him a natural for our sympathy. Whether in the chronicles of Oviedo[1] or in that excellent contemporary study of Kathleen Romoli's,[2] Balboa is hero. The terminal cities of today's Panama Canal are Colon (as you know, the Spanish name for Columbus) and Balboa. Cut through the poesy and romantic historigraphy, Balboa was the grandest and most successful of Spain's conquistadors, in the sense that measurably accounts for Spain's long rule in present day Latin America. With something fewer than 100 men, Balboa departed from the original Castillian settlement of Tierra Firme, Darien, crossed the Isthmus from Acla to the Gulf of San Miguel and returned through the territories of many Indian tribes, almost always at peace, without enslaving or destroying these tribes, and ending after four months back at Darien with a considerable amount of collected gold. We tend to overlook the Balboa, the archetype of the benevolent conquistador, because of the importance of his discovery of the western shore of the Pacific, then called the "Great Southern Sea."

If the humane opening of Panama by Balboa was negated by his successors, and historians are pretty well agreed that it was, nevertheless the results of his explorations were immense for the Western world . . . for the world. The 66 men who stood in the rip tide on September 26, 1513 and claimed for the Catholic majesties the lands and islands of the Pacific, may be seen by shallow observers as Quixotic braggarts. I suggest, on the contrary, that the force, the spirit which brought such a tiny band to make so great a claim represents the finest moment of an exuberant Spanish *elan*, a glory to all the world. With the failures, the setbacks and the disappointments that Spain's three centuries in America suffered, the effort, that crusade if you will, that explosion of arms, pious purpose and culture are historically established and, in a pleasing way, expose the fallacy and fraud of Marxism and determinism. Thousands of unsung Balboas, these Iberian pioneers, by their courage, faith and perseverance establish the claims for all time.

Charles V, Holy Roman Emperor, and his great-grandson, Philip IV of Spain, each had an "impossible dream." To take the latter first, there appeared in 1958 a curious account of the claim, put forward at the court of the Escorial, a claim to the moon for Spain.[3] The 16th century argument for this sovereignty was based on the plausibility of the King's claim to that which his subject astronomer saw in topographic detail through his newfangled telescope. In any case, the learned men of Charles V's court could see, in the sense of appreciating the tremendous opportunity a canal at Panama would afford the trade and commercial exploitation of the world, could see but . . . there simply was no way, in the technology of that world, for mankind to realize the proposal. This dream came to fulfillment in the minds and at the hands of other peoples.

The next hands to visit Panama, were, as you know, rather more ferocious, the great buccaneers and captains of Britain, Drake, Morgan *et al.* The United Kingdom's positive contribution to the exploitation of the region came in two instalments: the generalised Pax Britannica of Victorian times which promoted a great increase of marine trade, and secondly, the diplomatic initiative which, in

---

Footnotes at end of article.

the Hay-Pauncefote Treaty of 1901, gave the United States its unique opportunity to build the Panama Canal.

But this is running a bit ahead. Go back mentally to the 1820's when our still struggling Republic was with difficulty attempting to secure its enormous "Great American Desert" [that portion of the Louisiana Purchase West of the 100° of Longitude]. At that time in Europe a universal man, a genius, old in years only, pondered the correspondence he had accumulated with Alexander von Humboldt, the physiographer. Johann Wolfgang von Goethe pored over charts and sketches and "wrote enthusiastically of the duty of the United States to open" such a canal.[4] I quote from a recent biography:

"But he is always interested to hear about what is going on in England, France, or distant America, in Russia or China. He hears of great projects, of proposed canals at Panama and Suez, of plans for huge harbors. In his old age his thoughts roam far over the seas . . ."[5]

However, many men there were, great or small, who desired the construction of a Panama Canal, the first true step toward its realization, the railroad across the Isthmus, came twenty years after Goethe's plaintive prophecy. Those who have read Captain DuVal's fascinating account of "The Two Streaks of Rust in the Jungle" are well aware of the fascinating history of the development of the Panama Railroad.[6] It seems to me, knowing something of the world of research, that a rich field of graduate and scholarly research lies in the history of this enterprise. First I would suggest the genesis and development of the Panama railroad: that is, the interaction of the visionary John Lloyd Stephens and the businessmen William Henry Aspinwall and Henry Chauncey with the Congress and with the Polk and Taylor/Fillmore administrations. Or another and perhaps more rewarding research would be the effectiveness of the lessons taught by the rail building experience, the lessons for the engineers and planners of the Canal.

These lessons, at the stage of hypothesis, appear to be: 1) Although no excessive fatalities due to the nature of the Panamanian Isthmus are recorded for the rail construction, there would be climatological and medical factors limiting the use of a construction labor force, a work force very much larger for a canal than for a railway. 2) The region of Panama "possessed no important resources in labor, capital, material and food, but required importation of all these materials."[7] Finally, the United States would be embarked upon the decisive development of the Western Hemisphere.

Have we learned our lessons well? The answer to this lies partly in the future. But for that part of the question which is prologue, the answer is an unequivocal yes. The French nation, an industrious and intelligent people, stumbled badly because of the persistence of their great canal builder, Ferdinand de Lesseps in the planning of the Canal. And yet there is a distinct contribution to the Canal enterprise in Godin de Lepinay's original, ingenious suggestion of 1879 as to type of canal as well as in the later French Compagnie's efforts. So many contributed so much and in so many different ways; but De Lepinay's contribution was basic, and may yet be fully realized. So we can see that there is no straight-line progression of civilization's advance, neither on the Isthmus nor elsewhere. When the opportunity, a moment's duration in the span of history, arrived for the United States, the lessons of the 19th century were advantageously used by our leadership to build the Canal.

These applied lessons, and they were brilliantly pointed out by William Barclay Parsons as early as the year 1905[8] *are:* 1) the necessity for an enormous capitalization and long-term effort which all but a few great nations, if any, were capable of sustaining; 2) the vital necessity of rail transportation in constructing the Canal and corollary to this, the fact that John F. Stevens was essentially a railroad man has great significance in the development of the Canal, planning and construction stages; and 3) the need to import the overwhelming percentage of construction materials, together with the necessity of inducing large numbers of West Indian and European laborers to come to the Isthmus.

We are all familiar with the magnificent work of William C. Gorgas. There is no need in Governor Thatcher's presence, certainly, to repeat encomiums to the former's contribution to the Canal enterprise. But I wonder, in submitting these observations, if sufficient attention has been given to the sanitation work of Gorgas on the whole Isthmus. The 15,000 ocean-going ships which safely touch the ports of Colon and Panama are a tribute to all the builders of the Panama Canal, including the man we now honor. Imagine, if you will, the quarantine stringency which would have to be in force in Panama if "Chagres fever" and other tropical diseases still raged their deadly courses there.

It is fitting to conclude in poetry, this tribute to Governor Thatcher, poet and gentleman. First a poet's prose, again the great Goethe, had such men in mind when he wrote:

Here and now begins a new epoch of world history, and you sir(s), can say that "you were there."[9]

Finally, the last stanza of "Isthmian Heroes," written by Ford Lewis Battles under the stimulus of his World War II experiences on the Isthmus:

"Hail to those men who know each struggling hour
Of building; clearly see the present task;
Above confusing murmur, say with power,
'Not ended; let us ever build, not bask.' "[10]

RESPONSE OF GOV. MAURICE H. THATCHER

Officers and Members of the Society, Dr. Elson, Mr. Runnestrand and other distinguished guests, neighbors and friends:

It would be trite of me to say that I am overwhelmed by this observance of my centenary date; but I do thank all of you for the eloquence of your presence, and this includes the other speakers on this program. My earnest thanks also include Dr. Edward L. R. Elson, the distinguished Chaplain of the U.S. Senate for his splendid invocation; and to Col. Albert Schoepper, Leader of the Marine Band, the Commandant of the Marine Corps, Gen. Chapman; and also to the large segment of the Band, led by Drum Major Donovan, which has given us such a fine musical program.

In addition, I would express my earnest thanks and deepest appreciation to Gov. Walter P. Leber of the Canal Zone for the beautiful gifts and tangible tributes that have been brought here by my long-time friend, Paul M. Runnestrand, Executive Secretary of the Canal Zone government, who has made the presentation.

My thanks also go to Admiral Galloway, President of the Gorgas Memorial Institute of Tropical and Preventive Medicine, and to John R. Whitney, Deputy Governor of the General Society of Mayflower Descendants, for their greatly esteemed remarks.

Then, I would thank fellow officers of the Institute, who are in attendance, including the Institute's loyal and efficient Executive Secretary, Gloriela Calvo of Panama and Washington.

I am especially grateful for the presence here of those who have come from a distance including two nieces of my wife (now deceased), Mrs. James S. Darnell of Louisville, Kentucky and Mrs. Franklin C. Mason of Frankfort, Kentucky, the State Capitol, who has already appeared on this program as a personal representative of Louie B. Nunn, Governor of Kentucky, and has presented me with a very fine letter of congratulation and commendation from the Governor and my commission as a Kentucky Colonel. Also, I am pleased with the presence of two former loyal secretaries of mine, Mrs. Marcia Hoverson of Cape Cod and Mrs. Kay Leonard of West Virginia. My most earnest thanks go to Gov. Nunn.

In my extension of thanks and appreciation, I certainly wish to include Speaker McCormack and other members of the House and Senate who have written me on this occasion.

With deep emotion and heartfelt appreciation, I welcome the presence of a few of the oldtimers who helped to build the Panama Canal.

I am most grateful, indeed, to Capt. DuVal, widely known as an able historian of the Panama Canal enterprise and "occasional speaker," a term first applied to Daniel Webster many generations ago; to Dudley C. Bayliss, many years an official of the National Park Service with assignment as Chief of the National Parkway System; and to Prof. Richard B. O'Keeffee, former Research Associate of the Foreign Relations Commission of the American Legion, specializing in Panama Canal history and problems, and now a Staff Director of the Library of the George Mason College of the University of Virginia.

Then, we owe much to George L. Chapel, the tireless Secretary-Treasurer of this Society for his effective services in helping to make this event a success. Also, we owe Mrs. Charles Havlena thanks for baking a cake large enough to supply each of us with an adequate slice.

I note with appreciation the presence of John DeLay, accompanied by Mrs. DeLay, now occupying the post of National Parkway Studies.

I am sure we are all delighted with the singing of Madam Patricia Bruchalski, who sang The National Anthem with the Marine Band. Later, she will sing as a climactic feature of this program some verses from the poem I wrote a good many years ago, "Come You Back to Panama," set to the air of "On the Road to Mandalay" by Kipling. She will be accompanied at the piano by Howard R. Thacker, widely known musician and composer. Both are from Baltimore, and Madame Bruchalski is now singing there in summer opera.

The assemblage would probably like to know something of the reasons why I have lived beyond the age of three score and ten. I can only speak briefly in this connection.

I have sought to live temperately and with the practice of a simple dietary, based on my own experience, I have not indulged in "rebellious liquors," or anything in the way of food and drink that I thought would be in anywise deleterious. I have never tried to impose on others anything of my own habits; and my only advice to them has been to do what was best for themselves, based on their own experience. One man's meat may be another man's poison.

It might be apt for me to cite the story—old, but humorously apropos of my situation—of the old farmer who, in his 100th year, was asked by a reporter the reason for his advanced years. The answer was, "I'll tell you on next Tuesday what has caused me to tick—I am still dickering with two breakfast food outfits."

My own reasons are not quite the same as those of the old farmer. I never cared for publicity as regards my age. I retain in normal fashion, mind and memory; and my interests and desire for achievement have served to keep me young in thought and deed. Duty is, indeed, the chief consideration.

Luck and chance have much to do with our lives. I've had my share of luck, good and bad.

Whatever one may have of success is largely due to the help of friends. This has been especially true in my own case: and in every effort which requires support of many people, there is difficulty in determining who is entitled to the most praise. Thus, in the building of the Panama Canal and its operation, there is glory enough for all.

Always, I have held in first esteem, the Bible, with its moral and spiritual values; and next the works of Shakespeare, with his realistic mirror of life and glorious language.

By popular standards, I suppose I could very well say that I am self-made; but in this connection, I recall the observation of Josh Billings, a famous humorist of many years ago who said, "The trouble with a self-made man is that he is too proud of his creator." However, I am like Winston Churchill in one respect, I have picked up a few things as I came along.

I am constantly intrigued by the ancient, courageous appeal of Isaiah, "Here am I Lord, send me."

On the occurrence of my birthday last year, President Nixon wrote me a greatly appreciated letter of congratulations and referred to a featured article in the Washington Post concerning my anniversary which included a reference to my poetic endeavors. I have a sustained inclination in that direction, and have always found the writing of verse an excellent form of relaxation. Some of these poems have been published in magazines and newspapers of Panama and the United States; but I have given priority always to my public duties of official nature, and to subjects of humane and conservational character. As a result, I have never found time to collate and publish a volume of verse; and if I am ever to have any fame in this field, it will have to be of posthumous nature.

I do not know that I deserve any characterization as a "universal" man. I do have interests in every direction, but do not have any developed aptitude or versatility. I have long since reached the posture of objectivity and can see myself somewhat as "others see us." Thus, I have been able to work with others in various efforts, which have proved to be for public good and humane goals.

Through the years, in addition to my official service during the Canal construction era, in and out of Congress, I have been grateful for the opportunities that have come to me to render beneficial services to this, the greatest industrial enterprise of the ages, the Panama Canal, and its employees of every category; and the Isthmus of Panama. Also, the establishment and operation of the Gorgas Memorial Laboratory in prevention of tropical disease. The Laboratory chiefly operated and maintained by congressional funds—is now generally considered to be the chief institution of its kind in all the world.

Lacking special talents and skills in the arts and sciences, I have had, in more or less degree, the every day qualities of perseverance, patience and diligence; and although what I may have achieved may not yield any during recognition in history, I, nevertheless, believe that I have accomplished some things of value, worth and benefit to many people and regions. In my efforts, I have always been anxious to serve the "underdogs"—men and women who, through no fault of their own, are driven into want and need.

Some mention has been made concerning a recent bill, the enactment of which I aided, which was largely due to my catalystic efforts. Some modest workers in the Canal organization were fully supported by Gov. Leber in certain proposed legislation that would remove a cruel discrimination against them; but congressional enactment was delayed until recently when the Senate Armed Services Committee acted and the Senate passed the bill, without change or amendment, which the House had passed a year before. The bill was signed into law by President Nixon and the two pens used by him were given to me. One of these pens, I am sending to the Isthmus for delivery to these workers, mostly West Indian, and the other pen, I am retaining as the last of fifteen pens used by Presidents of the United States—Coolidge to Nixon—in the signing into law enactments by Congress for which I was directly responsible while in Congress, or largely responsible for after I left Congress. In his letter transmitting the pens, the President, joined by Mrs. Nixon, extended warm congratulations upon my centenary, and best wishes; and my deepest thanks are due him and Mrs. Nixon.

In connection with my efforts to aid "forgotten" employees, I may, I believe, appropriately refer to another beneficial act I sponsored in Congress, in behalf of another underdog class. The measure, in brief, was for the purpose of placing on the U.S. Treasury rolls, with uninterrupted employment—as was true of other Treasury employees—the faithful and efficient storekeeper-gaugers of the Nation. These neglected men have always been under Civil Service subject to call for duty, and not free to accept other employment; their work was intermittent, and their compensation very low, though their qualifications were of the highest order. This legislation gave them all-year employment, sick and annual leave, and all benefits long accorded to other Treasury employees.

In addition to what I have already expressed, as regards my philosophy of life, I may add that I believe man's divine mission is to go through an apprenticeship here to befit him for a nobler sequence. I am a believer in the Law of Compensation. The infinite hosts of the heavens were not created as ornaments or toys, but for the benefit of the human races wherever they may be. All and everything is governed by inexorable laws of eternal character. The races have tremendous responsibilities and must rise to meet them. Man has great potentials, but he has far to go. On this small planet, he has made great progress, and to science we owe much indeed. The miracle of today becomes the commonplace of tomorrow. The general condition, however, is at low tide; and we are plagued with unmatched violence and confusion. The law of mathematics has enabled astronauts to explore the orbits of space and stand upon the moon. My hope is that science may do much to serve our great need for moral and material betterment.

Order is Heaven's first law, and must be Man's, if ever he achieves his mission.

The divinest gift ever bestowed on Man is the Moral Principle; the greatest secular gifts, healing and redemptive, Mirth and Music.

Believing in ultimate good, I would submit the ancient query—"Eventually, why not now?" The moral and spiritual laws are as immutable as the multiplication table and the Ten Commandments. The past, indeed, is prologue and must be taken into account throughout the future.

Reverting to my Isthmian tenure, I recall the fact that my wife and I came to hold in highest respect and esteem the leaders who brought about the Panamanian Revolution of 1903, whereby Panama became an independent state. These were of the highest courage and patriotism, and their efforts were inspirational in the highest degree. We came to know them and their families, and the closest ties of friendship followed. No collective memorial has yet been erected in Panama, or elsewhere, commemorating their deeds and inscribed with their names. I would suggest that such a memorial, in bronze or granite, now be erected in Panama.

Reference has been made to my prosodic efforts over the years. It may not be inappropriate for me now to read a few of these poems. First, I quote from the poem entitled, "Builders of the Panama Canal," written some years ago and published in the Panama Press at the time of the 25th Anniversary of the formal opening of the Canal. The whole consists of thirteen 8-line stanzas, and I now give you the first and last two.

"BUILDERS OF THE PANAMA CANAL

"There were workers great, and workers small—
As judged by rank—in the Enterprise;
But glory enough there was for all,
And each was great to Seeing Eyes.
Let Fame take care that her Scroll be just,
And give to each his meed of praise—
Else, out of the Ashes and the Dust,
The Shade of Censure shall upraise.

* * * * *

The mountains moved, and the waters rose;
And Faith, at last, fulfilled her Dream:
Lake, Lock, and Channel—the whole World knows—
Attest the worth of a Hope Supreme!
The ships now shuttle from Shore to Shore:
Up, up, and up—and thence straight on;
Then three times downward—and on, once more—
Into the Sunset or the Dawn!
All were as one; and They strove and wrought
To shape the Passage to the Ind.
In terms of life it was dearly bought;
In money, cheap, The Ranks are thinned
By Time and Death; but the Deed They did
Excels all others of like and kind;
Its strength and virtue cannot be hid:
It lives—all tongues and lands to bind!"

"FRIENDSHIP

"Oh, Friendship is a flow'r of precious worth;
It bridges all the bounds of time and space;
Distance and years but yield it fairer grace,
It is the same in sorrow and in mirth;
Its vital strength has neither lapse nor dearth.
When one most needs to see its cheerful face,
Behold! tis there, in its appointed place,
Inspiring courage in a troubled Earth!
Aye, Friendship is a rare, eternal bloom;
It is indigenous to ev'ry breast:
Who stifles it does grossest violence
Unto himself. Its noble rays illume
Life's darken'd way. How truly is he blest,
Who lives within its sweet beneficence!"

"MUSIC

"Oh, give me music steeped in adagio;
Melodic strains of tenderest appeal;
Themes cadenced with soft minors to reveal
The heart's experience; the ebb and flow,
Within the soul, of treasured joy and woe!
Into my inmost being let there steal
Tomorrow's dream, and memories that kneel
At sun-blest altars of the long ago!

Language of the angels, and mother tongue
For all mankind; an universal key;
Common denominator of the Race;
True elixir that helps to keep Earth young;
The bridge of distance, time—dear harmony—
Noblest of arts, and richest in its grace!"

"AGE, YOUTH, AND TIME

"Why should men age, altho they must grow old?
Why doth not Time deal gently with his own?
And why should rosy Youth his bloom withhold
From those who unto ancientry have grown?
Tell me, I pray, why Time should leave his mark—
His stamp, indelible, on face and form?
And, for ripe years, tax me with tokens dark,
Wrought from Life's long and all-relentless storm?
Were I a tree I'd bear internal rings
To prove mine age—but they'd be hid from sight:
But, being man, my span most surely brings
Inward and outward witness of my plight.
Bid me grow old—Time's flight no strength can stay:
But keep me youthful till I've passed away."

"QUATRAINS: OUR BEST

"The Years go by more swiftly than of Yore,
When Youth was prone to dally on Life's shore
As if this Mortal Round would never cease,
And Good might nought deny us of her Stone.
Where are the Stars we long have sought to see?
And where the Selves we ever hoped to be?
Where are the dreamed-of rare and precious Goals;
And where our Passports for eternity?
Yet, when the Light shall wane within the West,
May we not count Ourselves as something blest,
If, one the Whole, in Justice we can say,
Our All, tho Little, was and is—Our Best?"

BUDGETING OF COUNTER PART FUNDS FOR SOCIAL REHABILITATION ASSISTANCE PROGRAMS IN FOREIGN COUNTRIES

Mr. PELL. Mr. President, the appropriation for the international research and demonstration program of the Social and Rehabilitation Service of the Department of Health, Education, and Welfare has been reduced by the House from $7 to $4 million for fiscal 1971, a cut of $3 million. I suggest that this reduction is not in the best interest of the Nation.

This program supports many activities in the field of health abroad that complement and supplement domestic programs of the Social and Rehabilitation Service.

Advances in medical practice and technology, derived from this program, have benefited hundreds of thousands of U.S. citizens. For example, many persons, including veterans of the war in Vietnam, have been helped by improved techniques in the fitting of prosthetic devices. Other examples could be cited in such fields as cardiovascular disease, handicapped children and vocational training for the handicapped.

In this current year studies are planned in such areas as aging in contemporary society, rehabilitation of the mentally retarded, and services to the disadvantaged handicapped. All of these planned studies are closely associated with the domestic priorities of the Social and Rehabilitation Service. This program represents a unique opportunity to gain vital information in these fields.

Besides gaining valuable data for the United States, this program has also greatly aided the health services of other nations at minimal cost. For example a decade ago there were only two centers in India where an amputee could receive an artificial limb. Since 1962 eight new centers have been started, equipped, staffed, and maintained. If the $3 million are not restored, the necessary curtailment of these needed health services will certainly not favor the U.S. image abroad.

Moreover, this program serves as a bridge of understanding to some nations with whom our relations have been strained. Egypt, for example, has extended more invitations for participation than many other countries. The personal contacts thus fostered cannot but help to improve U.S. relations.

I think it important to note that these benefits accrue to the United States at additional expense to the U.S. taxpayer. The so-called counterpart funds, used for this program, originated in payments for surplus U.S. agricultural products. By agreement these funds can only be spent in the host country.

The expenditure of these funds has absolutely no effect on inflation in this country, as no moneys of the United States are involved. As of December 31, 1969, the total amount of excess currencies available to the United States in the countries involved was equivalent to $1.6 billion; the amount requested is only $7 million.

These funds are useless if not spent in the host countries. In an article in The New York Times of Sunday, August 23, 1970, Dr. Howard A. Rusk has cogently supported the obvious conclusion that the original appropriation of $7 million be restored. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEALTH-FOR-PEACE CUT; ANY CURTAILMENT OF PROGRAM OPPOSED AS NOT HELPING THE FIGHT ON INFLATION

(By Howard A. Rusk, M.D.)

The battle of the budget continues in Congress with a heat that rivals the Washington temperature in August.

Those interested in the problems of health continue to present their views on the pain and anguish that any further budgetary cuts will bring in the fields of medical education, research and health facilities.

On the other side of coin, Administration leaders continue to fight for the budget cuts in the hope of combating inflation.

However, one budget cut recommended in the House and now being reconsidered in the Senate seems completely illogical as an anti-inflationary measure.

This is a proposed cut from $7-million to $4-million for the International Research and Demonstration Program of the Social and Rehabilitation Service. It would appear on the surface that this would mean a saving of $3-million.

ITEM CALLED MISLEADING

This, however, is completely misleading, for although the amounts appear in the record as United States dollars, they are really Polish zlotys, Yugoslav dinars, Indian and Pakistani rupee, Indonesian rupiahs, Guinean francs, Egyptian pounds and Moroccan dirhams and other assorted lots of counterpart currencies.

These are moneys that have accumulated to the United States as a result of sales of surplus agricultural commodities to these nations by the United States.

Since these nations could not afford to pay United States dollars for the commodities this Government agreed to accept payment in their national currency. The United States in turn, sponsors projects with the funds to improve the economy and health, rehabilitation and educational services in those nations.

These programs, which have been in existence for more than a decade, have been enormously successful and have cost this Government no dollars—they are "frozen assets"—by agreement. The funds must be spent in the host country.

The last figure available—for June 30, 1969—indicates that the United States Government hold the currencies of 71 countries in amounts totaling $2.135 billion.

India, for example, has a population of 500 million people. A decade ago, however, there were only two resources in all of India from which an amputee could get an artificial limb, and the limited number of limbs available were not of modern design and construction.

NEW CENTER STARTED

Using these "counterpart" funds, personnel has been trained, equipment ordered and eight new prosthetic-orthotic centers started since 1962. The plans were to start approximately two such new centers each year.

The average cost of training the personnel, purchasing equipment and supplies and maintaining the center until it becomes self-sufficient has been equivalent in rupees to around United States $15,000.

In 1962, with a grant in cruzeiros equal to United States $22,000, two four-month courses for bracemakers were held in São Paulo, Brazil.

These were so successful that the Pan American Health Organization and UNICEF sponsored three additional courses in both bracemaking and the making of artificial limbs.

As a result there are now 62 technicians in Central and South America working in 45 centers in 34 cities in 14 nations.

There are also pilot training centers throughout the world for the mentally retarded, speech and hearing clinics, mobile sight conservation clinics, vocational training for the emotionally ill, epidemiology of cardiovascular disease, and projects in tuberculosis and chronic obstructive lung diseases.

Efforts are made to select projects that may contribute to knowledge that will affect United States health and rehabilitation services.

POLISHED PROJECT CITED

The finest example of this was the development of a few years ago in Poland of a technique for the immediate or early fitting of artificial limbs that spectacularly reduced complications and the period of hospitalization.

The technique was introduced in the United States in a number of research and demonstration centers and has now become an accepted and most effective procedure. It is also being used in Vietnam.

Ironically, these projects, which have had great impact in the nations where they have been conducted, have been operated at virtually no cost to the American taxpayer. The action of the House in reducing the appropriation for this program means no saving at all to the American taxpayer.

It means only that these foreign currencies will continue to accumulate in New Delhi, Karachi, Belgrade, Warsaw, Cairo, Tunis, Rabat and elsewhere.

Even more tragic than the curtailment of needed health and rehabilitation services now being financed with the moneys is the

further downgrading of the American image overseas.

The Department of Health, Education and Welfare has sent representatives frequently to these countries, with the cost of their travel and expenses paid by counterpart funds, to stimulate the submission of applications for projects.

Now, unless Congress restores these funds, many applications will have to be rejected even though there are huge surpluses of such funds in many nations.

Today, the world-wide rehabilitation research and demonstration program is financing 83 projects in 13 countries.

The Health for Peace program has just celebrated its 10th anniversary. It would be tragic to see the program curtailed at this critical time, for its curtailment is simply not germane to the inflationary arguments.

RELIANCE ON NATIONAL GUARD AND RESERVE FORCES TO MEET THE REQUIREMENTS OF ACTIVE MILITARY FORCES FOR ADDITIONAL PERSONNEL

Mr. ELLENDER. Mr. President, on August 21, 1970, the Secretary of Defense, in a memorandum to the Secretaries of the military departments and other Department of Defense officials, established a new military manpower policy whereby the National Guard and Reserve Forces will be used to meet the requirements of the active military forces for additional personnel. In this memorandum the Secretary stated:

Guard and Reserve Units and individuals of the Selected Reserves will be prepared to be the initial and primary source for augmentation of the active forces in any future emergency requiring a rapid and substantial expansion of the active forces.

I ask unanimous consent that the memorandum be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C., Aug. 21, 1970.

Memorandum for Secretaries of the Military Departments: Chairman, Joint Chiefs of Staff; Director, Defense Research and Engineering; Assistant Secretaries of Defense; Department of Defense Agencies.

Subject: Support for Guard and Reserve Forces.

The President has requested reduced expenditures during Fiscal Year 1971 and extension of these economies into future budgets. Within the Department of Defense, these economies will require reductions in overall strengths and capabilities of the active forces, and increased reliance on the combat and combat support units of the Guard and Reserves. I am concerned with the readiness of Guard and Reserve units to respond to contingency requirements, and with the lack of resources that have been made available to Guard and Reserve commanders to improve Guard and Reserve readiness.

Public Law 90–168, an outgrowth of similar Congressional concern, places responsibility with the respective Secretaries of the Military Departments for recruiting, organizing, equipping and training of Guard and Reserve Forces. I desire that the Secretaries of the Military Departments provide, in the FY 1972 and future budgets, the necessary resources to permit the appropriate balance in the development of Active, Guard and Reserve Forces.

Emphasis will be given to concurrent consideration of the total forces, active and reserve, to determine the most advantageous mix to support national strategy and meet the threat. A total force concept will be applied in all aspects of planning, programming, manning, equipping and employing Guard and Reserve Forces. Application of the concept will be geared to recognition that in many instances the lower peacetime sustaining costs of reserve force units, compared to similar active units, can result in a larger total force for a given budget or the same size force for a lesser budget. In addition, attention will be given to the fact that Guard and Reserve Forces can perform peacetime missions as a by-product or adjunct of training with significant manpower and monetary savings.

Guard and Reservist units and individuals of the Selected Reserves will be prepared to be the initial and primary source for augmentation of the active forces in any future emergency requiring a rapid and substantial expansion of the active forces. Toward this end, the Assistant Secretary of Defense (Manpower and Reserve Affairs) is responsible for coordinating and monitoring actions to achieve the following objectives:

Increase the readiness, reliability and timely responsiveness of the combat and combat support units of the Guard and Reserve and individuals of the Reserve.

Support and maintain minimum average trained strengths of the Selected Reserve as mandated by Congress.

Provide and maintain combat standard equipment for Guard and Reserve units in the necessary quantities; and provide the necessary controls to identify resources committed for Guard and Reserve logistic support through the planning, programming, budgeting, procurement and distribution cycle.

Implement the approved ten-year construction programs for the Guard and Reserves, subject to their accommodation within the currently approved TOA, with priority to facilities that will provide the greatest improvement in readiness levels.

Provide adequate support of individual and unit reserve training programs.

Provide manning levels for technicians and training and administration reserve support personnel (TARS) equal to full authorization levels.

Program adequate resources and establish necessary priorities to achieve readiness levels required by appropriate guidance documents as rapidly as possible.

MELVIN R. LAIRD.

Mr. ELLENDER. Mr. President, I commend the Secretary for this change in policy. During the course of the hearings on the Department of Defense appropriations bill for fiscal year 1971, I became convinced that limited use of National Guard and Reserve Forces to meet the personnel needs in the conflict in Southeast Asia added to the many inequities in the Selective Service System. Furthermore, we have been spending from $2 billion to $2.5 billion annually to maintain this very large National Guard and Reserve Force. In my view, the failure to use these forces more extensively has been a waste of these very large expenditures.

As a result of my concern, I requested the Department of Defense to provide the Department of Defense Appropriations Subcommittee with detailed information on the Guard and Reserve Forces. This information included detailed data on the $2,478 million requested for the support of these forces during fiscal year 1971; the cost of these forces for fiscal years 1962 through 1970; the number of active duty military and civilian personnel required to support the Guard and Reserve Forces; the number of nonprior service personnel included in the total strength; the use of these forces in previous conflicts; and the additional number of draftees needed to meet the required increase in the active duty forces for the conflict in Southeast Asia. I submitted this information in a statement to the Department of Defense Subcommittee and it is included in the hearings of May 20. I ask unanimous consent to have included in the RECORD at this point a copy of this statement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Excerpt from the Hearings of the Department of Defense Subcommittee, Committee on Appropriations, U.S. Senate, on the Department of Defense appropriation bill, 1971. (Part 1, Pages 1158–1168)

GUARD AND RESERVE FORCES

Senator ELLENDER. During the course of the hearings on the budget requests for the support of the various National Guard and Reserve Forces, I was surprised to learn that over 30,000 active duty personnel are engaged in activities in direct support of the Guard and Reserve Forces. These 30,000 active duty military personnel are in addition to over 60,000 civilian employees engaged in such activities. I was also surprised when I learned that the cost of the Guard and Reserve Forces during fiscal year 1971 will total approximately $2.5 billion. These facts prompted me to go into the matter further in order that I might be able to present details on this $2.5 billion program to the full committee.

FISCAL 1971 REQUESTS

The budget requests for the support of the Guard and Reserve Forces during fiscal year 1971 total $2,478 million, of which $1,291 million is for the support of the Army National Guard and the Air National Guard, and the balance of $1,187 million is for the support of the Reserve Forces of the Army, Navy, Marine Corps, and Air Force. I will include in the record at this point a tabulation giving a breakdown of this total by appropriations.

(The tabulation follows:)

Guard and Reserve Forces fiscal year 1971 request

[In millions of dollars]

Army National Guard:	
Military personnel, Army	$21
National Guard personnel, Army	387
O. & M., Army National Guard	287

FUNDING HISTORY

Senator ELLENDER. The request for $2,478 million for the Guard and Reserve Forces for fiscal year 1971 is in line with the cost of these forces in previous fiscal years. For fiscal year 1970 the cost was $2,523 million; for fiscal year 1969, $2,141 million; for fiscal 1968, $2,203 million; and for fiscal 1967 the cost was $2,477 million. I will include in the record at this point a tabulation giving the cost of the Guard and Reserve Forces for fiscal years 1962 through 1970 and the estimate for fiscal year 1971.

(The tabulation follows:)

GUARD AND RESERVE FORCES (FISCAL YEAR 1962–70)

[In millions of dollars]

Fiscal year	Total	Army National Guard	Air Force National Guard	Reserve forces: Army	Navy	Air Force	Marine Corps
1962	1,617	508	287	348	208	155	111
1963	1,549	476	303	310	222	157	80
1964	1,784	588	350	354	250	163	80
1965	1,794	587	370	330	264	164	81
1966	2,154	686	419	330	280	180	260
1967	2,477	934	429	414	318	188	193
1968	2,203	688	440	353	301	184	237
1969	2,141	727	415	358	311	176	153
1970	2,523	834	506	439	347	234	164
1971	2,478	786	505	475	356	230	127

PLANNED PROGRAM FOR FISCAL 1971

Army National Guard

Senator ELLENDER. The requests for the support of the Army National Guard fiscal 1971 total $786 million. During fiscal year 1971 the Army National Guard plans to maintain average strength of 400,000, of which 383,058 will be in paid drill status and 16,942 will be non-prior-service personnel assigned to active duty training for at least 4 months under the provisions of the Reserve enlisted program. Of the total strength of 400,000, it is estimated that 329,600 will be non-prior-service personnel.

Air National Guard

For the support of the Air National Guard the budget for fiscal 1971 includes requests totaling $505 million. During fiscal year 1971 the Air National Guard will maintain an average strength of 87,878, of which 2,612 will be non-prior-service personnel assigned to active duty training for at least 4 months under the provisions of the Reserve enlisted program. Of the total strength of 87,878, it is estimated that 62,700 will be non-prior-service personnel.

Army Reserve

For the support of the Army Reserve the budget includes requests totaling $475 million. During fiscal year 1971 the Army Reserve will maintain an average strength of 260,000, of which 22,868 will be non-prior-service personnel assigned to active duty training for at least 4 months under the provisions of the Reserve enlisted program. Of the total strength of 260,000, it is estimated that 239,700 will be non-prior-service personnel. In addition to those individuals in a paid drill status the request includes funds for short active duty tours of 15 days for an additional 48,000 Army reservists.

Naval Reserve

The budget includes requests totaling $356 million for the support of the Naval Reserve during fiscal year 1971. These funds will provide for an average strength of 129,000, of which 700 will be assigned to active duty training for at least 4 months under the provisions of the Reserve enlisted program. Of the total strength of 129,000, about 12,400 will be non-prior-service personnel. Funds are also included in these requests for 3,350 paid training tours of 15 days for naval reservists not included in the paid drill program.

Marine Corps Reserve

For the support of the Marine Corps Reserve, the budget for fiscal year 1971 includes $127 million. These funds will provide for an average strength of 47,715, of which 5,797 will be assigned to active duty training for at least 4 months under the provisions of the Reserve enlisted program. Of the total planned strength of 47,715, about 41,800 will be nonprior service personnel. The total of $127 million also includes funds for 561 active duty training tours of 15 days for personnel not engaged in the paid drill training program.

Air Force Reserve

The requests include $230 million for the support of the Air Force Reserve with an average strength of 47,921, of which 1,955 will be assigned to active duty training for at least 4 months under the provisions of the Reserve enlisted program. The total of 47,921 includes 34,500 nonprior service personnel. These funds will also provide for 2,600 15-day active duty for training tours for Air Force reservists who do not participate in the paid drill program.

USE OF ACTIVE DUTY PERSONNEL FOR SUPPORT OF GUARD AND RESERVE FORCES

The requests totaling $2,478 million for the support of the Guard and Reserve forces during fiscal year 1971 includes approximately $204.1 million for the pay and allowances and other costs of 31,106 active duty military personnel engaged in supporting the Guard and Reserve programs. I will include in the record at this point a tabulation breaking down the number of personnel and their cost for each of the services.

(The information follows:)

ACTIVE DUTY MILITARY PERSONNEL SUPPORTING GUARD AND RESERVE FORCES

	Number	Cost
Army	5,894	$43,901,000
Navy	17,635	110,287,000
Marine Corps	5,315	30,422,000
Air Force	2,262	19,468,000
Total	31,106	204,078,000

Senator ELLENDER. The need for over 31,000 active duty military personnel for the support of the Guard and Reserve Forces is subject to question.

CIVILIAN PERSONNEL ENGAGED IN THE SUPPORT OF GUARD AND RESERVE FORCES

In addition to the 31,000 active duty military personnel the budget requests include approximately $590 million for the compensation of benefits of 63,318 civilian employees that are also engaged in the support of the Guard and Reserve Forces. I will include in the record at this point a tabulation setting out the number and cost of these civilian employees by Services.

(The information follows:)

CIVILIAN PERSONNEL SUPPORTING GUARD AND RESERVE FORCES
